ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 18TH DAY OF OCTOBER, 1921.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Abrading-tools, Making. C. R. King. No. 1,394,500; Oct. 18.

Accelerator and fuel-regulator, Automatic. G. Horvath. No. 1,394,015; Oct. 18.

Aerial-gun tractor. W. Christie. No. 1,394,068; Oct. 18.

Aeroplane. H. J. Le Pul. No. 1,394,314; Oct. 18.

Aeroplane construction. C. F. Willard. No. 1,394,460; Oct. 18.

Aeroplane-propeller. G. B. Collier. No. 1,393,758; Oct. 18.

Agitator. C. L. Lewis. No. 1,394,315; Oct. 18.

Air-compressor. E. L. Blevins. No. 1,393,742; Oct. 18.

Aircraft, Wing and similar member of. F. H. Page. No. 1,394,343; Oct. 18.

Aircraft, Wing and similar member of. F. H. Page. No. 1,394,344; Oct. 18.

Air-hose, Operating appliance for angle-cocks for. L. Cornell. No. 1,393,623; Oct. 18.

Airplane. F. M. Osborne. No. 1,393,820; Oct. 18.

Amusement apparatus. F. R. Chester. No. 1,394,277; Oct. 18.

Anchor-post. A. L. Melvin. No. 1,393,808; Oct. 18.

Antiskid-chain. G. T. Wallace and J. E. Twitchell. No. 1,393,986; Oct. 18.

Arm, Tone-. L. D. Nadel. No. 1,394,500; Oct. 18.

Ash-conveying or like systems, Valve mechanism for. H. A. Poppenhusen and A. P. Strong. No. 1,393,905; Oct. 18.

Autographic register. A. W. Metsner. No. 1,394,436; Oct. 18.

Autographic register. J. Q. Sherman and A. W. Metsner. No. 1,394,447; Oct. 18.

Automobile-bumper. H. Verleeve. No. 1,394,238; Oct. 18.

Automobile-creeper, Combination. C. J. Graner. No. 1,394,493; Oct. 18.

Automobile-door latch. L. A. Schumaker. No. 1,393,911; Oct. 18.

Automobile-jack. J. A. Adell. No. 1,394,268; Oct. 18.

Automobile license-plates, Display device for. H. E. Robinson and R. M. Van Cleve. No. 1,393,971; Oct. 18.

Automobile-lock. C. N. Colstad. No. 1,393,754; Oct. 18.

Automobile-robe. L. I. Meyerhoin. No. 1,394,208; Oct. 18.

Automobile robe-rail. P. F. Denning. No. 1,394,287; Oct. 18.

Automobile service, Pressure-operated grease-injecting device or grease-gun for. F. Jackson. No. 1,394,017; Oct. 18.

Automobile-truck chain. M. A. Whitten. No. 1,394,384; Oct. 18.

Automobiles, Locking device for. E. F. Jones. No. 1,394,021; Oct. 18.

Automobiles, Rear light for. C. S. Swaney. No. 1,394,046; Oct. 18.

Automobiles, Safety device for. W. Meyer. No. 1,394,437; Oct. 18.

Automobiles, Sun and rain shield for. W. H. Damon. No. 1,394,254; Oct. 18.

Automobiles, Temperature-indicator for. H. A. Bishel. No. 1,393,968; Oct. 18.

Autos, Washing device for. W. H. Crosby. No. 1,394,282; Oct. 18.

Axle-mounting. N. J. Gondolf. No. 1,394,491; Oct. 18.

Bag-fastener. F. A. Fuller. No. 1,393,770; Oct. 18.

Bait, Artificial. H. T. Looper. No. 1,394,318; Oct. 18.

Bale-bands, Spliced joint for. W. D. Kimball and C. G. Mortimer. No. 1,393,791; Oct. 18.

Ball-mills, Grinding in. J. S. Fasting. No. 1,394,294; Oct. 18.

Band-cutter. C. L. Loller. No. 1,394,484; Oct. 18.

Bar: *See*—
Safety-bar.

Basket. A. J. Allen. No. 1,394,463; Oct. 18.

Battery: *See*—
Electric battery.

Bearing, Adjustable pivot-. G. H. Ransom. No. 1,393,965; Oct. 18.

Bearing, Antifriction-. J. G. Nelson. No. 1,394,110; Oct. 18.

Bearing-board. S. E. Hansen. No. 1,393,891; Oct. 18.

Beater. L. Bordwell. No. 1,393,941; Oct. 18.

Bed, Collapsible. G. A. C. Monroe. No. 1,394,231; Oct. 18.

Bed-spring. A. and F. Tamaris and M. Hendler. No. 1,394,511; Oct. 18.

Bed-spring frame. H. O. Ersin. No. 1,394,155; Oct. 18.

Bed-spring, Portable. S. Mikiel. No. 1,394,320; Oct. 18.

Bed, Tilting. G. F. De Grasse. No. 1,393,885; Oct. 18.

Bedstead, Adjustable. A. and F. Tamaris and M. Hendler. No. 1,394,512; Oct. 18.

Beehive. W. E. Crease. No. 1,393,757; Oct. 18.

Beet-blocker. S. Donner. No. 1,394,152; Oct. 18.

Beet-topping apparatus. S. J. Wilson. No. 1,393,871; Oct. 18.

Belt. J. E. Hogan. No. 1,394,414; Oct. 18.

Belt-fastener. B. C. Robinson. No. 1,394,255; Oct. 18.

Belt-shipper. G. R. Quimby and H. F. Parker. No. 1,394,252; Oct. 18.

Blast-furnace. A. B. Carstens. No. 1,393,749; Oct. 18.

Block: *See*—
Die-block.

Block-pack. S. A. Scott. No. 1,394,363; Oct. 18.

Blowtorches, Attachment for. T. W. Garnett. No. 1,393,999; Oct. 18.

Board: *See*—
Bearing-board.

Boiler: *See*—
Superheater-boiler.

Boiler. R. W. Birchfield. No. 1,393,741; Oct. 18.

Bottle cap, Milk-. I. Davis. No. 1,394,409; Oct. 18.

Bottle retainer, Milk-. J. V. Cannissaro. No. 1,394,142; Oct. 18.

Box: *See*—
Collapsible box. Sound-box.
Folding box. Switch-box.
Mail-box.

Box head, Brass liner stuffing-. A. D. Purtle. No. 1,394,114; Oct. 18.

Box or crate, Folding. C. F. Fehling. No. 1,394,295; Oct. 18.

Boxes, Supporting structure for packing-. E. E. Kring. No. 1,394,028; Oct. 18.

Bracket: *See*—
Clothesline-bracket. Radiator-bracket.

Brake-drum pulley. M. Birkigt. No. 1,394,402; Oct. 18.

Brassière. M. D. Tate-Smith. No. 1,394,235; Oct. 18.

Brick-machine. Y. D. Avy. No. 1,394,285; Oct. 18.

Brooder. M. C. Baron. (Reissue.) No. 15,207; Oct. 18.

Brush, Fountain marking-. L. W. Simmons. No. 1,393,841; Oct. 18.

Brush-holder. O. C. Malcolm. No. 1,394,205; Oct. 18.

Brush, Massage-. F. L. Mathieu. No. 1,394,206; Oct. 18.

Buckle. B. R. Burg. No. 1,393,881; Oct. 18.

Buckle. T. Garceau. No. 1,394,195; Oct. 18.

Buckle. O. E. Wardner. No. 1,394,380; Oct. 18.

Buffer, Door-. O. A. Lawrence. No. 1,394,420; Oct. 18.

Building block and wall. E. Calvert. No. 1,394,406; Oct. 18.

Building-frames, Constructing. A. G. Aurand. No. 1,393,933; Oct. 18.

Button-blank rake. R. Stanforth and L. A. Angle. No. 1,393,846; Oct. 18.

Bumper. R. E. Griewe and R. Johnson. No. 1,394,170; Oct. 18.

Burner: *See*—
Kerosene-burner. Oven-burner.
Oil-burner.

Burner. J. B. Sheridan. No. 1,394,228; Oct. 18.

Button-fasteners, Attacher for. H. H. Daniels. No. 1,394,476; Oct. 18.

Buttons, Parallel clamp for holding jig and fixture. H. V. Gould. No. 1,394,004; Oct. 18.

Cabinet, Kitchenette-. C. H. Cooper. No. 1,394,146; Oct. 18.

Cable-coupling. H. A. Jensen. No. 1,394,019; Oct. 18.

Cable, Sector-. H. P. M. Carter. No. 1,393,750; Oct. 18.

Cactus, Making stock food from. W. Gebhardt. No. 1,394,162; Oct. 18.

Cake forming and cutting machine, Fried-. J. B. Winans. No. 1,393,872; Oct. 18.

Calcining phosphate rock, Apparatus for. M. Shoeld. No. 1,393,840; Oct. 18.

Calcining process, Phosphate-rock-. M. Shoeld. No. 1,393,839; Oct. 18.

Calibrating transparent tubes, Device for. A. Massi and F. Martini. No. 1,394,422; Oct. 18.

Calipers. J. S. Bushnell. No. 1,393,746; Oct. 18.

Calk-fastener. D. Ballenger. No. 1,393,934; Oct. 18.

Camera. C. J. Krysanowsky. No. 1,393,793; Oct. 18.

Camera. A. H. Rolfkjer. No. 1,393,829; Oct. 18.

Camera. S. C. Swann. No. 1,394,047; Oct. 18.

Camera-shutter. J. Swinscoe. No. 1,393,983; Oct. 18.

Cameras, Film-winding means for. H. H. Berry. No. 1,394,401; Oct. 18.

Cameras, Reel-actuating device for. S. C. Swann. No. 1,394,045; Oct. 18.
Can: *See*—
Oil-can.
Can feeding and righting machine. C. P. Cantley. No. 1,393,947; Oct. 18.
Car door. Grahn. W. Pihet. No. 1,393,982; Oct. 18.
Car-door-operating mechanism. L. T. Penny. No. 1,393,960; Oct. 18.
Car-loading system. G. P. Mariner and R. E. Chrysler. No. 1,394,422; Oct. 18.
Car-step, Auxiliary. W. C. McFeely. No. 1,393,986; Oct. 18.
Cars, Cross-tie for railway. L. G. Miller and R. C. Lane. No. 1,394,425; Oct. 18.
Cars, Hand-brake for railway. G. A. Woodman. No. 1,394,066; Oct. 18.
Cars, Weather screen or hood for motor. R. W. Anderson. No. 1,394,794; Oct. 18.
Cars, Wheel-holder for railway. O. M. McGuire. No. 1,394,319; Oct. 18.
Cartridge: *See*—
Toy cartridge.
Cartridge-case. E. T. Baker. No. 1,394,356; Oct. 18.
Carburetor. W. H. Tutt. No. 1,394,337; Oct. 18.
Card-holder. H. J. Farnham. No. 1,394,167; Oct. 18.
Carrier: *See*—
Trolley-harp carrier.
Cash-register. F. L. Fuller. No. 1,394,370; Oct. 18.
Casting, Preparing steel for. J. S. McGlynn. No. 1,394,108; Oct. 18.
Cathode apparatus, Incandescent. W. D. Coolidge and H. A. Wagner. No. 1,394,144; Oct. 18.
Cellulose-ether solvent and composition. J. M. Donohue. No. 1,394,356; Oct. 18.

Gear-puller. A. R. Wickersham. No. 1,394,129; Oct. 18.
Gear, Reversing-. J. F. Wollesen. No. 1,394,131; Oct. 18.
Gear-shift-lever lock. C. L. Johnson. No. 1,394,353; Oct. 18.
Gear-shift lock. T. Rose. No. 1,394,357; Oct. 18.
Gear, Steering-. D. E. Ross. No. 1,393,973; Oct. 18.
Gear, Steering-. D. E. Ross. No. 1,393,974; Oct. 18.
Gear-testing machine. J. L. Matthews. No. 1,394,324; Oct. 18.
Gear-wheel. C. Stone. No. 1,394,127; Oct. 18.
Gearing. B. A. Garratt. No. 1,394,080; Oct. 18.
Gearing, Intermediate bait-. O. Leimbrock. No. 1,394,100; Oct. 18.
Geometrical tool. J. H. Roberts. No. 1,393,970; Oct. 18.
Glass composition and making same. E. E. Fisher. No. 1,394,296; Oct. 18.
Glassware, Machine for making hollow. H. S. Hutton. No. 1,394,092; Oct. 18.
Graduating-machine. G. L. Taylor. No. 1,393,923; Oct. 18.
Grain-separator. A. G. Febring. No. 1,393,993; Oct. 18.
Grate-shaker bar. E. K. Wolfe. No. 1,393,880; Oct. 18.
Grease-cup. L. N. Bourdeau. No. 1,393,879; Oct. 18.
Grease-cup, Automatic. W. C. Machado. No. 1,394,435; Oct. 18.
Grinder, End-face. F. H. Mooney. No. 1,393,956; Oct. 18.
Grinder-spindle. C. G. Olson. No. 1,393,817; Oct. 18.
Grinders, Work-support for. S. E. Holt. No. 1,394,014; Oct. 18.
Grinding-machine. G. W. Lant. No. 1,394,418; Oct. 18.
Gun magazines, Safety and guide attachment for machine. S. G. Green. No. 1,394,494; Oct. 18.
Gun-mounting. L. H. Griffiths. No. 1,394,083; Oct. 18.
Gun, Non-recoil. J. A. Giles. No. 1,394,490; Oct. 18.
Guns, Stock for single or double barreled. E. Monnereux. No. 1,393,812; Oct. 18.
Gyroscope. E. A. Sperry. No. 1,393,845; Oct. 18.
Hackney. E. G. Ireland and J. D. Clark. No. 1,394,174; Oct. 18.
Hair-clipper. F. Leo. No. 1,393,943; Oct. 18.
Handlamp, Electric. E. A. Little. No. 1,394,101; Oct. 18.
Handles, Die and process for making cup-. J. Benton. No. 1,394,465; Oct. 18.
Hanger: *See*—
Paint-pot hanger.
Harrow. W. O. Lang. No. 1,394,030; Oct. 18.
Hatpin. E. E. Flaherty. No. 1,394,297; Oct. 18.
Hatpin-fastener. L. G. Hurd. No. 1,394,304; Oct. 18.
Headdress. G. M. Sharp. No. 1,394,368; Oct. 18.
Headlight. C. H. Allen. No. 1,393,877; Oct. 18.
Headlight. E. B. Benjamin. No. 1,394,209; Oct. 18.
Headlight-reflector. C. A. McNeal. No. 1,394,319; Oct. 18.
Headlights, Shade for. G. P. Eustis. No. 1,394,150; Oct. 18.
Heel, Detachable shoe-. L. Iannello. No. 1,393,734; Oct. 18.
Heel-trimming machine for fabrics. M. Adair and W. F. Snyder. No. 1,394,344; Oct. 18.
Hinge, Gate-. A. D. Hartley. No. 1,394,464; Oct. 18.
Hinge, Check-. E. Brackbarts. No. 1,393,889; Oct. 18.
Hoist for dumping-vehicles, Hydraulic. G. W. Berry. No. 1,394,245; Oct. 18.
Hoisting-hook. B. Cousins. No. 1,394,068; Oct. 18.
Hook: *See*—
Hoisting-hook.
Hoop-bending device. R. D. Wirt. No. 1,393,988; Oct. 18.
Horse-clamp. W. Meanholder and G. J. Meagle. No. 1,393,811; Oct. 18.
Hose-supporters, Clasp for. J. S. Leary. No. 1,394,199; Oct. 18.

Hub-plate, Adjustable. C. W. Duke. No. 1,393,695; Oct. 18.
Hub-plate, Adjustable. C. W. Duke. No. 1,393,894; Oct. 18.
Hubs, Locking device for detachable wheel-. M. Hering. No. 1,394,287; Oct. 18.
Hydrocarbon-motor. C. R. Short. Nos. 1,393,913-4; Oct. 18.
Hydrocarbons, Fractionally distilling mixtures containing. B. N. French. No. 1,394,466; Oct. 18.
Igniter. C. M. French. No. 1,394,467; Oct. 18.
Images, Registering projected. J. G. Capstaff. No. 1,394,504; Oct. 18.
Indent harness-gage. C. M. Zahler. No. 1,393,689; Oct. 18.
Indicator: *See*—
Changeable indicator. Vending-machine indicator.
Direction-indicator.
Ingot-molds, Feeder for. B. H. Howard and R. J. Turner. No. 1,394,415; Oct. 18.
Insect-destroyer. B. Heller. No. 1,394,497; Oct. 18.
Insulator-changer. T. F. Johnson, Jr. No. 1,394,020; Oct. 18.
Insurance-accounting, Blank for. T. C. Parsons. No. 1,393,623; Oct. 18.
Internal-combustion engine. E. T. Kershaw. No. 1,394,094; Oct. 18.
Internal-combustion engine. A. M. Eenman. No. 1,393,881; Oct. 18.
Iron: *See*—
Rust-resisting alloy of iron.
Irrigating device. E. Robbins. No. 1,394,041; Oct. 18.
Irrigation gate-post. A. Kemphey. No. 1,394,023; Oct. 18.
Jack: *See*—
Scaffold-jack.
Jack. J. H. Burtholder. No. 1,394,141; Oct. 18.
Jack. H. A. Thorndike. No. 1,393,851; Oct. 18.
Jack, T. Tarkilsen. No. 1,394,578; Oct. 18.
Jar-cover opener, Adjustable. J. A. McLeod and E. A. Dauter. No. 1,394,062; Oct. 18.
Jar-holder. N. T. Metcalf. No. 1,394,105; Oct. 18.
Jar-wrench. D. C. and W. Winenberg. No. 1,394,338; Oct. 18.
Joint: *See*—
Rail-joint. Universal joint.
Jointer-guard. P. C. Instrum. No. 1,394,469; Oct. 18.
Kaleidoscope. W. E. Fearn. No. 1,394,480; Oct. 18.
Kerosene-burner. F. W. Evans and A. H. Miller. No. 1,394,073; Oct. 18.
Kiln plant and operating the same, Cement-. J. B. Bell. No. 1,393,738; Oct. 18.
Kitchen utensil, Combination. J. H. Gagnon. No. 1,394,194; Oct. 18.
Knife: *See*—
Electrical uncapping-knife.
Knitted cap and making the same. E. N. John. No. 1,394,083; Oct. 18.
Label-feed device. J. Q. Leavitt. No. 1,394,482; Oct. 18.
Labeling-machine. J. O'Connor. No. 1,394,339; Oct. 18.
Ladder-raising device. H. J. Hopkins. No. 1,394,496; Oct. 18.
Ladder-support. E. N. Taylor. No. 1,393,922; Oct. 18.
Lamp and license-plate holder, Automobile. J. K. McCullagh. No. 1,394,517; Oct. 18.
Lamp-voltage regulator. W. A. Turbayne. No. 1,393,885; Oct. 18.
Lamp-wick regulator. J. C. Robert, Jr. No. 1,394,354; Oct. 18.
Lamps, Transparent glass screen for transmitting substantially white light from incandescent electric. D. N. Mc. Donald. No. 1,393,904; Oct. 18.
Latch mechanism. F. Schmidgall. No. 1,394,129; Oct. 18.
Lathe, Producing. A. H. Carrier. No. 1,394,273; Oct. 18.
Launching-cradles, Releasing device for. J. J. Scallan. No. 1,394,223; Oct. 18.
Laundry apparatus. M. J. Fleming. No. 1,394,189; Oct. 18.
Leather, Reclaiming waste. J. K. Mitchell. No. 1,394,329; Oct. 18.
Lens. E. D. Tillyer. No. 1,393,883; Oct. 18.
Lens-mount and assembling same, Focusing. C. W. Frederick. No. 1,394,078; Oct. 18.
Letter-sheet. D. D. Schulman. No. 1,394,263; Oct. 18.
Levers, Lock for controlling. A. C. Sartan and H. J. Menard. No. 1,394,289; Oct. 18.
Life-preserver. A. P. Lundin. No. 1,394,180; Oct. 18.
Light: *See*—
Electric light.
Liquid-dispensing device. T. E. Hester and F. J. Hardesty. No. 1,394,010; Oct. 18.
Liquid-level gage. M. O. Lundin. No. 1,394,031; Oct. 18.
Liquid-meter. H. C. Alger. No. 1,393,931; Oct. 18.
Liquid mixtures, Process and apparatus for redining. S. F. Aldus and H. C. Eddy. No. 1,394,442; Oct. 18.
Listing device. C. A. Seans. No. 1,394,231; Oct. 18.

Wheels and parts thereof, Vehicle-. R. G. Nierman. No. 149,417; Oct. 18.
Wire rope. Wickwire Spencer Steel Corporation. No. 145,198; Oct. 18.
Wood fillers for fibrous sheets and other forms. L. Graffin. Nos. 150,232–3; Oct. 18.
Wood shingles. Grays Harbor Shingle Company. No. 152,552; Oct. 18.
Woolen, worsted, &c., piece goods. R. Spitzer. No. 132,063; Oct. 18.
Woolens and other textiles used in men's wear trade. D. & H. Heidgerd. No. 150,747; Oct. 18.
Woolens, cottons, silks, flannels, &c. Winship, Boit & Co. No. 146,472; Oct. 18.
Woolens, cottons, silks, linens, &c. Winship, Boit & Co. No. 146,474; Oct. 18.
Worsted and woolen textile fabrics. Holden-Leonard Company. No. 126,727; Oct. 18.
Woven cotton piece goods. Neuss, Hesslein & Co. Inc. No. 151,059; Oct. 18.

CLASSIFICATION OF PATENTS

ISSUED OCTOBER 18, 1921.

NOTE.—First number—class, second number—subclass, third number—patent number.

1— 8: 1,393,515
26: 1,394,457
28: 1,394,678
41: 1,394,685
2— 41: 1,394,685
72: 1,394,686
73: 1,394,370
84: 1,394,441
85: 1,394,683
107: 1,394,685
144: 1,393,939
1: 1,393,939

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 25TH DAY OF OCTOBER, 1921.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Abbott, Charles C., Pittsfield, Mass., assignor to General Electric Company. Electric heating unit. No. 1,394,518; Oct. 25.

Abt, Hugo A. F., Chicago, Ill. Bascule-bridge. No. 1,394,519; Oct. 25.

Adamson, James S. (See Lewis, W. E. D., Adamson, and Madsen.)

Advance Electric Company, The. (See Bretch, Edward, assignor.)

Air Reduction Company. (See Von Recklinghausen, Max, assignor.)

Akemann, Walther, Essen, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Apparatus for the electrical long-distance control of the valve-gear of a hydraulic gun-pointing gear. No. 1,394,520; Oct. 25.

Akers, Glen, assignor to Jennings Automatic Dump Body, Inc., Essex, Va. End-gate-operating mechanism. No. 1,394,521; Oct. 25.

Aktiebolaget Ljungströms Angturbin. (See Ljungström, Fredrik, assignor.)

Aktiebolaget, Tuben. (See Karlsson, Walfrid, assignor.)

Alexander, Harry, Jersey City, assignor to New York Bottlers Supplies Manufacturing Co., Hoboken, N. J. Syrup-measuring device for bottle-fillers. No. 1,394,530; Oct. 25.

Allen, Charles J., Moorestown, N. J., J. M. Howard, Media, and D. R. Richie, Lansdowne, Pa. Cultivator. No. 1,394,522; Oct. 25.

Allen, Oglesby, Jr., assignor to Allen Specialty Company, Chicago, Ill. Spark-plug. No. 1,394,523; Oct. 25.

Allen Specialty Company. (See Allen, Oglesby, Jr., assignor.)

Allison, Clarence H., Chicago, Ill. Liquid-fuel burner. No. 1,394,603; Oct. 25.

Altgelt, Rudolph J., assignor to Oliver Chilled Plow Works, South Bend, Ind. Plow. No. 1,394,524; Oct. 25.

Altgelt, Rudolph J., assignor to Oliver Chilled Plow Works, South Bend, Ind. Plow. No. 1,394,525; Oct. 25.

Aluminum Company of America. (See Blough, Earl, assignor.)

American Arch Company. (See Willett, Alfred H., assignor.)

American Brass Company, The. (See Coe, James R., assignor.)

American Cellulose and Chemical Manufacturing Company. (See Miles, George W., assignor.)

American Electrical Heater Company. (See Kuhn, F. Thomas, and Spiess, assignors.)

American District Telegraph Company. (See Johnson, C. C., and Hopkins, assignors.)

American District Telegraph Company. (See Johnson, Clarence C., assignor.)

American District Telegraph Company. (See Hopkins, Richard M., assignor.)

American Foundry & Furnace Company. (See Frost, Nathaniel, assignor.)

American Manganese Steel Company. (See McKee, Walter S., assignor.)

American Perforator Company, The. (See Lyman, Walter H., assignor.)

American Steel and Wire Company of New Jersey. (See Febrey, Harold H., assignor.)

American Sterilizer Company. (See Mueller, Paul M., assignor.)

American Telephone and Telegraph Company. (See Post, Arthur W., assignor.)

Amsden, Eugene C., Boston, Mass. Universal table. No. 1,394,526; Oct. 25.

Anderson, Anders, Dunellen, N. J. Printing-press. No. 1,395,076; Oct. 25.

Anderson-Barngrover Mfg. Co. (See Thompson, Albert R., assignor.)

Anderson, William M., assignor to Ideal Products Company, Minneapolis, Minn. Cigar-box-lid holder. No. 1,395,215; Oct. 25.

Andrews, Alburee C., Greenville, Tex. Mortising-machine. No. 1,394,527; Oct. 25.

Angus, Donald J., Indianapolis, Ind. Electric-meter construction. No. 1,394,528; Oct. 25.

Apollo Magneto Corporation. (See Fuegel, G., and Schmid, assignors.)

Applegate, Ernest, Rushville, Ind. Latch. No. 1,394,650; Oct. 25.

Armitage, Le Roy, East Orange, N. J. Electric-lamp fixture. No. 1,394,529; Oct. 25.

Armstrong, Clarence D. (See Neville, Chris S., assignor.)

Arnot, Robert, Zurich, Switzerland. Azo dye and its manufacture. No. 1,395,238; Oct. 25.

Ashworth, William, North Adams, Mass. Carbureter. No. 1,395,170; Oct. 25.

Automatic Auto Jack Company. (See Downey, Richard F., assignor.)

Aveling, Christian W., Elgin, Ill. Hoisting and conveying machinery. No. 1,395,077; Oct. 25.

Avery Company. (See Bartholomew, John B., assignor.)

Bachar, John, Chicago, Ill. Phonograph-cabinet. No. 1,394,960; Oct. 25.

Badger Manufacturing Corporation. (See Ingrig, Walter V., assignor.)

Badois, Louis, and D. Kahn, Paris, France. Lock-screw. No. 1,394,660; Oct. 25.

Bailey, George, and J. P. Nielsen, San Francisco, Calif. Display-rack. No. 1,395,229; Oct. 25.

Bain, Nathaniel M., Oak Grove, Oreg. Segregating-mast. No. 1,395,078; Oct. 25.

Baldwin, Abram T., deceased, Detroit, Mich.; C. P. Baldwin, executrix. Differential gage. No. 1,394,660; Oct. 25.

Baldwin, Abram T., deceased, Detroit, Mich.; C. P. Baldwin, executrix. Differential gage. No. 1,394,661; Oct. 25.

Baldwin, Catherine P., executrix. (See Baldwin, Abram T.)

Ballard, Albert M. (See Oberfell, G. G., and Ballard.)

Barbé, Léonce, St. Maurice, assignor to Société des Produits Azotés, Paris, France. Granulating cyanamid. No. 1,394,532; Oct. 25.

Barber, Howard M., Stonington, Conn., assignor to C. E. Cottrell & Sons Company, New York, N. Y. Web-guide for rotary cutters. No. 1,394,961; Oct. 25.

Bardera, Jose M., New York, N. Y. Advertising device. No. 1,394,531; Oct. 25.

Barnhart, Walter C., Seattle, Wash. Pulley-grinding machine. No. 1,394,704; Oct. 25.

Barnhurst, Henry G., administrator. (See Barnhurst, H. R., Collins, and Barnhurst.)

Barnhurst, Henry G. (See Barnhurst, H. R., Collins, and Barnhurst.)

Barnhurst, Henry R., deceased, by H. G. Barnhurst, administrator, Catasauqua, H. R. Collins, Allentown, and H. G. Barnhurst, Catasauqua, assignors to Fuller Engineering Company, Allentown, Pa. Burning pulverized fuel in locomotives. No. 1,395,079; Oct. 25.

Barra, John L. (See Oldham, E. L., and Barra.)

Barri, Emma F., Brooklyn, N. Y. Stocking-supporter. No. 1,394,533; Oct. 25.

Barrows, Allan S., Chicago, Ill. Sheet-metal flush car-door. No. 1,395,080; Oct. 25.

Barry, Clinton R., and M. L. McClelland, Fort Smith, Ark., assignor of one-half to The Crowley and Smith Patents Company, Oklahoma, Okla. Drill. No. 1,395,081; Oct 25.

Bartholomew, John B., assignor to Avery Company, Peoria, Ill. Gang-plow. No. 1,395,216; Oct. 25.

Barton, Ben D., Lansing, Mich. Belt pulley and tightener. No. 1,394,705; Oct. 25.

Basore, Cleburne A., Auburn, Ala. Production of alcohol from gas containing ethylene. (Reissue.) No. 15,211; Oct. 25.

Bate, John W., Racine, Wis. Hood-clamp. No. 1,394,962; Oct. 25.

Bayles, Lewis C., Easton, Pa., assignor to The Ingersoll-Rand Company, Jersey City, N. J. Fluid-actuated motor. No. 1,395,082; Oct. 25.

Beach, Charles P., Littleton, N. H. Gear-puller attachment. No. 1,394,963; Oct. 25.

Beall, William L., Chicago, Ill., assignor to International Harvester Company. Feed-mill. No. 1,394,803; Oct. 25.

Beanes, Warwick H., Peterborough, England. Baking-oven. No. 1,394,706; Oct. 25.

Beasley, Alfred E., Toronto, Ontario, Canada, assignor of one-half to F. B. Leonard, Los Angeles, Calif. Steering-wheel lock. No. 1,395,083; Oct. 25.

Beaumont, Edward D., assignor of one-half to J. Y. Hung, Phoenix, Ariz. Vehicle-wheel. No. 1,394,882; Oct. 25.

Bégot, Louis H. E., Paris, France. Cascade extrusion-die for cold or hot spinning of metals. No. 1,395,217; Oct. 25.

Belt, John A., Toronto, Ontario, Canada. Centrifugal liquid-evacuator. No. 1,395,218; Oct. 25.

Belluche, Frank R., Mansfield, assignor to United Printing Machinery Company, Boston, Mass. Adjustable feeding-table. No. 1,395,027; Oct. 25.

Bender, Christian C., Seattle, Wash. Automatic universal reproducer and tone-arm. No. 1,394,804; Oct. 25.

Benedict, Dirck C., South Bellingham, Wash. Loose-leaf binder. No. 1,394,707; Oct. 25.

Benedict, J. M. (See McAdams, Lewis C., assignor.)

Benjamin Electric Manufacturing Company. (See Benjamin, Reuben B., assignor.)

Benjamin, Reuben B., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill. Outlet-fitting. No. 1,395,084; Oct. 25.

Bennett, Edward D., Pulaski, N. Y. Apparatus for cleaning felts. No. 1,395,219; Oct. 25.

Berg, John P., and J. M. Gleason; said Gleason assignor of all his right to Great Western Commercial Body Company, Omaha, Nebr. Body for dumping-trucks. No. 1,395,028; Oct. 25.

Bergman, Axel G. (See Mönchen, J., and Bergman.)

Berkeley Light Corporation. (See Wood, William G., assignor.)

Berkenkamp, Russell, *et al.* (See Briggs, John, assignor.)

Bernard, A. M., Wagon Works. (See Bernard, Willy J., assignor.)

Bernard, Willy J., assignor to A. M. Bernard Wagon Works, New Iberia, La. Tractor-platform. No. 1,394,883; Oct. 25.

Best, Clarence L., Oakland, assignor to The Holt Manufacturing Company, Stockton, Calif. Track-laying tractor. No. 1,395,029; Oct. 25.

Bibb, Robert P., Van Buren, Ark. Resilient wheel. No. 1,395,085; Oct. 25.

Biggs, Edward, assignor to Wood and Selick, Inc., New York, N. Y. Multiple bake-pan. No. 1,395,030; Oct. 25.

Birdsey, Charles R., Hinsdale, assignor, by mesne assignments, to United States Gypsum Company, Chicago, Ill. Plaster-board. No. 1,395,081; Oct. 25.

Birdsey, Charles R., Hinsdale, assignor, by mesne assignments, to United States Gypsum Company, Chicago, Ill. Plaster-board. No. 1,395,082; Oct. 25.

Bishop, George W. Jr., Lynbrook, assignor of one-third to George deV. Gilmore, New York, N. Y. Mixer. No. 1,395,171; Oct. 25.

Blake, Charles C., Brookline, Mass. Clutch. No. 1,394,805; Oct. 25.

Blake, Charles C., Brookline, Mass. Machine for inserting fastenings. No. 1,394,806; Oct. 25.

Blaise, Edward, Brooklyn, N. Y. Cabinet for talking-machine records. No. 1,394,964; Oct. 25.

Blanchard, George N., San Francisco, Calif. Igniting and controlling device for hydrocarbon generators and burners. No. 1,394,807; Oct. 25.

Blomquist, Ernest O. E., Woodside, N. Y. Floor waxing and polishing device. No. 1,394,662; Oct. 25.

Blough, Earl, Parnassus, assignor to Aluminum Company of America, Pittsburgh, Pa. Heat treatment of aluminum alloys. No. 1,394,534; Oct. 25.

Boggs, Robert R. (See Nell, C. B., and Boggs.)

Bohn, Belle H., *et al.*, executors. (See Howell, John A.)

Borden Company, The. (See Nonneman, Ira W., assignor.)

Boome, Alexander. (See Kramer, L., and Boome.)

Bornemann, George C., *et al.* (See Briggs, John, assignor.)

Boswell, Fletcher O., Philadelphia, Pa. Automobile-lock. No. 1,395,220; Oct. 25.

Bott, John C., Dell Rapids, S. D. Rail tie and fastener. No. 1,395,172; Oct. 25.

Bourne, Clifford A., Portland, Oreg. Electric marking device. No. 1,394,965; Oct. 25.

Bowers, Thomas A., Boston, Mass. Ornamental device or pompon. No. 1,395,033; Oct. 25.

Bovard, William P., assignor to The Ohio Brass Company, Mansfield, Ohio. Manufacturing rail-bonds. No. 1,394,604; Oct. 25.

Brandt, Henry E., assignor to Dobbins Manufacturing Company, North St. Paul, Minn. Air-charging pump for sprayers. No. 1,395,086; Oct. 25.

Braine, Bancroft G., New York, N. Y., assignor to The Rail Joint Company. Making step-joints. No. 1,394,708; Oct. 25.

Brenkert, Joseph W., San Diego, Calif. Street-traffic direction-signaling device. No. 1,394,966; Oct. 25.

Brennan, Thomas, Jr., assignor to Moline Plow Company, Moline, Ill. Automatic gear-throw-out mechanism for grain-drills or the like. No. 1,394,663; Oct. 25.

Brenner, Joseph A., Hanover, Pa. Timer for washing-machines. No. 1,395,034; Oct. 25.

Bretch, Edward, assignor to The Advance Electric Company, St. Louis county, Mo. Electric motor. No. 1,394,535; Oct. 25.

Brettschneider, Friedrich, Raits, Moravia. Manufacture of bricks. No. 1,395,173; Oct. 25.

Bridges, Rob R., Cameron, W. Va. Composition for refinishing blemished varnished wood surfaces. No. 1,394,808; Oct. 25.

Briggs, John, assignor of one-third to G. C. Bornemann and one-third to R. Berkenkamp, San Francisco, Calif. Multiple-disk phonograph. No. 1,395,035; Oct. 25.

Brion, Harry O., assignor to A. G. Cash, Rochester, N. Y. Center-testing device. No. 1,395,087; Oct. 25.

Brooks, Benjamin T., Bayside, N. Y., assignor to Chadeloid Chemical Company. Making chlorhydrins. No. 1,394,664; Oct. 25.

Brown, Newman T., assignor to C. A. Spirk, Seattle, Wash. Direction-indicator. No. 1,395,088; Oct. 25.

Bruneau, Hudger, Woonsocket, R. I. Decarbonizing device. No. 1,394,665; Oct. 25.

Bryan, Henry A., Medill, Okla. Air-brake system. No. 1,395,221; Oct. 25.

Buchner, Frederick E. (See Davern, Stephen A., assignor.)

Buhr, Joseph F., Detroit, Mich. Drill-head. No. 1,394,709; Oct. 25.

Burge, Clarence W., Parkersburg, W. Va. Chain-fastener. No. 1,394,666; Oct. 25.

Burger, Clarence W. (See Smith, J. E., and Burger.)

Burhans, Harry H., Newark, N. J. Automatic ball-mill feeder. No. 1,395,089; Oct. 25.

Burhorn, Edwin, Hoboken, N. J. Cooling-tower. No. 1,394,605; Oct. 25.

Burns, Archibald E. (See Friendly, H. M., and Burns.)

Burns, Joseph, Okmulgee, Okla. Temper-screw. No. 1,394,710; Oct. 25.

Burns, Thomas A., and D. J. Huether, assignors to Dunlop Tire and Rubber Goods Company, Limited, Toronto, Ontario, Canada. Apparatus for solutioning tire-beads. No. 1,395,085; Oct. 25.

Busch-Sulzer Bros.-Diesel Engine Company. (See Tacchella, Adolf, assignor.)

Burroughs Adding Machine Company. (See Gooch, Claiborne W., assignor.)

Buttigieg, John, Elgin, Ill. Necktie form and holder. No. 1,394,606; Oct. 25.

Butterworth-Judson Corporation. (See Jones, Whitney B., assignor.)

Calhoun, Charles, assignor of one-half to A. G. Meeks, Duquesne, Pa. Lubricating device. No. 1,395,174; Oct. 25.

Campbell, Leon J., Buchanan, Mich. Variable-speed transmission mechanism. No. 1,394,607; Oct. 25.

Cangeri, Mark, Brooklyn, N. Y. Shank-stiffener for shoes. No. 1,394,884; Oct. 25.

Carle, Leon P., North Raymond, Me. Circuit-testing apparatus. No. 1,395,037; Oct. 25.

Carlson, Gustav W., assignor to The Torbensen Axle Company, Cleveland, Ohio. Brake mechanism for motor-vehicles. No. 1,394,885; Oct. 25.

Carolina Pavement Company. (See Wilson, George A., Jr., assignor.)

Carpenter, Allan O., Corning, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J. Compressor-unloader. No. 1,395,090; Oct. 25.

Carter, Charles H., Farmers Fork, Va. Automatic fish-cleaner. No. 1,394,711; Oct. 25.

Case, J. I., Plow Works. (See Michael, Clement W., assignor.)

Case, J. I., Threshing Machine Company. (See Smith, Henry S., assignor.)

Cash, Alfred G. (See Brion, Harry O., assignor.)

Casey, James D. (See Evenden, A. L., and Casey.)

Casey, Joseph A. (See Evenden, A. L., and Casey.)

Catron, John J., Bonham, Tex. Safety-razor. No. 1,394,886; Oct. 25.

Caverly, Ralph, Chicago, Ill. Drill. No. 1,395,091; Oct. 25.

Chadeloid Chemical Company. (See Brooks, Benjamin T., assignor.)

Champney, Ralph P., Worcester, assignor to Mitchell and Smith, Incorporated, Boston, Mass. Driving-belt. No. 1,394,967; Oct. 25.

Chapin & Hollister Co. (See Lewis, Frederick W., assignor.)

Chase, Wilfred O., Detroit, Mich. Carbureter. No. 1,394,536; Oct. 25.

Cheney, Forest, assignor to Cheney Talking Machine Company, Chicago, Ill. Sound-reproducing machine. No. 1,395,092; Oct. 25.

Cheney, Forest, assignor to Cheney Talking Machine Company, Chicago, Ill. Sound-reproducing machine. No. 1,395,093; Oct. 25.

Cheney Talking Machine Company. (See Cheney, Forest, assignor.)

Cheney Talking Machine Company. (See Doerr, Fred H., assignor.)

China, Joseph L., West Huntington, W. Va. Merry-go-round. No. 1,395,175; Oct. 25.

Christensen, Christen, assignor to Electrical Engineers Equipment Co., Chicago, Ill. Disconnecting-switch. No. 1,394,968; Oct. 25.

Chmurski, Anton J., assignor to F. Rigas, Milwaukee, Wis. Automobile lighting device. No. 1,395,039; Oct. 25.

Claireaux, Félix M. J. A. (See Leroy, C. E. H., and Claireaux.)

Clelland, Duncan. (See McFarlane, J., and Clelland.)

Cleveland Osborn Manufacturing Company, The. (See Frost, Clinton E., assignor.)

Cliff, Ray Y. (See Strobl, Frank P., assignor.)

Clinton, Harry D., Whitney Point, N. Y. Textile spool or bobbin. No. 1,395,038; Oct. 25.

Close, Jacob V., Norwalk, Conn. Hollow tile. No. 1,395,176; Oct. 25.

Coe, James R., assignor to The American Brass Company, Waterbury, Conn. Apparatus for handling containers of liquid. No. 1,395,040; Oct. 25.

Coe, James R., assignor to The American Brass Company, Waterbury, Conn. Scrap-bundling machine. No. 1,395,041; Oct. 25.

Coes, Russell R., assignor of one-half to Coes Wrench Company, Worcester, Mass. Making wrench-handles. No. 1,394,222; Oct. 25.

Coes Wrench Company. (See Coes, Russell R., assignor.)

Cohen, Abraham, St. Louis, Mo. Shoe-heel. No. 1,394,712; Oct. 25.

Cohn, Charles C., assignor to I. B. Kleinert Rubber Company, New York, N. Y. Display-card. No. 1,394,537; Oct. 25.

Collins, Harry R. (See Barnhurst, H. R., Collins, and Barnhurst.)

Collins, Roy V., West Newton, Mass. Switch-operating mechanism. No. 1,394,713; Oct. 25.

Collins, Walter H., Summit, N. J. Reminder. No. 1,395,094; Oct. 25.

Colburn, Irving W., Toledo, Ohio, assignor, by mesne assignments, to The Libbey-Owens Sheet Glass Company, Process and apparatus for drawing sheet-glass. No. 1,394,809; Oct. 25.

Colven, James M., Yonkers, N. Y., assignor to New York Engineering Company. Steam-boiler. No. 1,394,969; Oct. 25.

Compagnie des Forges et Acieries de la Marine et d' Homecourt. (See Rimailho, Emile, assignor.)

Continental Can Company. (See Kronquest, Alfred L., assignor.)

Continental Can Company. (See Robinson, D. P., Coyle, and Kronquest, assignors.)

Conyngham, William B., Wilkes-Barre, Pa. Thread-spinning machine. No. 1,395,223; Oct. 25.

Cooper, William F., Norwalk, Ohio. Pump governor mechanism. No. 1,394,887; Oct. 25.

Copeland, Joseph F., Drexel Hill, Pa. Drawing-board. No. 1,394,539; Oct. 25.

Corbin, Elbert A., Jr., Swarthmore, Pa. Electric lamp and heater. No. 1,394,667; Oct. 25.

Cottrell, C. B., & Sons Company. (See Barber, Howard M., assignor.)

Coulombe, Joseph C., Lowell, Mass. Fuel-feeding device. No. 1,395,224; Oct. 25.

Cowan, Arthur S., Boston, assignor, by mesne assignments, to The Stafford Company, Readville, Boston, Mass. Warp stop-motion for looms. No. 1,394,970; Oct. 25.

Coyle, John. (See Robinson, D. P., Coyle, and Kronquest.)

Craddick, Joel E., Denver, Colo. Electrothermal garment. No. 1,394,810; Oct. 25.

Creighton, Elmer E. F., and F. R. Shaver, Schenectady, N. Y., assignors to General Electric Company. Protective device. No. 1,394,971; Oct. 25.

Creveling, John L., Auburn, N. Y. Electric regulation. No. 1,394,972; Oct. 25.

Crossley, Percy B., Calcutta, India. Manufacture of a glass using natural silicates, such as micaceous minerals, asbestos, and the like. No. 1,394,973; Oct. 25.

Crowley and Smith Patents Company, The. (See Barry, C. R., and McClelland, assignors.)

Crown Cork and Seal Company of Baltimore City. (See Goebel, George, assignor.)

Culshaw, Thomas, Malvern, Victoria, Australia. Construction of ceilings. No. 1,394,714; Oct. 25.

Culver, John F., Los Angeles, Calif. Scoring device. No. 1,394,715; Oct. 25.

Cunniff, Edward A., Fall River, assignor to Draper Corporation, Hopedale, Mass. Spindle. No. 1,394,668; Oct. 25.

Cureton, David D., Jr., Tallahassee, Fla. Automatic-stop oil-gage. No. 1,395,095; Oct. 25.

Curtiss Aeroplane and Motor Corporation. (See Gilmore, William L., assignor.)

Da Costa, Arthur V., Providence, R. I. Swinging figure toy. No. 1,394,670; Oct. 25.

Da Costa, Arthur V., Providence, R. I. Toy. No. 1,394,669; Oct. 25.

Dalos, Gaston J., Courbevoie, France. Compressor. No. 1,394,811; Oct. 25.

Dalton Adding Machine Company, The. (See Landsiedel, Harry, assignor.)

Danielsson, Axel, Gottenborg, Sweden, assignor to Nordiska Kullager Aktiebolaget, Sweden. Limit-gage. No. 1,394,974; Oct. 25.

Danielson, Frank, Chicago, Ill. Wrench. No. 1,394,539; Oct. 25.

Davern, Stephen A., assignor of one-half to F. E. Buchner, Cleveland, Ohio. Tool. No. 1,394,608; Oct. 25.

Davies, Evan W., Dowlais, Wales. Apparatus for the automatic manipulation of metal ingots at rolling-mills. No. 1,394,671; Oct. 25.

Davies, Joseph B., Melbourne, Victoria, Australia. Machine for spirally threading or grooving wire. No. 1,394,716; Oct. 25.

Davis, Cortland W., assignor to The Mantle Lamp Company of America, Chicago, Ill. Fastener for covers. No. 1,394,672; Oct. 25.

Davis, David J. and W. C.; said W. C. Davis assignor of forty per cent. to G. Davis, Columbus, Ohio. Collapsible bed-spring. No. 1,394,609; Oct. 25.

Davis, George. (See Davis, David J. and W. C., assignors.)

Davis, William C. (See Davis, David J. and W. C.)

Day, Harvey J., and G. J. Finn, Eau Claire, Wis. Train-sheet. No. 1,395,177; Oct. 25.

Dean, James H., Chicago, Ill. Flour-sifter. No. 1,395,096; Oct. 25.

Decker, Alfred, & Cohn. (See Serak, George E., assignor.)

De Cew, Judson A., Mount Vernon, assignor to Process Engineers, Incorporated, New York, N. Y. Rosin product. No. 1,394,610; Oct. 25.

De Clamecy, Philippe, Boston, assignor to B. F. Sturtevant Company, Hyde Park, Mass. Oscillating fan. No. 1,394,975; Oct. 25.

Delich, Petar, Duluth, Minn. Pump. No. 1,394,611; Oct. 25.

De Meutter, Leopold, San Francisco, Calif. Gas-plate. No. 1,395,097; Oct. 25.

Den-Hart Manufacturing Company. (See Denis, William E., assignor.)

Denis, William E., assignor to Den-Hart Manufacturing Company, New Haven, Conn. Washing-machine. No. 1,395,178; Oct. 25.

Dennis, Walter L. (See Ruebsamen, A., and Dennis.)

Denver Rock Drill Manufacturing Company, The. (See Oldham, E. L., and Barrs, assignors.)

De Reamer, Frank C., Schenectady, N. Y., assignor to General Electric Company. Electric switch. No. 1,394,976; Oct. 25.

Dernell Potato Products Co. (See Dernell, William, assignor.)

Dernell, William, assignor to Dernell Potato Products Co., Chicago, Ill. Apparatus for dipping vegetables. No. 1,394,612; Oct. 25.

Determann, August P., Lyons, Iowa. Pneumatic-stacker hood. No. 1,394,812; Oct. 25.

Dibert, Louis D., and R. C. Winter, Philadelphia, Pa. Transposing device for pneumatic musical instruments. No. 1,394,541; Oct. 25.

Dieges & Clust. (See Dieges, Charles J., assignor.)

Dieges, Charles J., assignor to Dieges & Clust, New York, N. Y. Badge. No. 1,394,977; Oct. 25.

Diack, Alexander S., Detroit, Mich. Mixing-bowl. No. 1,394,540; Oct. 25.

Dobbins Manufacturing Company. (See Brandt, Henry E., assignor.)

Dobbins, Michael G., Philadelphia, assignor of one-half to F. H. Shaw, Narberth, Pa. Emery-wheel dresser. No. 1,395,098; Oct. 25.

Doerner, John M., St. Cloud, Minn. Plow. No. 1,395,179; Oct. 25.

Doerr, Fred H., Grand Rapids, Mich., assignor to Cheney Talking Machine Company, Chicago, Ill. Swaging needle-arms and fulcrum-bars. No. 1,394,717; Oct. 25.

Dodds, Ethan I. (See Flannery, J. R., and Dodds.)

Dolbear, Clinton E., Los Angeles, assignor of three-fourths to D. C. Norcross, and one-fourth to J. H. Miller and G. J. Henry, San Francisco, Calif. Recovering potassium compounds from brines containing the same in association with other chemical compounds. No. 1,394,978; Oct. 25.

Donaldson & Fisher Company, The. (See Fisher, Harvey L., assignor.)

Downey, Richard F., assignor to Automatic Auto Jack Company, Milwaukee, Wis. Automobile-jack. No. 1,394,888; Oct. 25.

Doyle, Merrill W., St. Louis, Mo. Connecting device. No. 1,394,673; Oct. 25.

Draper Corporation. (See Cunniff, Edward A., assignor.)

Draper Corporation. (See Nutting, Charles E., assignor.)

Draper Corporation. (See Rhoades, Alonzo E., assignor.)

Draper Corporation. (See Trembley, Ulysse N., assignor.)

Drinker, Philip. (See Gault, Henry, assignor.)

Drury, Frederick A., Jersey City, N. J., assignor to P. Lorillard Company, New York, N. Y. Sheet-feeding apparatus. No. 1,394,613; Oct. 25.

Dudley, Arthur J., Jersey City, N. J., assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting-machine. No. 1,394,614; Oct. 25.

Duffey, Homer N., Jr. (See Thompson, George H., assignor.)

Dull, Raymond W., La Grange, assignor to Link Belt Company, Chicago, Ill. Link for chain-belts. No. 1,394,979; Oct. 25.

Dull, Raymond W., La Grange, assignor to Link Belt Company, Chicago, Ill. Link for chain-belts. No. 1,394,980; Oct. 25.

Duncan, Robert H., Epping, near Sydney, New South Wales, Australia. Security box or case. No. 1,394,981; Oct. 25.

Dunham Company The. (See Hunter Robert M. assignor.)

Dunlop Tire and Rubber Goods Company. (See Burns, T. A., and Huether, assignors.)

Edison, Thomas A., Incorporated. (See Shelly, Samuel, assignor.)

Elbets, Max. (See Luber, S., and Elbetz, assignor.)

Elfiaender, Ludwig. (See Luttringhaus, A., and Elfiaender.)

Elder, Matthew L., Pittsfield, Mass., assignor to General Electric Company. Casing for electrical apparatus. No. 1,394,982; Oct. 25.

Electric Vacuum Cleaner Company. (See Rosenfield, William W., assignor.)

Electrical Engineers Equipment Co. (See Christensen, Christen, assignor.)

Ellis, Axel E., Boston, Mass. Vehicle-wheel. No. 1,395,099; Oct. 25.

Emery, Walter E., Peoria, Ill. Sealing shafts or wells. No. 1,394,718; Oct. 25.

Empire Transformer Company. (See Mendels, Irwin J., assignor.)

Enache, Cociu, assignor to one-tenth to G. P. Riza, Dallas, Tex. Automatic safety-gate for railway-crossings. No. 1,394,813; Oct. 25.

Engler, Richard A., Evanston, Ill. Flying-machine. No. 1,394,814; Oct. 25.

Bagley, Richard A., Dubuque, Iowa. Electrically-operated car and control apparatus. No. 1,[illegible]; Oct. 25.
Bagley, Richard A., Evanston, Ill. [illegible]. No. 1,394,616; Oct. 25.
Erwin, Luther E., Covington, Ohio. Gas-controlling valve. No. 1,394,613; Oct. 25.
Etzweiler, William, and Thomas H. Fox, Pittsburgh, Pa. Sounding instrument. No. 1,395,150; Sept. 25.
Everlon Building Material Manufacturing Company. (See Fischer, Joseph A., and Meier.)
Evans, Edward E., Detroit, Mich. Metal shaft-floating back for automobiles. No. 1,[illegible]; Oct. 25.
Evendon, Alfred L., J. D. and J. A. Cheney, Rome, N. Y. Implement for fixing tips to laces. No. 1,394,719; Oct. 25.
Ewell, Laurence M. (See Hope, A., G. J., and Ewell.)
Fanmot, Winifred M., Newtownards, Ireland. Receptacle. No. 1,394,617; Oct. 25.
Fay, Thomas L., Seattle, Wash. Attachment for automobile running-boards. No. 1,[illegible]; Oct. 25.
Febrey, Harold H., Newark, assignor to The American Steel and Wire Company of New Jersey, Hoboken, N. J. Rail-bond. No. 1,394,618; Oct. 25.
Federal Products Company, The. (See Rowland, Andrew J., assignor.)
Feltman, Charles L., Brooklyn, N. Y. Garment-supporter. No. 1,394,720; Oct. 25.
Ferguson, Alexander D., Chicago, Ill., assignor to Sullivan Machinery Company. Compressor-controlling mechanism. No. 1,394,619; Oct. 25.
Festo, John, Brooklyn, N. Y. Gas-burner. No. 1,394,721; Oct. 25.
Fiego, Alexander J. E., Lynn, Mass., assignor to General Electric Company. Electrical measuring instrument. No. 1,394,623; Oct. 25.
Fiber Electric Heater, Limited. (See Kratt, Charles, assignor.)
Finckh, Fritz, Essen, assignor to Fried. Krupp Aktiengesellschaft. Essen-on-the-Ruhr, Germany. Barrel-recoil gun. No. 1,394,624; Oct. 25.
Finn, Gilbert J. (See Day, H. J., and Finn.)
Firestone Tire & Rubber Company, The. (See Stevens, William C., assignor.)
Fischer, Joseph A., assignor to Eureka Bedding Manufacturing Company, Brooklyn, N. Y. Day-bed with adjustable folding headpiece. No. 1,394,625; Oct. 25.
Fisher, Harvey L., assignor to The Dusaldeem & Fisher Company, Chicago, Ill. Driving mechanism. No. 1,394,966; Oct. 25.
Fisk Rubber Company, The. (See Midgley, T., and Naylor, assignors.)
Fite, Cephas V., Charlotte, N. C. Sawing apparatus. No. 1,395,100; Oct. 25.
Fite, Cephas V., Charlotte, N. C. Manually-portable sawing-machine. No. 1,395,101; Oct. 25.
Flannery Bolt Company. (See Flannery, J. R., and Dodds, assignors.)
Flannery, John R., and E. I. Dodds, assignors to Flannery Bolt Company, Pittsburgh, Pa. Staybolt structure. No. 1,394,542; Oct. 25.
Flannery, John R., and E. I. Dodds, assignor to Flannery Bolt Company, Pittsburgh, Pa. Staybolt structure. No. 1,394,543; Oct. 25.
Flemings, Richard, Westfield, N. J., assignor to The Richard Fleming Company, Apparatus for condensing and treating distillates. No. 1,394,967; Oct. 25.
Fleming, Richard, Company, The. (See Fleming, Richard, assignor.)
Flood, S. D. (See Snyder, Frederick T., assignor.)
Flood, Samuel D., Kenilworth, Ill. Method of and apparatus for baking. No. 1,394,674; Oct. 25.
Florence, Joule. (See Koster, William J., assignor.)
Flynn, John K., Superior, Wis. Stump-puller. No. 1,394,544; Oct. 25.
Foedisch, Charles O. and R. J., Chicago, Ill. Door-stop. No. 1,394,859; Oct. 25.
Foedisch, Roy J. (See Foedisch, Charles O. and R. J.)
Fogde, Gustav, Hoquiam, Wash. Power-hammer. No. 1,394,722; Oct. 25.
Folberth, William M., Cleveland, Ohio. Bracket. No. 1,394,988; Oct. 25.
Foley, Mahlon S. (See Graham, J. H., and Foley.)
Folk, Joseph. (See Luschka, A. R., and Folk.)
Foster, Emory M., assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio. Demountable-rim-operating lever. No. 1,394,989; Oct. 25.
Foster, Freling C., Chicago, Ill. Car-brake. No. 1,394,990; Oct. 25.
Foundation Oven Corporation. (See Roberts, William E., assignor.)
Frechette, Joseph H., and L. Hachez, Lowell, Mass. Picture-frame. No. 1,394,675; Oct. 25.
Fredricks, Charles, Brooklyn, N. Y. Fishing-tackle. No. 1,394,616; Oct. 25.
Fredriksen, Christian, Croydon, near Sydney, New South Wales, Australia. Spring suspension for automobiles. No. 1,394,724; Oct. 25.
Frederick, William J., *et al.* (See Fuller, Clarence C., assignor.)
Freese, Hugo, Genesee, N. Y. Pad or mat. No. 1,395,227; Oct. 25.
French, Thomas H., Pacific Grove, Calif. Sealed container. No. 1,394,545; Oct. 25.
Frick, Orlando C., assignor to Smalley Manufacturing Company, Manitowoc, Wis. Comminuting attachment for feed-cutters. No. 1,394,725; Oct. 25.
Frick, [illegible], Ill., Oliver. No. 1,394,991; Oct. 25.
Fritz, [illegible] (See Smith, Alexander J., assignor.)
Fritz, [illegible]schaft. (See Abraham, William, assignor.)
Fritz, [illegible]schaft. (See Finckh, Fritz, assignor.)
Frost, Richard M., and A. E. Bacon, Portland, Oreg.; [illegible] assignor to said Frost. Telephone [illegible]. No. 1,394,723; Oct. 25.
[illegible] et al. (See Frost, Richard, assignor.)
[illegible] A. (See Hayter, W. O., and Fry.)
[illegible], Kansas City, assignor to J. E. Gregg, Jr., [illegible] Mining device for explosive-engines. No. 1,394,[illegible]; Oct. 25.
Frost, Clinton E., East Cleveland, assignor to The Cleveland [illegible] Company, Cleveland, Ohio. Rotary [illegible]. No. 1,394,546; Oct. 25.
Frost, Richard, assignor to American Foundry & Furnace Company, Bloomington, Ill. Furnace-casing. No. 1,394,921; Oct. 25.
Fry, Edwin B., Oroville, Calif. Combined gage and marker. No. 1,394,662; Oct. 25.
Fuessl, Gottlieb, and H. Schmid, assignors, by mesne assignments, to Apollo Magneto Corporation, Brooklyn, N. Y. Timer-ring for ignition systems. No. 1,394,042; Oct. 25.
Fuller, Clarence C., assignor of one-fifth to H. K. Fuller, one-fifth to F. C. Griffin, one-fifth to H. L. Hiles, and one-fifth to W. J. Frederick, Lanley, Ala. Thrust-bearing for internal-combustion engines. No. 1,395,043; Oct. 25.
Fuller Engineering Company. (See Barnhurst, H. R., Collins, and Barnhurst, assignors.)
Fuller, Howard B., *et al.* (See Fuller, Clarence C., assignor.)
Fuller-Lehigh Company. (See Kinter, C. W., and Smith, assignors.)
Gaait, Henry, Strasmburg, France, assignor of one-half to P. Drinker, Bethlehem, Pa. Applying coated fabrics to objects. No. 1,394,920; Oct. 25.
Gaarde, Otto, Winesap, Wash. Clasp. No. 1,395,102; Oct. 25.
Geisenhöner, Henry, Schenectady, N. Y., assignor to General Electric Company. Electric heating apparatus. No. 1,394,991; Oct. 25.
Gerlach, Fred, *et al.*, trustees. (See Lindgren, A. C., and Johnson, assignors.)
General American Tank Car Corporation. (See Weaver, Robert E., assignor.)
General Electric Company. (See Abbott, Charles C., assignor.)
General Electric Company. (See Creighton, E. F. F., and Shavor, assignors.)
General Electric Company. (See De Roamer, Frank C., assignor.)
General Electric Company. (See Elder, Matthew L., assignor.)
General Electric Company. (See Fiego, Alexander J. E., assignor.)
General Electric Company. (See Geisenhöner, Henry, assignor.)
General Electric Company. (See Hendricks, Allan B., Jr., assignor.)
General Electric Company. (See Hobart, Henry M., assignor.)
General Electric Company. (See Kierstead, Friend H., assignor.)
General Electric Company. (See McLain, Robert H., assignor.)
General Electric Company. (See Moss, Sanford A., assignor.)
General Electric Company. (See Murphy, Edwin J., assignor.)
General Electric Company. (See O'Neil, James A., assignor.)
General Electric Company. (See Palmer, Robert, assignor.)
General Electric Company. (See Reichold, Ludwig, assignor.)
General Electric Company. (See Stearns, Ralph W., assignor.)
General Electric Company. (See Sugimura, Nobuchika, assignor.)
General Electric Company. (See Van Aller, Tycho, assignor.)
General Electric Company. (See Wilkinson, James, assignor.)
Gilmore, George de V. (See Bishop, George W., Jr., assignor.)
Gilmore, William L., Fort Washington, assignor, by mesne assignments, to Curtiss Aeroplane and Motor Corporation, Buffalo, N. Y. Airplane-fuselage. No. 1,394,726; Oct. 25.
Gleason, James M. (See Berg, J. P., and Gleason.)
Gleason Works. (See Stewart, A. L., and Head, assignors.)
Goebel, George, assignor to The Crown Cork and Seal Company of Baltimore City, Baltimore, Md. Stopper-extractor. No. 1,395,103; Oct. 25.
Goetz, Oscar H., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill. Automobile-bumper. No. 1,394,662; Oct. 25.
Goetz, Oscar H., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill. Automobile-bumper. No. 1,394,806; Oct. 25.

Goerty, Henry B., Des Moines, Iowa. Stock-waterer. No. 1,394,517; Oct. 25.
Goldstein, Samuel H., Philadelphia, Pa. Stop-motion. No. 1,394,546; Oct. 25.
Gooch, Catherine W., assignor to Burroughs Adding Machine Company, Detroit, Mich. Adding-machine. No. 1,395,044; Oct. 25.
Good Inventions Co. (See Good, John, assignor.)
Good, John, assignor to Good Inventions Co., Brooklyn, N. Y. Incandescent-gas-burner. No. 1,394,994; Oct. 25.
Goodyear Redwood Co. (See Lawson, Davenport, assignor.)
Goodyear Tire & Rubber Co., The. (See Harsel, W. B., and Nall, assignors.)
Gover, Hardy A., Epping, near Sydney, New South Wales, Australia. Stocking-suspender. No. 1,394,822; Oct. 25.
Graham, James H., and M. S. Foley, assignors to The Torrington Company, Torrington, Conn. Die for making spoke-nipples. No. 1,395,161; Oct. 25.
Gray, Forrest L., Kenmore, Ohio. Hair-clipper. No. 1,395,104; Oct. 25.
Great Western Commercial Body Company. (See Berg, J. P., and Gleason, assignors.)
Green, J. E. (See Fritz, John H., assignor.)
Greer, William E., Syracuse, N. Y. Tire-mold. No. 1,394,547; Oct. 25.
Griffin, Albert P., Troy, N. Y. Chain connection. No. 1,394,618; Oct. 25.
Griffin, Fred C., *et al.* (See Fuller, Clarence C., assignor.)
Griffin, Bartie J., Springfield, Mass. Valve. No. 1,394,805; Oct. 25.
Grob, Armin, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Green acid dyestuffs containing chromium and making same. No. 1,394,823; Oct. 25.
Gronbech, Christian E. A., Keene, N. H. Mail-clip. No. 1,394,727; Oct. 25.
Grover, Harry, Bellingham, Wash. Automatic garage-door. No. 1,394,728; Oct. 25.
Gutenkunst, William, Milwaukee, Wis. Hay-carrier. No. 1,394,729; Oct. 25.
Gutridge, John A., and J. A. Wood, McLoud, Okla. Road-drag. No. 1,394,548; Oct. 25.
Habrich, Peter, Philadelphia, Pa. Life-sustaining apparatus. No. 1,394,824; Oct. 25.
Hachez, Louis. (See Frechette, J. E., and Hachez.)
Hafemeister, William C., assignor to The Metal Parts Manufacturing Company, Cleveland, Ohio. Self-opening die-head. No. 1,394,549; Oct. 25.
Hahn, Francis C., Newton, Mass. Auxiliary device for talking-machines. No. 1,394,825; Oct. 25.
Halladay, Lewis P., Decatur, Ill. Double bumper-bar. No. 1,395,045; Oct. 25.
Hall, Charles P., near Highland Springs, Va. Governor for gas-engines. No. 1,394,826; Oct. 25.
Halvorson, Cromwell A. B., Jr., Lynn, Mass. Headlight-reflector. No. 1,394,896; Oct. 25.
Hamor, William A. (See Tressler, Donald K., assignor.)
Hand, Townson, New Haven, Conn. Revolving heel. No. 1,394,676; Oct. 25.
Haney, Myron L., Beloit, Wis. Device for opening and closing garage-doors and the like. No. 1,395,240; Oct. 25.
Hansa Metallwerk G. m. b. H., Abteilung Maschinenfabrik. (See Schilling, Hugo O., assignor.)
Hanseaana, Richard A. (See Kucharski, Stanislaus, assignor.)
Hansen, Hans, Kansas City, Mo. Drain-board. No. 1,394,994; Oct. 25.
Hanson, Albert J., assignor to Tidewater Equipment Corporation, Portland, Me. Engine-starter. No. 1,394,619; Oct. 25.
Harper, William D., Sydenham, Ontario, Canada. Alarm track-gage. No. 1,395,106; Oct. 25.
Harriman, George V., New York, N. Y. Piston. No. 1,394,808; Oct. 25.
Harshberger, Russell P., Chicago, Ill. Safety-razor. No. 1,394,827; Oct. 25.
Harsel, William B., and E. Nall, deceased, by E. A. Nall, executrix, assignors to The Goodyear Tire & Rubber Co., Akron, Ohio. Tire-making machine. No. 1,395,055; Oct. 25.
Harsel, William B., and E. Nall, deceased, Akron, E. A. Nall, Cuyahoga Falls, executrix, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio. Tire-making machine. No. 1,395,152; Oct. 25.
Harsel, William B., and E. Nall, deceased, Akron, E. A. Nall, Cuyahoga Falls, executrix, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio. Tire-making machine. No. 1,395,153; Oct. 25.
Haslam, Joseph C., San Francisco, Calif. Hat-shaping device. No. 1,395,106; Oct. 25.
Haupt, Mary A. M., Chicago, Ill. Educational apparatus. No. 1,394,620; Oct. 25.
Haus, John G., Weirton, W. Va. Water-heater. No. 1,394,897; Oct. 25.
Hawk, Ivan O., East Cleveland, assignor of one-half to T. B. Soden, Cleveland, Ohio. Wind musical instrument. No. 1,395,107; Oct. 25.
Haynes, Charles M., Chillicothe, Ohio. Clamp for adjusting spectacle-frames. No. 1,394,828; Oct. 25.
Hayter, Wilbur O., Klamath Falls, Oreg., and G. A. Frisk, Gridley, Calif. Jam-nut. No. 1,394,730; Oct. 25.
Haywood, John W., New York, assignor to Horne Manufacturing Company, Brooklyn, N. Y. Multiple connector. No. 1,395,108; Oct. 25.
Head, Ernest C. (See Stewart, A. L., and Head.)
Hendricks, Allan B., Jr., Pittsfield, Mass., assignor to General Electric Company. Water-cooled electrical apparatus. No. 1,394,899; Oct. 25.
Hennig, Hermann O., Atlanta, Ga. Broom. No. 1,395,109; Oct. 25.
Henry, George J., *et al.* (See Delbear, Clinton E., assignor.)
Herterich, Milton B., Omaha, Nebr. Concrete building-slab. No. 1,394,550; Oct. 25.
Hersh, Lewis, Ironwood, Mich. Switch-stand. No. 1,395,184; Oct. 25.
Hertzberg, Harry. (See Wohl, M. J., and Hertzberg.)
Hibser, Philip D., Seattle, Wash. Valve. No. 1,394,900; Oct. 25.
Hiles, Edward L., *et al.* (See Fuller, Clarence C., assignor.)
Hill Pump Valve Company, The. (See Umbdenstock, Walter, assignor.)
Hilsabeck, Albert R. (See Button, Frank M., assignor.)
Hindahl, David, assignor to National Dump Car Company, Chicago, Ill. Door-shaft lever. No. 1,394,621; Oct. 25.
Hitt, Thomas G., Seattle, Wash. Aerial toy projectile. No. 1,394,551; Oct. 25.
Hoagland, Thomas G. (See Meachen, J., and Bergman, assignors.)
Hobart, Henry M., Schenectady, N. Y., assignor to General Electric Company. Electricity-transformer and transforming and converting apparatus. No. 1,394,901; Oct. 25.
Hoeschen, Herman. Freeport, Minn. Buckle. No. 1,394,552; Oct. 25.
Hoffer, Herman and J., New York, N. Y. Hollow casting. No. 1,394,553; Oct. 25.
Hoffer, Jacob. (See Hoffer, Herman and J.)
Hoffman, Richard A., New York, N. Y. Ash-protector and cutter adaptable to cigars and cigarettes. No. 1,394,622; Oct. 25.
Holdsworth, Willis, Providence, R. I. Top screw for gill-drawing frames. No. 1,394,829; Oct. 25.
Hole, Dean, Chicago, Ill. Luminous pendant. No. 1,395,110; Oct. 25.
Holland Lighting and Specialty Co. (See Olinger, Thomas, assignor.)
Hollifield, Horatio B., Washington, D. C. Attachment for motor-vehicles. No. 1,395,111; Oct. 25.
Holloway, Halbert H., San Francisco, Calif. Intake-manifold-heating device. No. 1,394,830; Oct. 25.
Holman, Vasser C., Nixon, Tex. Spittoon. No. 1,395,185; Oct. 25.
Holt, Benjamin, assignor to The Holt Manufacturing Company, Stockton, Calif. Upper-run support for chain-tracks. No. 1,394,995; Oct. 25.
Holt Manufacturing Company, The. (See Best, Clarence L., assignor.)
Holt Manufacturing Company, The. (See Holt, Benjamin, assignor.)
Holt Manufacturing Company, The. (See Holt, Pliny E., assignor.)
Holt Manufacturing Company, The. (See Norelius, Emil F., assignor.)
Holt Manufacturing Company, The. (See Turnbull, W., and Norelius, assignors.)
Holt Manufacturing Company, The. (See Turnbull, William, assignor.)
Holt Manufacturing Company, The. (See Whitnall, Clarence A., assignor.)
Holt Manufacturing Company, The. (See Wickersham, Elmer E., assignor.)
Holt, Pliny E., assignor to The Holt Manufacturing Company, Stockton, Calif. Tractor-truck construction. No. 1,394,996; Oct. 25.
Holthaus, George, assignor to The Tin Decorating Company of Baltimore, Baltimore, Md. Method of and means for assembling sifter-top members for cans. No. 1,394,623; Oct. 25.
Hopkins, Richard M., Rutherford, assignor to American District Telegraph Company, Jersey City, N. J. Key device for register. No. 1,394,831; Oct. 25.
Hopkins, Richard M., Rutherford, assignor to American District Telegraph Company, Jersey City, N. J. Watchman's registry system. No. 1,394,832; Oct. 25.
Hopkins, Richard M., Rutherford, assignor to American District Telegraph Company, Jersey City, N. J. Key device. No. 1,394,833; Oct. 25.
Hopkins, Richard M., Rutherford, assignor to American District Telegraph Company, Jersey City, N. J. Registry system and register therefor. No. 1,394,834; Oct. 25.
Hopkins, Richard M. (See Johnson, C. C., and Hopkins.)
Horan, John G., Detroit, Mich. Railway-tie. No. 1,394,781; Oct. 25.
Horne Manufacturing Company. (See Haywood, John W., assignor.)
Hosch, Greene C., St. Louis, Mo. Presser-roller-releasing device. No. 1,394,554; Oct. 25.
Hough, Samuel, Atco, N. J. Aerial bomb. No. 1,394,902; Oct. 25.
Howard, Frank A. (See McKenzie-Martyn, E. C., and Howard.)
Howard, John M. (See Allen, C. J., Howard, and Eichle.)
Howell, John A., deceased, Warrenton, Va., by B. H. Bohn and F. A. Neville, executors, Washington, D. C. Wheeled boat. No. 1,395,112; Oct. 25.
Hrissikos, Louis J., Moline, Ill. Medicinal compound. No. 1,395,228; Oct. 25.
Hruby, Thomas J. (See Plummer, George C., assignor.)

Hubbard, Charles W., Weston, Mass. Winding-machine. No. 1,394,732; Oct. 25.
Hubbard, Harry H. Grand Rapids, Mich. Recording-apparatus. No. 1,394,735; Oct. 25.
Huether, Davis J. (See Burns, T. A., and Huether.)
Hudson, John W., Brooklyn, N. Y. Crank-shaft. No. 1,395,113; Oct. 25.
Hughes, Harry F. (See Klocke, William H., assignor.)
Hung, Jeang Ying. (See Beaumont, Edward D., assignor.)
Hunt, Ormond E., assignor to Packard Motor Car Company, Detroit, Mich. Fluid-compressor for motor-vehicles. No. 1,394,835; Oct. 25.
Hunter, Robert M., Lexington, Ky., assignor to The Dunham Company, Berea, Ohio. Implement draft appliance. No. 1,394,903; Oct. 25.
Hussong Dyeing Machine Company. (See Thompson, James H., assignor.)
Hutton, Edward S., Lapel, Ind. Glass-discharging mechanism. No. 1,394,677; Oct. 25.
Hydraulic Pressed Steel Company, The. (See Foster, Emory M., assignor.)
Ickes, Peter G., Chanute, Kans. Railway-tie. No. 1,394,624; Oct. 25.
Ide, Harry L., Springfield, Ill. Electrical transformer. No. 1,394,555; Oct. 25.
Ideal Products Company. (See Anderson, William M., assignor.)
Ingersoll-Rand Company, The. (See Bayles, Lewis C., assignor.)
Ingersoll-Rand Company. (See Carpenter, Allan O., assignor.)
Inman, Harry A., and W. H., Newark, N. Y. Receptacle-making machine. No. 1,395,229; Oct. 25.
Inman, William H. (See Inman, Harry A. and W. H.)
International Harvester Company. (See Beall, William L., assignor.)
International Harvester Company. (See Mott, Carl W., assignor.)
International Harvester Company. (See Pearson, Charles, assignor.)
Ingrig, Walter V., assignor to Badger Manufacturing Corporation, Milwaukee, Wis. Clamp. No. 1,394,904; Oct. 25.
Iukaszewski, John, Chicago, Ill. Gas or liquid fuel burner. No. 1,395,196; Oct. 25.
Jackman, Charles W., assignor of one-half to M. M. Jackman, Detroit, Mich. Rotary pump. No. 1,395,114; Oct. 25.
Jackman, Miles M. (See Jackman, Charles W., assignor.)
Jackson, William J., Brooklyn, N. Y. Machine for grinding and reboring engine-cylinders. No. 1,394,836; Oct. 25.
James, Charles A., Philadelphia, Pa. Combination toilet box. No. 1,394,837; Oct. 25.
Januchowsky, John, Webster Groves, Mo. Reinforcing and sealing device. No. 1,394,678; Oct. 25.
Jaslow, Leah, Brooklyn, N. Y. Child's garment. No. 1,395,115; Oct. 25.
Jeffrey Manufacturing Company, The. (See Lindenberg, Frank H., assignor.)
Jennings Automatic Dump Body, Inc. (See Akers, Glen, assignor.)
Jicha, Mathew, Bridgeport, Ohio. Antispreading device for railway-rails. No. 1,394,734; Oct. 25.
Johansen, Johan M., Trondhjem, Norway. Apparatus for tightening leakages in and about boiler-tubes and the like. No. 1,395,180; Oct. 25.
Johns, Morgan J., Miles City, Mont. Automatic pressure-operated valve for engines or pumps. No. 1,394,679; Oct. 25.
Johnson, Albert E., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for preparing insoles. No. 1,394,905; Oct. 25.
Johnson, Alfred R., Reedsville, Pa. Strapholder. No. 1,394,906; Oct. 25.
Johnson, Clarence C., Mount Vernon, N. Y., and R. M. Hopkins, Rutherford, assignors to American District Telegraph Company, Jersey City, N. J. Registry system and register therefor. No. 1,394,838; Oct. 25.
Johnson, Clarence C., Mount Vernon, N. Y., assignor to American District Telegraph Company, Jersey City, N. J. Registry system. No. 1,394,839; Oct. 25.
Johnson, Clarence C., Metuchen, and R. M. Hopkins, Rutherford, assignors to American District Telegraph Company, Jersey City, N. J. Registry apparatus. No. 1,394,840; Oct. 25.
Johnson, Clarence C., New York, N. Y., assignor to American District Telegraph Company, Jersey City, N. J. Watchman's tour signal system. No. 1,394,841; Oct. 25.
Johnson, Frank E., Trinidad, Colo. Weaner. No. 1,395,116; Oct. 25.
Johnston, Bess E., Chicago, Ill. Medical apparatus. No. 1,395,117; Oct. 25.
Johnston, Roy B. (See Lindgren, A. C., and Johnston.)
Jones, George D., Winterhaven, Fla. Attachment for fishing-reels. No. 1,395,118; Oct. 25.
Jones, Joseph W., New York, N. Y. Winding device for spring-motors. No. 1,394,907; Oct. 25.
Jones, Juell M. (See Neil, C. B., and Boggs, assignors.)
Jones, Whitney B., Newark, N. J., assignor to Butterworth-Judson Corporation, New York, N. Y. Making nitrodiaso compounds. No. 1,394,556; Oct. 25.
Jordan, Paul R., Indianapolis, Ind. Ventilator apparatus. No. 1,394,735; Oct. 25.
Kahn, Dolphy. (See Radois, L., and Kahn.)
Kaminska, Maria. (See Wellirl, George, assignor.)
Kanaszka, John V., Spragues, Wash. Rear axle. No. 1,394,842; Oct. 25.
Kanrath, Charles F., Omaha, Nebr. Rendering fats and oils. No. 1,394,776; Oct. 25.
Karger, David, Milwaukee, Wis. Knitted cap. No. 1,395,230; Oct. 25.
Karlsson, Walfrid, Wigglyholm, near Stockholm, assignor to Aktiebolaget Tubus, Stockholm, Sweden. Heater for hot-pipe systems. No. 1,394,557; Oct. 25.
Kaufman, Alfred, New York, N. Y. Hydrocarbon-burner. No. 1,395,187; Oct. 25.
Keesler, Clyde C., assignor to Watson Wagon Company, Canastota, N. Y. Trailer-supporting means. No. 1,394,737; Oct. 25.
Keller, Arnold B., *et al.*, trustee. (See Lindgren, A. C., and Johnston, assignors.)
Kelling, Gustave C., Chicago, Ill. Feeding mechanism. No. 1,394,908; Oct. 25.
Kennard, Harold J., Easton, Pa., assignor to Research Corporation, New York, N. Y. Apparatus for the electrical treatment of gases. No. 1,394,771; Oct. 25.
Kennedy, Ernest N., Birchwood, Sunningdale, England. Razor-blade holder. No. 1,394,909; Oct. 25.
Kennedy, John W., Seneca Falls, assignor to Kiddie-Town Products, Inc., Rochester, N. Y. Folding crib. No. 1,394,625; Oct. 25.
Kenyon, Roy A., Newcastle, Ind. Thread-gage. No. 1,395,231; Oct. 25.
Kesselring, Adam, Quincy, Ill. Phonograph-record holder. No. 1,395,188; Oct. 25.
Keyes, Henry B., Philadelphia, Pa. Vertical-milling-machine attachment. No. 1,394,843; Oct. 25.
Kiddie-Town Products, Inc. (See Kennedy, John W., assignor.)
Kierstead, Friend H., Pittsfield, Mass., assignor to General Electric Company. Reactor in tanks. No. 1,394,910; Oct. 25.
King, Oscar L. (See Sager, E. E., and King.)
King, Roy D., Chicago, Ill. Shingle-cutting machine. No. 1,394,911; Oct. 25.
Kinter, Charles W., Wellsburg, and G. Z. Smith, Follansbee, W. Va., assignors to Fuller-Lehigh Company, Fullerton, Pa. Switching-valve. No. 1,394,738; Oct. 25.
Kjorlien, Edwin, Minneapolis, Minn. Cooling system for internal-combustion-engine pistons. No. 1,394,844; Oct. 25.
Klauber, Laurence M., assignor of one-half to San Diego Consolidated Gas & Electric Company, San Diego, Calif. Automatic circuit-controlling apparatus. No. 1,395,046; Oct. 25.
Kleinert, I. B., Rubber Company. (See Cohn, Charles C., assignor.)
Klocke, William H., Woodhaven, assignor of one-half to H. F. Hughes, Brooklyn, N. Y. Nut-lock. No. 1,394,740; Oct. 25.
Klocke, William H., Woodhaven, assignor of one-half to H. F. Hughes, Brooklyn, N. Y. Nut-lock. No. 1,394,741; Oct. 25.
Klocke, William H., Woodhaven, assignor of one-half to H. F. Hughes, Brooklyn, N. Y. Rear wheel for motor-vehicles. No. 1,394,739; Oct. 25.
Klug, Louis E., assignor to Rub-Tex Products, Inc., Indianapolis, Ind. Process and apparatus for the manufacture of rubber jars. No. 1,394,558; Oct. 25.
Knudson, Gustave P., Harley, S. D. Wheel attachment. No. 1,394,680; Oct. 25.
Koch, Reinhold G., New York, N. Y. Insect-trap. No. 1,394,626; Oct. 25.
Koedding, William, St. Louis, Mo. Surface condenser. No. 1,394,627; Oct. 25.
Koehler, Edward J., Bronxville, assignor to Messinger Automatic Sales Corporation, New York, N. Y. Coin-vending machine. No. 1,394,559; Oct. 25.
Koliasch, Edward G., Browning, Mo. Vehicle-wheel. No. 1,395,189; Oct. 25.
Kolster, Frederick A., Washington, D. C. Apparatus for transmitting radiant energy. No. 1,394,560; Oct. 25.
Koonts, Victor E., assignor to The Victor Tool Company, Waynesboro, Pa. Die-head. No. 1,394,845; Oct. 25.
Kopf, John C., Bellevue borough, Pa. Die-casting machine. No. 1,394,561; Oct. 25.
Korkoss, Stanislaw J., Schenectady, N. Y. Vise. No. 1,394,912; Oct. 25.
Koster, William J., assignor to L. Florence, Peterborough, Ontario, Canada. Accessory for Ford automobiles. No. 1,394,846; Oct. 25.
Kramer, Andrew A., Kansas City, Mo. Vehicle-tank structure. No. 1,394,742; Oct. 25.
Kramer, Le Roy, and A. Boome, Chicago, Ill. Lathe-tool holder. No. 1,394,628; Oct. 25.
Kratt, Charles, Nottingham, England, assignor to Fibar Electric Heater, Limited. Electric water-heater. No. 1,394,847; Oct. 25.
Kronquest, Alfred L., Chicago, Ill., assignor to Continental Can Company, Inc., Syracuse, N. Y. Magazine and sheet-withdrawing mechanism therefor. No. 1,395,232; Oct. 25.
Kronquest, Alfred L. (See Robinson, D. P., Coyle, and Kronquest.)
Kube, Frederick E., Clinton, Iowa. Turbine. No. 1,394,772; Oct. 25.

Kucharski, Stanislaus, Charlottenburg, near Berlin, assignor to E. A. Hansemann, Berlin, Germany. Device for maintaining the slack of cinematographic films. No. 1,395,119; Oct. 25.
Kuhn, Harry A., Edgewood, Md. Antidimming composition. No. 1,394,773; Oct. 25.
Kuhn, Harry A., Edgewood, Md. Antidimming composition. No. 1,394,774; Oct. 25.
Kuhn, Frank, L. H. Thomas, and J. G. Spiess, assignors to American Electrical Heater Company, Detroit, Mich. Soldering-iron. No. 1,394,562; Oct. 25.
Kunkle, George, Grand Junction, Colo. Radium hydroemanometer. No. 1,395,120; Oct. 25.
Kuttroff, Adolf. (See Luttringhaus, A., and Eiflaender, assignors.)
La Duke, Emery E., Salt Lake City, Utah. Centrifugal basket. No. 1,394,743; Oct. 25.
Lafata, Antonio, Harbor City, Calif. Gravity labeling-machine. No. 1,394,744; Oct. 25.
Lake, Simon, Milford, Conn. Erecting concrete structures. No. 1,394,997; Oct. 25.
Lamb, Thomas F., Mansfield, Ohio. Coiling-machine. No. 1,395,190; Oct. 25.
Lambeck, Max, Barmen, Germany. Making the coloring natural horn water-resisting. No. 1,395,191; Oct. 25.
Landgraf, Emma, geb. Cartharius, Dresden, Germany. Garter. No. 1,395,192; Oct. 25.
Landsiedel, Harry, Norwood, assignor to The Dalton Adding Machine Company, Cincinnati, Ohio. Recording-machine. No. 1,395,121; Oct. 25.
Larala, Giuseppe C., New York, N. Y. Headrest for barber or like chairs. No. 1,394,913; Oct. 25.
Lauson, Duffa B., Grand Rapids, Minn. Automobile-door latch. No. 1,394,681; Oct. 25.
Lawrence, Charles A. (See McCorkindale, William P., assignor.)
Lawson, Davenport, assignor to Goodyear Redwood Co., Elk, Calif. Logging apparatus. No. 1,394,745; Oct. 25.
Lasenby, William R., Hardin, Mont. Trapper's tool. No. 1,395,122; Oct. 25.
Lee, Ira, assignor to W. J. Lee, Seattle, Wash. Sadiron-holder. No. 1,394,998; Oct. 25.
Lee, William J. (See Lee, Ira, assignor.)
Leicht, John, Jr., Burlington, Iowa. Sled. No. 1,394,629; Oct. 25.
Leise, Hubert A., Meriden, Conn. Telephone instrument. No. 1,394,563; Oct. 25.
Leonard, Frank B. (See Beasley, Alfred E., assignor.)
Leopold, George O., assignor to North Bros. Mfg. Co., Philadelphia, Pa. Lifting-jack. No. 1,395,123; Oct. 25.
Leroy, Charles E. H., and F. M. J. A. Claireaux, Versailles, France. Manufacture of a plastic product. No. 1,394,746; Oct. 25.
Levering, James F., Atlantic City, N. J., assignor to Standard Cotton Company of America. Machine for treating cotton. No. 1,394,775; Oct. 25.
Lewis, Frank D., West Orange, N. J., assignor to Pathe Freres Phonograph Company, New York, N. Y. Automatic stop mechanism for phonographs. No. 1,394,776; Oct. 25.
Lewis, Frank D., West Orange, N. J., assignor to Pathe Freres Phonograph Company. Automatic stop for phonographs. No. 1,394,777; Oct. 25.
Lewis, Frederick W., assignor to Chapin & Hollister Co., Providence, R. I. Forming a buckle-body. No. 1,395,124; Oct. 25.
Lewis, Otto L., Houston, Tex. Power steering device for tractors. No. 1,394,682; Oct. 25.
Lewis, Wilfred E. D., J. S. Adamson, and M. J. Mahon, Ottawa, Ontario, Canada. Portable flushing device. No. 1,395,125; Oct. 25.
Libby-Owens Sheet Glass Company, The. (See Colburn, Irving W., assignor.)
Libow, Frida. (See Libow, Jacob, assignor.)
Libow, Jacob, Springfield, assignor to F. Libow, Hampden county, Mass. Wire mattress fabric. No. 1,394,848; Oct. 25.
Lindenberg, Frank H., assignor to The Jeffrey Manufacturing Company, Columbus, Ohio. Centrifugal separator. No. 1,395,193; Oct. 25.
Lindgren, Alexus C., and R. B. Johnston, Hamilton, Ontario, Canada, assignor to F. Gerlach and A. B. Keller, trustees, Chicago, Ill. Power-lift plow. No. 1,394,914; Oct. 25.
Lindgren, Charles F., Duluth, Minn. Portable power device. No. 1,394,564; Oct. 25.
Lindhe, Eric G., New York, N. Y. Portable radial drills. No. 1,395,194; Oct. 25.
Lindman, Konrad W., Stockholm, assignor, by mesne assignments, to Nordiska Kullager Aktiebolaget, Gottenborg, Sweden. Ball-holder for ball-bearings. No. 1,395,126; Oct. 25.
Link Belt Company. (See Dull, Raymond W., assignor.)
Link Belt Company. (See Rapp, A. G. J., and Ewell, assignors.)
Little, Bert M., Hamilton, Ontario, Canada. Attachment for internal-combustion engines. No. 1,394,747; Oct. 25.
Little, Robert P., Columbus, Ohio. Window-sash fastener. No. 1,395,047; Oct. 25.
Litvak, Harry, New York, N. Y. Spring-mattress support. No. 1,394,849; Oct. 25.
Ljungström, Fredrik, Brevik, Lidingön, assignor to Aktiebolaget Ljungströms Angturbin, Stockholm, Sweden. Air-pump for condensers. No. 1,394,748; Oct. 25.
Loening, Grover C., New York, N. Y. Airplane. No. 1,394,630; Oct. 25.
Lohr, Michael E., Westmont borough, Pa. Hoisting apparatus. No. 1,394,915; Oct. 25.
Long, Albert R., Ballston, Va. Internal-combustion engine. No. 1,394,850; Oct. 25.
Long, John E., Hot Springs, Mont. Electric sign. No. 1,394,565; Oct. 25.
Lorillard, P., Company. (See Drury, Frederick A., assignor.)
Loud, George D., Boston, Mass. Pumping unit. No. 1,394,916; Oct. 25.
Lovett, Harry L., Nashua, N. H. Interchangeable price-card section. No. 1,395,127; Oct. 25.
Lowndes, Richard H., Atlanta, Ga. Universal joint. No. 1,394,749; Oct. 25.
Lubé, Henry, Astoria, N. Y. Tone-modifier for sound-boxes. No. 1,395,195; Oct. 25.
Luber, Solomon, and M. Eibetz, New York, N. Y. Pyrophoric igniting device. No. 1,394,917; Oct. 25.
Luedde, Arthur H., St. Louis, Mo. Furniture. No. 1,394,750; Oct. 25.
Luschka, August R., and J. Folk, assignors to U. S. Slicing Machine Company, Laporte, Ind. Adjustable support. No. 1,394,631; Oct. 25.
Luttringhaus, Arthur, Mannheim, and L. Eiflaender, Ludwigshafen-on-the-Rhine, Germany, assignors to A. Kuttroff, New York, N. Y. Manufacture of anthraquinone derivatives and new products resulting therefrom. No. 1,394,851; Oct. 25.
Lyman, Walter H., assignor to The American Perforator Company, Chicago, Ill. Perforating-machine. No. 1,394,566; Oct. 25.
Macdonald, John W. F., Brighton, Mass., assignor to The Merrill Process Company. Hydrocarbon-burner. No. 1,394,567; Oct. 25.
MacDonald, William W., San Francisco, Calif. Hydraulic-ram control. No. 1,395,001; Oct. 25.
Macfadden, Bernarr, New York, N. Y. Portable air cooler, moistener, and purifier. No. 1,394,924; Oct. 25.
Mahon, Martin J. (See Lewis, W. E. D., Adamson, and Mahon.)
Mandel, Louis, Chicago, Ill. Camera attachment. No. 1,394,568; Oct. 25.
Mann, Alfred, Barmen, Germany, assignor, by mesne assignments, to Waldes & Co. Inc., New York, N. Y. Press-button. (Reissue.) No. 15,212; Oct. 25.
Mantle Lamp Company of America, The. (See Davis, Cortland W., assignor.)
Margileth, Adolph W., Cincinnati, Ohio. Sign. No. 1,394,853; Oct. 25.
Marieu, Charles A., St. Louis, Mo. Piston-ring pot-casting and making piston-rings therefrom. No. 1,394,633; Oct. 25.
Markham, James P., Jr. (See Runyan, Benjamin F., assignor.)
Marlow, Richard, Ralph, Ala. Gear-wheel. No. 1,394,751; Oct. 25.
Marmon, Howard. (See Thoms, Max H., assignor.)
Marshall, Ernest W., Yonkers, assignor to J. E. Ogden, Mountainville, N. Y. Expansion-shield. No. 1,394,925; Oct. 25.
Marston, Edgar J. (See Smith, Herman A., assignor.)
Martin, Alfred N., New Dorp, N. Y. Piston. No. 1,394,926; Oct. 25.
Martin, Ernest, Marseille, France. Manufacture of pure alumina. No. 1,394,854; Oct. 25.
Martin, Ernest C., Antrim, N. H. Steel for sharpening cutlery. No. 1,394,927; Oct. 25.
Martin, Isaac, San Diego, Calif. Differential axle. No. 1,394,855; Oct. 25.
Mason, Edwin C., Madison, Wis. Furnace attachment. No. 1,394,634; Oct. 25.
Matsuo, Kenji, Tokyo, Japan. Glass roll. No. 1,394,684; Oct. 25.
Maturo, Pasquale, New Haven, Conn. Automatic latch. No. 1,394,635; Oct. 25.
Mayer, Max. (See Wohl, M. J., and Mayer.)
McAdams, Lewis C., Los Angeles, assignor of one-half to J. M. Benedict, Glendale, Calif. Traffic-signaling mechanism. No. 1,394,918; Oct. 25.
McCann, John J., Toronto, Ontario, Canada. Prayer-rail. No. 1,394,919; Oct. 25.
McCann, John W., Pauls Valley, Okla. File. No. 1,395,197; Oct. 25.
McCarley, William T., Luling, Tex. Device for lifting push-rods on Ford motors. No. 1,395,128; Oct. 25.
McClelland, Marshall L. (See Barry, C. R., and McClelland.)
McClure, Claude H., Oaktown, Ind. Worm-gear. No. 1,394,852; Oct. 25.
McClurd, Elbert B., Elizabethton, Tenn. Seat construction for sewing and other machines. No. 1,395,130; Oct. 25.
McCorkindale, William P., assignor of one-half to C. A. Lawrence, Holyoke, Mass. Vehicle-top. No. 1,395,129; Oct. 25.
McDermott, James, *et al.* (See Speed, John, assignor.)
McFarlane, John, Broomhill, and D. Clelland, Clydebank, Glasgow, Scotland. Screw-cutting tap. No. 1,395,198; Oct. 25.
McGee, Richard T., Wheeling, W. Va. Glass-delivery apparatus. No. 1,394,920; Oct. 25.
McGee, Walter, & Son, Limited. (See Walls, Alexander G., assignor.)

McKay, Henry N., San Francisco, Calif., assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting-machine. No. 1,394,682; Oct. 25.
McKee, Neal T., Yonkers, assignor to The Superheater Company, New York, N. Y. Superheater. No. 1,395,131; Oct. 25.
McKee, Walter S., Chicago, Ill., assignor to American Manganese Steel Company, Augusta, Me. Dipper-tooth. No. 1,395,045; Oct. 25.
McKenzie-Martyn, Edward C., and F. A. Howard, Elizabeth, assignors to Standard Oil Company, Bayonne, N. J. Priming device. No. 1,394,921; Oct. 25.
McKinstry, Frank X., Chicago, Ill. Overhead and underground storage for automobiles. No. 1,394,999; Oct. 25.
McKissick, Edward K., Oklahoma, Okla. Low-supply alarm for gasolene-tanks. No. 1,395,132; Oct. 25.
McLain, Robert H., Schenectady, N. Y., assignor to General Electric Company. Motor-control system. No. 1,394,922; Oct. 25.
McLeod, John A. (See Scalfaro, F. A., and McLeod.)
McNamara, Charles E., Minneapolis, Minn. Typewriting-machine. No. 1,395,049; Oct. 25.
McNeil, James W., Newark, N. J. Sheet-metal barrel. No. 1,394,923; Oct. 25.
McNerney, Mathew F., Goldfield, Colo. Automatic boiler-feed. No. 1,395,133; Oct. 25.
McRae, Finlay A., Montreal, Quebec, Canada. Ocean-going vessel. No. 1,395,000; Oct. 25.
McWilliams, Thomas J., assignor to H. J. Trenkamp, Cleveland, Ohio. Stove-door fitting. No. 1,394,683; Oct. 25.
Meeks, Arthur G. (See Calhoun, Charles, assignor.)
Menchen, Joseph, and A. G. Bergman, New York, N. Y., assignor to T. G. Hoagland, Rockaway, N. J. Nut-lock. No. 1,394,778; Oct. 25.
Mendels, Irwin J., assignor to Empire Transformer Company, Chicago, Ill. Electric toaster. No. 1,394,856; Oct. 25.
Merrill Process Company, The. (See Macdonald, John W. F., assignor.)
Merry, Frederick C., assignor to Merry Optical Company, Kansas City, Mo. Eyeglass-mounting. No. 1,395,199; Oct. 25.
Merry Optical Company. (See Merry, Frederick C., assignor.)
Messinger Automatic Sales Corporation. (See Koehler, Edward J., assignor.)
Messner, John, Calumet, Mich. Traction-shoe. No. 1,395,134; Oct. 25.
Metal Parts Manufacturing Company, The. (See Hafemeister, William C., assignor.)
Metals Recovery Company. (See Perkins, Clement L., assignor.)
Metals Recovery Company. (See Schwarz, Alfred, assignor.)
Meyer, William, Chicago, Ill. Increasing the efficiency of X-ray tubes. No. 1,394,569; Oct. 25.
Michael, Clement W., assignor to J. I. Case Plow Works, Racine, Wis. Disk plow. No. 1,395,050; Oct. 25.
Midgley, Thomas, Hampden, and R. B. Naylor, Springfield, assignors to The Fisk Rubber Company, Chicopee Falls, Mass. Treatment of rubber articles. No. 1,394,928; Oct. 25.
Mikanowich, Alexander C., Cleveland, Ohio. Dirigible. No. 1,395,051; Oct. 25.
Miles, George W., Sandwich, Mass., assignor to American Cellulose and Chemical Manufacturing Company, Ltd., New York, N. Y. Treating cellulose acetate and the product thereof. No. 1,394,752; Oct. 25.
Miller, Jacob W., Hanover, Pa. Radiator-core. No. 1,394,857; Oct. 25.
Miller, John H., *et al.* (See Dolbear, Clinton E., assignor.)
Miller, Walter F., Dayton, Ohio. Wrench. No. 1,395,052; Oct. 25.
Minnelli, Vincenso, Pittston, Pa. Combined tone-arm and amplifier. No. 1,395,053; Oct. 25.
Mitchell and Smith. (See Champney, Ralph P., assignor.)
Mitchell, John C., East Orange, N. J. Inner form for concrete-pipe molds. No. 1,394,570; Oct. 25.
Mitchell, John H., St. Louis, Mo. Cotton cleaning and separating machine. No. 1,395,054; Oct. 25.
Mock, Frank C., assignor to Stromberg Motor Devices Company, Chicago, Ill. Carbureter. No. 1,395,233; Oct. 25.
Moline Heat. (See Shartleff, Wilfred, assignor.)
Moline Plow Company. (See Brennan, Thomas, Jr., assignor.)
Moore, John E., Plains, Kans. Draft appliance. No. 1,394,858; Oct. 25.
Moore, Leon W., Santa Maria, Calif. Drawing-board. No. 1,395,200; Oct. 25.
Moran, Daniel E., Mendham, N. J. Subaqueous structure and method. No. 1,394,571; Oct. 25.
Mosher, Charles W., Cattaraugus, N. Y. Air moistening and distributing device. No. 1,394,859; Oct. 25.
Moss, Sanford A., Lynn, Mass., assignor to General Electric Company. Condenser apparatus. No. 1,394,920; Oct. 25.
Mott, Carl W., Chicago, Ill., assignor, by mesne assignments, to International Harvester Company. Power-operated plow. No. 1,394,930; Oct. 25.
Moulin, Auguste D., Paris, France. Motorcycle-engine starter. No. 1,394,753; Oct. 25.
Mueller, Adolph, trustee. (See Mueller, Robert H., assignor.)
Mueller, Adolph, trustee. (See Mueller, P., and Schuermann, assignors.)
Mueller, Adolph, trustee. (See Schuermann, Anton C., assignor.)
Mueller, Paul M., assignor to American Sterilizer Company, Erie, Pa. Electric-heating-element-controlling device. No. 1,395,002; Oct. 25.
Mueller, Paul M., Hartford, Conn., assignor to American Sterilizer Company, Erie, Pa. Electric-heating-element-controlling device. No. 1,395,003; Oct. 25.
Mueller, Philip, and A. C. Schuermann, assignors to A. Mueller, trustee, Decatur, Ill. Combined foundation-plate and templet. No. 1,394,755; Oct. 25.
Mueller, Philip, and A. C. Schuermann, assignors to A. Mueller, trustee, Decatur, Ill. Elastic-valve stem. No. 1,394,756; Oct. 25.
Mueller, Robert H., assignor to A. Mueller, trustee, Decatur, Ill. Service-box. No. 1,394,754; Oct. 25.
Müller, Henry, Waterbury, Conn. Emery-cloth holder. No. 1,394,757; Oct. 25.
Munts, William H., London, England. Valve. No. 1,394,931; Oct. 25.
Murphy, Edward R., Winchester, Mass. Liquid-dispensing apparatus. No. 1,394,758; Oct. 25.
Murray, Edwin J., Schenectady, N. Y., assignor to General Electric Company. Magnetic reversing and speed-varying gear clutch. No. 1,394,932; Oct. 25.
Murray, John O., Wenatchee, Wash. Shoe-polishing device. No. 1,394,636; Oct. 25.
Nall, Edith A., executrix. (See Harsel, W. D., and Nall.)
Nall, Edward. (See Harsel, W. B., and Nall.)
National Dump Car Company. (See Hindahl, David, assignor.)
Naylor, Ralph B. (See Midgley, T., and Naylor.)
Nell, Calvin B., and R. R. Boggs, assignors of one-third to J. M. Jones, Fannettsburg, Pa. Blackboard. No. 1,394,572; Oct. 25.
Nelson, Arthur F., Rogers Park, Ill. Device for applying paste to labels. No. 1,395,056; Oct. 25.
Nelson, John, Chicago, Ill. Cushion-wheel. No. 1,394,779; Oct. 25.
Nelson, Nels H., Willmar, Minn. Antiskid-chain. No. 1,395,057; Oct. 25.
Neville, Chris S., Kansas City, Mo., assignor of one-half to C. D. Armstrong, Los Angeles, Calif. Gasolene-flow-line lock. No. 1,394,560; Oct. 25.
Neville, Frances A., *et al.*, executors. (See Howell, John A.)
Nevius, Frazier W., St. Louis, Mo. Rubber floor-cleaner. No. 1,395,058; Oct. 25.
New York Bottlers' Supplies Manufacturing Co. (See Alexander, Harry, assignor.)
New York Engineering Company. (See Colven, James M., assignor.)
New Process Oil Company. (See Seeger, Robert, assignor.)
Nicholas, Wilbur H., Indianapolis, Ind. Septic-sewage-disposal pipe. No. 1,394,780; Oct. 25.
Nielsen, James P. (See Bailey, G., and Nielsen.)
Nipper, John W., Knoxville, Tenn. Valve-facing tool. No. 1,394,573; Oct. 25.
Nonneman, Ira W., assignor to The Borden Company, Warren, Ohio. Pipe-cutter. No. 1,394,781; Oct. 25.
Norcross, David C., *et al.* (See Dolbear, Clinton E., assignor.)
Nordiska Kullager Aktiebolaget Sweden. (See Danielsson, Axel, assignor.)
Nordiska Kullager Aktiebolaget. (See Lindman, Konrad W., assignor.)
Norelius, Emil F., Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif. Tractor transmission. No. 1,395,004; Oct. 25.
Norelius, Emil F. (See Turnbull, W., and Norelius.)
North Bros. Mfg. Co. (See Leopold, George O., assignor.)
Nutting, Charles E., assignor to Draper Corporation, Hopedale, Mass. Filling-end catcher for looms. No. 1,394,637; Oct. 25.
Nutting, George F., San Francisco, Calif. Oiling system for engines. No. 1,394,782; Oct. 25.
Oberfell, George G., and A. M. Ballard, Tulsa, Okla. Gas-testing apparatus. No. 1,395,201; Oct. 25.
Ogden, J. Edward. (See Marshall, Ernest W., assignor.)
Ohio Brass Company, The. (See Bovard, William P., assignor.)
Oldham, Edward L., and J. L. Barra, assignors to The Denver Rock Drill Manufacturing Company, Denver, Colo. Apparatus for blowing bores of rock-drill steels. No. 1,395,202; Oct. 25.
Olinger, Thomas, assignor to Holland Lighting and Specialty Co., Holland, Mich. Animal-stock. No. 1,394,783; Oct. 25.
Oliver Chilled Plow Works. (See Altgelt, Rudolph J., assignor.)
Ollesheimer, Theodore H., Rockford, Ill. Sample-holder. No. 1,395,005; Oct. 25.
Olsen, Axel M., East Orange, N. J. Electromagnetic valve. No. 1,395,203; Oct. 25.
Olsen, Harry H., Minneapolis, Minn. Trainman's flag and container. No. 1,394,933; Oct. 25.
O'Neil, James A., Lynn, Mass., assignor to General Electric Company. Headlight-reflector. No. 1,394,934; Oct. 25.
Packard Motor Car Company. (See Hunt, Ormond M., assignor.)

Palmer, Ernest E., assignor to Toronto Type Foundry Company, Limited, Toronto, Ontario, Canada. Sheet-feeding mechanism for paper and the like. No. 1,394,574; Oct. 25.
Palmer, Robert, Schenectady, N. Y., assignor to General Electric Company. Making tubes. No. 1,394,935; Oct. 25.
Papot, James A., Tucson, Ariz. Brick. No. 1,394,759; Oct. 25.
Pappas, Nick G., Hanna, Wyo. Aeroplane. No. 1,395,204; Oct. 25.
Parham Auto Patents Corporation. (See Parham, William H., assignor.)
Parham, William F., West Asheville, N. C. Rail-chair. No. 1,394,626; Oct. 25.
Parham, William H., assignor to Parham Auto Patents Corporation, Knoxville, Tenn. Vehicle-tire fastener. No. 1,395,205; Oct. 25.
Parham, William H., assignor to Parham Auto Patents Corporation, Knoxville, Tenn. Vehicle-tire fastener. No. 1,394,206; Oct. 25.
Park, Ira L., Washington, D. C. Suspension means for electric-lighting fixtures. No. 1,394,575; Oct. 25.
Parrish, Hale W., Chicago, Ill. Liquid-fuel burner. No. 1,394,576; Oct. 25.
Parrish, Vernon E., Cupertino, Calif. Machine for ridging land. (Reissue.) No. 15,213; Oct. 25.
Pathe Freres Phonograph Company. (See Lewis, Frank D., assignor.)
Patterson, George F., Baltimore, Md. Stoker-grate. No. 1,395,006; Oct. 25.
Payne, Alvah, Orange, Tex. Baling-press. No. 1,395,135; Oct. 25.
Pearson, Charles, Chicago, Ill., assignor to International Harvester Company. Pitman connection. No. 1,394,784; Oct. 25.
Perkins, Clement L., Pittsburgh, Pa., assignor to Metals Recovery Company, New York, N. Y. Flotation agent. No. 1,394,639; Oct. 25.
Perkins, Clement L., Pittsburgh, Pa., assignor to Metals Recovery Company, New York, N. Y. Concentration of minerals. No. 1,394,640; Oct. 25.
Perkins, Thomas F., Atlanta, Tex. Automatic toller. No. 1,394,760; Oct. 25.
Perkins, Thomas F., Atlanta, Tex. Grain-toller. No. 1,394,761; Oct. 25.
Peterson, Henry A., Atwood, Kans. Dump for grain-elevators and the like. No. 1,394,577; Oct. 25.
Phillips, John W., Chicago, Ill. Colloidal suspension of polymers and making the same. No. 1,395,242; Oct. 25.
Pico, Albert P. F., Kansas City, Mo. Autographic register. No. 1,394,785; Oct. 25.
Pike, Robert D., San Francisco, Calif. Apparatus for molding articles from plastic materials. No. 1,394,786; Oct. 25.
Pleshe, Louis, Chicago, Ill. Rail-joint. No. 1,395,136; Oct. 25.
Pluderi, Eraldo, Turro Milanese, assignor to E. Schieroni and R. Frigerio, Milan, Italy. Cinematographic machine. No. 1,395,137; Oct. 25.
Plummer, George C., Chicago, assignor to T. J. Hruby, Cicero, Ill. Lug-equipped traction-wheel. No. 1,394,685; Oct. 25.
Plush, Earl V., Meade, Kans. Internal-combustion engine. No. 1,395,138; Oct. 25.
Poole, Arthur R., Kenilworth, Ill., assignor, by mesne assignments, to Remington Accounting Machine Corporation, New York, N. Y. Calculating-machine. No. 1,394,641; Oct. 25.
Porter, Hollis P., Tulsa, Okla. Fuel-burner. No. 1,395,139; Oct. 25.
Porter, Winfield P., New York, N. Y. Pneumatic tire. No. 1,394,787; Oct. 25.
Post, Arthur W., Westbury, N. Y., assignor to American Telephone and Telegraph Company. Telegraph system. No. 1,395,007; Oct. 25.
Potstada, George, Oakland, Calif. Display-clamp. No. 1,394,788; Oct. 25.
Pratt, Maud, Chicago, Ill. Hand portable sewing-machine. No. 1,394,936; Oct. 25.
Prell, Henry, Cleveland, Ohio. Cleaner. No. 1,394,789; Oct. 25.
Prince, Arthur C., Chicago, Ill. Bank. No. 1,395,008; Oct. 25.
Process Engineers Incorporated. (See De Cew, Judson A., assignor.)
Purcell, Isaac S., Oak Park, assignor to Tentobed Company, Chicago, Ill. Cot. No. 1,394,578; Oct. 25.
Purcell, Isaac S., Oak Park, assignor to Tentobed Company, Chicago, Ill. Tent. No. 1,394,579; Oct. 25.
Quass, Ralph L., Hawthorne, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Electric signaling system. No. 1,394,642; Oct. 25.
Radio Corporation of America. (See Wright, George M., assignor.)
Rager, Glenn N., near Reamn, Ind. Compressing mechanism. No. 1,394,580; Oct. 25.
Rail Joint Company, The. (See Braine, Bancroft G., assignor.)
Rail Joint Company, The. (See Wolhaupter, Benjamin, assignor.)
Rao Manufacturing Company. (See Tornsjo, Gustaf E., assignor.)
Rapp, Axel G. J., Chicago, Ill., and L. M. Ewell, Pittsburgh, Pa., assignors to Link Belt Company. Hutch-valve-operating mechanism. No. 1,395,009; Oct. 25.
Ray, William H., assignor to The Weis Fibre Container Corporation, Monroe, Mich. Cover-sealing means. No. 1,394,581; Oct. 25.
Ray, William H. (See Weis, A. L., and Ray.)
R. D. E. Manufacturing Co. (See Ruebsamen, A., and Dennis, assignor.)
Reaugh, Frank, Oakcliff, Tex. Pump or motor. No. 1,394,641; Oct. 25.
Redmon, Claude F., L. K. Redmon, C. G. Redmon, and J. T. Redmon, assignors of one-fifth to W. H. Whitley, Paris, Ky. Powder-blower. No. 1,394,686; Oct. 25.
Redmon, Claude G. (See Redmon, C. F., L. K., C. G., and J. T.)
Redmon, John T. (See Redmon, Claude F., L. K., C. G., and J. T.)
Redmon, Lillard K. (See Redmon, Claude F., L. K., C. G., and J. T.)
Reed, Albert F., Wapello, Iowa. Piston-ring tool. No. 1,395,140; Oct. 25.
Reed, C. E. (See Sorensen, Sam, assignor.)
Reeves, George G., Humble, Tex. Drilling apparatus. No. 1,395,050; Oct. 25.
Reichart, William M., Cleveland, Ohio. Electric feed-water regulator. No. 1,394,643; Oct. 25.
Reichelt, Ludwig, Pittsfield, Mass., assignor to General Electric Company. Resistance unit. No. 1,394,937; Oct. 25.
Reid, William, Chicago, Ill. Carbureter. No. 1,394,687; Oct. 25.
Reising, Eugene G., East Hartford, Conn. Firearm. No. 1,395,141; Oct. 25.
Remington Accounting Machine Corporation. (See Poole, Arthur R., assignor.)
Remington Typewriter Company. (See Dudley, Arthur J., assignor.)
Remington Typewriter Company. (See McKay, Henry N., assignor.)
Remington Typewriter Company. (See Woodward, Oscar, assignor.)
Renault, Joseph W., New Haven, Conn. Train stop and signal system. No. 1,395,142; Oct. 25.
Reno, Milton C., Corliss, Pa. Lift for flush-valves. No. 1,394,862; Oct. 25.
Research Corporation. (See Kennard, Harold J., assignor.)
Reynolds, Edwin, Vineland, N. J. Reversible temple member for spectacles. No. 1,394,863; Oct. 25.
Rhoades, Alonzo E., assignor to Draper Corporation, Hopedale, Mass. Transferring mechanism for automatic filling-replenishing looms. No. 1,395,010; Oct. 25.
Rhoades, Alonzo E., assignor to Draper Corporation, Hopedale, Mass. Battery mechanism for automatic filling replenishing looms. No. 1,395,011; Oct. 25.
Rhoades, Alonzo E., assignor to Draper Corporation, Hopedale, Mass. Filling-severing means for automatic filling-replenishing looms. No. 1,395,012; Oct. 25.
R. H. S. Motors, Incorporated. (See Stewart, Robert H., assignor.)
Richie, David R. (See Allen, C. J., Howard, and Richie.)
Rickey, Ignas, Rochester, N. Y. Manufacturing shoes and a shoe made by such method. No. 1,394,938; Oct. 25.
Riebe, Albert W., Königsberg, Germany. Device for automatically turning over leaves of a book formed with several turning-arms. No. 1,395,143; Oct. 25.
Rigas, Frank. (See Chmurski, Anton J., assignor.)
Rimailho, Emile, assignor to Compagnie des Forges et Aciéries de la Marine et d'Homecourt, Paris, France. Apparatus for throwing the wheels into and out of action of a vehicle having both wheels and endless tracks. No. 1,395,144; Oct. 25.
Riza, George P. (See Enache, Cociu, assignor.)
Robbins, Charles F., Keene, N. H. Cutter-blade grinder. No. 1,395,145; Oct. 25.
Roberts, Edward L. (See Smith, Orland V., assignor.)
Roberts, Henry T., New York, N. Y. Wrench. No. 1,394,939; Oct. 25.
Roberts, Walter, *et al.* (See Speed, John, assignor.)
Roberts, William E., assignor, by mesne assignments, to Foundation Oven Corporation, New York, N. Y. Air-valves for coke-ovens or the like. No. 1,395,060; Oct. 25.
Roberts, William E., assignor, by mesne assignments, to Foundation Oven Corporation, New York, N. Y. Coke-oven door. No. 1,395,061; Oct. 25.
Robinson, Daniel P., and J. Coyle, Baltimore, Md., and A. L. Kronquest, Chicago, Ill., assignors to Continental Can Company, Inc., Syracuse, N. Y. Slitter-feed. No. 1,395,207; Oct. 25.
Rosenfield, William W., White Plains, N. Y., assignor to Electric Vacuum Cleaner Company, Inc. Suction-cleaner. No. 1,394,940; Oct. 25.
Ross, David E., assignor to Ross Gear and Tool Company, La Fayette, Ind. Steering-gear. No. 1,395,013; Oct. 25.
Ross Gear and Tool Company. (See Ross, David E., assignor.)
Ross, George G., South Greensburg, Pa. Record-rack cabinet. No. 1,394,864; Oct. 25.
Rottman, George, New York, N. Y. Buckle. No. 1,394,644; Oct. 25.
Roughedge, William H., Ottawa, Ontario, Canada. Mold for constructing concrete houses and other buildings. No. 1,394,790; Oct. 25.

Rowell, Charles V., Croydon, near Sydney, New South Wales, Australia. Apparatus for processing grain under high pressure and high temperature. No. 1,395,014; Oct. 25.

Rowell, Charles V., Croydon, near Sydney, New South Wales, Australia. Treating wheat grains and product therefrom. No. 1,395,015; Oct. 25.

Rowland, Andrew J., assignor to The Federal Products Company, Cincinnati, Ohio. Oilproof impregnating agent or coating and process. No. 1,395,016; Oct. 25.

Rub-Tex Products, Inc. (See Klug, Louis E., assignor.)

Ruebsamen, Albert, and W. L. Dennis, assignors to The R. D. R. Manufacturing Co., Decatur, Ill. Fare-collecting box. No. 1,394,941; Oct. 25.

Runyan, Benjamin F., assignor of fifty-one per cent. to J. P. Markham, Jr., Houston, Tex. Pipe-coupling. No. 1,394,791; Oct. 25.

Ruschmeyer, William J. H., Toledo, Ohio. Combination-lock. No. 1,394,792; Oct. 25.

Rutherford, Robert B., St. Louis, Mo. Automobile-lock. No. 1,395,146; Oct. 25.

Rutherford, William A., Salem, Oreg. Dirigible headlight. No. 1,395,147; Oct. 25.

Rutten, Frank M., assignor to A. R. Hilsabeck, Grand Forks, N. D. Automatic safety adjustable tractor-coupling. No. 1,394,793; Oct. 25.

Sager, Eli E., and O. L. Kling, San Francisco, Calif. Combination carbonator and filler. No. 1,394,794; Oct. 25.

Sagle, Roy E., Roseville, Ohio. Signal system. No. 1,395,208; Oct. 25.

San Diego Consolidated Gas & Electric Company. (See Klauber, Laurence M., assignor.)

Sargent Company. (See Sargent, George H., assignor.)

Sargent, George H., assignor to Sargent Company, Chicago, Ill. Water-gage. No. 1,395,062; Oct. 25.

Sater, Peter E. C., Cleveland, Ohio. Bushing for outlet-boxes. No. 1,394,942; Oct. 25.

Saucke, Herman, New York, N. Y. Metal-drill. No. 1,394,865; Oct. 25.

Saul, Henry C., Douglas, Wyo. Clock-escapement. No. 1,395,148; Oct. 25.

Sauter, Alfred and L., Chicago, Ill. Printer's quoin. No. 1,395,149; Oct. 25.

Sauter, Leo. (See Sauter, Alfred and L.)

Sauve, Patrick, Flint, Mich. Drill or tap holder. No. 1,394,795; Oct. 25.

Scalfaro, Frank A., and J. A. McLeod, Chicago, Ill. Electric cloth-cutter. No. 1,395,150; Oct. 25.

Schaefer, Peter C., Denver, Colo. Fastening device for auto porch-beds. No. 1,395,151; Oct. 25.

Schieroni, Ettore, *et al.* (See Pluderi, Eraldo, assignor.)

Schilling, Hugo O., assignor, by mesne assignments, to the firm of Hanns Metallwerk G. m. b. H., Abteilung Maschinenfabrik, Hamburg, Germany. Filling-machine for doughy and powdery material. No. 1,394,892; Oct. 25.

Schoenknecht, Curt E. G., Newark, N. J. Bicycle. No. 1,394,866; Oct. 25.

Schomacker, Bernard G., Glendorf, Ohio. Chair-back and picture-frame therefor. No. 1,395,153; Oct. 25.

Schmid, Herman. (See Fuegel, G., and Schmid.)

Schmidt, Benjamin F., Exeter, Calif. Brake-operating means for motor-vehicles. No. 1,394,645; Oct. 25.

Schneider, John Elisabeth, N. J. Twisting-tool. No. 1,395,152; Oct. 25.

Schroeder, Ruth S. M., Chicago, Ill. Hair-dressing appliance. No. 1,394,943; Oct. 25.

Schuermann, Anton C., assignor to Adolph Mueller, trustee, Decatur, Ill. Combined stop-cock and strainer. No. 1,394,762; Oct. 25.

Schuermann, Anton C. (See Mueller, P., and Schuermann.)

Schultz, Paul, Middleville, N. Y. Splitting-wedge. No. 1,395,209; Oct. 25.

Schwarz, Alfred, Joplin, Mo., assignor to Metals Recovery Company, New York, N. Y. Concentration of ores and the like. No. 1,394,958; Oct. 25.

Scott, Walter, Lakewood, Ohio. Portable driving mechanism for talking-machines and the like. No. 1,394,763; Oct. 25.

Scott, Walter, Sheridan, Wyo. Tone-modifier for phonographs. No. 1,394,646; Oct. 25.

Seeger, Robert, St. Louis, Mo., assignor to New Process Oil Company. Apparatus for treating hydrocarbon oils. No. 1,394,688; Oct. 25.

Selinger-Balser, Joseph, Oberateinmanr, Switzerland. Climbing-iron. No. 1,395,234; Oct. 25.

Serak, George E., assignor to Alfred Decker & Cohn, Inc., Chicago, Ill. Pattern for making clothing. No. 1,394,583; Oct. 25.

Shavor, Frederick R. (See Creighton, E. E. F., and Shavor.)

Shaw, Frederick H. (See Dobbins, Michael G., assignor.)

Shaw, Richard E., Fresno, Calif. Auxiliary ignition system for gas-engines. No. 1,394,944; Oct. 25.

Sheehan, Nicholas I., Lakewood, Ohio. Baseball game. No. 1,394,764; Oct. 25.

Shelly, Samuel, Philadelphia, Pa., assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Stop mechanism for phonographs. No. 1,395,017; Oct. 25.

Shelton, Roy C., Nashville, Tenn. Tractor-cultivator. No. 1,395,210; Oct. 25.

Sherman, Moses, St. Louis, Mo. Folding-bed couch. No. 1,394,584; Oct. 25.

Showers, George D., Altoona, Pa. Flush-valve. No. 1,394,945; Oct. 25.

Shurtleff, Wilfred, assignor to Moline Heat, Moline, Ill. Ventilating unit. No. 1,394,946; Oct. 25.

Simi, Bohuslav, Chicago, Ill. Dental amalgam or alloy mixer. No. 1,395,235; Oct. 25.

Singer, Julius, New York, N. Y. Pan-rack. No. 1,394,947; Oct. 25.

Sklar, John, Brooklyn, N. Y. Tonsillotome. No. 1,394,867; Oct. 25.

Slingerland, William A., Portland, Oreg. Chronometer. No. 1,395,154; Oct. 25.

Simpson, Jacob, Washington, D. C. Printing-plate-trimming machine. No. 1,394,765; Oct. 25.

Smalley Manufacturing Company. (See Frick, Orlando C., assignor.)

Smith, Adoniram J., assignor of one-half to T. P. Fridan, Seattle, Wash. Holder for spools, &c. No. 1,395,155; Oct. 25.

Smith, Albert, Leetonia, Ohio. Scraper. No. 1,394,868; Oct. 25.

Smith, Carlisle F., Kokomo, Ind. Carbureted-fuel separator and fuel-vaporizer. No. 1,394,948; Oct. 25.

Smith, Charles, Providence, R. I. Automatic machine for making metallic frames for wreaths. No. 1,394,796; Oct. 25.

Smith, Charles A., Brattleboro, Vt. Boring-machine. No. 1,394,769; Oct. 25.

Smith, George Z. (See Kinter, C. W., and Smith.)

Smith, Henry S., Dixon, Ill., assignor, by mesne assignments, to J. I. Case Threshing Machine Company, Racine, Wis. Plow-lift. No. 1,394,767; Oct. 25.

Smith, Herman A., Yonkers, N. Y., assignor of one-half to E. J. Marston, Greenwich, Conn. Method of and apparatus for producing pictures by projection. No. 1,394,707; Oct. 25.

Smith, James E., and C. W. Burger, Washington, D. C. Instrument for use in learning telegraphy. No. 1,394,768; Oct. 25.

Smith, Orland V., Milford, Conn., assignor, by mesne assignments, of one-half to E. L. Roberts, Amarillo, Tex. Auxiliary banking means. No. 1,395,156; Oct. 25.

Smith, Rufus W., Chester, S. C. Spool-steward. No. 1,395,157; Oct. 25.

Smith, Sam R., Los Angeles, Calif. Collapsible bed structure. No. 1,395,158; Oct. 25.

Snyder, Frederick T., Oak Park, assignor to S. D. Flood, Chicago, Ill. Baking apparatus. No. 1,395,211; Oct. 25.

Speed, John, New York, assignor of one-third to J. McDermott and one-third to W. Roberts, Richmond Hill, N. Y. Wagon-body. No. 1,394,798; Oct. 25.

Spence, John L., Jr., Brooklyn, N. Y. Clamp. No. 1,394,691; Oct. 25.

Spiess, Jules G. (See Kuhn, F., Thomas, and Spiess.)

Spratt, George A., Coatesville, Pa. Aeroplane. No. 1,394,585; Oct. 25.

Sprik, Charles A. (See Brown, Newman T., assignor.)

Société des Produits Azotés. (See Barbé, Léonce, assignor.)

Society of Chemical Industry in Basle. (See Grob, Armin, assignor.)

Soden, Thomas B. (See Hawk, Ivan O., assignor.)

Soderstrom, Karl A., Philadelphia, Pa. Valve. No. 1,395,018; Oct. 25.

Sohm, Alfred L., Chicago, Ill. Time-indicating system. No. 1,394,647; Oct. 25.

Sohm, Alfred L., assignor to Sohm Electric Company, Chicago, Ill. Self-winding clock. No. 1,394,689; Oct. 25.

Sohm, Alfred L., assignor to Sohm Electric Company, Chicago, Ill. Pendulum. No. 1,394,690; Oct. 25.

Sohm Electric Company. (See Sohm, Alfred L., assignor.)

Sorensen, Sam, assignor to C. E. Reed, Houston, Tex. Drill-head for oil-wells. No. 1,394,769; Oct. 25.

Stafford Company, The. (See Cowan, Arthur S., assignor.)

Standard Cotton Company of America. (See Levering, James F., assignor.)

Standard Oil Company. (See McKenzie-Martyn, E. C., and Howard, assignors.)

Stearns, Ralph W., Schenectady, N. Y., assignor to General Electric Company. Resistance material. No. 1,394,949; Oct. 25.

Stephens, Robert P., Raton, N. Mex. Signal apparatus. No. 1,394,950; Oct. 25.

Stevens, William C., Summit county, assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Wrapping and unwrapping machine. No. 1,395,063; Oct. 25.

Stewart, Alexander T., Philadelphia, Pa. Safety-razor. No. 1,395,159; Oct. 25.

Stewart, Arthur L., and E. C. Head, assignors to Gleason Works, Rochester, N. Y. Gear-planing machine. No. 1,394,586; Oct. 25.

Stewart, Frank C., Springfield, Mo. Antifrost device. No. 1,394,648; Oct. 25.

Stewart, Robert H., Greensboro, N. C., assignor to R. H. S. Motors, Incorporated. Rotary gas engine or motor. No. 1,394,587; Oct. 25.

Stewart-Warner Speedometer Corporation. (See Goetz, Oscar H., assignor.)

Stocker, James M., Atlanta, Ga. Heating-tank. No. 1,394,692; Oct. 25.

Stockwell, Myron H., Geneva, N. Y. Daylight developing and fixing apparatus for roll-films. No. 1,395,160; Oct. 25.

Stone, Albert H., Boston, Mass. Making depilatory for hides and skins. No. 1,394,588; Oct. 25.

Strobl, Frank P., assignor of one-half to R. Y. Cliff, Sebring, Ohio. Automatic batting-out and slapping-on device. No. 1,395,161; Oct. 25.

Stromberg Motor Devices Company. (See Mock, Frank C., assignor.)

Stromgren, Charles D., Los Angeles, Calif. Valve-silencer. No. 1,395,064; Oct. 25.

Stroud, David H., Jr., Philadelphia, Pa. Rug-weaving, and the product resulting therefrom. No. 1,394,869; Oct. 25.

Stroud, Pearl E., South Heart, N. D. Tire-protecting casting. No. 1,395,162; Oct. 25.

Sturtevant, B. F., Company. (See De Clamecy, Philippe, assignor.)

Sugimura, Nobuchika, Tokyo, Japan, assignor to General Electric Company. Electrical apparatus. No. 1,394,951; Oct. 25.

Sullivan Machinery Company. (See Ferguson, Alexander D., assignor.)

Sullivan Machinery Company. (See Wineman, Wade H., assignor.)

Superheater Company, The. (See McKee, Neal T., assignor.)

Swanson, Frank T., Hayward, Calif. Steam friction device. No. 1,394,962; Oct. 25.

Swinehart, Benjamin C., Akron, Ohio. Cushion-tire. No. 1,394,589; Oct. 25.

Swintek, Martin, Eddyville, Iowa. Traveling screen for suction-nozzles. No. 1,394,693; Oct. 25.

Sylvester, Edward G., Honolulu, Hawaii. Headlight. No. 1,394,694; Oct. 25.

Tacchella, Adolf, assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo. Governor-controlled combustion-engine. No. 1,394,953; Oct. 25.

Talbot, Henry H., St. Joseph, Mo. Bedstead. No. 1,394,695; Oct. 25.

Tatosian, Martin, Bridgeport, Conn. Polishing-machine. No. 1,395,163; Oct. 25.

Taylor, Henry O., Rockford, Ill. Machine for repairing cues and the like. No. 1,395,236; Oct. 25.

Templeton, William G., Colorado Springs, Colo. Weighing-scale. No. 1,394,696; Oct. 25.

Tentobed Company. (See Purcell, Isaac S., assignor.)

Tervas, Joseph K. E., Hancock, Mich. Reel for picture-machines. No. 1,395,164; Oct. 25.

Thomas, Benjamin D., assignor of one-tenth to Thomas-Morse Aircraft Corporation, Ithaca, N. Y. Driving connections for airplane-engines. No. 1,394,870; Oct. 25.

Thomas, Lawrence H. (See Kuhn, F., Thomas, and Spiess.)

Thoms, Max H., assignor to H. Marmon, Indianapolis, Ind. Thread-gage. No. 1,394,650; Oct. 25.

Thomas-Morse Aircraft Corporation. (See Thomas, Benjamin D., assignor.)

Thomas, Seth, Clock Co., The. (See Wehrle, Frank X., assignor.)

Thompson, Albert R., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif. Safety can-feed chute. No. 1,394,799; Oct. 25.

Thompson, George H., assignor to H. N. Duffey, Jr., Santa Barbara, Calif. Trap. No. 1,394,649; Oct. 25.

Thompson, James H., Trenton, assignor to Hussong Dyeing Machine Company, Groveville, N. J. Dyeing-machine. No. 1,395,165; Oct. 25.

Tidewater Equipment Corporation. (See Hanson, Albert J., assignor.)

Tidewater Paper Mills Company. (See West, J. B., and Walz, assignors.)

Tillman, Ferdinand J., St. Louis, Mo. Calculating-machine. No. 1,394,800; Oct. 25.

Tin Decorating Company of Baltimore, The. (See Holtbaus, George, assignor.)

Tomlinson, George E., Winchester, Ky. Table. No. 1,395,166; Oct. 25.

Tompkins, Gilbert, Thompson, Conn. Agricultural implement. No. 1,394,651; Oct. 25.

Torbensen Axle Company, The. (See Carlson, Gustav W., assignor.)

Tornojo, Gustaf E., St. Paul, assignor to Rao Manufacturing Company, Minneapolis, Minn. Film-hanging device. No. 1,394,697; Oct. 25.

Toronto Type Foundry Company. (See Palmer, Ernest E., assignor.)

Torrington Company, The. (See Graham, J. H., and Foley, assignors.)

Trane, Reuben N., La Crosse, Wis. Thermostatic trap. No. 1,395,167; Oct. 25.

Trembly, Ulysse N., South Lawrence, assignor to Draper Corporation, Hopedale, Mass. Temple-thread parter for looms. No. 1,394,652; Oct. 25.

Trenkamp, Herman J. (See McWilliams, Thomas J., assignor.)

Trent, Lamartine C., Los Angeles, Calif. Continuous method for the purification of sewage. No. 1,394,698; Oct. 25.

Tressler, Donald K., assignor to W. A. Hamor, Pittsburgh, Pa. Manufacture of liquid glue. No. 1,394,653; Oct. 25.

Tressler, Donald K., Pittsburgh, Pa. Manufacture of liquid glue. No. 1,394,654; Oct. 25.

Trostel, Albert O., Milwaukee, Wis. Mineralising hair, wool, and other animal fiber and the product so produced. No. 1,394,655; Oct. 25.

Tucker, Louise B., York, Pa. Measuring and dispensing device. No. 1,395,168; Oct. 25.

Turnbull, William, and E. F. Norelius, Peoria, Ill., assignors to The Holt Manufacturing Company, Stockton, Calif. Anti-aircraft-gun mount. No. 1,395,020; Oct. 25.

Turnbull, William, assignor to The Holt Manufacturing Company, Stockton, Calif. Traction-engine mechanism. No. 1,395,019; Oct. 25.

Turner, Henry B., Suisun, Calif. Tread for tractor-wheels. No. 1,395,227; Oct. 25.

Tuttle, Roy X., Battle Creek, Mich. Administering therapeutic light treatments. No. 1,395,065; Oct. 25.

U. S. Slicing Machine Company. (See Luschka, A. R., and Folk, assignors.)

Umbdenstock, Walter, assignor to The Hill Pump Valve Company, Chicago, Ill. Machine for castellating nuts. No. 1,395,169; Oct. 25.

Underhill, Charles R., New Haven, Conn. Controlling mechanism. No. 1,395,066; Oct. 25.

United Printing Machinery Company. (See Belluche, Frank E., assignor.)

United Shoe Machinery Corporation. (See Johnson, Albert E., assignor.)

United States Gypsum Company. (See Birdsey, Charles R., assignor.)

Vail, George L., Cleveland Heights, Ohio. Shutter. No. 1,394,656; Oct. 25.

Van Aller, Tycho, Schenectady, N. Y., assignor to General Electric Company. Metal-melting pot. No. 1,394,954; Oct. 25.

Van Syckle, Cecil E., Lakewood, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio. Scraper attachment for unloader-buckets. No. 1,394,699; Oct. 25.

Victor Tool Company, The. (See Koontz, Victor E., assignor.)

Von Recklinghausen, Max, assignor to Air Reduction Company, New York, N. Y. Apparatus for filling oxygen-cylinders. No. 1,394,955; Oct. 25.

Walden, Alfred E., Detroit, Mich. Fuel-supply-control mechanism. No. 1,395,212; Oct. 25.

Waldes & Co. (See Mann, Alfred, assignor.) (Reissue.)

Walker, Lewis, Richmond, Va. Boot and shoe stretcher. No. 1,394,871; Oct. 25.

Walls, Alexander G., assignor to Walter McGee & Son, Limited, Paisley, Renfrewshire, Scotland. Balling-machine. No. 1,395,213; Oct. 25.

Walz, Louis J. (See West, J. B., and Walz.)

Warne, Arthur S., Vancouver, British Columbia, Canada. Camera-shutter release. No. 1,395,214; Oct. 25.

Warren, Herbert W., Osseo, Mich. Changeable-speed gear. No. 1,395,067; Oct. 25.

Watson Wagon Company. (See Keesler, Clyde C., assignor.)

Weaver, Robert R., assignor to General American Tank Car Corporation, Chicago, Ill. Tank-car. No. 1,394,956; Oct. 25.

Webster, Towner K. (See Whitney, William A., assignor.)

Wehrle, Frank X., assignor to The Seth Thomas Clock Co., Thomaston, Conn. Ship's-bells clock. No. 1,394,957; Oct. 25.

Weis, Andrew L., assignor to The Weis Fibre Container Corporation, Monroe, Mich. Open-end container. No. 1,394,590; Oct. 25.

Weis, Andrew L., assignor to The Weis Fibre Container Corporation, Monroe, Mich. Slide-cover box. No. 1,394,591; Oct. 25.

Weis, Andrew L., and W. H. Ray, assignor to The Weis Fibre Container Corporation, Monroe, Mich. Metal-bound fiber container. No. 1,394,592; Oct. 25.

Weis Fibre Container Corporation, The. (See Ray, William H., assignor.)

Weis Fibre Container Corporation, The. (See Weis, Andrew L., assignor.)

Weis Fibre Container Corporation, The. (See Weis, A. L., and Ray, assignors.)

Welliki, George, assignor of one-half to M. Kaminska, Hamilton, Ontario, Canada. Aeroplane. No. 1,395,068; Oct. 25.

Wellman-Seaver-Morgan Company, The. (See Van Syckle, Cecil E., assignor.)

Wells, Elmer E., Stockton, Calif. Oil-filter for gas-engines. No. 1,395,069; Oct. 25.

Wentsell, Lewis P., Greensburg, Pa. Channel-iron and anchor. No. 1,395,070; Oct. 25.

Wentsell, Lewis P., Greensburg, Pa. Clip. No. 1,395,071; Oct. 25.

Wertz, Peter, Pittsburgh, Pa. Blow-off valve. No. 1,394,657; Oct. 25.

West, John B., and L. J. Walz, assignor to Tidewater Paper Mills Company, Brooklyn, N. Y. Apparatus for heading rolls of paper. No. 1,394,700; Oct. 25.

Western Electric Company. (See Quass, Ralph L., assignor.)

Wetmore, Albert G., Plymouth, Ind. Box and process of and apparatus for the manufacture thereof. No. 1,394,593; Oct. 25.

Wheeler, George B., New York, N. Y. Washboard. No. 1,394,801; Oct. 25.

Whipple, Ralph, Detroit, Mich. Automatic steering and control mechanism for tractors. (Reissue.) No. 15,214; Oct. 25.

White, Jessee M., Philadelphia, Pa. Locking device for automobiles. No. 1,394,872; Oct. 25.

Whitehead, Samuel, Romford, England. Pencil-sharpener. No. 1,395,241; Oct. 25.

Whitley, Wade H. (See Redmon, Claude F., L. K., C. G., and J. T., assignors.)

Rowell, Charles V., Croydon, near Sydney, New South Wales, Australia. Apparatus for processing grain under high pressure and high temperature. No. 1,395,014; Oct. 25.

Rowell, Charles V., Croydon, near Sydney, New South Wales, Australia. Treating wheat grains and product therefrom. No. 1,395,015; Oct. 25.

Rowland, Andrew J., assignor to The Federal Products Company, Cincinnati, Ohio. Oilproof impregnating agent or coating and process. No. 1,395,016; Oct. 25.

Rub-Tex Products, Inc. (See Klug, Louis E., assignor.)

Ruebsamen, Albert, and W. L. Dennis, assignors to The R. D. R. Manufacturing Co., Decatur, Ill. Fare-collecting box. No. 1,394,941; Oct. 25.

Runyan, Benjamin F., assignor of fifty-one per cent. to J. P. Markham, Jr., Houston, Tex. Pipe-coupling. No. 1,394,791; Oct. 25.

Ruschmeyer, William J. H., Toledo, Ohio. Combination-lock. No. 1,394,792; Oct. 25.

Rutherford, Robert B., St. Louis, Mo. Automobile-lock. No. 1,395,146; Oct. 25.

Rutherford, William A., Salem, Oreg. Dirigible head-light. No. 1,395,147; Oct. 25.

Rutten, Frank M., assignor to A. B. Hilsabeck, Grand Forks, N. D. Automatic safety adjustable tractor-coupling. No. 1,394,793; Oct. 25.

Sager, Eli E., and O. L. King, San Francisco, Calif. Combination carbonator and filler. No. 1,394,794; Oct. 25.

Sagle, Roy E., Roseville, Ohio. Signal system. No. 1,395,208; Oct. 25.

San Diego Consolidated Gas & Electric Company. (See Klauber, Laurence M., assignor.)

Sargent Company. (See Sargent, George H., assignor.)

Sargent, George H., assignor to Sargent Company, Chicago, Ill. Water-gage. No. 1,395,062; Oct. 25.

Sater, Peter E. C., Cleveland, Ohio. Bushing for outlet-boxes. No. 1,394,942; Oct. 25.

Sancke, Herman, New York, N. Y. Metal-drill. No. 1,394,865; Oct. 25.

Saul, Henry C., Douglas, Wyo. Clock-escapement. No. 1,395,148; Oct. 25.

Sauter, Alfred and L., Chicago, Ill. Printer's quoin. No. 1,395,149; Oct. 25.

Sauter, Leo. (See Sauter, Alfred and L.)

Sauve, Patrick, Flint, Mich. Drill or tap holder. No. 1,394,795; Oct. 25.

Scalfaro, Frank A., and J. A. McLeod, Chicago, Ill. Electric cloth-cutter. No. 1,395,150; Oct. 25.

Schaefer, Peter C., Denver, Colo. Fastening device for auto porch-beds. No. 1,395,151; Oct. 25.

Schieroni, Ettore, *et al.* (See Pluderi, Eraldo, assignor.)

Schilling, Hugo O., assignor, by mesne assignments, to the firm of Hansa Metallwerk G. m. b. H., Abteilung Maschinenfabrik, Hamburg, Germany. Filling-machine for doughy and powdery material. No. 1,394,582; Oct. 25.

Schoenknecht, Curt E. G., Newark, N. J. Bicycle. No. 1,394,866; Oct. 25.

Schomacker, Bernard G., Glendorf, Ohio. Chair-back and picture-frame therefor. No. 1,395,153; Oct. 25.

Schmid, Herman. (See Fuegel, G., and Schmid.)

Schmidt, Benjamin F., Exeter, Calif. Brake-operating means for motor-vehicles. No. 1,394,645; Oct. 25.

Schneider, John, Elizabeth, N. J. Twisting-tool. No. 1,395,152; Oct. 25.

Schroeder, Ruth S. M., Chicago, Ill. Hair-dressing appliance. No. 1,394,943; Oct. 25.

Schuermann, Anton C., assignor to Adolph Mueller, trustee, Decatur, Ill. Combined stop-cock and strainer. No. 1,394,762; Oct. 25.

Schuermann, Anton C. (See Mueller, P., and Schuermann.)

Schultz, Paul, Middleville, N. Y. Splitting-wedge. No. 1,395,209; Oct. 25.

Schwarz, Alfred, Joplin, Mo., assignor to Metals Recovery Company, New York, N. Y. Concentration of ores and the like. No. 1,394,958; Oct. 25.

Scott, Walter, Lakewood, Ohio. Portable driving mechanism for talking-machines and the like. No. 1,394,763; Oct. 25.

Scott, Walter, Sheridan, Wyo. Tone-modifier for phonographs. No. 1,394,646; Oct. 25.

Seeger, Robert, St. Louis, Mo., assignor to New Process Oil Company. Apparatus for treating hydrocarbon oils. No. 1,394,688; Oct. 25.

Selinger-Balzer, Joseph, Oberstelnmaur, Switzerland. Climbing-iron. No. 1,395,234; Oct. 25.

Serak, George E., assignor to Alfred Decker & Cohn, Inc., Chicago, Ill. Pattern for making clothing. No. 1,394,583; Oct. 25.

Shavor, Frederick R. (See Creighton, E. E. F., and Shavor.)

Shaw, Frederick H. (See Dobbins, Michael G., assignor.)

Shaw, Richard R., Fresno, Calif. Auxiliary ignition system for gas-engines. No. 1,394,944; Oct. 25.

Sheehan, Nicholas L., Lakewood, Ohio. Baseball game. No. 1,394,764; Oct. 25.

Shelly, Samuel, Philadelphia, Pa., assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Stop mechanism for phonographs. No. 1,395,017; Oct. 25.

Shelton, Roy C., Nashville, Tenn. Tractor-cultivator. No. 1,395,210; Oct. 25.

Sherman, Moses, St. Louis, Mo. Folding-bed couch. No. 1,394,584; Oct. 25.

Showers, George D., Altoona, Pa. Flush-valve. No. 1,394,945; Oct. 25.

Shurtleff, Wilfred, assignor to Moline Heat, Moline, Ill. Ventilating unit. No. 1,394,946; Oct. 25.

Sinal, Bohuslav, Chicago, Ill. Dental amalgam or alloy mixer. No. 1,395,235; Oct. 25.

Singer, Julius, New York, N. Y. Pan-rack. No. 1,394,947; Oct. 25.

Sklar, John, Brooklyn, N. Y. Tonsillotome. No. 1,394,867; Oct. 25.

Slingerland, William A., Portland, Oreg. Chronometer. No. 1,395,154; Oct. 25.

Simpson, Jacob, Washington, D. C. Printing-plate-trimming machine. No. 1,394,765; Oct. 25.

Smalley Manufacturing Company. (See Frick, Orlando C., assignor.)

Smith, Adoniram J., assignor of one-half to T. P. Fridan, Seattle, Wash. Holder for spools, &c. No. 1,395,155; Oct. 25.

Smith, Albert, Leetonia, Ohio. Scraper. No. 1,394,868; Oct. 25.

Smith, Carlisle F., Kokomo, Ind. Carbureted-fuel separator and fuel-vaporizer. No. 1,394,948; Oct. 25.

Smith, Charles, Providence, R. I. Automatic machine for making metallic frames for wreaths. No. 1,394,796; Oct. 25.

Smith, Charles A., Brattleboro, Vt. Boring-machine. No. 1,394,766; Oct. 25.

Smith, George Z. (See Kinter, C. W., and Smith.)

Smith, Henry S., Dixon, Ill., assignor, by mesne assignments, to J. I. Case Threshing Machine Company, Racine, Wis. Plow-lift. No. 1,394,767; Oct. 25.

Smith, Herman A., Yonkers, N. Y., assignor of one half to E. J. Marston, Greenwich, Conn. Method of and apparatus for producing pictures by projection. No. 1,394,797; Oct. 25.

Smith, James E., and C. W. Burger, Washington, D. C. Instrument for use in learning telegraphy. No. 1,394,768; Oct. 25.

Smith, Orland V., Milford, Conn., assignor, by mesne assignments, of one-half to E. L. Roberts, Amarillo, Tex. Auxiliary banking means. No. 1,395,156; Oct. 25.

Smith, Rufus W., Chester, S. C. Spool-steward. No. 1,395,157; Oct. 25.

Smith, Sam R., Los Angeles, Calif. Collapsible bed structure. No. 1,395,158; Oct. 25.

Snyder, Frederick T., Oak Park, assignor to S. D. Flood, Chicago, Ill. Raking apparatus. No. 1,395,211; Oct. 25.

Speed, John, New York, assignor of one-third to J. McDermott and one-third to W. Roberts, Richmond Hill, N. Y. Wagon-body. No. 1,394,798; Oct. 25.

Spence, John L., Jr., Brooklyn, N. Y. Clamp. No. 1,394,691; Oct. 25.

Spiess, Jules G. (See Kuhn, F., Thomas, and Spiess.)

Spratt, George A., Coatesville, Pa. Aeroplane. No. 1,394,585; Oct. 25.

Sprik, Charles A. (See Brown, Newman T., assignor.)

Société des Produits Azotés. (See Barbé, Léonce, assignor.)

Society of Chemical Industry in Basle. (See Grob, Armin, assignor.)

Soden, Thomas B. (See Hawk, Ivan O., assignor.)

Soderstrom, Karl A., Philadelphia, Pa. Valve. No. 1,395,018; Oct. 25.

Sohm, Alfred L., Chicago, Ill. Time-indicating system. No. 1,394,647; Oct. 25.

Sohm, Alfred L., assignor to Sohm Electric Company, Chicago, Ill. Self-winding clock. No. 1,394,689; Oct. 25.

Sohm, Alfred L., assignor to Sohm Electric Company, Chicago, Ill. Pendulum. No. 1,394,690; Oct. 25.

Sohm Electric Company. (See Sohm, Alfred L., assignor.)

Sorensen, Sam, assignor to C. E. Reed, Houston, Tex. Drill-head for oil-wells. No. 1,394,769; Oct. 25.

Stafford Company, The. (See Cowan, Arthur S., assignor.)

Standard Cotton Company of America. (See Levering, James F., assignor.)

Standard Oil Company. (See McKenzie-Martyn, E. C., and Howard, assignors.)

Stearns, Ralph W., Schenectady, N. Y., assignor to General Electric Company. Resistance material. No. 1,394,949; Oct. 25.

Stephens, Robert P., Raton, N. Mex. Signal apparatus. No. 1,394,950; Oct. 25.

Stevens, William C., Summit county, assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Wrapping and unwrapping machine. No. 1,395,063; Oct. 25.

Stewart, Alexander T., Philadelphia, Pa. Safety-razor. No. 1,395,159; Oct. 25.

Stewart, Arthur L., and E. C. Head, assignors to Gleason Works, Rochester, N. Y. Gear-planing machine. No. 1,394,586; Oct. 25.

Stewart, Frank C., Springfield, Mo. Antifrost device. No. 1,394,648; Oct. 25.

Stewart, Robert H., Greensboro, N. C., assignor to R. H. S. Motors, Incorporated. Rotary gas engine or motor. No. 1,394,587; Oct. 25.

Stewart-Warner Speedometer Corporation. (See Goetz, Oscar H., assignor.)

Stocker, James M., Atlanta, Ga. Heating-tank. No. 1,394,692; Oct. 25.

Stockwell, Myron H., Geneva, N. Y. Daylight developing and fixing apparatus for roll-films. No. 1,395,160; Oct. 25.

Stone, Albert H., Boston, Mass. Making depilatory for hides and skins. No. 1,394,589; Oct. 25.

Strobl, Frank P., assignor of one-half to R. Y. Cliff, Sebring, Ohio. Automatic batting-out and slapping-on device. No. 1,395,161; Oct. 25.

Stromberg Motor Devices Company. (See Mock, Frank C., assignor.)

Stromgren, Charles D., Los Angeles, Calif. Valve-silencer. No. 1,395,064; Oct. 25.

Stroud, David H., Jr., Philadelphia, Pa. Rug-weaving, and the product resulting therefrom. No. 1,394,869; Oct. 25.

Stroud, Pearl E., South Heart, N. D. Tire-protecting casting. No. 1,395,162; Oct. 25.

Sturtevant, B. F., Company. (See De Clamecy, Philippe, assignor.)

Sugimura, Nobuchika, Tokyo, Japan, assignor to General Electric Company. Electrical apparatus. No. 1,394,951; Oct. 25.

Sullivan Machinery Company. (See Ferguson, Alexander D., assignor.)

Sullivan Machinery Company. (See Wineman, Wade H., assignor.)

Superheater Company, The. (See McKee, Neal T., assignor.)

Swanson, Frank T., Hayward, Calif. Steam friction device. No. 1,394,952; Oct. 25.

Swinehart, Benjamin C., Akron, Ohio. Cushion-tire. No. 1,394,589; Oct. 25.

Swintek, Martin, Eddyville, Iowa. Traveling screen for suction-nozzles. No. 1,394,693; Oct. 25.

Sylvester, Edward G., Honolulu, Hawaii. Headlight. No. 1,394,694; Oct. 25.

Tacchella, Adolf, assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo. Governor-controlled combustion-engine. No. 1,394,953; Oct. 25.

Talbot, Henry F., St. Joseph, Mo. Bedstead. No. 1,394,695; Oct. 25.

Tatosian, Martin, Bridgeport, Conn. Polishing-machine. No. 1,395,163; Oct. 25.

Taylor, Henry O., Rockford, Ill. Machine for repairing cues and the like. No. 1,395,236; Oct. 25.

Templeton, William G., Colorado Springs, Colo. Weighing-scale. No. 1,394,696; Oct. 25.

Tentobel Company. (See Purcell, Isaac S., assignor.)

Tervas, Joseph K. E., Hancock, Mich. Reel for picture-machines. No. 1,395,164; Oct. 25.

Thomas, Benjamin D., assignor of one-tenth to Thomas-Morse Aircraft Corporation, Ithaca, N. Y. Driving connections for airplane-engines. No. 1,394,870; Oct. 25.

Thomas, Lawrence H. (See Kuhn, F., Thomas, and Spiess.)

Thoms, Max H., assignor to H. Marmon, Indianapolis, Ind. Thread-gage. No. 1,394,650; Oct. 25.

Thomas-Morse Aircraft Corporation. (See Thomas, Benjamin D., assignor.)

Thomas, Seth, Clock Co., The. (See Wehrle, Frank X., assignor.)

Thompson, Albert R., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif. Safety can-feed chute. No. 1,394,799; Oct. 25.

Thompson, George H., assignor to H. N. Duffey, Jr., Santa Barbara, Calif. Trap. No. 1,394,649; Oct. 25.

Thompson, James H., Trenton, assignor to Hussong Dyeing Machine Company, Groveville, N. J. Dyeing-machine. No. 1,395,165; Oct. 25.

Tidewater Equipment Corporation. (See Hanson, Albert J., assignor.)

Tidewater Paper Mills Company. (See West, J. B., and Walz, assignors.)

Tillman, Ferdinand J., St. Louis, Mo. Calculating-machine. No. 1,394,800; Oct. 25.

Tin Decorating Company of Baltimore, The. (See Holthaus, George, assignor.)

Tomlinson, George E., Winchester, Ky. Table. No. 1,395,166; Oct. 25.

Tompkins, Gilbert, Thompson, Conn. Agricultural implement. No. 1,394,651; Oct. 25.

Torbensen Axle Company, The. (See Carlson, Gustav W., assignor.)

Tornajo, Gustaf E., St. Paul, assignor to Rao Manufacturing Company, Minneapolis, Minn. Film-hanging device. No. 1,394,697; Oct. 25.

Toronto Type Foundry Company. (See Palmer, Ernest E., assignor.)

Torrington Company, The. (See Graham, J. H., and Foley, assignors.)

Trane, Reuben N., La Crosse, Wis. Thermostatic trap. No. 1,395,167; Oct. 25.

Trembly, Ulysse N., South Lawrence, assignor to Draper Corporation, Hopedale, Mass. Temple-thread parter for looms. No. 1,394,652; Oct. 25.

Trenkamp, Herman J. (See McWilliams, Thomas J., assignor.)

Trent, Lamartine C., Los Angeles, Calif. Continuous method for the purification of sewage. No. 1,394,698; Oct. 25.

Tressler, Donald K., assignor to W. A. Hamor, Pittsburgh, Pa. Manufacture of liquid glue. No. 1,394,653; Oct. 25.

Tressler, Donald K., Pittsburgh, Pa. Manufacture of liquid glue. No. 1,394,654; Oct. 25.

Trostel, Albert O., Milwaukee, Wis. Mineralising hair, wool, and other animal fiber and the product so produced. No. 1,394,655; Oct. 25.

Tucker, Louise B., York, Pa. Measuring and dispensing device. No. 1,395,168; Oct. 25.

Turnbull, William, and E. F. Norelius, Peoria, Ill., assignors to The Holt Manufacturing Company, Stockton, Calif. Anti-aircraft-gun mount. No. 1,395,020; Oct. 25.

Turnbull, William, assignor to The Holt Manufacturing Company, Stockton, Calif. Traction-engine mechanism. No. 1,395,019; Oct. 25.

Turner, Henry B., Suisun, Calif. Tread for tractor-wheels. No. 1,395,237; Oct. 25.

Tuttle, Roy X., Battle Creek, Mich. Administering therapeutic light treatments. No. 1,395,065; Oct. 25.

U. S. Slicing Machine Company. (See Luschka, A. R., and Folk, assignors.)

Umbdenstock, Walter, assignor to The Hill Pump Valve Company, Chicago, Ill. Machine for castellating nuts. No. 1,395,169; Oct. 25.

Underhill, Charles R., New Haven, Conn. Controlling mechanism. No. 1,395,066; Oct. 25.

United Printing Machinery Company. (See Belluche, Frank E., assignor.)

United Shoe Machinery Corporation. (See Johnson, Albert E., assignor.)

United States Gypsum Company. (See Birdsey, Charles R., assignor.)

Vail, George I., Cleveland Heights, Ohio. Shutter. No. 1,394,656; Oct. 25.

Van Aller, Tycho, Schenectady, N. Y., assignor to General Electric Company. Metal-melting pot. No. 1,394,954; Oct. 25.

Van Syckle, Cecil E., Lakewood, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio. Scraper attachment for unloader-buckets. No. 1,394,699; Oct. 25.

Victor Tool Company, The. (See Koontz, Victor R., assignor.)

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 25TH DAY OF OCTOBER, 1921.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Adding-machine. C. W. Gooch. No. 1,395,044; Oct. 25.
Advertising device. J. M. Barbera. No. 1,394,881; Oct. 25.
Aerial bomb. S. Hough. No. 1,394,902; Oct. 25.
Aeroplane. N. G. Pappas. No. 1,395,204; Oct. 25.
Aeroplane. G. A. Spratt. No. 1,394,585; Oct. 25.
Aeroplane. G. Weikil. No. 1,395,068; Oct. 25.
Agricultural implement. G. Tompkins. No. 1,394,651; Oct. 25.
Air-brake system. H. A. Bryan. No. 1,395,221; Oct. 25.
Air cooler moistener and purifier, Portable. B. Macfadden. No. 1,394,924; Oct. 25.
Air moistening and distributing device. C. W. Mosher. No. 1,394,859; Oct. 25.
Airplane. G. C. Loening. No. 1,394,630; Oct. 25.
Airplane-engines, Driving connections for. B. D. Thomas. No. 1,394,870; Oct. 25.
Airplane-fuselage. W. L. Gilmore. No. 1,394,726; Oct. 25.
Alarm track-gage. W. D. Harper. No. 1,395,105; Oct. 25.
Alcohol from gas containing ethylene, Production of. C. A. Basore. (Reissue.) No. 15,211; Oct. 25.
Alloy. Heat treatment of aluminum. E. Blough. No. 1,394,634; Oct. 25.
Alumina, Manufacture of pure. E. Martin. No. 1,394,864; Oct. 25.
Animal-stock. T. Olinger. No. 1,394,783; Oct. 25.
Anthraquinone derivatives and new products resulting therefrom, Manufacture of. A. Lüttringhaus and L. Elffiaender. No. 1,394,851; Oct. 25.
Antifreeze device. F. C. Stewart. No. 1,394,648; Oct. 25.
Arch and archbrick. A. H. Willett. No. 1,394,878; Oct. 25.
Autographic register. A. P. F. Pico. No. 1,394,785; Oct. 25.
Automatic-stop oil-gage. D. D. Cureton, Jr. No. 1,395,095; Oct. 25.
Automobile-bumper. O. H. Goetz. Nos. 1,394,892–3; Oct. 25.
Automobile-door latch. D. B. Lauzon. No. 1,394,681; Oct. 25.
Automobile-jack. R. F. Downey. No. 1,394,888; Oct. 25.
Automobile lighting device. A. J. Chmurski. No. 1,395,039; Oct. 25.
Automobile-lock. F. O. Boswell. No. 1,395,220; Oct. 25.
Automobile-lock. R. B. Rutherford. No. 1,395,146; Oct. 25.
Automobile-puller. J. H. Wright. No. 1,394,703; Oct. 25.
Automobile running-boards, Attachment for. T. L. Fay. No. 1,395,226; Oct. 25.
Automobiles, Accessories for Ford. W. J. Koster. No. 1,394,846; Oct. 25.
Automobiles, Locking device for. J. M. White. No. 1,394,572; Oct. 25.
Automobiles, Metal double-decking buck for. E. S. Evans. No. 1,395,225; Oct. 25.
Automobiles, Overhead and underground storage for. F. Y. McKinstry. No. 1,394,999; Oct. 25.
Automobiles, Spring suspension for. C. Fredriksen. No. 1,394,724; Oct. 25.
Axle, Differential. J. Martin. No. 1,394,855; Oct. 25.
Axle, Rear. J. V. Kammers. No. 1,394,842; Oct. 25.
Azo dye and its manufacture. R. Arnot. No. 1,395,238; Oct. 25.
Badge. C. J. Dieges. No. 1,394,977; Oct. 25.
Bake-pan, Multiple. E. Biggs. No. 1,395,030; Oct. 25.
Baking apparatus. F. T. Snyder. No. 1,395,211; Oct. 25.
Baking, Method and apparatus for. S. D. Flood. No. 1,394,674; Oct. 25.
Baling-press. A. Payne. No. 1,395,135; Oct. 25.
Ball-mill feeder, Automatic. H. H. Burbans. No. 1,395,089; Oct. 25.
Balling-machine. A. G. Walls. No. 1,395,213; Oct. 25.
Bank. A. C. Prince. No. 1,395,008; Oct. 25.
Banking means, Auxiliary. O. V. Smith. No. 1,395,156; Oct. 25.
Bar: *See*—
Double bumper-bar.
Barber or like chairs, Headrest for. G. C. Larala. No. 1,394,913; Oct. 25.
Barge, Dumping-. A. F. Wiking. No. 1,394,594; Oct. 25.
Barrel, Sheet-metal. J. W. McNeil. No. 1,394,923; Oct. 25.
Basket, Centrifugal. E. E. La Duke. No. 1,394,743; Oct. 25.
Batting-out and slapping-on device, Automatic. F. P. Strobl. No. 1,395,161; Oct. 25.
Bearings, Ball-holder for ball-. K. W. Lindman. No. 1,395,126; Oct. 25.
Bed couch, Folding-. M. Sherman. No. 1,394,584; Oct. 25.
Bed-spring, Collapsible. D. J. and W. C. Davis. No. 1,394,609; Oct. 25.
Bed structure, Collapsible. S. H. Smith. No. 1,395,155; Oct. 25.
Bed with adjustable folding headpiece, Day-. J. A. Fischer. No. 1,394,985; Oct. 25.
Beds, Fastening device for auto porch-. P. C. Schaefer. No. 1,395,151; Oct. 25.
Bedstead. H. H. Talbot. No. 1,394,695; Oct. 25.
Belt, Driving-. B. P. Champney. No. 1,394,967; Oct. 25.
Belt pulley and tightener. B. D. Barton. No. 1,394,705; Oct. 25.
Belts, Link for chain. R. W. Dull. Nos. 1,394,979–80; Oct. 25.
Bicycle. C. K. G. Schoenknecht. No. 1,394,846; Oct. 25.
Binder, Loose-leaf. D. C. Benedict. No. 1,394,707; Oct. 25.
Bituminous substances, Treating. G. A. Wilson, Jr. No. 1,394,874; Oct. 25.
Blackboard. C. B. Neil and R. B. Boggs. No. 1,394,872; Oct. 25.
Board: *See*—
Drain-board. Plaster-board.
Drawing-board.
Boat, Wheeled. J. A. Howell. No. 1,395,112; Oct. 25.
Boiler: *See*—
Steam-boiler.
Boiler-feed, Automatic. M. F. McNerney. No. 1,395,183; Oct. 25.
Boiler-tubes, Apparatus for tightening leakages in and about. J. M. Johansson. No. 1,395,186; Oct. 25.
Book formed with several turning-arms, Device for automatically turning over leaves of a. A. W. Riebe. No. 1,395,143; Oct. 25.
Boot and shoe stretcher. L. Walker. No. 1,394,871; Oct. 25.
Boring-machine. C. A. Smith. No. 1,394,766; Oct. 25.
Bowl, Mixing-. A. S. Diack. No. 1,394,540; Oct. 25.
Box: *See*—
Combination toilet-box. Service-box.
Fare-collecting box. Slide-cover box.
Box and process and manufacture thereof. A. G. Wetmore. No. 1,394,593; Oct. 25.
Box or case, Security. E. H. Duncan. No. 1,394,981; Oct. 25.
Boxes, Bushing for. P. E. C. Sater. No. 1,394,942; Oct. 25.
Bracelet. W. C. Wood. No. 1,394,877; Oct. 25.
Bracket. W. M. Folberth. No. 1,394,988; Oct. 25.
Brake: *See*—
Car-brake.
Brick. J. A. Papot. No. 1,394,759; Oct. 25.
Bricks, Manufacture of. I. Brettschneider. No. 1,395,178; Oct. 25.
Bridge, Bascule-. H. A. F. Abt. No. 1,394,519; Oct. 25.
Broom. H. O. Hennig. No. 1,395,109; Oct. 25.
Brush, Rotary. C. E. Frost. No. 1,394,993; Oct. 25.
Buckets, Scraper attachment for unloader-. C. E. Van Syckle. No. 1,394,699; Oct. 25.
Buckle. H. Hoeschen. No. 1,394,552; Oct. 25.
Buckle. G. Rottman. No. 1,394,644; Oct. 25.
Buckle-body, Forming a. F. W. Lewis. No. 1,395,124; Oct. 25.
Burner: *See*—
Fuel-burner. Liquid-fuel burner.
Gas-burner. Vapor-burner.
Hydrocarbon-burner.
Button, Press-. A. Mann. (Reissue.) No. 15,212; Oct. 25.
Cabinet for talking-machine records. E. Blaise. No. 1,394,904; Oct. 25.
Cabinet, Record-rack. G. G. Ross. No. 1,394,864; Oct. 25.
Calculating-machine. A. F. Poole. No. 1,394,641; Oct. 25.
Calculating-machine. F. J. Tillman. No. 1,394,600; Oct. 25.
Camera attachment. L. Mandel. No. 1,394,568; Oct. 25.
Camera-shutter release. A. S. Warne. No. 1,395,214; Oct. 25.
Can-feed chute, Safety. A. E. Thompson. No. 1,394,700; Oct. 25.
Cans, Method and means for assembling sifter-top members for. G. Holthaus. No. 1,394,623; Oct. 25.
Car-brake. F. C. Foster. No. 1,394,990; Oct. 25.

Car-door, Sheet-metal flush. A. S. Barrows. No. 1,395,080; Oct. 25.
Car, Tank-. R. R. Weaver. No. 1,394,956; Oct. 25.
Carbonator and filler, Combination. E. E. Bager and O. L. King. No. 1,394,794; Oct. 25.
Carburetor. W. Ashworth. No. 1,395,170; Oct. 25.
Carburetor. W. O. Chase. No. 1,394,536; Oct. 25.
Carburetor. F. C. Mock. No. 1,395,233; Oct. 25.
Carburetor. W. Reid. No. 1,394,687; Oct. 25.
Card section, Interchangeable price-. H. L. Lovett. No. 1,395,127; Oct. 25.
Carrier: *See*—
Hay-carrier.
Casting, Hollow. H. and J. Hoffer. No. 1,394,553; Oct. 25.
Ceilings, Construction of. T. Culshaw. No. 1,394,714; Oct. 25.
Cellulose acetate and the product thereof, Treating. G. W. Miles. No. 1,394,752; Oct. 25.
Center-testing device. H. O. Brion. No. 1,395,087; Oct. 25.
Centrifugal separator. F. H. Lindenberg. No. 1,395,193; Oct. 25.
Chain, Antiskid-. N. H. Nelson. No. 1,395,057; Oct. 25.
Chain connection. A. P. Griffin. No. 1,394,618; Oct. 25.
Chain-fastener. C. W. Burge. No. 1,394,666; Oct. 25.
Chain-tracks, Upper-run support for. B. Holt. No. 1,394,996; Oct. 25.
Chair: *See*—
Rail-chair.
Chair-back and picture-frame therefor. B. G. Schomacker. No. 1,395,153; Oct. 25.
Channel-iron and anchor. L. P. Wentzell. No. 1,395,070; Oct. 25.
Chlorhydrins, Making. B. T. Brooks. No. 1,394,664; Oct. 25.
Chronometer. W. A. Slingerland. No. 1,395,154; Oct. 25.
Cigar-box-lid holder. W. M. Anderson. No. 1,395,215; Oct. 25.
Cigars and cigarettes, Ash-protector and cutter adaptable to. R. A. Hoffmann. No. 1,394,622; Oct. 25.
Cinematographic films, Device for maintaining the slack of. S. Kucharski. No. 1,395,119; Oct. 25.
Cinematographic machine. E. Pluderi. No. 1,395,137. Oct. 25.
Circuit-controlling apparatus, Automatic. L. M. Klauber. No. 1,395,046; Oct. 25.
Circuit-testing apparatus. L. P. Carle. No. 1,395,037; Oct. 25.
Clamp: *See*—
Display-clamp. Hood-clamp.
Clamp. W. V. Isgrig. No. 1,394,904; Oct. 25.
Clamp. J. L. Spence, Jr. No. 1,394,691; Oct. 25.
Clasp. O. Gehrke. No. 1,395,102; Oct. 25.
Cleaner: *See*—
Fish-cleaner. Suction-cleaner.
Rubber floor-cleaner.
Cleaner. H. Prell. No. 1,394,789; Oct. 25.
Climbing-iron. J. Selinger-Balser. No. 1,395,234; Oct. 25.
Clip: *See*—
Mail-clip.
Clip. L. P. Wentzell. No. 1,395,071; Oct. 25.
Clock-escapement. H. C. Saul. No. 1,395,148; Oct. 25.
Clock, Self-winding. A. L. Sohm. No. 1,394,689; Oct. 25.
Clock, Ship's-bells. F. X. Wehrle. No. 1,394,957; Oct. 25.
Cloth-cutter, Electric. F. A. Scalfaro and J. A. McLeod. No. 1,395,150; Oct. 25.
Clutch. C. C. Blake. No. 1,394,805; Oct. 25.
Cock and strainer, Combined stop-. A. C. Schuermann. No. 1,394,762; Oct. 25.
Coiling-machine. T. F. Lamb. No. 1,395,190; Oct. 25.
Coin-vending machine. E. J. Koehler. No. 1,394,559; Oct. 25.
Coke-oven door. W. E. Roberts. No. 1,395,061; Oct. 25.
Colloidal suspension of polymers and making same. J. W. Phillips. No. 1,395,242; Oct. 25.
Combination-lock. W. J. H. Ruschmeyer. No. 1,394,792; Oct. 25.
Combination toilet-box. C. A. James. No. 1,394,837; Oct. 25.
Composition, Antidimming. H. A. Kuhn. Nos. 1,394,773–4; Oct. 25.
Compressing mechanism. G. N. Bager. No. 1,394,580; Oct. 25.
Compressor. G. J. Daloz. No. 1,394,811; Oct. 25.
Compressor-controlling mechanism. A. D. Ferguson. No. 1,394,819; Oct. 25.
Compressor-unloader. A. O. Carpenter. No. 1,395,090; Oct. 25.
Compressors, Unloading apparatus for. W. H. Wineman. No. 1,394,802; Oct. 25.
Concrete building-slab. M. B. Herbrick. No. 1,394,550; Oct. 25.
Concrete houses and other buildings, Mold for constructing. W. H. Roughsedge. No. 1,394,790; Oct. 25.
Concrete-pipe, molds. Inner form for. J. C. Mitchell. No. 1,394,570; Oct. 25.
Concrete structures, Erecting. S. Lake. No. 1,394,907; Oct. 25.
Condenser apparatus. S. A. Moss. No. 1,394,929; Oct. 25.
Condenser, Surface. W. Koedding. No. 1,394,627; Oct. 25.
Condensers, Air-pump for. F. Ljungström. No. 1,394,748; Oct. 25.
Connecting device. M. W. Doyle. No. 1,394,673; Oct. 25.
Connector, Multiple. J. W. Haywood. No. 1,395,108; Oct. 25.
Container, Metal-bound fiber. A. L. Weis and W. H. Ray. No. 1,394,592; Oct. 25.
Container, Open-end. A. L. Weis. No. 1,394,590; Oct. 25.
Container, Sealed. T. H. French. No. 1,394,545; Oct. 25.
Controlling mechanism. C. R. Underhill. No. 1,395,066; Oct. 25.
Cooling-tower. E. Burhorn. No. 1,394,605; Oct. 25.
Cot. I. S. Purcell. No. 1,394,578; Oct. 25.
Cotton cleaning and separating machine. J. E. Witchell. No. 1,395,054; Oct. 25.
Cotton, Machine for treating. J. F. Levering. No. 1,394,775; Oct. 25.
Coupling: *See*—
Pipe-coupling.
Cover-sealing means. W. H. Ray. No. 1,394,581; Oct. 25.
Cover-support. A. F. Zega. No. 1,394,879; Oct. 25.
Covers, Fastener for. C. W. Davis. No. 1,394,672; Oct. 25.
Crank-shaft. J. W. Hudson. No. 1,395,113; Oct. 25.
Crib, Folding. J. W. Kennedy. No. 1,394,625; Oct. 25.
Cues, Machine for repairing. H. O. Taylor. No. 1,395,236; Oct. 25.
Cultivator. C. J. Allen, J. M. Howard, and D. R. Richie. No. 1,394,522; Oct. 25.
Cultivator, Tractor-. R. C. Shelton. No. 1,395,210; Oct. 25.
Cushion-wheel. J. Nelson. No. 1,394,779; Oct. 25.
Cutter: *See*—
Cloth-cutter. Pipe-cutter.
Cutters, Web-guide for rotary. H. M. Barber. No. 1,394,961; Oct. 25.
Cutting machine, Shingle-. R. D. King. No. 1,394,911; Oct. 25.
Cyanamid, Granulating. L. Barbé. No. 1,394,532; Oct. 25.
Cylinders, Apparatus for filling oxygen-. M. von Beckinghausen. No. 1,394,955; Oct. 25.
Decarbonizing device. H. Bruneau. No. 1,394,665; Oct. 25.
Dental amalgam or alloy mixer. B. Siml. No. 1,395,235; Oct. 25.
Dental bridgework, Horizontally-split attachment for removable. J. Zirikian. No. 1,394,770; Oct. 25.
Die-casting machine. J. C. Kopf. No. 1,394,561; Oct. 25.
Die-head. V. R. Koontz. No. 1,394,845; Oct. 25.
Die-head, Self-opening. W. C. Hafemeister. No. 1,394,549; Oct. 25.
Differential gage. A. T. Baldwin. Nos. 1,394,660–1; Oct. 25.
Dipper-tooth. W. S. McKee. No. 1,395,048; Oct. 25.
Direction-indicator. N. T. Brown. No. 1,395,088; Oct. 25.
Dirigible. A. C. Mihanovich. No. 1,395,051; Oct. 25.
Disconnecting-switch. C. Christensen. No. 1,394,968; Oct. 25.
Display-card. C. C. Cohn. No. 1,394,537; Oct. 25.
Display-clamp. G. Potstada. No. 1,394,788; Oct. 25.
Display-rack. G. Bailey and J. P. Neilsen. No. 1,395,239; Oct. 25.
Distillates, Apparatus for condensing and treating. R. Fleming. No. 1,394,987; Oct. 25.
Door, Automatic garage-. H. Groves. No. 1,394,728; Oct. 25.
Door-stop. C. O. and R. J. Foedisch. No. 1,394,889; Oct. 25.
Doors, Device for opening and closing garage. M. L. Haney. No. 1,395,240; Oct. 25.
Double bumper-bar. L. P. Halladay. No. 1,395,045; Oct. 25.
Doughy and powdery material, Filling-machine for. H. O. Schilling. No. 1,394,582; Oct. 25.
Draft appliance. J. R. Moore. No. 1,394,858; Oct. 25.
Draft appliance, Implement. B. M. Hunter. No. 1,394,903; Oct. 25.
Drain-board. H. Hansen. No. 1,394,994; Oct. 25.
Drawing-board. J. F. Copeland. No. 1,394,538; Oct. 25.
Drawing-board. L. W. Moore. No. 1,395,200; Oct. 25.
Drill: *See*—
Metal drill.
Drill. C. E. Barry and M. L. McClelland. No. 1,395,081; Oct. 25.
Drill. R. Caverly. No. 1,395,091; Oct. 25.
Drill-head. J. F. Buhr. No. 1,394,709; Oct. 25.
Drill or tap holder. P. Sauve. No. 1,394,795; Oct. 25.
Drill, Portable radial. E. G. Lindhe. No. 1,395,194; Oct. 25.
Drilling apparatus. G. G. Reeves. No. 1,395,059; Oct. 25.
Driving mechanism. H. L. Fisher. No. 1,394,986; Oct. 25.
Dyeing-machine. J. H. Thompson. No. 1,395,165; Oct. 25.
Dyestuffs containing chromium and process of making same, Green acid. A. Grob. No. 1,394,823; Oct. 25.
Educational apparatus. M. A. M. Haupt. No. 1,394,620; Oct. 25.
Electric feed-water regulator. W. M. Reichart. No. 1,394,643; Oct. 25.
Electric-heating-element-controlling device. P. M. Mueller. Nos. 1,395,002–3; Oct. 25.
Electric-lighting fixtures, Suspension means for. I. L. Park. No. 1,394,575; Oct. 25.
Electric marking device. C. A. Bourne. No. 1,394,965; Oct. 25.
Electric-meter construction. D. J. Angus. No. 1,394,528; Oct. 25.
Electric motor. E. Bretch. No. 1,394,535; Oct. 25.

Electric regulation. J. L. Creveling. No. 1,394,972; Oct. 25.
Electric signaling system. R. L. Quass. No. 1,394,642; Oct. 25.
Electric switch. F. C. De Reamer. No. 1,394,976; Oct. 25.
Electric toaster. I. J. Mandels. No. 1,394,856; Oct. 25.
Electrical apparatus. N. Sugimura. No. 1,394,951; Oct. 25.
Electrical apparatus, Casing for. M. L. Elder. No. 1,394,982; Oct. 25.
Electrical apparatus, Water-cooled. A. B. Hendricks, Jr. No. 1,394,899; Oct. 25.
Electrical transformer. H. L. Ide. No. 1,394,555; Oct. 25.
Electricity transformer and transforming and converting apparatus. H. M. Hobart. No. 1,394,901; Oct. 25.
Electromagnetic rectifier and current-redresser. R. A. Engler. No. 1,394,815; Oct. 25.
Elevators, Dump for grain-. H. A. Peterson. No. 1,394,577; Oct. 25.
Emery-cloth holder. H. Müller. No. 1,394,757; Oct. 25.
Emery-wheel dresser. M. G. Dobbins. No. 1,395,098; Oct. 25.
Engine: *See*—
Internal-combustion engine.
Starter-engine.
Engine-cylinders, Machine for grinding and reboring. W. J. Jackson. No. 1,394,836; Oct. 25.
Engine-starter. A. J. Hanson. No. 1,394,619; Oct. 25.
Engines, Attachment for internal-combustion. B. M. Little. No. 1,394,747; Oct. 25.
Engines, Auxiliary ignition system for gas-. R. R. Shaw. No. 1,394,944; Oct. 25.
Engines, Construction for traction-. E. E. Wickersham. No. 1,395,024; Oct. 25.
Engines, Governor for gas-. C. P. Hall. No. 1,394,826; Oct. 25.
Engines, Mixing device for explosive-. J. H. Fritz. No. 1,394,820; Oct. 25.
Engines, Oil-filter for gas-. E. E. Wells. No. 1,395,060; Oct. 25.
Engines, Oiling system for. G. F. Nutting. No. 1,394,782; Oct. 25.
Engines or pumps, Automatic pressure-operated valve for. M. J. Johns. No. 1,394,679; Oct. 25.
Engines, Thrust-bearing for internal-combustion. C. C. Fuller. No. 1,395,043; Oct. 25.
Eyeglass-mounting. F. C. Merry. No. 1,395,199; Oct. 25.
Fabric: *See*—
Wire mattress fabric.
Fabrics to objects, Applying coated. H. Gault. No. 1,394,890; Oct. 25.
Fan, Oscillating. P. De Clamecy. No. 1,394,975; Oct. 25.
Fare-collecting box. A. Buebsamen and W. L. Dennis. No. 1,394,941; Oct. 25.
Fastenings, Machine for inserting. C. C. Blake. No. 1,394,806; Oct. 25.
Fats and oils, Rendering. C. F. Kamrath. No. 1,394,736; Oct. 25.
Feed-cutters, Comminuting attachment for. O. C. Frick. No. 1,394,725; Oct. 25.
Feed-mill. W. L. Beall. No. 1,394,803; Oct. 25.
Feeding mechanism. G. C. Kelling. No. 1,394,908; Oct. 25.
Feeding-table, Adjustable. F. R. Belluche. No. 1,395,027; Oct. 25.
Felts, Apparatus for cleaning. E. D. Bennett. No. 1,395,219; Oct. 25.
File. J. W. McCann. No. 1,395,197; Oct. 25.
Film-hanging device. G. E. Tornsjo. No. 1,394,697; Oct. 25.
Films, Daylight developing and fixing apparatus for roll-. M. H. Stockwell. No. 1,395,160; Oct. 25.
Firearm. E. G. Reising. No. 1,395,141; Oct. 25.
Fish-cleaner, Automatic. C. H. Carter. No. 1,394,711; Oct. 25.
Fishing-reels, Attachment for. G. D. Jones. No. 1,395,118; Oct. 25.
Fishing-tackle. C. Fredricks. No. 1,394,616; Oct. 25.
Flag and container, Trainman's. H. H. Olsen. No. 1,394,933; Oct. 25.
Flotation agent. C. L. Perkins. No. 1,394,639; Oct. 25.
Fluid-actuated motor. L. C. Bayles. No. 1,395,082; Oct. 25.
Flushing device, Portable. W. E. Lewis, J. S. Adamson, and M. J. Mahon. No. 1,395,125; Oct. 25.
Flying-machine. R. A. Engler. No. 1,394,814; Oct. 25.
Flying-machine. R. A. Engler. No. 1,394,816; Oct. 25.
Frame: *See*—
Picture-frame.
Fuel-burner. H. P. Porter. No. 1,395,139; Oct. 25.
Fuel feed and mixture control, Automatic. E. E. Wickersham. No. 1,395,022; Oct. 25.
Fuel-feeding device. J. C. Coulombe. No. 1,395,224; Oct. 25.
Fuel-separator and fuel vaporizer, Carbureted-. C. F. Smith. No. 1,394,948; Oct. 25.
Fuel-supply-control mechanism. A. E. Walden. No. 1,395,212; Oct. 25.
Furnace attachment. E. C. Mason. No. 1,394,634; Oct. 25.
Furnace-casing. N. Frost. No. 1,394,821; Oct. 25.
Furniture. A. H. Luedde. No. 1,394,750; Oct. 25.
Gage: *See*—
Alarm track-gage. Limit-gage.
Automatic-stop oil-gage. Thread-gage.
Differential gage. Water-gage.
Gage and marker, Combined. E. B. Fry. No. 1,394,992; Oct. 25.
Game, Baseball. N. I. Sheehan. No. 1,394,764; Oct. 25.
Garment, Child's. L. Jeslow. No. 1,395,115; Oct. 25.
Garment, Electrothermal. J. E. Craddick. No. 1,394,610; Oct. 25.
Garment-supporter. C. L. Feltman. No. 1,394,720; Oct. 25.
Garter. E. Landgraf, geb. Cartharius. No. 1,395,192; Oct. 25.
Gas-burner. J. Festa. No. 1,394,721; Oct. 25.
Gas engine or motor, Rotary. R. H. Stewart. No. 1,394,587; Oct. 25.
Gas or liquid fuel burner. J. Lukassewski. No. 1,395,196; Oct. 25.
Gas-plate. L. De Meutter. No. 1,395,097; Oct. 25.
Gas-testing apparatus. G. G. Oberfell and A. M. Ballard. No. 1,395,201; Oct. 25.
Gases, Apparatus for the electrical treatment of. H. J. Kennard. No. 1,394,771; Oct. 25.
Gasolene-flow-line lock. C. S. Neville. No. 1,394,860; Oct. 25.
Gasolene. Process and apparatus for treating petroleum-oils to produce. R. Yates. No. 1,395,075; Oct. 25.
Gasolene-tanks, Low-supply alarm for. E. K. McKissick. No. 1,395,132; Oct. 25.
Gate-operating machine, End-. G. Akers. No. 1,394,521; Oct. 25.
Gear, Changeable-speed. H. W. Warren. No. 1,395,067; Oct. 25.
Gear clutch, Magnetic reversing and speed-varying. E. J. Murphy. No. 1,394,932; Oct. 25.
Gear-planing machine. A. L. Stewart and E. C. Head. No. 1,394,586; Oct. 25.
Gear-puller attachment. C. P. Beach. No. 1,394,963; Oct. 25.
Gear, Steering-. D. E. Rose. No. 1,395,013; Oct. 25.
Gear-wheel. E. Marlow. No. 1,394,751; Oct. 25.
Gear, Worm-. C. H. McClure. No. 1,394,852; Oct. 25.
Gill-drawing frames, Top screw for. W. Holdsworth. No. 1,394,829; Oct. 25.
Glass-delivery apparatus. R. T. McGee. No. 1,394,920; Oct. 25.
Glass-discharging mechanism. E. S. Hutton. No. 1,394,677; Oct. 25.
Glass, Process and apparatus for drawing sheet-. I. W. Colburn. No. 1,394,809; Oct. 25.
Glass roll. K. Matuo. No. 1,394,684; Oct. 25.
Glass using natural silicates, such as micaceous minerals, asbestos, &c., Manufacture of s. P. B. Crossley. No. 1,394,973; Oct. 25.
Glue, Manufacture of liquid. D. K. Tressler. Nos. 1,394,653–4; Oct. 25.
Governor-controlled combustion-engine. A. Tacchella. No. 1,394,953; Oct. 25.
Grain-drills, Automatic gear-throw-out mechanism for. T. Brennan, Jr. No. 1,394,663; Oct. 25.
Grain under high pressure and high temperature, Apparatus for processing. C. V. Rowell. No. 1,395,014; Oct. 25.
Grains and product therefrom, Treating wheat-. C. V. Rowell. No. 1,395,015; Oct. 25.
Grate, Stoker-. G. F. Patterson. No. 1,395,006; Oct. 25.
Grinder, Cutter-blade. C. F. Robbins. No. 1,395,145; Oct. 25.
Grinding machine, Pulley-. W. C. Barnhart. No. 1,394,704; Oct. 25.
Gun, Barrel-recoil. F. Finckh. No. 1,394,984; Oct. 25.
Gun mount, Anti-aircraft-. W. Turnbull and E. F. Norelius. No. 1,395,020; Oct. 25.
Gun-pointing gear, Apparatus for the electrical long-distance control of the valve-gear of a hydraulic. W. Akemann. No. 1,394,520; Oct. 25.
Hair-clipper. F. L. Gray. No. 1,395,104; Oct. 25.
Hair-dressing appliance. R. S. M. Schroeder. No. 1,394,943; Oct. 25.
Hair, wool, and other animal fiber, and the product so produced, Mineralizing. A. O. Trostel. No. 1,394,655; Oct. 25.
Hammer, Power-. G. Fogde. No. 1,394,722; Oct. 25.
Hat-shaping device. J. C. Haslam. No. 1,395,106; Oct. 25.
Hay-carrier. W. Gutenkunst. No. 1,394,729; Oct. 25.
Headlight. E. G. Sylvester. No. 1,394,694; Oct. 25.
Headlight. W. G. Wood. No. 1,395,026; Oct. 25.
Headlight, Dirigible. W. A. Rutherford. No. 1,395,147; Oct. 25.
Headlight-reflector. C. A. B. Halvorson, Jr. No. 1,394,896; Oct. 25.
Headlight-reflector. J. A. O'Neil. No. 1,394,934; Oct. 25.
Heater: *See*—
Water-heater.
Heater for hot-pipe systems. W. Karlsson. No. 1,394,557; Oct. 25.
Heating apparatus, Electric. H. Geisenhöner. No. 1,394,891; Oct. 25.
Heating-tank. J. M. Stocker. No. 1,394,692; Oct. 25.
Heating unit, Electric. C. C. Abbott. No. 1,394,518 Oct. 25.
Heel, Revolving. T. Hand. No. 1,394,676; Oct. 25.
Heel, Shoe-. A. Cohen. No. 1,394,712; Oct. 25.

Hides and skins, Making depilatory for. A. H. Rowe. No. 1,394,585; Oct. 25.
Hoisting and conveying machinery. C. W. Arnhem. No. 1,395,977; Oct. 28.
Hydrant connection. H. H. Lyon. No. 1,395,041; Oct. 28.
Hydrant-stand. J. W. Hall. No. 1,394,685; Oct. 25.
Hydraulic separating. H. H. Lyon. No. 1,395,042; Oct. 28.
Hydrocarbon-burner. A. Blackburn. No. 1,394,587; Oct. 25.
Hydrocarbon-burner. J. W. F. Macdonald. No. 1,394,597; Oct. 25.
Hydrocarbon generators and burners, Igniting and controlling device for. G. H. Blanchard. No. 1,394,597; Oct. 25.
Ignition systems, Timer-ring for. G. Feegel and H. Schmid. No. 1,395,012; Oct. 28.
Indicator: See—
Direction-indicator.
Ingots or like moulds, Apparatus for automatic manipulation of metal. E. W. Davies. No. 1,394,671; Oct. 25.
Insect-trap. R. G. Koch. No. 1,394,626; Oct. 25.
Insoles, Machine for preparing. A. E. Johnson. No. 1,394,905; Oct. 28.
Intake-manifold-heating device. H. H. Holloway. No. 1,394,830; Oct. 26.
Internal-combustion engine. A. R. Long. No. 1,394,859; Oct. 26.
Internal-combustion engine. E. V. Plank. No. 1,395,186; Oct. 28.
Internal-combustion-engine pistons, Cooling system for. E. Kjellen. No. 1,394,844; Oct. 25.
Iron: See—
Climbing-iron. Soldering-iron.
Jack: See—
Automobile-jack. Lifting-jack.
Jam-nut. W. O. Heyter and G. A. Frink. No. 1,394,739; Oct. 25.
Joint: See—

Presser-roller-releasing device. G. C. Heach. No. 1,394,656; Oct. 25.
Printing device. R. C. McKenzie-Martyn and F. A. Howard. No. 1,394,921; Oct. 26.
Printing cousin. A. and L. Sautez. No. 1,395,149; Oct. 28.
Printing-plate-trimming machine. J. Simpson. No. 1,394,765; Oct. 25.
Printing-press. A. Anderson. No. 1,395,078; Oct. 28.
Protective device. E. E. F. Creighton and F. R. Shavor. No. 1,394,971; Oct. 26.
Puller: See—
Automobile-puller. Stump-puller.
Pump. P. Dillon. No. 1,394,611; Oct. 25.
Pump governor mechanism. W. F. Cooper. No. 1,394,887; Oct. 25.
Pump or motor. F. Branch. No. 1,394,861; Oct. 25.
Pump, Rotary. C. W. Jackman. No. 1,395,714; Oct. 28.
Purification of sewage, Continuous method for the. L. C. Trent. No. 1,394,698; Oct. 25.
Pyrophoric igniting device. S. Luber and M. Ribets. No. 1,394,917; Oct. 25.
Rack: See—
Display-rack. Pan-rack.
Radiant energy, Apparatus for transmitting. F. A. Kolster. No. 1,394,695; Oct. 25.
Radiator-core. J. W. Miller. No. 1,394,857; Oct. 26.
Radium hydro-emanometer. G. Eunice. No. 1,395,120; Oct. 28.
Rail-anchor, Welded. B. Wolhaupter. (Reissue.) Nos. 15,215-16; Oct. 28.
Rail-bond. H. H. Febrey. No. 1,394,918; Oct. 25.
Rail-bonds, Manufacturing. W. P. Bevard. No. 1,394,694; Oct. 25.
Rail-chair. W. P. Parham. No. 1,394,638; Oct. 25.
Rail-end-supporting rail-joint. B. Wolhaupter. No. 1,394,896; Oct. 26.
Rail-joint. L. Plasha. No. 1,395,136; Oct. 28.
Rail-joints, Means for lubricating. B. Wolhaupter. No. 1,394,897; Oct. 25.
Rail, Prayer-. J. J. McCann. No. 1,394,919; Oct. 25.
Rail tie and fastener. J. C. Bott. No. 1,395,172; Oct. 28.
Rails, Antispreading device for. M. Jicha. No. 1,394,754; Oct. 25.
Railway-crossings, Automatic safety-gate for. C. Esache. No. 1,394,813; Oct. 26.
Railway-tie. J. G. Horan. No. 1,394,731; Oct. 25.
Railway-tie. F. C. Jekel. No. 1,394,624; Oct. 25.
Ram control, Hydraulic-. W. W. MacDonald. No. 1,395,001; Oct. 28.
Razor-blade holder. E. N. Kennedy. No. 1,394,909; Oct. 25.
Razor, Safety-. J. J. Catron. No. 1,394,586; Oct. 25.
Razor, Safety-. E. P. Harshberger. No. 1,394,627; Oct. 25.
Razor, Safety-. A. T. Stewart. No. 1,395,150; Oct. 28.
Receptacle. W. M. Fausset. No. 1,394,817; Oct. 26.
Receptacle-making machine. H. A. and W. H. Inman. No. 1,395,220; Oct. 28.
Recording apparatus. H. H. Hubbard. No. 1,394,733; Oct. 25.
Recording-machine. H. Landsdeel. No. 1,395,121; Oct. 28.
Register: See—
Autographic register.
Registers, Key device for. R. M. Hopkins. No. 1,394,581; Oct. 25.
Registry apparatus. C. C. Johnson. No. 1,394,840; Oct. 25.
Registry system. C. C. Johnson. No. 1,394,839; Oct. 25.
Registry system and register therefor. R. M. Hopkins. No. 1,394,834; Oct. 25.
Registry system and register therefor. C. C. Johnson. No. 1,394,838; Oct. 25.
Registry system, Watchman's. R. M. Hopkins. No. 1,394,832; Oct. 25.
Regulator: See—
Electric feed-water regulator.
Reinforcing and sealing device. J. Januchowsky. No. 1,394,673; Oct. 25.
Rendder. W. H. Collins. No. 1,395,094; Oct. 28.
Reproducer and tone-arm, Automatic universal. C. C. Bender. No. 1,394,804; Oct. 25.
Resilient wheel. E. P. Babb. No. 1,395,085; Oct. 28.
Resistance material. R. W. Stearns. No. 1,394,949; Oct. 25.
Resistance unit. L. Reichold. No. 1,394,967; Oct. 25.
Rim-operating lever, Demountable. E. M. Foster. No. 1,394,880; Oct. 25.
Road-drag. J. A. Gutridge and J. A. Wood. No. 1,394,543; Oct. 25.
Rock-drill stands, Apparatus for blowing bores of. H. L. Oldham and J. L. Barra. No. 1,395,249; Oct. 28.
Roofs product. J. A. De Cew. No. 1,394,610; Oct. 25.
Rubber articles, Treatment of. T. Midgley and R. B. Nagler. No. 1,394,928; Oct. 26.
Rubber floor-cleaner. F. W. Nevins. No. 1,395,058; Oct. 28.
Rubber jars, Process and apparatus for the manufacture of. L. E. Klug. No. 1,394,558; Oct. 25.
Rug-weaving and the product therefrom. D. H. Bread, Jr. No. 1,394,869; Oct. 26.
Sadiron-holder. I. Lee. No. 1,394,698; Oct. 25.
Sample-holder. T. H. Ollesheimer. No. 1,395,055; Oct. 28.
Sash Fastener, Window-. R. P. Little. No. 1,395,047; Oct. 28.
Sawing apparatus. C. V. Fite. No. 1,395,100; Oct. 28.
Sawing-machine, Manually-portable. C. V. Fite. No. 1,395,101; Oct. 28.
Scale, Weighing-. W. G. Templeton. No. 1,394,945; Oct. 26.
Scoring device. J. F. Culver. No. 1,394,715; Oct. 25.
Scrap-bundling machine. J. E. Coe. No. 1,395,041; Oct. 28.
Scraper. A. Smith. No. 1,394,865; Oct. 25.
Screw-cutting tap. J. McFarlane and D. Clelland. No. 1,395,193; Oct. 28.
Screw, Lock-. I. Badois and D. Kaha. No. 1,394,880; Oct. 25.
Screw, Temper-. J. Burns. No. 1,394,710; Oct. 25.
Separator: See—
Centrifugal separator.
Septic-sewage-disposal pipe. W. H. Nicholas. No. 1,394,780; Oct. 26.
Service-box. B. H. Mueller. No. 1,394,754; Oct. 25.
Sewing and other machines, Seat construction for. R. B. McClard. No. 1,395,130; Oct. 28.
Sewing-machine, Hand portable. M. Pratt. No. 1,394,936; Oct. 26.
Shaft-packing. J. Wilkinson. No. 1,394,956; Oct. 26.
Shafts or wells, Sealing. W. E. Emery. No. 1,394,715; Oct. 25.
Sharpener, Pencil-. B. Whitehead. No. 1,395,241; Oct. 28.
Sharpening cutlery, Steel for. E. C. Martin. No. 1,394,927; Oct. 26.
Sheet-feeding apparatus. F. A. Drury. No. 1,394,618; Oct. 25.
Shield, Expansion-. E. W. Marshall. No. 1,394,926; Oct. 26.
Shoe-polishing device. J. O. Murray. No. 1,394,686; Oct. 25.
Shoes and a shoe made by such method, Manufacturing. I. Bishey. No. 1,394,938; Oct. 26.
Shoes, Shank-stiffener for. M. Canzen. No. 1,394,884; Oct. 25.
Shutter. G. I. Vail. No. 1,394,656; Oct. 25.
Shuttle. C. S. Wright. No. 1,394,578; Oct. 25.
Sifter, Flour-. J. H. Dean. No. 1,395,090; Oct. 28.
Sign. A. W. Margileth. No. 1,394,553; Oct. 25.
Sign, Electric. J. E. Lenz. No. 1,394,565; Oct. 25.
Signal apparatus. R. P. Stephens. No. 1,394,899; Oct. 25.
Signal system. R. E. Eagle. No. 1,395,248; Oct. 28.
Signal system, Watchman's tour. C. C. Johnson. No. 1,394,841; Oct. 25.
Sled. J. Leicht, Jr. No. 1,394,629; Oct. 25.
Slide-cover box. A. L. Weis. No. 1,394,591; Oct. 25.
Slitter-feed. D. P. Robinson, J. Coyle, and A. L. Kronquest. No. 1,395,207; Oct. 28.
Soldering-iron. P. Kuhn, L. H. Thomas, and J. G. Spiess. No. 1,394,562; Oct. 25.
Sound-boxes, Tone-modifier for. H. Lebe. No. 1,395,195; Oct. 28.
Sound-reproducing machine. F. Cheney. Nos. 1,395,092-3; Oct. 28.
Spark-plug. O. Allen, Jr. No. 1,394,523; Oct. 25.
Spectacle-frames, Clamp for adjusting. C. M. Haynes. No. 1,394,828; Oct. 25.
Spectacles, Reversible temple member for. E. Reynolds. No. 1,394,943; Oct. 25.
Speed transmission mechanism, Variable. L. J. Campbell. No. 1,394,607; Oct. 25.
Spindle. R. A. Cramlg. No. 1,394,662; Oct. 25.
Spittoon. V. C. Holman. No. 1,395,135; Oct. 28.
Spoke-nipples, Die for making. J. H. Graham and M. S. Tuley. No. 1,395,181; Oct. 28.
Spool or bobbin, Textile. H. D. Clinton. No. 1,395,038; Oct. 28.
Spool-steward. R. W. Smith. No. 1,395,157; Oct. 28.

Spools, &c., Holder for. A. J. Smith. No. 1,895,165; Oct. 25.
Sprayers, Air-charging pump for. H. E. Bennis. No. 1,895,662; Oct. 25.
Spring: See—
End-spring.
Stacher head, Pneumatic. A. P. Determann. No. 1,894,512; Oct. 25.
Stand: See—
Switch-stand. Telescopic stand.
Starter, Motorcycle-engine. A. D. Meelin. No. 1,894,758; Oct. 25.

Preparation for coughs, croup, asthma, &c. George F. Hogan & Ruben Blundell. No. 150,808; Oct. 25.
Preparation for eye brows and lashes. A. T. Wilson. No. 147,763; Oct. 25.
Preparation for producing permanent waves in the hair, Oily. F. R. Marcel. Nos. 150,909-10; Oct. 25.
Preparation for the treatment of mange, eczema, and all skin diseases, &c. Kirbarine Co. No. 150,691; Oct. 25.
Preparation to reduce and deodorize perspiration. Odri Company. No. 150,764; Oct. 25.
Razors, scissors, knives, files, &c. W. & S. Butcher Limited. No. 135,128; Oct. 25.
Remedy for constipation, diseases of the stomach, &c. Dr. L. Plantier. No. 150,823; Oct. 25.
Remedy for diseases of the respiratory organs. Dr. D. Jayne & Son. No. 150,899; Oct. 25.
Respiration-testing and gas-administration apparatus. E. I. McKesson. No. 147,445; Oct. 25.
Salve for wounded, sore, or galled horses. H. D. Fenton. No. 148,796; Oct. 25.
Sanitation process and organic-waste-reduction systems and parts thereof. Cobwell Corporation. No. 148,716; Oct. 25.
Scales, Weighing-. Mason, Davis & Company. No. 148,828; Oct. 25.
Seeds used as food for birds. Kaempfer's Incorporated. No. 133,735; Oct. 25.
Sewage-treatment systems and parts thereof. Sanitation Corporation. No. 148,854; Oct. 25.
Shoes, slippers, and moccasins, Leather. M. B. Lingenfelder Co. No. 143,444; Oct. 25.
Silk piece goods. Aimé Baboin & Cie. No. 131,373; Oct. 25.
Silk piece goods. Empire Silk Company. No. 151,760; Oct. 25.
Silk piece goods. H. R. Mallinson & Co. No. 152,272; Oct. 25.
Silk piece goods. Rogers & Thompson. No. 152,717; Oct. 25.
Silk piece goods, Broad-. Duplan Silk Corporation. Nos. 152,915-18; Oct. 25.
Soap. Globe Soap Company. No. 152,678; Oct. 25.
Soap. Michigan Specialty Co. No. 152,485; Oct. 25.
Soap, Castile-. D. A. Eberly. No. 135,141; Oct. 25.
Soap, Toilet. Los Angeles Soap Co. No. 152,268; Oct. 25.
Spectacle and eyeglass frames and mountings. New Jersey Optical Co. No. 147,306; Oct. 25.
Springs, Vehicle-. F. V. Cooke. No. 144,017; Oct. 25.
Steel rails. Bethlehem Steel Company. No. 148,120; Oct. 25.
Steel, Sheet-. Bethlehem Steel Company. No. 148,195; Oct. 25.
Steels, Tool-. Carpenter Steel Company. Nos. 134,568-70; Oct. 25.
Syringe, Venereal. W. J. Covell. No. 138,800; Oct. 25.
Thread, Cotton. Societe Francaise De Cotons a Coudre (Societe Anonyme). No. 150,476; Oct. 25.
Thread, Cotton. Societe Francaise De Cotons a Coudre (Societe Anonyme.) No. 150,486; Oct. 25.
Tire-valves. A. Charpillon. No. 146,526; Oct. 25.
Tires and inner tubes. Black Hawk Tire & Rubber Company. No. 141,747; Oct. 25.
Toothbrushes. Irvin-Smith Company. No. 149,006; Oct. 25.
Toothbrushes. P. B. F. Williams. No. 140,623; Oct. 25.
Toy balloons. Richard D. Bakrow & Son. No. 143,153; Oct. 25.
Toys, Animal. E. B. H. Taggart. No. 132,668; Oct. 25.
Urn-bags or woven tea-containers and connected spout-hoods. G. H. Stockman, Jr. No. 138,520; Oct. 25.
Waterproof dressing for automobile-tops, leather, and textiles. L. E. Davis. No. 138,200½; Oct. 25.
Windshield-cleaners. La Vietes Manufacturing Co. No. 143,935; Oct. 25.
Woolen, cotton, and silk fabrics, velvets, velveteens. Finkelstein & Sons. No. 140,433; Oct. 25.
Woolen piece goods. Forstmann & Huffmann Company. Nos. 152,610-15; Oct. 25.
Woolen piece goods. Forstmann & Huffmann Company. Nos. 152,617-19; Oct. 25.
Yeast. Yeastole Company. No. 149,732; Oct. 25.

Attorneys.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., October 24, 1921.

This Office has been advised, under date of October 22, 1921, by the Chief Clerk of the Department of the Interior, of the disbarment from practice before the Department, its bureaus and offices, of Horace L. B. Atkinson, of Washington, D. C. The order of disbarment is dated October 20, 1921.

THOMAS E. ROBERTSON,
Commissioner of Patents.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., October 24, 1921.

This Office has been advised, under date of October 22, 1921, by the Chief Clerk of the Department of the Interior, of the disbarment from practice before the Department and its bureaus and offices of Leo Grandin Grossman, of Washington, D. C. The order of disbarment is dated October 20, 1921.

THOMAS E. ROBERTSON,
Commissioner of Patents.

Adverse Decisions in Interference.

PATENT No. 1,287,530.

On September 27, 1921, a decision was rendered that Johann Heinrich Herman Voss was not the first inventor of the subject-matter covered by claims 3, 9, and 10 of his Patent No. 1,287,590, subject, "High-speed valves," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,287,644.

On September 26, 1921, a decision was rendered that Percy D. Brewster was not the first inventor of the subject-matter covered by claims 2, 5, and 11 of his Patent No. 1,287,644, subject, "Apparatus for printing cinematographic films," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,266,474.

On September 28, 1921, a decision was rendered that France Mers was not the first inventor of the subject-matter covered by claims 1 and 2 of his Patent No. 1,266,474, subject, "Crystallizing-receptacle," and no appeal having been taken within the time allowed such decision has become final.

Interference Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., October 21, 1921.

Golden Laxative Coffee Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Goode & Dunkle, 19 and 21 Pike street, Covington, Ky., and Charles I. Cook, 501 Main street, Menominee, Mich., for registrations of trade-marks and trade-mark registered March 8, 1898, No. 27,883, to Golden Laxative Coffee Co., Ayer, Mass., and a notice of such declaration sent by registered mail to said Golden Laxative Coffee Co. at the said address having been returned by the post-office undelivered, notice is hereby given that unless said Golden Laxative Coffee Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Disbarred Attorneys.

It is hereby directed that any person who has been disbarred from practice before the Patent Office by order of the Commissioner will be denied access to the files of the Office, either in his own capacity or as the representative of any other person or firm.

Amendment Under Rule 78.

The entry of an amendment under Rule 78 takes much more time than would its entry during the regular prosecution of the case, since the docket clerk must get the file from the Issue and Gazette Division, send it to the Examiner for report, submit it to the Commissioner, notify the applicant of the Commissioner's action, and if the petition is granted return the file to the Examiner for entry of the amendment.

Attorneys are therefore requested to take all possible steps to obviate the necessity of the presentation of such an amendment.

4715

Condition of Applications Under Examination at Close of Business October 22, 1921.

Room No.	Divisions, Examiners, and subjects of inventions. (Oldest new case, Nov. 2; oldest amended, Dec 22.)	Oldest new application and oldest not taken up by present examining officer for action. New.	Amended.	No. of applications awaiting action.
214	1. LOEFFLER, F. S., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders.	May 23	May 14	706
128	2. BALDWIN, M., Bee Culture; Dairy; Medicines; Preparation; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Jan. 10	Mar. 6	1,706
175	3. RICH, WM. J., Electric Heating and Illuminating; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Jan. 10	Dec. 24	855
294	4. MERRITT, A. D., Conveyors; Conveyors, Fluid-Current; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	Nov. 10	Apr. 30	1,092
167	5. MACNAB, J. F., Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Jan. 5	Feb. 4	928
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic and Match Compositions; Fertilizers; Mould Coating Compositions; Plastic Compositions; Substance Preparation.	Feb. 11	June 17	946
312	7. JARBOE, C. G., Cameras and Tents; Optics; Photography; Velocipedes.	Mar. 25	June 6	1,923
121	8. CLIFT, J. W., Beds; Chairs and Seats; Folding-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Stove Furniture; Supports.	July 18	July 25	670
231	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Nov. 12	June 27	1,043
295	10. MITCHELL, T. H., Land-Vehicles; Land Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Apr. 6	July 20	1,146
154	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	July 15	July 23	391
263	12. PIERCE, F. F., Measuring Elements.	Mar. 21	July 20	1,126
220	13. NIXON, G. A., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear-Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Nov. 24	Sept. 1	1,088
223	14. BRUMBAUGH, N. J., Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Jan. 5	Aug. 2	860
269	15. REDROW, W. L., Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	Nov. 2	Feb. 16	1,709
111	16. BACKUS, C. D., Radiant Energy; Telegraphy; Telephony.	Nov. 16	Feb. 12	1,761
207	17. RAFTER, G. S., Casting, Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufacture; Printing; Type Casting; Sheet Material Assorting or Folding; Sheet Feeding or Delivering; Type Setting.	Mar. 8	June 17	1,052
220	18. PORTER, H. E., Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Dec. 31	Feb. 26	1,811
236	19. GLASCOCK, E. S., Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Dec. 15	Apr. 11	980
170	20. WRIGHT, H., Artificial Body Members; Miscellaneous Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Lockers; Safes; Undertaking.	Apr. 16	June 1	1,451
242	21. THURBER, W. L., Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Mar. 17	June 6	665
249	22. COLWELL, J. H., Ammunition; Firearms; Ordnance; Ammunition and Explosive Devices; Ammunition and Explosive Charge Making.	May 26	Aug. 8	534
217	23. GROESBECK, W. D., Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Jan. 6	June 11	809
144	24. DARBY, J. J., Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines.	Jan. 24	June 6	1,049
215	25. LIGHTFOOT, J. H., Agitating; Bottle-Sealing; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	July 26	Aug. 3	300
108	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime Mover Dynamo Plants.	Mar. 21	May 16	796
214	27. ANDERSON, L. S., Threading; Brushing and Scrubbing; Laundry; Washing Apparatus.	Apr. 2	June 1	1,573
235	28. BENSON, A. R., Internal-Combustion Engines.	Jan. 26	May 4	1,522
147	29. MORRIS, E., Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool Handle Fastenings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking-Tools.	Feb. 11	Aug. 1	785
182	30. SULLIVAN, M. E., Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines.	Mar. 17	Aug. 8	1,220
172	31. HOLMES, W. N., Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	Nov. 17	Jan. 5	2,006
278	32. BANCROFT, J. F., Gas and Liquid Contact Apparatus; Heat Exchange.	Jan. 1	July 5	986
70	33. COWLES, W. A., Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Apr. 11	May 19	742
304	34. SIMPSON, G. R., Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling-Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track-Sanders; Vehicle-Fenders.	Aug. 10	Aug. 16	300
57	35. REYNOLDS, E. C., Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet.	July 25	July 17	656
204	36. MORTON, G. L., Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring.	May 13	May 3	1,531
107	37. TAYLOR, E. C., Electricity, Circuit Makers and Breakers.	Feb. 16	Feb. 25	1,574
378	38. IDE, G. B., Animal Husbandry; Earth Boring; Fishing, Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	May 13	May 13	1,206
220	39. COWLES, A. W., Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	Nov. 9	Feb. 21	1,980
279	40. OBERLIN, J. J., Bagging; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Jan. 10	Mar. 25	2,312

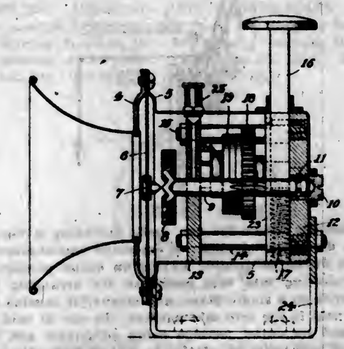
PATENTS

GRANTED NOVEMBER 1, 1921.

1,395,243. **SAFETY STARTING-CLUTCH FOR MOTOR-VEHICLES.** SHIKICHI ABE, Highland Park, Mich. Filed Dec. 20, 1919. Serial No. 346,421. 2 Claims. (Cl. 123—185.)

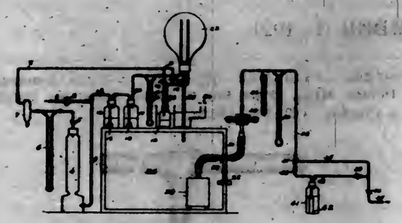
1. In a safety starting clutch for motor vehicles, the combination with an engine shaft and a starting crank for turning over said engine shaft; of a bearing, a rear outer clutch member fixed in said bearing, a rear inner clutch member fixed on said engine shaft and journaled in said rear outer clutch member, a front inner clutch member loose on said engine shaft and adapted to be engaged by said starting crank and shifted rearward to interlock with and turn said rear inner clutch member when said starting crank is pushed rearwardly and turned in a clockwise direction, a coiled expansion spring encircling said engine shaft between said rear and front inner clutch members to maintain said members normally separated, a front outer clutch member rotatable on said front inner clutch member and held for longitudinal movement therewith to interlock with said rear outer clutch member and be temporarily held stationary thereby, and a ratchet mechanism associated with said front inner and outer clutch members permitting of said front inner clutch being turned clockwise by said starting crank while said front outer clutch member is held by said rear outer clutch member, said ratchet mechanism causing said front inner and outer clutch members to rotate counterclockwise together and recede under the action of said spring from said rear inner and outer clutch members when said engine shaft rotates counterclockwise.

1,395,244. **BEARING.** GUSTAF E. ANDRE, Chicago, Ill. Filed July 31, 1920. Serial No. 400,337. 3 Claims. (Cl. 64—62.)



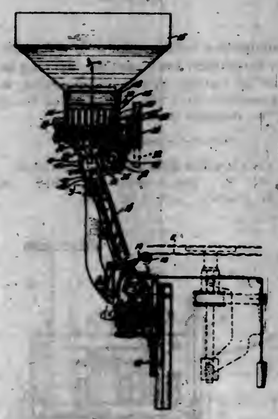
3. A bearing structure including elongated rollers; inner and outer raceways for said rollers that are disposed between said raceways; and a retaining cage for said rollers, said cage including connected end rings to prevent endwise displacement of said rollers and a plurality of U-shaped portions included in the connections that unite said rings and distributed in the space between the raceways to space the rollers apart, the base of each U-shaped portion being between adjacent rollers, connections between said end rings also including parts in the zone of the rollers and upon one side of the narrowest spaces between the rollers, said parts being wider than said narrowest spaces and also wider than the roller spacing parts of the connections between the end rings.

1,395,245. **CYLINDER-REAMER.** NORMAN ANDERSON, Duluth, Minn. Filed Feb. 6, 1920. Serial No. 356,674. 5 Claims. (Cl. 51—190.)



1. The combination with a reamer of the class described comprising a cylindrical body portion carrying an abrasive substance and an axially disposed supporting member, of an actuating member pivotally attached to the supporting member for the purpose described.

1,395,246. **WARNING-SIGNAL.** EMANUEL AUFIERO, Brooklyn, N. Y. Filed Mar. 30, 1918. Serial No. 225,673. 10 Claims. (Cl. 116—145.)



1. In a hand operated mechanical horn the combination of a vibratory diaphragm, a cam for vibrating the diaphragm, a shaft for said cam, a transverse frame member at an appreciable distance from said cam for supporting said shaft, and an adjustable thrust bearing for said shaft comprising an inclosing sleeve, and a replaceable key for holding said sleeve in fixed longitudinal relation with said shaft, the longitudinal freedom of movement of said shaft being sufficient to permit replacement of said key from the exterior of the horn.

1,395,247. METHOD AND APPARATUS FOR GENERATING SMOKE AND TESTING POROUS MATERIAL THEREBY. ALLEN ABRAMS, Butler, Pa. Filed Jan. 14, 1919. Serial No. 271,112. 13 Claims. (Cl. 73—51.)

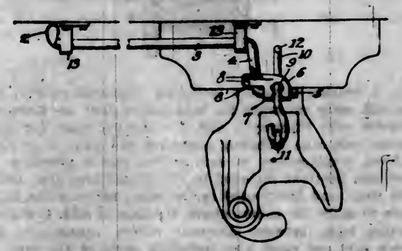
1. In a method of absorbing smoke, breaking up by means of porous material the gas films surrounding the smoke particles and subjecting the so-treated particles to the action of an absorbent.

1,395,248. CORK-FEEDING DEVICE. THOMAS ALLATT, Westfield, N. J., assignor to International Cork Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 27, 1920. Serial No. 377,010. 3 Claims. (Cl. 142—20.)

1. A feeding device for flat corks, including a hopper having a discharge opening, an extension communicating with said discharge opening having an outlet passage, a roller projecting into said extension for arranging the corks therein in a single plane, and means for causing the corks to pass in file into said passage, the size of said extension and its outlet passage being adjustable and the position of said roller in relation to a fixed portion of said extension being variable.

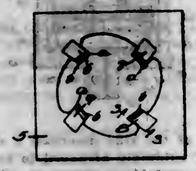
1,395,249. AIRCRAFT. JOHN BAUER, Detroit, Mich. Filed Feb. 7, 1919. Serial No. 275,821. 5 Claims. (Cl. 244—21.)

1. In a device of the class described, an air craft having a movable closure; a parachute housed beneath the closure; a first lever fulcrumed on the air craft and including a part coöperating with closure; a second lever fulcrumed on the first lever and comprising means for engaging the parachute releasably; means under the control



of an operator for actuating both levers thereby to open the closure and to open the parachute; and a flexible connection between the parachute and the aircraft.

1,395,250. COUPLING-OPERATING MECHANISM. ARTHUR J. BARNEY, Cleveland, Ohio, assignor to The National Malleable Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 12, 1919. Serial No. 303,679. 5 Claims. (Cl. 213—59.)



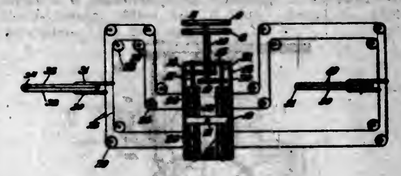
1. In coupler operating mechanism, a rod extending transversely of the car and engaging a lock lifter, supports on the car for the rod, one of said supports being mounted to swing during the lifting of the lock and to move bodily during buff and draft.

1,395,251. COUPLING-OPERATING MECHANISM. ARTHUR J. BARNEY, Cleveland, Ohio, assignor to The National Malleable Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 18, 1919, Serial No. 324,661. Renewed Sept. 16, 1921. Serial No. 501,184. 5 Claims. (Cl. 213—59.)

1. In coupler operating mechanism, a rod extending transversely of the car and having at its inner end a forward extension terminating in an angled portion, a clip secured upon such angled portion, a link secured to a coupler lock lift, said link having an extension engaging the clip in an apertured portion thereof, said link upon actuation by the uncoupling rod being adapted to raise the lock lift and being free during radial and longitudinal movements of the coupler to move relatively to said uncoupling rod.

1,395,252. THREAD-CUTTING DIE. EDWARD E. BECK, Chicago, Ill., assignor to Crown Die and Tool Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 15, 1919. Serial No. 330,682. 5 Claims. (Cl. 10—120.)

5. A solid thread cutting die having a central opening, radially disposed chasers projecting into said opening, the cutting edges of the threads on each chaser being arranged on an arc of a circle corresponding to the pipe being threaded, the teeth of the threads varying transversely of the threaded face of each chaser, the advancing threads on each chaser being countersunk circumferentially thereof.



1,395,253. JOINT FOR METAL CULVERTS OR THE LIKE. GEORGE A. BELLAMY, Billings, Mont. Filed Mar. 31, 1920. Serial No. 370,214. 3 Claims. (Cl. 137—75.)

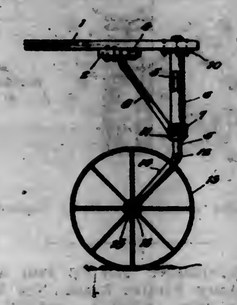
1. A structure of the character described including two overlapping sections, one of said sections being formed with a perforation in its wall and on its inside face being provided with a relatively narrow and thick tongue extending parallel to the wall but spaced therefrom and formed with a perforation aligning with the perforation in the section, said tongue having a base of equal thickness with the body of the tongue and attached to the wall of the section, the other section being formed with a perforation adapted to register with said perforations in the tongue and wall of the first named section, the perforation of the tongue being screw-threaded, and a screw-threaded fastening device passing through the perforation in the two sections and into the screw-threaded perforation in the tongue and having a relatively large head.

1,395,254. AEROPLANE-CONTROL SYSTEM. ARCHIBALD BLACK, Brooklyn, N. Y., assignor, by mesne assignments, of one-half to L-W-F Engineering Company, Inc., College Point, Long Island, N. Y., a Corporation of New York. Filed Mar. 21, 1917. Serial No. 156,338. 6 Claims. (Cl. 244—23.)

6. In combination, an aeroplane having two pairs of separable controlling planes, means for operating the planes comprising a pair of rolls each having cables connected to each set of planes, and independent hand-wheels

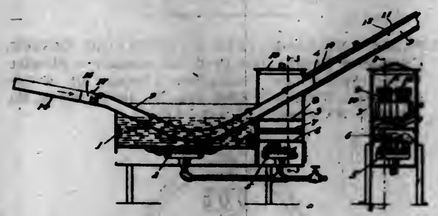
having concentric shafts respectively connected to said rolls.

1,395,255. ALINEMENT DEVICE FOR MANIFOLD-SHEETS. ALICE SNITJER BURKE, New York, N. Y. Filed June 4, 1920. Serial No. 386,617. 4 Claims. (Cl. 202—29.)



1. A combined aligning and holding device for manifold sheets for typewriting machines, comprising a trough-shaped member having one closed end and one open end, and a window between said ends.

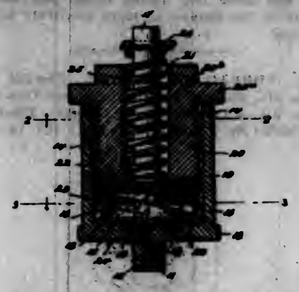
1,395,256. MILEAGE-PERIOD-SIGNALING DEVICE. CHARLES S. BURTON, Oak Park, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Jan. 28, 1921. Serial No. 440,604. 9 Claims. (Cl. 116—115.)



1. In combination with a vehicle-operated odometer train, a signaling device for indicating the requirements of the vehicle or its motor, comprising a target for displaying or concealing the signal; a tripping device for operating the target consisting of a part rotated by the odometer train, and a dog coöperating therewith spring-actuated for riding on said rotating part during signal-concealing position of the target, and for being tripped by said part for moving the target into signal-displaying position; said dog being operatively connected with the target for movement of each by the other in the shifting of the target from one position to the other.

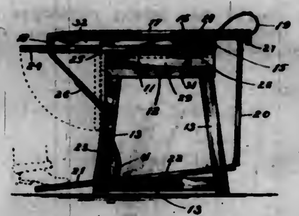
1,395,257. CASTER-WHEEL. CHARLES H. CLARK, Easton, Me. Filed June 9, 1920. Serial No. 387,706. 1 Claim. (Cl. 280—84.)

The combination with a draft beam, and a cross beam secured thereto, of a wear plate secured to the under side of the draft beam in advance of the cross beam, a vertically disposed tube bearing at its upper end against the said wear plate, braces secured to the cross beam at the center and at the ends thereof and converging downwardly therefrom, a clamp carried by the lower ends of the brace and securing the lower end of said tube, a spindle extending through and freely rotatable in said tube, a stop collar on the spindle immediately below the lower end of the tube, an axle, an obliquely disposed laterally offset connection between the axle and the lower end of the spindle below said collar, and a wheel mounted upon said axle.



1,395,258. PARAFFINING-MACHINE. HARRY L. CLARK, Norwood, and JAMES H. SOWER, Cincinnati, Ohio, assignors, by mesne assignments, to The Southern Ohio Tin Can Company, Winton Place, Ohio, a Corporation of Ohio. Filed July 26, 1919. Serial No. 313,563. 7 Claims. (Cl. 91—55.)

1. A device of the character described comprising a means for maintaining a molten bath of paraffin or the like, for impregnating cartons, and a conduit leading down into the bath and thence upwardly for an extended distance, said conduit being formed to engage the cartons without friction so as to permit the advancement of a complete charge of cartons by an insertion of an additional carton therein, and of a length sufficient to dry out to the required degree, each carton passing through the same when impelled therethrough by the available hand labor for insertion of cartons one by one.



4. A paraffining machine or the like, comprising an element for providing a molten bath, a stove, and a conduit leading upwardly therefrom, said stove communicating with the interior of the conduit, means for conducting the articles to be paraffined down through the bath and thence through the conduit, said means being adapted to drain back into the bath from the conduit and describing a curved path through the molten bath.

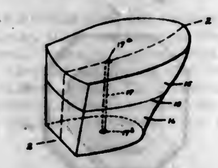
1,395,259. SELF-LOCKING GREASE-PLUG. FRANK R. COOK, Amarillo, Tex. Filed Mar. 22, 1921. Serial No. 454,935. 16 Claims. (Cl. 184—48.)

1. In a device of the kind described a cup for holding grease, a plunger rotatably arranged in said cup, a plug slidably and non-rotatably mounted in said cup in front of the plunger and movable into and out of contact with the plunger, and means for preventing rotation of the plunger in one direction relative to the plug when said parts are in contact with each other.

1,395,260. DELINEATING APPARATUS. LEONARD S. CRONE, New York, N. Y. Filed Nov. 4, 1920. Serial No. 421,706. 5 Claims. (Cl. 101—126.)

1. In an apparatus for delineating pictures and designs, an operating table suitably mounted upon a frame, an extension rack and stencil holding member hinged to the table, a foot operated actuating means connected to the rack to raise and lower same, and a resilient member interposed between the hinged extensible rack and foot operating means.

1,395,261. AMUSEMENT DEVICE. JOHN J. CULLINAN, Bradford, Pa. Filed Aug. 24, 1920. Serial No. 405,694. 3 Claims. (Cl. 46—56.)

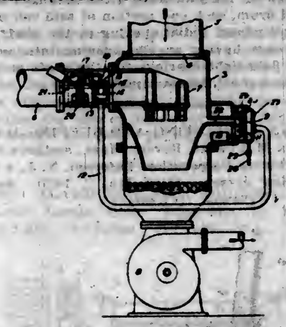


1. An amusement or toy device of the spinning top type, comprising such a top having a plane-bottomed chamber, said plane-bottom having a plurality of circularly-arranged pockets, said pockets being arranged adjacent the circular wall of said chamber; and a gravity actuating member adapted to be received within any of said circularly-arranged pockets, said top having indicia upon the outer surface of its circular wall coincident with said pockets.

1,395,262. TOOL-HOLDER. HENRY CURTIN, Gloversville, N. Y. Filed Dec. 18, 1919. Serial No. 345,801. 3 Claims. (Cl. 29—99.)

1. A tool holder comprising a shank, an angular related stationary jaw formed on the shank, clamping jaws carried by the opposite sides of the stationary jaw for movement toward and away from said stationary jaw; and means for adjusting the clamping jaws toward and away from said head.

1,395,263. UNATTACHED HEEL. RICHARD CUTTS, Swampscott, Mass., assignor of one-half to Renton Heel Company, Lynn, Mass., a Corporation of Massachusetts. Filed May 21, 1921. Serial No. 471,326. 3 Claims. (Cl. 36—34.)

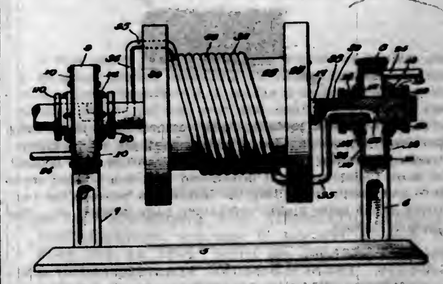


1. As an article of manufacture, an unattached shoe heel, having a heel-seat face, a top-lift face, and intermediate breast and marginal faces, the said heel comprising an upper section on which the heel-seat face and portions of the breast and marginal faces are formed, and a lower section on which the top-lift face and other portions of the breast and marginal faces are formed, said sections having separable inner faces, and a binder connecting the sections and constituting a pivot on which one section may be turned and otherwise manipulated to detach it from the other without marring either the breast or the marginal face, the binder being adapted to confine the sections in their predetermined relative positions prior to their attachment to a shoe.

1,395,264. DIAGNOSTIC INSTRUMENT. HENRY L. DE ZENG, Moorestown, N. J. Filed Mar. 14, 1919. Serial No. 282,553. 1 Claim. (Cl. 88—20.)

An attachment for a retinoscope comprising a sleeve bearing a transparent member having the property of selective retardance of light radiations, said sleeve having an L-shaped slot formed therein providing a laterally deflected spring finger for resiliently holding the attachment in position.

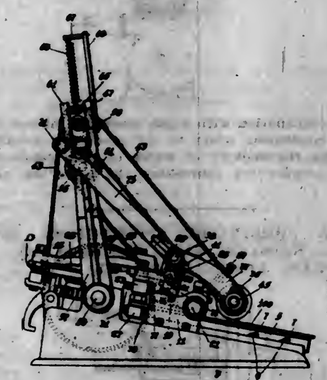
1,395,265. AUTOMATIC SHUT-OFF VALVE FOR JET-CONDENSERS. RAYMOND N. EHRHART and JAMES A. POWELL, Edgewood Park, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 1, 1916. Serial No. 88,305. 12 Claims. (Cl. 261—69.)



1. In combination with a jet condenser, means for delivering condensing water to the condenser, a valve for controlling the delivery of water to said means, and a vacuum breaker for controlling the operation of said valve.

1,395,266. COMBINATION SPIKE-PULLER. JOHN F. FENTON, Kansas City, Kans. Filed Aug. 9, 1920. Serial No. 402,430. 1 Claim. (Cl. 254—25.)

A spike puller, consisting of a lever having a claw end and provided within the claw with a bumper, said bumper comprising a centrally located plane portion extending vertically of the claw and terminating in beveled side portions, the outer ends of the beveled portions forming with the claw end of the lever rigid fulcrums.



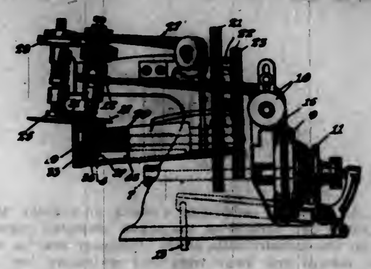
1,395,267. ROTARY MOTOR. WILLIAM H. FISHER, Minocqua, Wis. Filed Mar. 2, 1920. Serial No. 362,834. 1 Claim. (Cl. 253—73.)

A rotary motor including a pair of spaced standards, an annulus rigid on the upper end of each standard in the vertical plane of the standard, the annuli being in axial alinement, cover plates secured on opposite sides of said annuli thereby forming a pair of motive fluid chests, a rotary shaft extending through said chests and having ra-

dial openings within the respective chests, said shaft having a second set of radial openings without and between the chests and longitudinal bores establishing communication between the radial openings in the chests and the respectively adjacent radial openings, a drum mounted on the shaft between the standards, a coil arranged about and fixed to said drum, each end portion of said coil extending into a second named radial opening in the shaft, motive fluid pipes each having an end opening into one of the chests, and fluid-tight bearings for the shaft mounted on the other faces of all the cover plates.

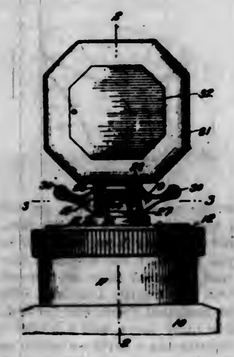
1,395,268. SPLITTING AND BUFFING MACHINE. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 2, 1920. Serial No. 348,861. 17 Claims. (Cl. 69—1.)

4. A machine of the class described, having in combination, a cutting tool, a buffing tool, means for supporting a piece of stock, and means for causing relative movement between the supporting means and the tools, to cause the tools to operate upon the stock.



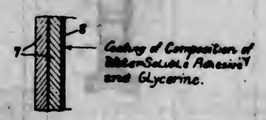
1,395,269. METALLIC ARTICLE. CHARLES L. GEBAUER, Cleveland, Ohio. Original application filed May 17, 1917, Serial No. 169,176. Divided and this application filed Oct. 10, 1918. Serial No. 257,632. 4 Claims. (Cl. 148—32.)

1. A composite metallic body comprising a main body portion of finely divided, discrete particles of highly refractory material closely compacted together, and a layer of more fusible material introduced in a non-divided state into and completely filling the interstices between the particles of the more highly refractory body portion near the surface thereof.



1,395,270. FRENCH-BINDING STRAIGHTENING AND CEMENT-APPLYING MACHINE. PERLEY R. GLASS, Brookline, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 2, 1919. Serial No. 327,983. 15 Claims. (Cl. 12—55.)

13. A machine of the class described, having in combination, a stepped roll over which the work is fed, means for supplying an adhesive to the steps, and means for feeding the work over the roll in such manner that the work



contracts with one step only and overhangs an adjacent step.

1,395,271. ALARM MECHANISM FOR RADIATOR-TANKS. LAFAYETTE C. GORMER, Brooklyn, N. Y. Filed Mar. 16, 1921. Serial No. 452,709. 5 Claims. (Cl. 116—109.)

1. For use on radiator tanks of motor vehicles and in combination with the filler-cap thereof, alarm mechanism operable by steam pressure within said tank comprising a whistle-stem extending through the top of said cap and secured thereto and having its sound-opening above said cap, and a manually operative sleeve-valve on said stem for exposing or closing said opening, as may be desired.

1,395,272. OILPROOF AND GREASEPROOF PAPER CAN. TRUMAN M. GODFREY, Chicago, Ill., assignor to The American Cotton Oil Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 1, 1918. Serial No. 256,448. 1 Claim. (Cl. 91—68.)

A paper container having an inner coating produced by the application thereto first of glycerin, water, and casein, and secondly, of glycerin, water and an adhesive soluble in water and of a character to mask any objectionable odor of the casein employed in the first coating; substantially as and for the purposes described.

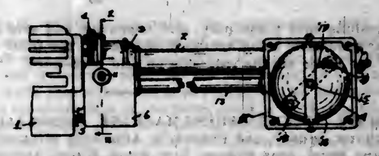
1,395,273. SAFETY POSITIVE LOCK FOR HOSE-COUPLINGS. HOWARD E. GOLD, New York, N. Y., assignor to Gold Car Heating & Lighting Company, New York, N. Y., a Corporation of New York. Filed Sept. 14, 1920. Serial No. 410,266. 6 Claims. (Cl. 285—68.)

1. A hose coupling, of the straight port, gravity type, comprising reciprocal coupling members, having each a head with a locking arm on one side and a locking projection on the opposite side, combined with a hook-shaped locking element pivoted to one of said members to swing about an upright axis, and a lug projecting upwardly from the other of said members to form a keeper, said locking element being movable into a positive locking engagement with said keeper.

1,395,274. SEWING-MACHINE. CHRISTIAN H. T. HASELSTEIN, Boston, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Original application filed Aug. 17, 1914, Serial No. 857,053. Patent No. 1,264,921, dated May 7, 1918. Divided and this application filed Mar. 11, 1918. Serial No. 221,706. 11 Claims. (Cl. 112—252.)

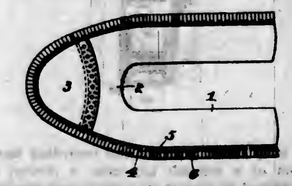
8. In a sewing machine, the combination with stitch-forming mechanism including a needle and shuttle and means for operating them, of a tension for the needle thread, a thread selector, means for actuating said selector during the formation of the last stitch to select and carry laterally both the shuttle thread and the end of the needle thread loop that extends to the work, pivotally-mounted cooperating cutting members to sever said threads, and means to relieve the tension on the needle thread while it is acted on by the thread selector.

1,395,275. PUMP-SUPPORT. CHARLES B. HARBAUGH, Milwaukee, Wis. Filed Nov. 19, 1920. Serial No. 425,209. 5 Claims. (Cl. 31—70.)



1. A pump support for milking machine pumps, comprising a base bracket, means for securing said bracket to the stall frame, a pump bracket provided with an attaching pin, a rest and a guideway for the pump actuating rod, and means for securing the base bracket to the pump bracket.

3. A pump support for milking machine pumps, comprising a base bracket, means for securing said bracket to the stall frame, an extension member for said base bracket, a pump bracket provided with an attaching pin, a rest and a guideway for the pump actuating rod, and means for securing the pump bracket to said extension member.

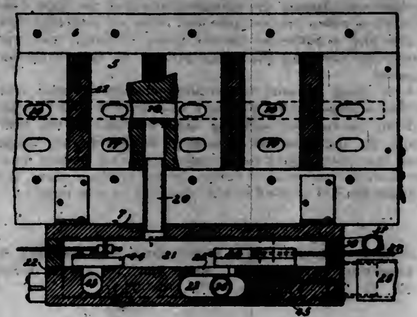


5. A pump support for milking machine pumps, comprising a base bracket having a base portion and a flange portion, means for securing said bracket to the stall frame, an angled extension member having one leg longer than the other, means for securing either leg of said member to either the base or flange portion of the bracket, and a pump bracket secured to the other leg of said member.

1,395,276. ALARM FOR AUTOMOBILES. DELMER E. HERSHEY, Lorain, Ohio. Filed Jan. 20, 1919. Serial No. 271,981. 3 Claims. (Cl. 116—33.)

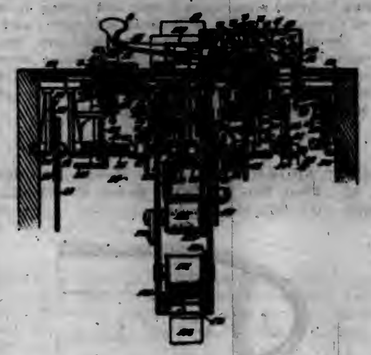
1. In a device of the character described, the combination of an engine-driven shaft, an exposed gear thereon, a casing mounted adjacent said gear and having an opening, an element rotatably mounted in said casing and pivotally mounted so as to extend through such opening and engage with said gear, an alarm, the casing inclosing said alarm, and flexible connections between said element and said alarm and a conduit secured in said two casings and surrounding said flexible connections.

1,395,277. SHOE-UPPER. HIRAM HOLDEN, Manchester, N. H. Filed Jan. 20, 1920. Serial No. 355,072. 1 Claim. (Cl. 36—45.)



A shoe upper comprising a body portion of leather, and a marginal portion extending outwardly from the bottom edge a distance sufficient to enable it to be grasped by the nippers in the pulling over and lasting operations, said marginal portion comprising a doubled strip of corrugated material having its margins secured above and below the outer edge of the leather by a single row of stitches.

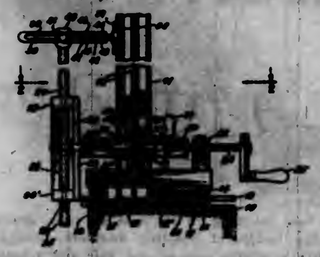
1,395,278. AIR-MOTOR FOR AUTOMATIC MUSICAL INSTRUMENTS. CHARLES V. JAMESON, Chicago, Ill. Filed May 24, 1918. Serial No. 236,425. 5 Claims. (Cl. 230—36.)



1. In an air motor of the character described, the combination of a base-board having a suction-chamber, a governor pneumatic connected with said chamber by a port, a governing valve cooperating with said port and controlled by the governor-pneumatic, a tempo-box having a valve chamber and a suction chamber, said suction chamber being in communication with said governor-pneumatic,

said valve chamber communicating with the last-named suction chamber by a tempo-port, and a regulating valve

controlling said tempo-port, said tempo-box and said governor-pneumatic being arranged, the one on the front side and the other on the rear side of said base-board.



1,395,279. TICKET-ISSUING MACHINE. GEORGE ALFRED JULIUS, Sydney, and FREDERICK AUGUSTUS WILKINSON, Sans Souci, near Sydney, New South Wales, Australia. Filed Feb. 1, 1919. Serial No. 274,425. 13 Claims. (Cl. 235—31.)

1. In a strip ticket printing and recording machine, the combination of a selector key arm, a pivotal mounting therefor adapted to permit traversing and plunging movements of said key arm, a fixed tracker desk with tracker cups therein adapted to receive a locating selector pin on said key, a recording mechanism corresponding with each of said selector cups, an attachment on said tracker arm registering with said recording means respectively and also geared to a total counter, means for printing tickets on a continuous strip of paper and numbering same and severing them from the strip as printed and for ejecting them, means including a clutch for gearing said printing, numbering, severing, and issuing means to a constantly running element, means operated by the plunging of said selector arm to engage said clutch, and means for disengaging said clutch automatically upon the completion of each ticket producing operation.

1,395,280. WINDOW-CLEANING DEVICE. SAMUEL KAHN, New York, N. Y. Filed June 5, 1920. Serial No. 386,902. 4 Claims. (Cl. 15—59.)

1. In a device of the character described, a rack-carrying bracket, a hollow shaft extending from said bracket, a sleeve encompassing a portion of said shaft wherein said shaft may be rotated, but held against longitudinal movement relative thereto, a bearing in which said sleeve is slidably mounted whereby said shaft may be moved lon-

gitudinally with said sleeve relatively to said bearing, and means for clamping said sleeve in said bearing whereby the longitudinal motion of said shaft is prevented while oscillatory motion of said shaft in said sleeve is allowed.

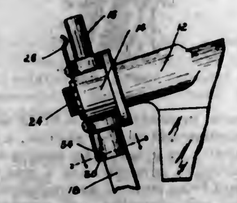
1,395,281. DRY BATTERY-CELL. HARRY M. KORNTZKY, New York, N. Y. Filed Sept. 18, 1919. Serial No. 324,567. 5 Claims. (Cl. 204—38.)

1. A battery cell comprising an external cupshaped electrode a core composed of a central electrode surrounded by a self-supporting bare body of depolarising material molded thereon, a separate spacing device extending substantially the entire length of said core, lying flat against said core and compressed between the outer electrode and the core at intervals around the same so as to hold the core together during use, and an electrolyte in the unoccupied spaces around the core.

1,395,282. DRY BATTERY-CELL. HARRY M. KORNTZKY, New York, N. Y. Filed Sept. 18, 1919. Serial No. 324,568. 9 Claims. (Cl. 204—29.)

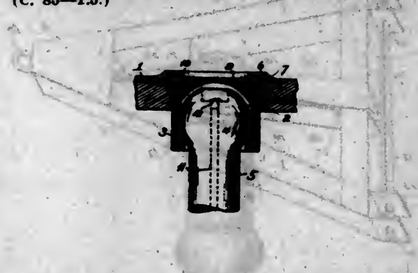
1. In a battery cell, an external cup-shaped electrode, an internal core comprising the second electrode, a carrier between the core and cup and in contact with both, a dry electrolyte carried by said carrier, and sealing means for the cell.

1,395,283. CHAIN. ROBERT M. LANGDON, Englewood Cliffs, N. J. Filed Dec. 19, 1919. Serial No. 345,951. 5 Claims. (Cl. 59—35.)



1. A repair link of the class described comprising oppositely directed loop portions joined by shank portions, one of the shank portions being cut out to form an open link thereof, the ends of the shank which is cut out being provided with apertures, a tubular section adapted to be placed between the ends of said shank to close the cut out portion thereof, and means passed through said tubular section and into the apertures of said shank for securing said section in connection with the link.

1,395,284. FRONT-ROLL STAND FOR SPINNING-FRAMES. DON CARLOS LEONARD and ARCHIE PERRY GREER, Greenville, S. C. Filed Apr. 29, 1921. Serial No. 465,437. 5 Claims. (Cl. 19—32.)



2. A stand for spinning or roving frames comprising a pedestal having a flat face, a projection formed on the pedestal at the lower end of the flat face, a screw extending through said projection, a front roller bearing contacting with the flat face, a slotted extension formed on the bearing, a screw threadedly engaging the pedestal and extending through said slot, the lower end of said extension being rounded and adapted to be engaged by the first screw, for the purpose described.

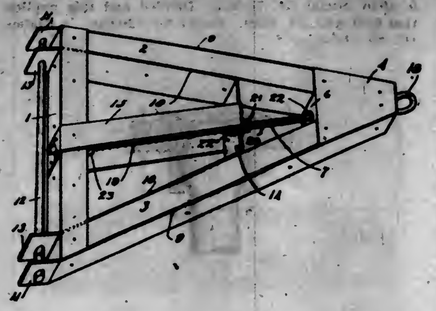
1,395,285. BURNISHING-MACHINE. HENRY M. LOOMER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 10, 1920. Serial No. 350,607. 15 Claims. (Cl. 12—104.)

1. A retaining member comprising a leaf spring having a hole and a ball seated in the hole and held by the spring against the tool to be retained.

1,395,286. STAYBOLT STRUCTURE. ROBERT S. MENNIE, Chicago, Ill., assignor to Flannery Bolt Company, Pittsburgh, Pa. Original application filed Feb. 5, 1916, Serial No. 76,333. Divided and this application filed Aug. 29, 1919. Serial No. 320,646. 4 Claims. (C. 85—1.5.)

1. In a staybolt structure, the combination with a boiler sheet having an opening, of a bearing sleeve passing through said opening and extending inwardly beyond the same and prevented from inward movement by engagement with the boiler sheet, said sleeve also projecting beyond the outer face of the boiler sheet, a weld surrounding the outwardly projecting end of the sleeve and uniting said sleeve to the boiler sheet, a staybolt having a head mounted in said sleeve, and a closure in the sleeve over the bolt head.

1,395,287. GARMENT-HANGER. HELEN MESSAROS, McKeesport, Pa. Filed Mar. 12, 1921. Serial No. 451,892. 1 Claim. (Cl. 211—13.)

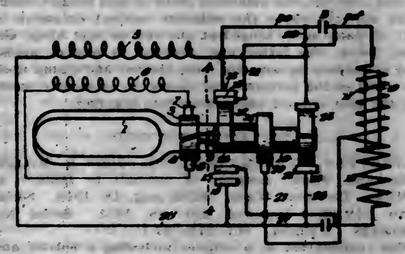


A garment hanger adapted for suspending ladies' skirts therefrom comprising a curved yoke bar having vertical depending extensions at its ends adapted to project into the waist of the skirt, a hinge element fixed to one end of said yoke bar, the attaching point of said hinge element being entirely above the adjacent vertical extension, a pair of clamp arms hinged at one end on said hinge element below the latter and adapted to project across said extensions on opposite faces thereof and clamp upon the waist of the garment, and means for releasably securing the free ends of said clamp bars together.

1,395,288. TRUCK-COUPLING. JOHN R. MILLER, Spokane, Wash., assignor of one-half to Delbert A. Miller, Thornton, Wash. Filed Aug. 18, 1919. Serial No. 318,267. Renewed Mar. 18, 1921. Serial No. 453,478. 1 Claim. (Cl. 213—67.)

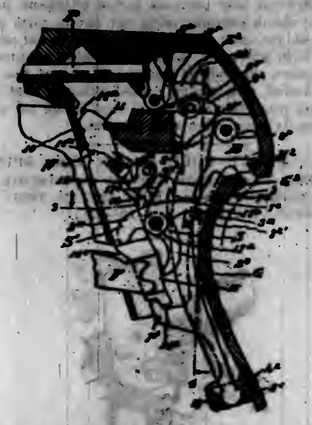
The combination in a coupler including a bolster and converging side bars comprising outer and inner straps having extended perforated ends for a transverse coupling pin, of a draw bar and its coupling eye, a cross brace in-

tegral with said inner strap, a rectangular frame bar overlapping said cross brace and the bolster and perfo-



rated for reception of the draw bar, and springs in connection with the draw bar for absorbing shocks.

1,395,289. CLUTCH FOR MOTORS AND THE LIKE. WILLIAM J. O'LEARY, Montreal, Quebec, Canada, assignor to Marguerite Vernandes O'Leary, Montreal, Quebec, Canada. Filed Sept. 5, 1919. Serial No. 321,918. 13 Claims. (Cl. 64—26.)

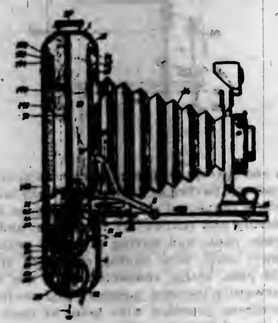


13. A clutch of the character specified comprising the combination of a shaft, a cupped disk being attached to said shaft, a part of said disk being under compression whereby the disk tends to remain cupped in either direction dependent upon the direction in which pressure was last applied to said disk, arms integral with said disk, said arms being open when the disk is concave in one direction, said arms being closed when the disk is concave in the other direction, selector pins carried by said disk, and a member cooperative with said arms when the clutch is operative, said member being provided with openings to receive said pins.

1,395,290. NON-ARCING COMMUTATING SWITCH DEVICE. LOUIS PAULMO, Petersburg, Va., assignor to American Electric Tool Company, Incorporated, Petersburg, Va., a Corporation of Virginia. Filed Mar. 14, 1919. Serial No. 282,605. 3 Claims. (Cl. 172—128.)

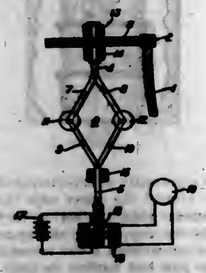
1. The combination of a dynamo electric machine having a series exciting winding, two hammer coils for moving a hammer in opposite directions, and means for supplying electrical impulses of opposite polarity from said machine to said coils in alternate succession through two independent circuits each of which includes said series exciting winding.

1,395,291. FIREARM. JOHN D. PEDERSEN, Jackson, Wyo. Original application filed July 30, 1915, Serial No. 42,774. Renewed July 17, 1919, Serial No. 311,689. Divided and this application filed Dec. 11, 1919. Serial No. 344,627. 25 Claims. (Cl. 42—3.)



12. In a firearm, in combination, a firing-pin, reciprocally movable firing-pin actuating means engageable with said firing-pin, means for moving said firing-pin actuating means reciprocally, a firing member slidably movable to fired position and to firing position, and engageable therewith for movement thereby to firing position when said firing pin actuating means is moved by said means for moving reciprocally, and means for slidably moving said firing member to fired position.

1,395,292. FIREARM. JOHN D. PEDERSEN, Jackson, Wyo. Filed Dec. 12, 1919. Serial No. 344,628. 23 Claims. (Cl. 42—3.)



13. In a firearm, in combination, a firing member movable to firing position and to fired position, a slidable detainer and controller, an actuator for moving said slidable detainer and controller upwardly, and a sear member engageable with said firing member, and engageable with said slidable detainer and controller, and provided with an actuator-contactor; said firing member when moved to firing position engaging said actuator-contactor and moving said sear member to permit upward movement of said slidable detainer and controller by said actuator to lock said sear member and firing member in firing position; said sear member when said firing member is moved to fired position being moved by the firing member and engaging said slidable detainer and controller to move the slidable detainer and controller downwardly.

1,395,293. PHOTOGRAPHIC CAMERA. WILLIAM A. PETERS, Chicago, Ill., assignor to International Patent Licensing Corporation, Chicago, Ill., a Corporation of Delaware. Substitute for application Serial No. 56,227, filed Oct. 16, 1915. This application filed Oct. 13, 1919. Serial No. 330,681. 28 Claims. (Cl. 95—32.)

1. In a folding camera, the combination with film spool carriages reciprocably movable in the housing for disposing film in the exposure plane, of a bellows support reciprocably movable transversely within the housing and in the path of the film spool carriages and adapted to prevent movement of the latter when the bellows is projected into said housing.

1,395,294. MEASURING INSTRUMENT. RAYMOND T. PIERCE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 5, 1917. Serial No. 160,049. 7 Claims. (Cl. 175—183.)

1. An accelerometer comprising a movable member adapted to be moved longitudinally in accordance with its speed of rotation and means actuated by the movable member responsive to the rate of change of movement of the movable member.

1,395,295. MEDICATED TAMPON. EDMUND MORSE PORTER, Rutland, Vt. Filed Jan. 24, 1918, Serial No. 213,467. Renewed Sept. 10, 1921. Serial No. 499,864. 2 Claims. (Cl. 128—270.)

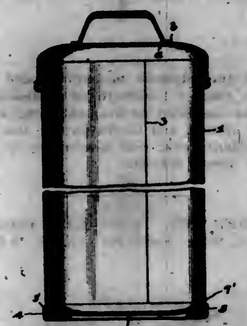
1. A medicated tampon for treatment of the cavities of a patient's body comprising, in combination, a shell of soluble material closed at one end, a body of soluble material impregnated with medicament located in the closed end of the shell, a layer of less soluble material capable of therapeutic action next to said first mentioned mass, and a body of fibrous material filling the open end of the shell, whereby in use the shell is first dissolved by the

secretions of the adjacent membranes and the soluble mass held in contact therewith until dissolved by said secretions, the contained medicament being absorbed into the patient's system, and thereafter the less soluble material is distributed over said membranes by the massage action of the fibrous material.

1,395,296. TIRE-VISE. ELMER QUINN, Philadelphia, Pa. Filed Apr. 2, 1921. Serial No. 457,869. 5 Claims. (Cl. 152—27.)

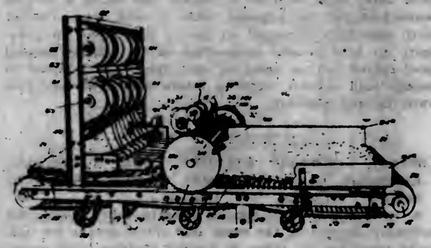
1. In a tire vise, a plurality of arms having hooks at their outer ends, adapted to engage tire walls, a pivotal connection for the opposite ends of said arms, ratchet teeth annularly arranged on one of said arms, in proximity to said pivotal connection and a spring pressed pawl carred by the other of said arms, and adapted to engage said ratchet teeth to retain said arms and tire walls in open position.

1,395,297. CURTAIN-FIXTURE. FRED A. REARDON, Bridgeport, Conn. Filed Mar. 8, 1920. Serial No. 364,189. 9 Claims. (Cl. 156—36.)



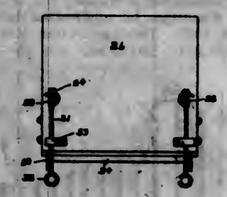
8. In combination, a tubular curtain roller, means for rotatably supporting the same, and clutch means for normally retaining the roller in desired position, said means comprising a sheet metal box or retainer of polygonal shape and having openings at its corners, said box or re-

tainer being seated within said roller, and secured in position by striking the material of said roller into engage-



ment with said openings, cover means for said box, and coöperative clutch elements within said box.

1,395,298. CONTAINER. WALTER H. RICHMAN, Philadelphia, Pa. Filed Nov. 20, 1919. Serial No. 339,436. 2 Claims. (Cl. 220—75.)



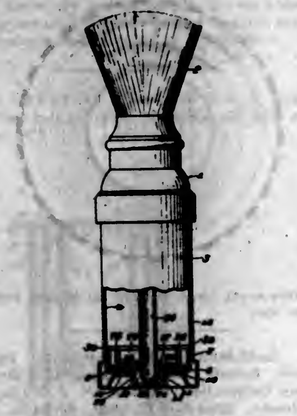
1. A container comprising a body portion, and a bottom having a depressed main part and a doubled back portion forming a downwardly extending vertical flange with a fin-like edge at the junction of and braced by the convergent depressed main part and doubled back portion and lying with its highest point against the inner side of the body to provide a smooth continuous surface at the joint and a tin coating applied molten and covering said joint at the inner side of said body and bottom, said joint being solderless, substantially as described.

1,395,299. APPARATUS FOR MANUFACTURING RESILIENT PACKING OR FILLING MATERIAL. CHARLES T. RIPLEY, Chicago, Ill. Filed July 11, 1919. Serial No. 310,086. 26 Claims. (Cl. 140—93.)

1. In apparatus of the character described, the combination of a conveyer adapted to receive a body of packing or filling material at one end and discharge it at the other, and means associated therewith for embedding spring elements in said body of material.

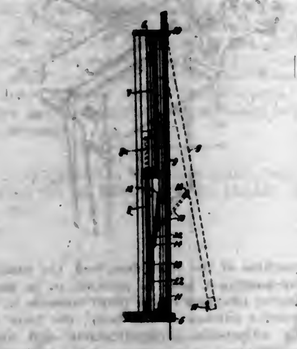
1,395,300. SCOOP-BOARD AND END-GATE. GEORGE W. SANDERS, Township 66, Worth county, Mo. Filed Jan. 31, 1921. Serial No. 441,401. 2 Claims. (Cl. 296—60.)

1. In an end gate structure, a bracket comprising spaced upright members, having at their upper ends lateral extensions, members connected with said extensions and extending downwardly and rearwardly therefrom, and connected at their lower ends, and having laterally projecting pins at their lower ends, bars having elongated slots for receiving said pins, strips connected with the upper ends of said rearwardly inclined members and projecting rearwardly therefrom, provided with holes at their rear ends, and rods designed to be pivotally connected with said last strips.



1,395,301. COMBINED PAN-HANDLE AND PAN-SUPPORT. ALBERT SECHRIST, Denver, Colo. Filed Oct. 22, 1920. Serial No. 418,796. 1 Claim. (Cl. 53—1.)

In combination a plurality of superimposed pans, a lower pan having a rim around the upper edge thereof and having a greater diameter than the bottom of the pan thereabove, and means for supporting the upper pan on the lower, said means comprising a bar secured to the upper edge of the lower pan and having its ends turned under and inward to produce hooks engaging the rim of the lower pan, the upper pan resting on said bar, said bar being adapted to serve as a handle.



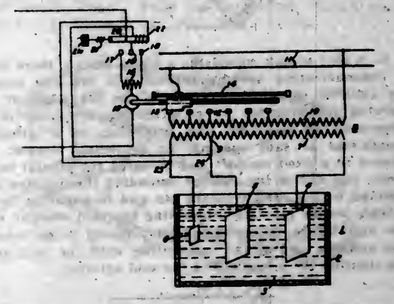
1,395,302. DISPENSING DEVICE. ISAAC C. SHALLROP, Philadelphia, Pa., assignor to The De Luxe Brush Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 3, 1920. Serial No. 421,462. 5 Claims. (Cl. 221—79.)

1. In a dispensing device of the character described, the combination of a hollow member having a closed end formed with a central projection surrounded by a depression, a container situated within the said hollow member and having a closed end provided with a projection which

extends into the said projection of the said hollow member, and a discharge tube extending into the said projections.

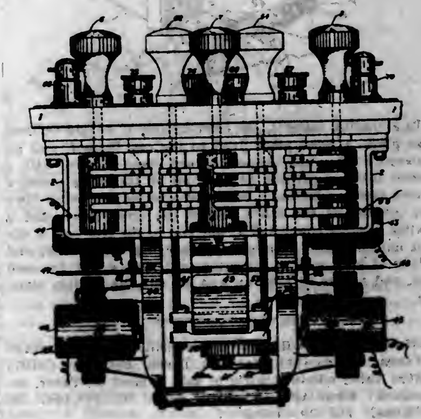
1,395,303. STORM-WINDOW OPENER AND CLOSER. EDWARD C. SHORT, St. Paul, Minn. Filed Jan. 10, 1921. Serial No. 436,139. 2 Claims. (Cl. 20—55.)

1. A storm-window operating device comprising an inclined actuating rod pivotally connected with the storm sash and the adjacent inner window sash, one end of said rod having a limited sliding motion, said slidable end carrying a pivoted T-shaped member with its leg pivoted to one end of the bar, a guide member having a slot for the leg of the T-shaped member and a groove adjacent the slot for the arms of the T-shaped member to slide in.



1,395,304. ELECTROLYTIC CONDENSER. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 30, 1919. Serial No. 348,449. 8 Claims. (Cl. 175—315.)

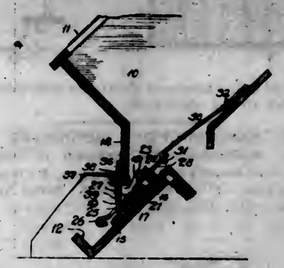
1. The combination with an electrolytic condenser comprising a plurality of groups of electrodes and a coöperating electrolyte, of means governed by the relative voltages impressed upon the groups of electrodes acting to maintain



the potential of the groups of electrodes substantially equal with respect to the electrolyte.

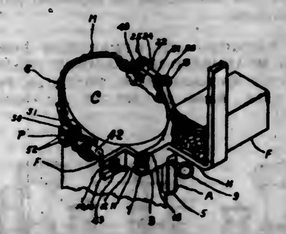
1,395,305. ELECTROLYTIC CONDENSER. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 30, 1919. Serial No. 348,452. 7 Claims. (Cl. 175—315.)

1. The method of maintaining a substantially constant capacitance in an electrolytic condenser that comprises providing means for regulating the impressed voltage on the condenser, and maintaining the impressed voltage substantially constant.



1,395,306. METHOD AND APPAPATUS FOR CALIBRATING MEASURING-INSTRUMENT TRANSFORMERS. HENRY NICKOLAS STROH, Pittsburgh, Pa. Filed Nov. 22, 1918. Serial No. 263,701. 16 Claims. (Cl. 175—183.)

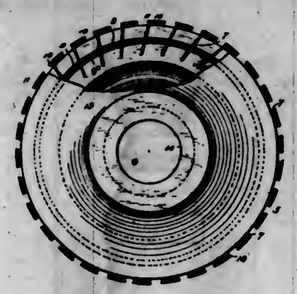
1. A calibrating device for instrument transformers comprising two similar watt-hour meters adapted to be



connected to the primary and secondary windings of the transformer to be calibrated and means for equalizing the speeds of the meters.

1,395,307. FEED-TROUGH. DONALD R. STUART, Harlan, Iowa. Filed Sept. 15, 1919. Serial No. 323,761. 11 Claims. (Cl. 119—53.)

5. A feed trough embodying a bin, a trough, there being a communicating opening between the bin and trough, an agitator element operating in the bin adjacent the opening and mounted for reciprocating movement in an approximately straight line extending in a direction lengthwise of said opening, an operating element anchored to a fixed support and mounted for pivotal movement, one end of the element extending through the said opening to the outside of the bin and terminating in the trough, means pivotally connecting the said element with the agitator to operate the latter, spaced stops beneath the agitator and means coöperating with the said stops for limiting the movement of the said agitator.



1,395,306. STAGING-SUPPORT. MARTIN F. SYKES, Lawrence, Mass. Filed Apr. 4, 1919. Serial No. 287,565. 1 Claim. (Cl. 304—41.)

In a staging support, the combination of a rigid vertical base plate, a cross piece fixed to the top thereof, and an outwardly extending supporting arm fixed thereto, with a hinged member pivoted at one end of the cross piece, a hinged member having a bent end terminating in an open slot pivoted at the other end of the cross piece, and a flexible member connected at one end to the free end of the first named hinged member and carrying at its other end a bolt of such size as to enter said slot, a nut for said bolt, and means to take up and let out the flexible member.

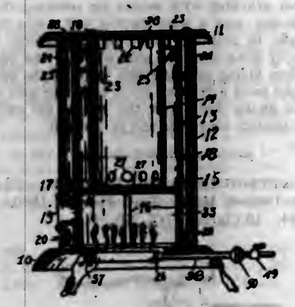
1,395,309. TIRE-DRESSING WHEEL. PERCY EDWARD TABER and SAMUEL MAURICE TABER, Berkeley, Calif.; Rose Taber administratrix of said Samuel M. Taber, deceased. Filed Apr. 12, 1920. Serial No. 373,494. 22 Claims. (Cl. 29—105.)

1. The combination with a wheel having transverse slots spaced apart, each slot being separated by a solid portion of the wheel, of toothed blades mounted in the slots, and means for holding the blades in place, said

blades having every tooth set and all of said teeth being of the same size.

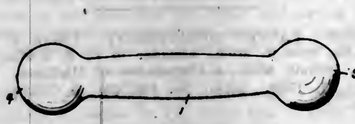
1,395,310. LAST-MEASURING MACHINE. FRANK H. THOMPSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 17, 1920. Serial No. 352,091. 17 Claims. (Cl. 33—122.)

1. In a machine of the class described, the combination of means for holding a body in position to be measured, and a planimeter having a tracer point movable in a plane over the exterior surface of the body, the body holding means being adjustable perpendicularly and angularly relatively to the plane of movement of the tracer point.



1,395,311. LENS ATTACHMENT. EDGAR D. TILLYER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Aug. 23, 1920. Serial No. 405,359. 8 Claims. (Cl. 88—42.)

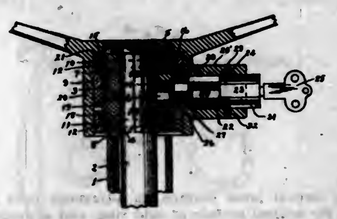
1. In a device of the character described, the combination with a lens clip ear having a screw receiving aper-



ture formed therethrough and an annular recess formed adjacent the aperture, of a locking device lying within the recess and having an upstanding portion for bitingly engaging a screw, the material of the clip ear adjacent the recess being inwardly deflected to loosely retain the locking device in position, substantially as illustrated.

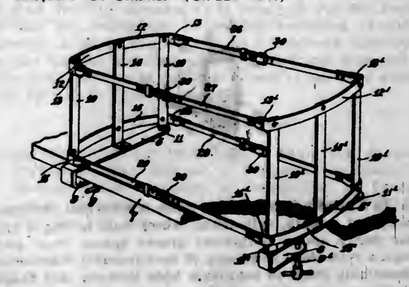
1,395,312. GAS-STOVE. JAMES E. TOSCAN, Jamestown, N. Y. Filed July 19, 1920. Serial No. 397,335. 4 Claims. (Cl. 126—90.)

1. A gas stove comprising top and bottom plates, a cylinder clamped therebetween and formed intermediate its length with an internal shoulder, a ring plate seated on the shoulder and defining the upper wall of a combustion chamber, and a shorter cylinder of sheet metal interposed between the ring plate and the top plate and engaged with the top plate and formed with a plurality of openings adjacent its upper and lower ends in open communication with the space between said cylinders whereby the unheated gases issuing from the upper openings may reënter the lower openings.



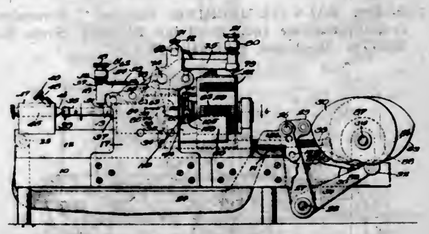
1,395,313. DUMB-BELL. WILLIAM TREPANIER, Duluth, Minn. Filed Oct. 25, 1920. Serial No. 419,453. 2 Claims. (Cl. 46—69.)

1. The combination with a two-part dumb bell of the class described, having means therebetween for yieldably holding the sections together; of a rigidly united shaft and tube securely fixed in the ball like portions of one of the sections, expansive helical springs intermediate of the shaft and tube, and sleeves screw-threaded into the ball like portions of the other sections through which the shaft and tube slidably reciprocate and in which the shaft is held against dislodgment.



1,395,314. VEHICLE STEERING MECHANISM. LOUIS C. VANDERLIP, Elkhart, Ind. Filed Jan. 29, 1921. Serial No. 440,861. 15 Claims. (Cl. 70—129.)

15. In combination, a steering post; a driver hub rigid therewith; a sleeve rotatable about said hub; means for preventing relative axial movement of said sleeve and hub; a steering element fitted over said sleeve; and a



lock barrel carried by the steering element for releasably locking the latter to said driver hub.

1,395,315. LUGGAGE-CARRIER. HENRY G. VOIGHT, New Haven, Conn. Filed Dec. 10, 1920. Serial No. 429,613. 10 Claims. (Cl. 224—29.)

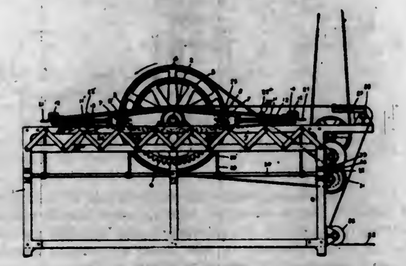
1. A luggage carrier comprising, two independent horizontally bowed resilient end pieces and means for clamping the same to a running board of a vehicle.

1,395,316. CHASING-MACHINE. JOHN C. WAHL, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 2, 1919. Serial No. 286,964. 26 Claims. (Cl. 90—24.3.)

1. In a chasing machine, the combination of a plurality of spindles, means to rotate said spindles simultaneously, cutting tools, means to reciprocate said spindles and said cutting tools relatively to each other and means operated by said reciprocating means to rotate said spindles intermittently and without lost motion.

1,395,317. PRINTING-PRESS INKING-ROLLER TRUCK. LEROY J. WARNER, North Chicago, Ill. Filed Mar. 19, 1921. Serial No. 453,836. 5 Claims. (Cl. 101—348.)

1. A roller construction for inking-roller trucks of printing-presses, comprising in combination a main-body hav-

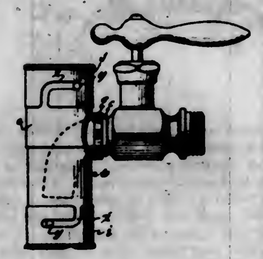


ing an abutment wall, an expansible and contractible ring bearing at one side against said abutment wall and having a conical inner surface, an adjustable cone coacting with the conical surface of said ring, and a confining collar arranged to bear on the opposite side wall of said ring.

1,395,318. WHEEL FOR PRINTING-PRESS INKING-ROLLER TRUCKS. LEROY J. WARNER, North Chicago, Ill. Filed Mar. 19, 1921. Serial No. 453,837. 4 Claims. (Cl. 101—348.)

1. In a printing-press inking-roller truck-wheel, the combination of a main, cylindrical, wheel body having a circular flange and a peripheral groove spaced from said flange, a cylindrical tread-ring of unchangeable dimensions demountably fitted on said main body between said flange and groove, a tread-ring locking-spring normally partly in and partly out of said groove but designed at times to be temporarily compressed wholly in said groove, and a key and keyway connection between said tread-ring and said wheel body, such key extending only part way the length of said tread-ring, the latter having a beveled surface adapted to automatically contract said locking-spring in said groove during application of the tread-ring of said wheel body.

1,395,319. BALE-TIE MACHINE. GEORGE W. WHITTINGTON, Indianapolis, Ind. Filed Jan. 22, 1920. Serial No. 353,176. 10 Claims. (Cl. 140—73.)

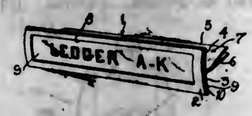


1. A bale tie machine comprising a revolving member, means disposed flatwise to its path of travel for feeding wire thereto, a plurality of cutting devices operable intermittently thereon, and a plurality of wire twisting means also operable intermittently for simultaneously forming a plurality of bale ties, said cutting devices and wire twisting means being arranged in series at each end of the platform and side by side, substantially as set forth.

1,395,320. CIGAR AND CIGARETTE HOLDER. FRANK P. WILLIAMS, Detroit, Mich. Filed Feb. 2, 1920. Serial No. 355,566. 6 Claims. (Cl. 131—51.)

5. A combined ash catcher and cigar shield, comprising a pan member provided with means for securing the same to a cigar holder, and a hood having end walls that are initially made to slightly converge and which require spreading to fit them over the side walls of the pan, said end walls when fitting over the side walls of the pan serving to give the hood a friction pivot upon the pan so that the same can swing down over the end of the pan or be swung up to project above the end of the pan.

1,395,321. ATTACHMENT FOR FAUCETS. FRANK P. WILLIAMS, Detroit, Mich. Filed Feb. 11, 1920. Serial No. 357,994. 10 Claims. (Cl. 299—9.)

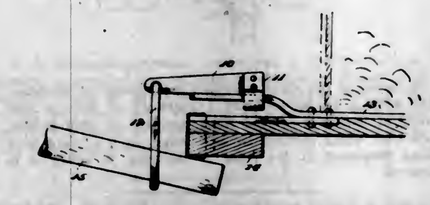


5. An attachment for faucets, comprising an upright barrel having an open lower end and an opening through the side of the barrel, means for clamping the barrel to the elbow of a faucet which passes through the said opening in the side of the barrel, means for closing the lower end of the barrel, and a bubbling fountain device in the upper end of the barrel operated when the lower end of the barrel is closed off.

1,395,322. FAUCET ATTACHMENT. FRANK P. WILLIAMS, Detroit, Mich., assignor to E. E. Gudka Mfg. Co., Detroit, Mich., a Corporation of Michigan. Filed May 21, 1920. Serial No. 383,038. 4 Claims. (Cl. 299—9.)

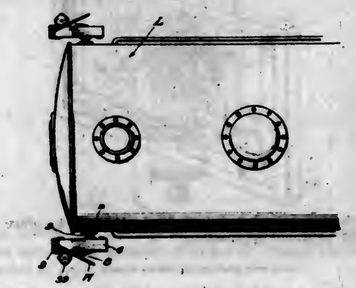
1. An attachment for a faucet, comprising a barrel having a bubbling fountain orifice in its top and an aperture through its side adapted to allow a faucet elbow to enter into the barrel, a rubber washer having a conical exterior adapted to be fitted over the faucet elbow and adapted to engage in said aperture, and a metal washer fitting over the faucet elbow ahead of the rubber washer, and means between the washer and the barrel for drawing the barrel into water-tight relation with respect to the rubber washer.

1,395,323. MARKER OR INDICATOR. CLARENCE WOFFORD, Atlanta, Ga. Filed Jan. 20, 1920. Serial No. 352,687. 1 Claim. (Cl. 40—23.)



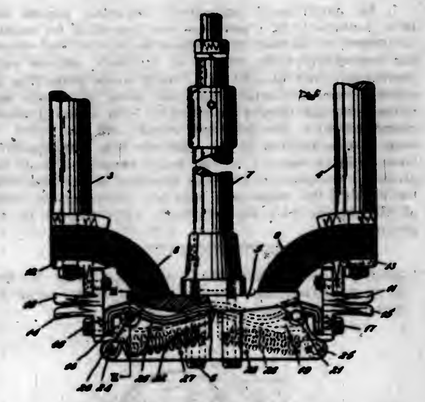
The marker or indicator of the class described embodying a face portion formed to receive and expose an index card, and a binder entrant, consisting of a pair of resilient shanks diverging outwardly from the rear of the face portion, and a plurality of laterally projecting spurs formed on the outer surfaces of the shanks, said shanks being adapted to be compressed and inserted between the binder leaves, said compression serving to draw the face portion into contact with the binder while at the same time forcing the spurs into frictional engagement with the adjacent binder leaves to lock the marker in position.

1,395,324. DISH-WASHING MACHINE. LEOLA C. WOOD and ELIJAH G. WOOD, Rebecca, Ga. Filed Mar. 23, 1921. Serial No. 454,665. 3 Claims. (Cl. 141—9.)



1. In a dish washing machine, a tank for the reception of cleaning fluid provided with agitating means for agitating the fluid, a dish receiving basket being of a shape to fit and mounted within the tank, arcuate spaced rods for the reception of dishes therebetween to support the dishes on their edges upon the bottom of the basket and a cover common to the tank and the basket and having means engaging between the basket and the wall of the tank, to space the basket from the inner surface of the tank.

1,395,325. DRAWBAR-STRAIGHTENER. NEWTON L. YARNALL, Accoville, W. Va. Filed Mar. 5, 1920. Serial No. 363,612. 2 Claims. (Cl. 153—38.)

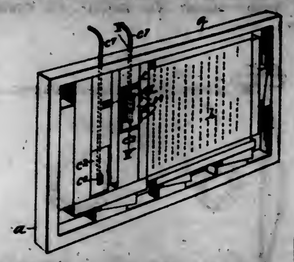


2. A device for the purpose set forth comprising a body bar, a stirrup secured rigidly to one end of said bar and flattened below the bar whereby to project laterally from the bar, and a suspending loop pivotally engaged in the opposite end of the bar.

1,395,326. CLASSIFICATION-SIGNAL FOR LOCOMOTIVES. SHEPPARD BOYD YATES, Hamlet, N. C. Filed Oct. 9, 1920. Serial No. 415,775. 3 Claims. (Cl. 116—30.)

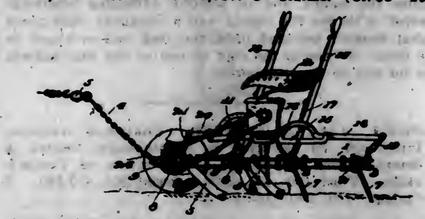
1. In a signal device of the class described, a casing, a staff pivotally mounted to be swung to position housed within the casing and to position extending exteriorly thereof, a lid for the casing, and a relatively rigid plane signal member mounted upon the staff and arranged in the latter position of the staff to rest at one edge against the lid and be thus supported.

1,395,327. CIRCUIT-BREAKER. CHRISTIAN AALBORG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 18, 1920. Serial No. 417,561. 9 Claims. (Cl. 200—166.)



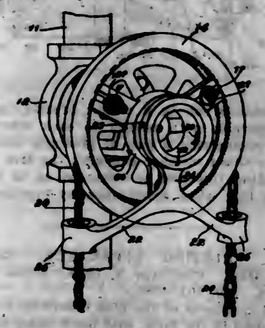
9. In combination, in a circuit breaker, main contact members movable with respect to each other, a pair of stationary arcing tips, a pair of pivotally mounted arcing tips, and a shunt member engaging the free ends of the pivoted arcing tips and so arranged as to bear against the arcing tips when acted upon by repellant magnetic strains.

1,395,328. PRINTING APPARATUS. REED ADAMS, Detroit, Mich. Filed Apr. 4, 1919. Serial No. 287,394. 2 Claims. (Cl. 101—383.)



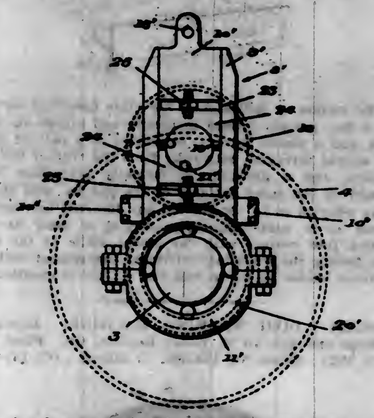
1. In an apparatus of the kind described, a block adapted to be bound in the form, said block being provided with an aperture in its surface, and means for producing a vacuum in said aperture, in combination with a printing

plate adapted to engage on the surface of the first named plate and being held thereon solely by the vacuum, where-



by such a plate may be readily adjusted to place and removed between impressions.

1,395,329. AGRICULTURAL IMPLEMENT. WILLIAM E. ATON and WILLIE J. ATON, Milburn, Ky., assignors of one-third to L. J. Bryant, Milburn, Ky. Filed Oct. 28, 1919. Serial No. 334,050. 5 Claims. (Cl. 55—102.)



1. An agricultural implement including spaced side bars, a plurality of transverse bars journaled for rocking movement in the side bars, blades secured to and extending rearwardly from certain of the bars, harrow teeth carried by other of said bars, crank arms projecting upwardly from the outer transverse bars, quadrants each having one end thereof extended to form a link pivotally connected with the adjacent crank arm and with its base portion secured to the adjacent link, and operating levers rigidly secured to the inner transverse bars and pivotally connected to the base members of the quadrants for rocking the transverse bars and changing the angle of the blades and harrow teeth with respect to the ground.

1,395,330. SPROCKET-CHAIN GUIDE. ISAAC N. BABBITT, Fairhaven, Mass. Filed June 26, 1918. Serial No. 242,889. 11 Claims. (Cl. 74—31.)

3. The combination with a sprocket, of a tubular bearing connected thereto in a position where the axial line of the sprocket is within its bore, and a chain guide rotatably mounted upon said bearing and having eyes located outside of the periphery of the sprocket and substantially in the plane thereof adapted to guide a chain.

1,395,331. VALVE-GEAR. HARTLEY O. BAKER, Pueblo, Colo., assignor to The Baker Steam Motor Car and Manufacturing Co., Inc., Pueblo, Colo. Filed Mar. 17, 1919. Serial No. 283,220. 3 Claims. (Cl. 121—171.)

1. A valve gear embodying in combination with a shaft and a driving gear thereon, an arm disposed astride said gear and having pairs of plates at opposite sides of said gear, some of which have bearings journaled on said shaft, valve operating gears at opposite sides of said gear disposed between the plates of said arm and having bosses on opposite sides mounted for rotation in said plates, said bosses having opposite valve operating wrist pins, and gears secured on the shaft within the arm at opposite sides of the driving gear and meshing with the valve operating gears.

1,395,332. KEY-REMINDER. MAX BAYERDORFFER, Huguenot Park, N. Y. Filed Apr. 30, 1921. Serial No. 465,875. 1 Claim. (Cl. 40—10.)

A device of the class described comprising, in combination with a key-holder, and a plurality of keys, a plurality of variously-colored rings mounted on said holder, said keys being secured to said rings, each of said keys being identified by the color of the ring to which it is secured.

1,395,333. SPIRAL LEG-BAND. MAX BAYERDORFFER, Huguenot Park, N. Y. Filed July 28, 1921. Serial No. 488,128. 2 Claims. (Cl. 40—2.)

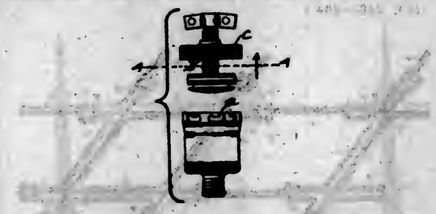
1. A leg band comprising a slightly flexible coil the ends of which are adapted to overlap each other, tapered cur-

faces on the ends thereof, a name plate having extending lugs adapted to encircle the overlapped ends of said coil

to slidably retain said name plate thereon, and means for locking said overlapping ends.

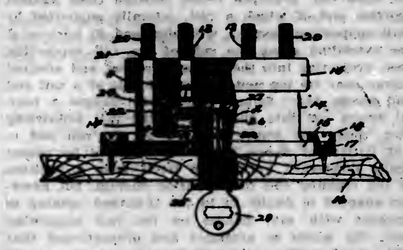
1,395,334. HAIR-CUTTING IMPLEMENT. MARCUS B. BUSHMAN, Tompkinsville, N. Y. Filed Sept. 25, 1919. Serial No. 326,320. 5 Claims. (Cl. 30—12.)

1. A hair cutting implement of the character described comprising a general frame affording a top and a downwardly and outwardly inclined front toothed member, a razor blade mounted in said front member, a cover-plate for said front member, a toothed adjusting plate hinged at its upper edge back of the upper portion of said front member and to be adjusted at its lower end toward and from said member, and means for locking said hinged plate up under said top when said plate is to be placed out of operation.



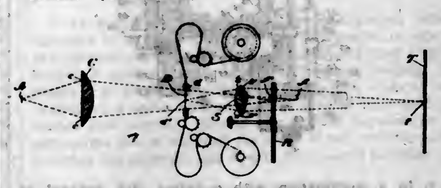
1,395,335. ELECTRICAL MEASURING INSTRUMENT. LEWIS W. CHUBB, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 10, 1916. Serial No. 114,176. 11 Claims. (Cl. 175—183.)

1. A measuring system comprising a reactor, a condenser, a resistor and a current-measuring device, said devices being so arranged that the admittance of the circuit thus constituted will vary in accordance with a predetermined function between the frequency and the inductive interference effect.



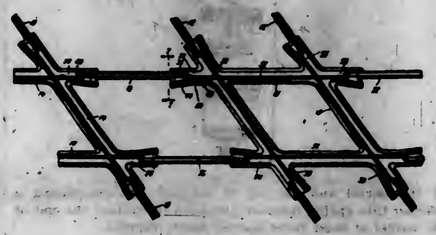
1,395,336. GREASE-CUP. LLOYD GEOFF COPEMAN, Flint, Mich., assignor to Copeman Development Company, Flint, Mich., a Corporation of Michigan. Filed Dec. 18, 1918. Serial No. 267,311. 3 Claims. (Cl. 184—48.)

1. A grease cup, having in combination, a barrel provided with bayonet slots cut clear through the wall of the barrel at the outer end, a cap provided with projections on the inside of the flange adapted to engage the bayonet slots, and a spring engaging between the end



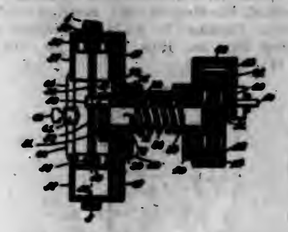
of the barrel and the top of the cap and comprising a warped thin spring member arranged to contact the end of the barrel at least three spaced points thereon.

1,395,337. AUTOMOBILE-LOCK. HERBERT E. FANNER, Bryn Mawr, Pa. Filed July 8, 1920. Serial No. 394,784. 3 Claims. (Cl. 200—44.)



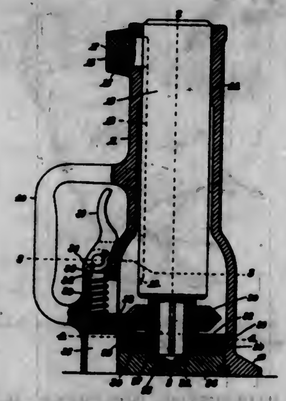
1. In a device of the character stated superimposed fixed terminal blocks of insulating material each provided with contact pieces, a disk of insulating material rotatably mounted between said terminal blocks which disk is provided with spaced contact pieces electrically inter-connected in an irregular manner, a key barrel passing through one of said terminal blocks and fixed to said disk and a key adapted for coöperatively engaging said barrel to shift said disk for establishing registry of the contact pieces of said disk with the terminal blocks whereby correct timing order of motor cylinders may be effected.

1,395,338. OPTICAL PROJECTING SYSTEM. HENRY PHELPS GAGE, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed July 26, 1919. Serial No. 313,555. 2 Claims. (Cl. 88—24.)



1. In an optical projector, the combination of a light source, a condenser, an objective lens, and a screen to receive the image of the light source, a restricted portion of the condenser focusing the rays from light source in front of the screen, such portions of the condenser and the objective lens together having conjugate foci at the light source and screen when the light source is properly placed to illuminate the picture to be projected and the objective lens is at a given position.

1,395,339. RAILROAD-CROSSING. BENEDICT T. GIBBS, Jr., Chicago, Ill., assignor to Morden Frog & Crossing Works, Chicago, Ill., a Corporation of Illinois. Filed May 26, 1921. Serial No. 472,647. 2 Claims. (Cl. 246—464.)

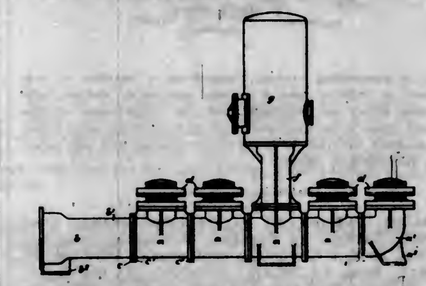


1. In mechanism of the class described, a crossing end having angularly extending therefrom, a horizontally separated rail supporting member and guard rail, forming an open top, U-shaped recess between them against the bottom end of which a rail, laterally supported by the rail supporting member, will abut and fit horizontal flanges extending along the side of the rail supporting member, projecting into the U-shaped recess, and adapted to engage near its top and bottom the side of a rail end in said recess, there being between said flanges a horizontal recess cut into the wall of the rail supporting member, along the length engaged by the rail end, a rail of horizontal flange width too wide to be passed vertically downward parallel to itself from a position above the crossing end to a position therein, but nevertheless adapted to finally fit in the U-shaped opening in engagement with said flanges on the rail supporting member, the whole so arranged and proportioned that by tilting and rocking said rail through several angular positions, it may while its end is in the vertical plane of the U-shaped recess end against which it is to abut, be moved down into the U-shaped recess and placed against the side of the rail supporting member where it is engaged by the flanges thereon, for the purposes set forth.

1,395,340. SPEED-RETARDING DEVICE FOR LIFTING-JACKS. FRANK L. GORMLEY, Brookline, Mass., assignor to A. O. Norton, Inc., Boston, Mass., a Corporation of Maine. Filed July 22, 1920. Serial No. 398,114. 10 Claims. (Cl. 188—99.)

1. In a combination with a lifting jack adapted to lower under the weight of the load and including a load-supporting member, a shaft adapted to be rotated in one direction only, and mechanism between said load-supporting member and said shaft for imparting rotary movement to said shaft during the lowering operation at a speed greater than that of said load-supporting member; a member secured to and revoluble with said shaft; a dash pot; and a piston therein adapted to be reciprocated by said revoluble member.

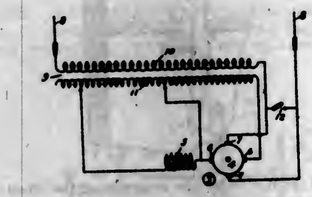
1,395,341. SELF-LOWERING JACK. FRANK L. GORMLEY, Brookline, Mass., assignor to A. O. Norton, Inc., Boston, Mass., a Corporation of Maine. Filed May 3, 1921. Serial No. 466,497. 15 Claims. (Cl. 254—103.)



1. The combination of a casing having a cylindrical chamber; a rotatable lifting screw; a movable ram provided with a screw thread coacting with said screw; a ratchet rotatable with said screw; members surrounding said ratchet and having peripheral walls adapted to contact frictionally with cylindrical wall of said chamber; a pawl on each member coacting with said ratchet; and operating mechanism for rotating the screw during the lifting operation.

1,395,342. RESILIENT HEEL. FRANK GRAFFIS, Easthampton, Mass. Filed Feb. 5, 1921. Serial No. 442,666. 3 Claims. (Cl. 36—35.)

1. A heel plate comprising a body of resilient material having a recess in the upper surface thereof, a plate having a plurality of arcuate serrations in the recess, and means for preventing movement of said body in a rearward direction while being assembled.



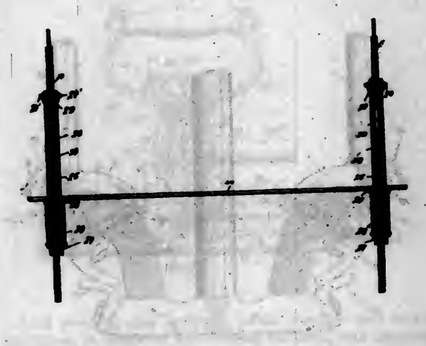
1,395,343. HYDRAULIC RAM FOR RAISING WATER. ROBERT CHARLES GREEN, Winchester, England. Filed Oct. 14, 1918. Serial No. 258,070. 3 Claims. (Cl. 103—29.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a hydraulic ram, a bed comprising a series of separable tubular sections detachably connected together and

arranged end to end, each of said sections, excepting one, being provided with waste valves, the other section being connected to the air chamber vessel.

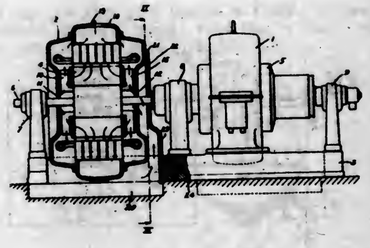
1,395,344. ARMATURE EXCITED DYNAMO-ELECTRIC MACHINE. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 1, 1916. Serial No. 134,264. 3 Claims. (Cl. 172—276.)

2. The combination with a supply transformer, of a commutator motor connected to the secondary winding thereof, a pair of brushes in position to establish a magnetizing field for said motor, means for connecting said brushes in series relation with the primary winding of said transformer, and means for transferring the brushes to a mutual interconnection embodying a resistor and a reactor that are traversed by the sum of the primary transformer current and the motor magnetizing current.



1,395,345. UPRIGHT ELECTRIC TOASTER. HENRY WILLIAM JUTTON, Hamilton, Ontario, Canada. Filed Oct. 2, 1920. Serial No. 414,330. 1 Claim. (Cl. 219—19.)

In an upright electric toaster of the character described, a self contained element supported in mica or other insulating material and reinforced by peripheral metal strips assembled in a metal frame, said element being formed of a continuous coil mounted vertically in a frame and describing inverted curves in a vertical plane, and provided with contact pieces at each end adapted to engage terminal contacts on a base, and means for securing the frame to the base.

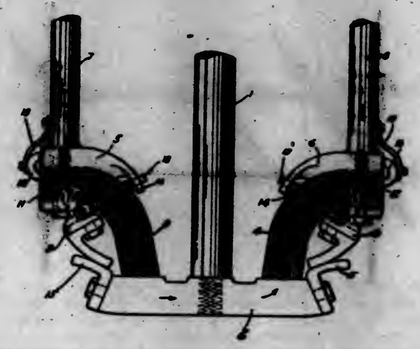


1,395,346. SCAFFOLD. GEORGE J. LUX and JOHN WILCOX, Independence, Kans. Filed July 2, 1918. Serial No. 243,016. 4 Claims. (Cl. 304—29.)

1. A scaffold comprising a plurality of uprights, each having a vertical series of notches arranged in staggered relation, travelers mounted on the uprights, means carried by the travelers for supporting a platform therebetween, a lever oscillatably mounted on each traveler, elevating dogs carried by each lever for engaging the uprights to cause vertical movement of the traveler when the levers are os-

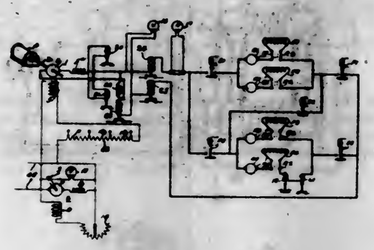
cillated, safety dogs carried by the levers for constant engagement with the uprights, and resilient means for retaining the safety dogs in such engagement.

1,395,347. VENTILATION OF DYNAMO-ELECTRIC MACHINES. ROY A. MCCARTY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 28, 1917. Serial No. 193,714. 6 Claims. (Cl. 171—252.)



1. In a system of ventilation, the combination with a plurality of dynamo-electric machines mounted in side-by-side relation, one of said machines being provided with an inclosing casing having axial depressions therein, and means for drawing air into the respective ends of said casing, of a baffle member located intermediate said machines and partially closing one of said depressions for preventing heated air from the other of said machines from entering the adjacent end of said first-named machine.

1,395,348. CIRCUIT-BREAKER. JOHN B. MACNEILL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 20, 1920. Serial No. 425,343. 7 Claims. (Cl. 200—153.)

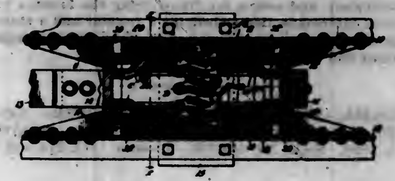


6. In a circuit breaker, the combination with a pair of co-acting main contact members, of two relatively mov-

able auxiliary contact members and means whereby the magnetic forces incident to current traversing the contact

members maintains the auxiliary contact members in engagement.

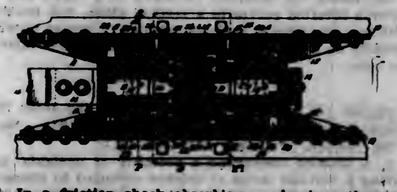
1,395,349. SYSTEM OF CONTROL. PAUL L. MERRIS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 3, 1917. Serial No. 146,427. 22 Claims. (Cl. 172—179.)



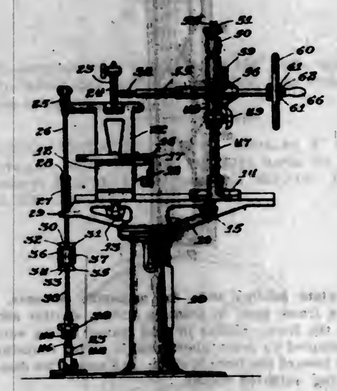
1. In a system of control for an electric vehicle, the combination with a plurality of propelling motors, and a generator for supplying energy to said motors, of means governed in accordance with the current and also with the voltage and current supplied by the generator for simultaneously controlling the circuit relation of the motors and the voltage of the current produced by the generator.

1,395,350. LID-SUPPORT. FRANK OSMER, Glendale, N. Y., assignor to Sonora Phonograph Corporation, a Corporation of New York. Filed Oct. 3, 1919. Serial No. 328,216. 6 Claims. (Cl. 217—60.)

1. A device of the character described, comprising an inclosing member, a cover hinged to the member, an element pivoted to and depending from the cover, an offset on the free end of the element, said offset engaging a device carried by a wall of the member, there being a depression in the device for the reception of the offset when the cover is in raised position.



1,395,351. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Mar. 25, 1920. Serial No. 368,669. 4 Claims. (Cl. 213—64.)

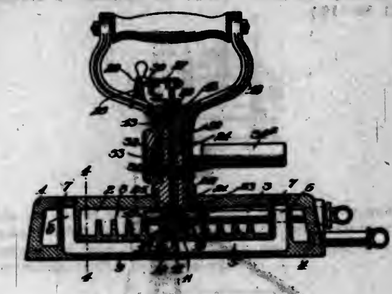


1. In a friction shock absorbing mechanism, the combination with a casting having opposed sets of interior longitudinally extending friction surfaces at each end thereof; of a pair of friction shoes disposed within said casting, each friction shoe having a wedge face at each end thereof; coöperating means on said casting and each shoe for guiding the latter in a direction transversely of the axis of the casting, said means preventing longitudinal movement of the shoes relatively to the casting; spring means interposed between said shoes; and a pair of wedges at each end of said casting, each wedge having a friction surface coöperable with one of the friction surfaces of the casting and a wedge face coöperable with one end of a shoe.

1,395,352. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed May 26, 1920. Serial No. 384,438. 5 Claims. (Cl. 213—64.)

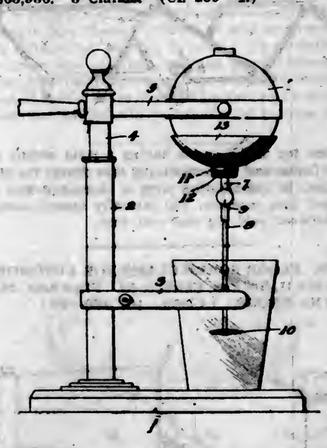
1. In a friction shock absorbing mechanism, the combination with end members relatively movable toward and from each other and provided with interior friction surfaces parallel to the line of relative movement; of a friction member having end sections, the outer surfaces of which frictionally coöperate with said interior friction surfaces of the shells; end friction wedges movable in unison with said end members and having friction surfaces on their outer sides frictionally coöperable with the inner surfaces of said end sections of said friction member; a friction shoe movable transversely of the line of relative movement of said end members and having wedge shaped ends coöperable with said friction wedges; and spring means for yieldingly resisting transverse movement of said friction shoe.

1,395,353. UNIVERSAL TAPPING-MACHINE. WILLIAM C. OSTERHOLM, Chicago, Ill. Filed Dec. 26, 1918. Serial No. 268,344. 5 Claims. (Cl. 10—129.)



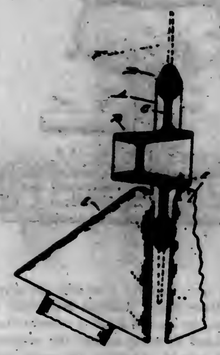
5. In a machine of the class described, the combination of a main frame, a work table supported thereon, a clamping arm pivoted to the work table, a pedal pivoted to the frame, yieldable connections between the arm and pedal, means for holding the pedal in work clamping position, an adjustable and rotatable tool spindle mounted on the frame in operative relation to the work table, and means for operating the spindle.

1,395,354. NON-SLIP DEVICE FOR VEHICLE-WHEELS. EDWARD N. PAGELSEN, Detroit, Mich. Filed Sept. 15, 1921. Serial No. 500,854. 3 Claims. (Cl. 152—14.)



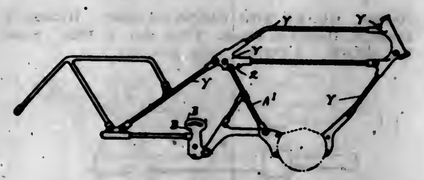
1. An anchoring device for tire chains comprising two similar parts adapted to be secured to a vehicle wheel, each part having a perforated lug through which a chain may pass and a hook on which the chain may be suspended.

1,395,355. PRESSING-IRON. HERMAN W. PETH, Rochester, N. Y. Filed Aug. 21, 1918. Serial No. 250,977. 4 Claims. (Cl. 68—36.)



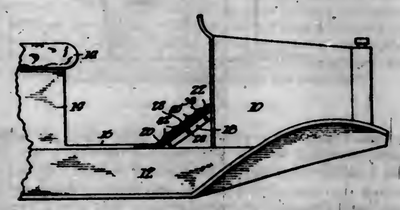
1. A pressing iron having a steam chamber into which the steam is delivered for heating the iron, said chamber having an opening in its top wall, a second chamber having an opening situated directly below the opening in the top wall of the first-named chamber, through which steam is received from said first-named chamber, and also having openings leading through the bottom wall of the iron to discharge steam on the material to be pressed, a handle having a hollow stem formed with a screw threaded portion removably secured in the opening of the top wall, a valve for controlling the opening between the chambers, a valve stem to which the valve is secured, extending through the hollow stem of the handle and removable with the latter and the valve through the opening in the top wall and a packing gland for the valve stem arranged on the hollow stem of the handle.

1,395,356. GUARD FOR DRINK-MIXERS. HUBERT T. PEARSON, Hoquiam, Wash. Filed Mar. 8, 1920. Serial No. 363,936. 3 Claims. (Cl. 259—1.)



1. The combination with a drink mixer having a motor housing provided with a neck portion through which extends a motor shaft having an agitator carried thereby, of a guard conforming in shape to the housing disposed between said housing and said agitator, said guard having a frictional sleeve portion for engaging the neck portion of said housing for holding the same in position thereon.

1,395,357. METHOD OF MANUFACTURING DISK WHEELS. ALDEN L. PUTNAM, Detroit, Mich., assignor, by mesne assignments, to Detroit Pressed Steel Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 27, 1919. Serial No. 333,859. 6 Claims. (Cl. 80—16.)



1. The method of forming metal disks, comprising the forging of a blank of smaller diameter than the completed disk and with a thickened peripheral portion sufficient in mass to complete the disk, and in expanding said blank by progressively rolling said peripheral portion and progressively forcing the same outward.

1,395,358. FRAME OF MOTORCYCLES. GEORGE EDWIN RIGBY, Manchester, England. Original application filed June 11, 1918, Serial No. 239,365. Divided and this application filed June 2, 1919. Serial No. 301,290. 1 Claim. (Cl. 208—94.)

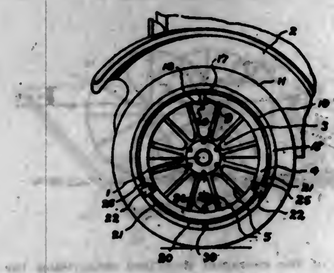
A frame for motor cycles having a rigid middle section or main frame and an articulated rear frame for the rear road-wheel, in combination with a shortened seat lug, a lower seat tube member, and laterally spaced connecting means between said lug and seat tube.

1,395,359. FLOOR-BOARD CLAMP FOR AUTOMOBILES. CLARENCE H. ROCKEY, Chicago, Ill. Filed Sept. 26, 1919. Serial No. 326,679. 1 Claim. (Cl. 180—90.)

In combination with two meeting floor boards of an automobile, a member overlapping said boards and pivoted to one of them, there being in said overlapping member at least one notch adjacent to the board to which it is pivoted and at least two notches adjacent to the board to which it is not pivoted, and headed pins on said boards engaging said notches, for the purposes set forth.

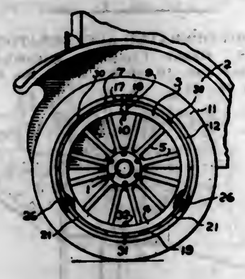
1,395,360. LOADER-MAGAZINE FRAME FOR PHOTOGRAPHIC CAMERAS. CHARLES ROTHMEYER, Aulnay-sous-Bois, France. Filed Nov. 9, 1918. Serial No. 261,851. 6 Claims. (Cl. 95—72.)

1. A plate holding slide for magazine cameras, comprising a frame open in front, a sliding shutter adapted to close the front opening in said frame, spring actuated means adapted to press photographic plates contained in the slide toward the front opening, and means for disabling said spring actuated means.



1,395,361. TROUSERS. GEORGE ROTTMAN, New York, N. Y. Filed Jan. 12, 1920. Serial No. 350,946. 6 Claims. (Cl. 2—122.)

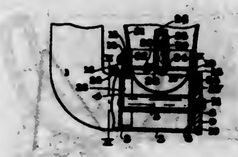
1. Trousers having a cut in their legs at the lower extremities of same, a tightening band across each cut, hose supports attached to the lower extremity of each leg at oppositely located points, and a reefing element secured to each leg to coöperate with one of said supports.



1,395,362. VEHICLE-WHEEL. CHARLES F. RUBSAM, Cleveland, Ohio. Filed Mar. 9, 1918, Serial No. 221,481. Renewed Mar. 19, 1921. Serial No. 453,718. 6 Claims. (Cl. 301—11.)

1. A vehicle wheel comprising a wheel body having a flange, a removable rim for said wheel body and means associated with said rim and wheel body for permitting the former to be swung into position on the latter about a portion of the wheel body as a pivot, said means comprising a plurality of raised bearing members interposed between said rim and wheel body, said bearing members being spaced from each other, certain of said bearing members being included entirely within one and the remainder of said bearing members being included entirely within the other

of two complementary arcs of about 180° each, one of said arcs including that portion of the wheel body about which the rim is swung.

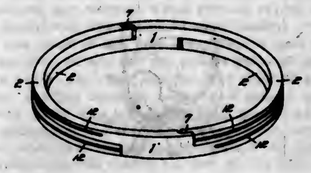


1,395,363. VEHICLE-WHEEL. CHARLES F RUBSAM, Cleveland, Ohio. Filed Apr. 17, 1918, Serial No. 229,069. Renewed Mar. 19, 1921. Serial No. 453,719. 4 Claims. (Cl. 301—11.)

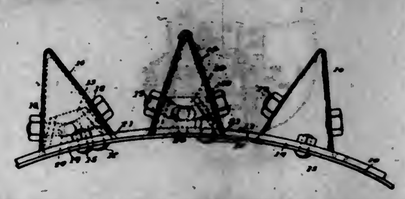
1. A vehicle wheel comprising a wheel body having a flange at the vehicle side, a removable rim for said wheel body, means associated with said rim and said wheel body for permitting the former to be swung into position on the latter about a portion of the wheel body as a pivot, said means comprising a plurality of raised, segmental bearing members interposed between said rim and wheel body, said bearing members being spaced from each other, certain of said bearing members being included entirely within one and the remainder of the said bearing members being included entirely within the other of two complementary arcs of about 180° each, one of said arcs including that portion of the wheel body about which the rim is swung as a pivot, the bearing member on one of said arcs being nearer to one side and the bearing member on the other of said arcs being nearer to the other side of the wheel, and clamping means intermediate certain of said bearing members for clamping the rim in position on the wheel body.

1,395,364. TALKING-MACHINE. WILFRED SAMPSON SAMUEL, London, England, assignor to Barnett Samuel & Sons, Limited, London, England, a Corporation of Great Britain. Filed Apr. 5, 1921. Serial No. 458,665. 3 Claims. (Cl. 274—23.)

1. In a talking machine of the type referred to having an amplifier, a tone arm and a universal joint between said tone arm and amplifier adapted to permit of swiveling movements of the tone arm about horizontal and vertical axes, means for preventing the tone arm swiveling about the vertical axis comprising a tongue on said tone arm and a flat bearing strip on said amplifier, said tongue being adapted to engage with said bearing strip when said tone arm is in the inoperative position, and means for tightening the swivel connection between said tone arm and said amplifier for the purpose of increasing the pressure of said tongue on said bearing strip to prevent the tone arm swiveling about a horizontal axis.

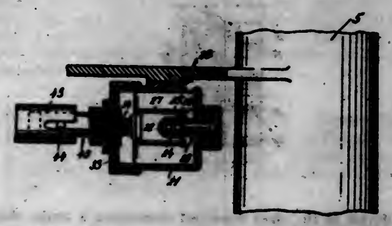


1,395,365. BRAKE-SHOE. THOMAS H. SANFORD, Alexander City, Ala., assignor of one-fourth to Lemuel B. Coley, Alexander City, Ala. Filed Dec. 10, 1920. Serial No. 429,682. 1 Claim. (Cl. 188—246.)



A device of the class described comprising a brake shoe having a plurality of lugs projecting from the convex face thereof, one of said lugs being dove-tailed, a brake head having a plurality of transverse grooves extending across the concave face thereof and one of said grooves provided with a dove-tailed slot for receiving the dove-tailed lug on the brake shoe and the remaining grooves provided with slots for receiving the other lugs, a pocket formed adjacent one of said grooves opposite its slot, and a latch pivotally mounted within said pocket for the purpose specified.

1,395,366. PISTON-RING. JOHN H. SCHREIBER, St. Louis, Mo. Filed Sept. 4, 1920. Serial No. 408,263. 8 Claims. (Cl. 74—109.)

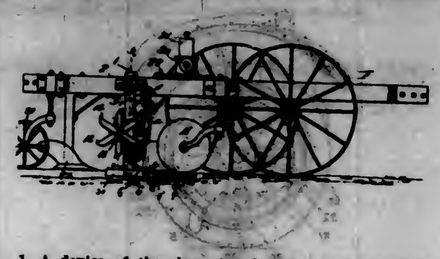


5. A piston ring comprising two ring like sections each having a relatively short central body portion, a pair of diagonally arranged ring members extending from the ends of the central body portion of each ring section a distance approximately one-half the distance around each ring section, the ends of the ring like members being spaced apart sufficient to receive the central body portion of the opposite ring member therebetween.

1,395,367. LUG FOR TRACTION-WHEELS. Hiram R. Sprague, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Apr. 22, 1918. Serial No. 230,023. 7 Claims. (Cl. 301—44.)

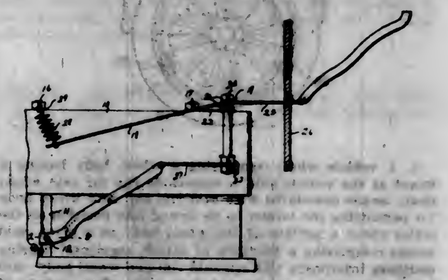
1. A substantially V-shaped detachable lug for traction wheels having oppositely disposed apertures in its inclined walls for the reception of securing means.

1,395,368. DISPENSER FOR COMPRESSED AIR. Gregory John Sprague, East Orange, N. J. Filed Nov. 6, 1919. Serial No. 336,132. 7 Claims. (Cl. 221—72.5.)



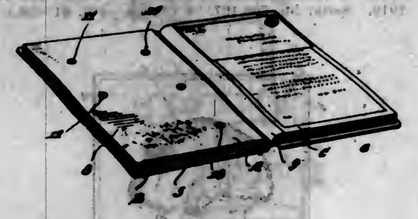
1. In an apparatus for dispensing gas under pressure, the combination of an automatic pressure-reducing valve for varying the outlet pressure of gas passing therethrough, a dial, a manually adjustable indicator cooperating with the dial and operatively connected to the valve, and means tending to hold said indicator in position to close said valve.

1,395,369. VEGETABLE-CUTTER. Harry A. Stoddard and Francis E. Callahan, Columbus, Ohio; said Stoddard assignor to said Callahan. Filed Apr. 28, 1921. Serial No. 464,581. 5 Claims. (Cl. 146—11.)



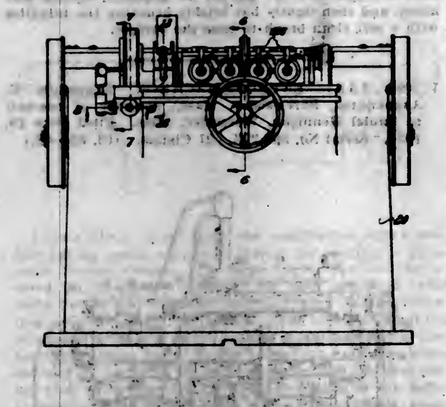
1. A vegetable slicer including a rotary cutter, and a hopper having a feed channel and also having a vertical face plate at one side against which the cutter rotates, said face plate provided with a feed slot at its lower portion below the axis of the cutter communicating at one end with the said channel and gradually decreasing in depth therefrom in the direction of rotation of the cutter.

1,395,370. PLOW AND PULVERIZER. Peter J. Tate, Big Pine, Calif. Filed July 20, 1920. Serial No. 397,571. 3 Claims. (Cl. 97—25.)



1. A device of the character described comprising the combination, in a wheeled frame, of a beam depending therefrom, a longitudinally extending landside member carried on the lower end thereof, a plow share rigidly mounted on the said member and extending laterally thereof, a mold board hinged to said share for delivery of earth from said share, colters vertically adjustable disposed at opposite sides of said share, means carried by the frame for vertical adjustment of said mold board, beater mechanism in the frame above the rear edge of said mold board and in alinement therewith, and means for operating said beater mechanism.

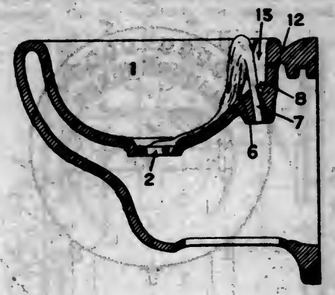
1,395,371. FOOT-OPERATED ACCELERATOR FOR AUTOMOBILES. Harry Chester Trebabold, Gibson, N. Mex. Filed Jan. 10, 1920. Serial No. 350,629. 2 Claims. (Cl. 74—91.)



1. An accelerator for automobiles including a bracket adapted to be mounted upon an engine block by one of the engine bolts and providing upper and lower bearings, a bolt rotatably mounted in said bracket, a lever section mounted upon said bolt at the lower end thereof and below said bracket for rotation with the bolt and mounted for adjustment around the bolt, and adapted at its forward end to be loosely connected to a throttle rod, a lever section detachably engaged with the upper end of said bolt and rotating therewith but adjustable around the axis of the bolt and with relative thereto and extending horizontally and then upward and rearward in approximately the same plane for its entire length, whereby said lever may be operated by a sidewise movement of the operator's foot or knee, an arm also attached to the upper end of said bolt for rotation therewith and extending forward therefrom, said arm being adjustable around the axis of the bolt, a spring engaged with the forward end of said arm, and a plate with which the other end of said spring is detachably engaged and having a bolt hole for the passage of an engine bolt.

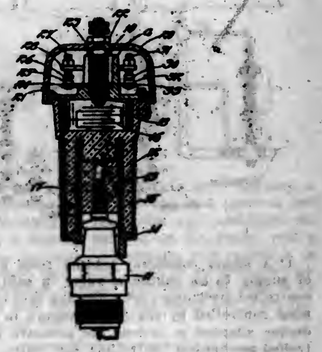
1,395,372. MAIL-SIGNING BOOK. Nathaniel L. Tookme, Brooklyn, N. Y. Filed July 26, 1920. Serial No. 399,617. 3 Claims. (Cl. 281—38.)

1. A book for facilitating the handling of mail from the stenographer to the dictator comprising a cover and a plurality of leaves formed of blotting material, said leaves having a plurality of sight openings formed therein.



1,395,373. MILLING-MACHINE. Hans H. Wanders, Brookline, Mass. Filed Sept. 9, 1918. Serial No. 253,315. 14 Claims. (Cl. 90—14.)

1. A machine for reducing the journals of a crank shaft, comprising a work carrier which includes rotatable chucks for engaging the opposite ends of the crank shaft, a tool carrier having a plurality of parallel rotatable tool spindles each having a tool thereon and all arranged transversely of the axis of rotation of the chucks, means for moving said tool carrier toward and from the axis of the chucks to cause the tools on the spindles to operate upon the journals on the crank shaft, and means for rotating the chucks and the crank shaft carried thereby.



1,395,374. DRINKING-FOUNTAIN. Edward T. Webster, Milwaukee, Wis. Filed July 30, 1919. Serial No. 314,310. 4 Claims. (Cl. 299—12.)

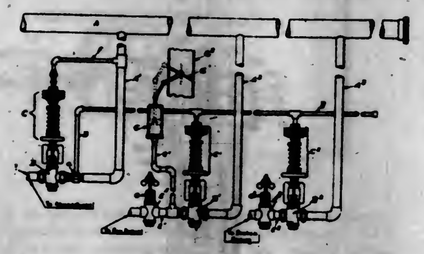
6. A drinking fountain comprising the combination of a bowl having a discharge aperture and provided with an inclined ledge at one side and an inclined side wall leading downwardly from the ledge toward the said discharge aperture, and means for delivering a jet of water in a nearly vertical direction from the ledge at such an angle to the vertical as to allow the water to turn inwardly

and fall to said inclined side wall between the said ledge and the said discharge aperture of the bowl.

1,395,375. SPARK-PLUG-COIL UNIT. Ralph H. Whaley, Detroit, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed Oct. 8, 1919. Serial No. 329,227. 1 Claim. (Cl. 123—148.)

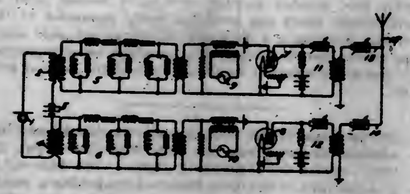
A unit adapted to be secured to a spark plug and comprising a body within which is a chamber containing a central binding post through which current enters, a radial member electrically connected to said binding post and carrying one point of the first spark gap, a semi-circular member carrying at one end the second point of said first spark gap and at the other end the first point of a second spark gap, another member carrying a second point of said second spark gap and electrically connected to the primary winding of a disruptive discharge coil, said spark gap points and their supporting members being supported by insulating material forming a part of the body of said unit.

1,395,376. MACHINE FOR CLEANING SPARK-PLUGS. Arthur White, Sheboygan Falls, Wis. Filed Dec. 23, 1919. Serial No. 347,042. 4 Claims. (Cl. 141—1.)



3. A machine of the class described comprising a rotary holder support including circular end members, and a plurality of holder sockets carried by each end member, a plurality of holder bars for spark plugs and the like,

each of said bars being detachably held by corresponding holder sockets, a spray head, and means for moving the

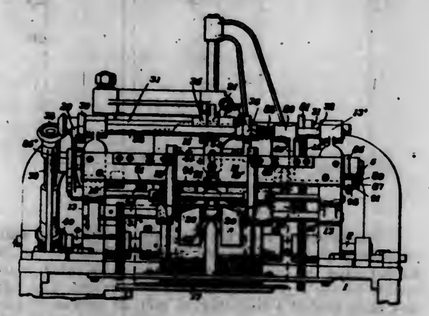


holder support to successively aline the holder bars with the spray head.

1,395,377. SYSTEM FOR REGULATING MECHANICAL STOKERS FOR STEAM-GENERATORS. THOMAS M. WILKINS, East Randolph, N. Y., assignor of one-half to John W. Storke, Erie, Pa. Filed Apr. 16, 1919. Serial No. 290,631. 5 Claims. (Cl. 110—54.)

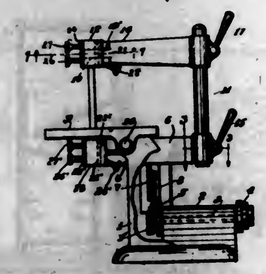
1. A steam conductor leading from a suitable source of supply to an engine, a valve in said conductor, fluid controlled mechanism for actuating said valve, and mechanism controlled by the fluid pressure in said steam conductor adapted to relieve the pressure in the fluid controlled mechanism controlling said valve.

1,395,378. SECRET SIGNALING. RICHARD H. WILSON, Newark, N. J., and JOHN P. SCHAFER, Richmond Hill, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 29, 1919. Serial No. 327,125. 44 Claims. (Cl. 250—6.)



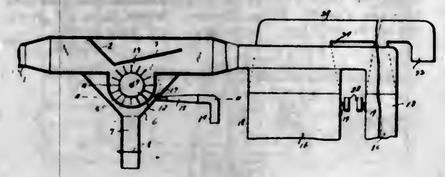
1. The method of electric signaling which comprises separating a signal wave arbitrarily into different parts, transmitting the different parts separately and simultaneously, and recombining the different parts to form a signal wave.

1,395,379. PROCESS OF COLORING INTAGLIOS. MARY B. ADELSPERGER, Chicago, Ill. Filed June 23, 1919. Serial No. 306,167. 4 Claims. (Cl. 41—26.)



1. The process of coloring intaglios which consists of coating the surface with an adhesive fluid, then applying powders of desired colors to produce the wanted design, then brushing out the powder to secure a smooth mat finish, and then lightly but briskly brushing the intaglios with a soft clean brush to tone the surface.

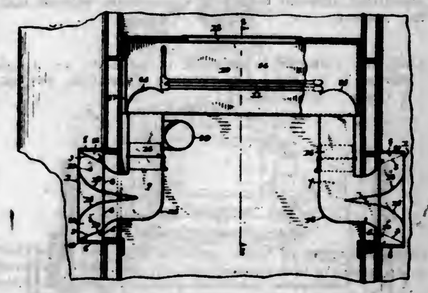
1,395,380. ENVELOP-MACHINE. FREDERICK E. ARMOUQUINE, Shrewsbury, Mass., assignor of one-half to Daniel Hennigan, Worcester, Mass. Filed June 19, 1920. Serial No. 390,208. 21 Claims. (Cl. 93—68.)



1. In an envelop machine, in combination, a rotary gumming mechanism comprising a bed-cylinder, and a coacting gummer-cylinder provided upon its exterior with gum applying pads formed for imprinting gum successively upon the infold flap and sealing flap in place of edges of an envelop blank; said mechanism being adapted to afford an instant of release to the blank after the gumming contact with the first or infold edge of the advancing blank and before the gumming contact with the last or sealing edge of the blank by the respective pads, means for regulating the register of the blank during the instant of its release, means for rotating said cylinders, and means for feeding the blank to said gumming mechanism.

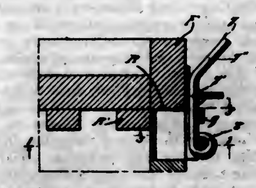
1,395,381. FILING-MACHINE. FRANK E. BIDDLE, Elkhart, Ind. Filed June 30, 1919. Serial No. 307,792. 6 Claims. (Cl. 29—76.)

1. In a filing machine, a reciprocatory frame; a post on said frame and vertically adjustable thereon; an arm projecting laterally from said post; and file clamping mechanism carried by said arm, said clamping mechanism comprising a holder box, a tiltably adjustable file block mounted in said box; clamping means carried by said box and positioned therein to engage the body of the file for clamping it against the block.



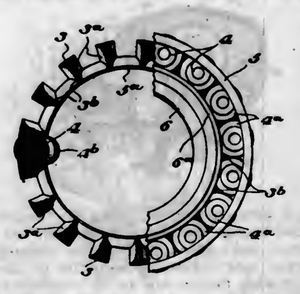
1,395,382. SEED-COTTON CLEANER. CHARLES C BIGGERSTAFF, Rowesville, S. C. Filed May 22, 1920. Serial No. 383,467. 6 Claims. (Cl. 13—19.)

4. In a device as set forth, the combination with a conduit having means connected thereto for creating a pneumatic suction therein, of a baffle having perforations located in the conduit adjacent its inlet end, said baffle plate having an extension plate arranged at an inclination relative to the longitudinal plane of the conduit, to retain the trash and dust that may pass through the perforations of the baffle, means below the extension plate radially in line with the baffle for agitating the seed cotton after being deflected and initially broken by the baffle, a chute carried by the conduit adjacent said means, pneumatic suction means connected to the chute for drawing off the trash and dust therefrom, means arranged in the chute adjacent where said pneumatic means is connected thereto, for drawing the trash and dust into said pneumatic means, said chute having an extension to which a receptacle may be connected for receiving rocks and gravel, said extension having a valve, for controlling the discharge of the rocks and gravel into the receptacle.



1,395,383. CAR-VENTILATING SYSTEM. PETER B. BOGART, Milwaukee, Wis. Filed Sept. 2, 1919. Serial No. 321,280. 6 Claims. (Cl. 98—23.)

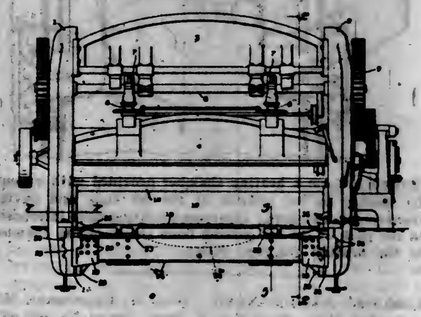
5. A car ventilator including the combination with a car body provided with a cupola, of an exterior elongated air receiving chamber provided at each end with a transverse screen and an interior obliquely disposed screen spaced from the transverse screen to form a settling chamber, passage walls leading from the central portion of the receiving chamber to the interior of the cupola, and depending walls, forming a cinder discharge passage extending underneath the receiving chamber, the bottom of the receiving chamber having apertures through which cinders may pass from the settling chambers to the cinder discharge passage, the space within the cupola being sub-



divided to form a heating chamber provided with an outlet leading to the interior of the car body and having transversely extending superposed heating coils interposed in the path of the air passing from the receiving chamber to the heating chamber outlet.

1,395,384. SASH-HANGER. JOHN F. BRODOWSKI, Milwaukee, Wis. Filed Feb. 9, 1920. Serial No. 357,445. 5 Claims. (Cl. 16—171.)

4. In combination, a frame having a sash opening, a sash normally disposed within the said sash opening, but being movable laterally of the frame and positioned exteriorly thereof, a bearing member on the frame, and a pintle pivoted to the sash and slidable and rotatable in the bearing member, said pintle being in coöperative relation with said bearing member both when the sash is located within the sash opening of the frame and when disposed exteriorly of the latter.

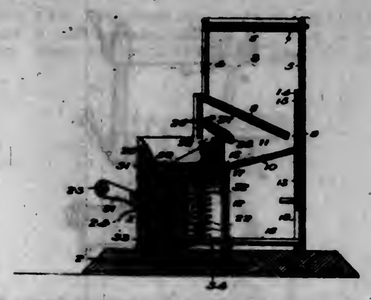


1,395,385. BEARING-CAGE. TRACY V. BUCKWALTER, Canton, Ohio, assignor to Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed July 18, 1918. Serial No. 245,448. 6 Claims. (Cl. 64—62.)

1. The combination with a set of rollers, of an antifriction bearing cage, adapted to be carried by said rollers,

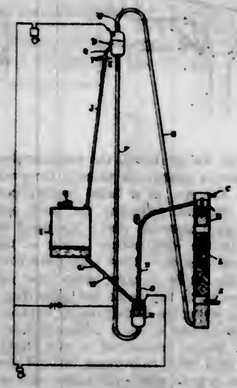
said cage having curved ends and connecting bridges providing roller seats, adjacent bridges having curved bearing surfaces spaced at their inner edges to permit conforming rollers to be entered between them and between said ends and the respective bridges having narrow inner edges permitting adjacent rollers to approximate without making contact.

1,395,386. PRESS. William F. Burditt, Jr., Lyons Farms, N. J. Filed July 17, 1917. Serial No. 181,009. 1 Claim. (Cl. 153—21.)



In a sheet metal bending press, the combination with opposite housings providing slideways, a die-holding hammer having an exposed working edge between said housings adapted to receive a die longitudinally of said edge and extending between said housings, means engaging said hammer at a plurality of separated points intermediate its ends for reciprocating the same in its slideways, a die-bed opposed to said hammer with its ends slidably free in the housings and presenting toward the hammer a working edge adapted to receive longitudinally of itself a die extending between the housings, parallel spaced beams extending between the ends of the housings at the opposite side of said die-bed from the hammer, means for connecting said beams to each other and to said housings, and means for supporting said die-bed directly upon the upper face of said beams at a plurality of separated points intermediate its ends, both said die-bed and hammer being unsupported except at said separated points intermediate their ends.

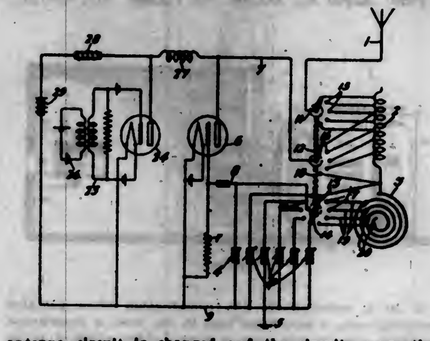
1,395,387. CARBURETER. Leopold F. Buaoss, Riverside, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Apr. 22, 1918. Serial No. 230,036. 7 Claims. (Cl. 158—87.)



1. In a carbureter, a fuel reservoir, means for supplying fuel thereto, means for maintaining the height of fuel therein, and controlling means for draining said reservoir when said controlling means is in one position, and for causing fuel to flow to the reservoir and return excess fuel to the source of supply when said means is in another position.

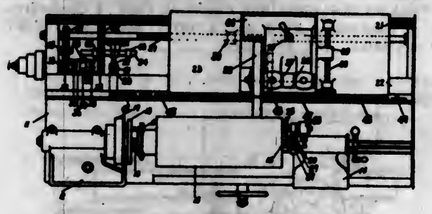
1,395,388. MATCH AND TOOTHPICK DISPENSER. John D. Byrn, Butte, Mont. Filed Apr. 8, 1920. Serial No. 371,665. 3 Claims. (Cl. 206—23.)

1. In a dispenser for toothpicks or matches, the combination with a compartment or holder for the toothpicks or matches, of a dispensing slide operating in the front part of said compartment, a stirrer or agitator operating in the rear part of said compartment for the toothpicks or matches, and an operative connection between the dispensing slide and the stirrer or agitator.



1,395,389. PROCESS FOR THE EXTRACTION OF HYDROGEN FROM GASEOUS MIXTURES. Georges Claude, Paris, France, assignor to L'Air Liquide Societe Anonyme pour l'Etude et l'Exploitation des Procedes Georges Claude, Paris, France. Filed Mar. 14, 1918. Serial No. 222,503. 4 Claims. (Cl. 183—117.)

1. The process of extracting hydrogen from gaseous mixtures containing it, which comprises compressing the mixture to a pressure within the range of 400 to 1,000 atmospheres, and circulating the mixture in contact with a solvent liquid which will dissolve, in a single stage, all of the gases except the hydrogen, thus leaving the latter in a practically pure and compressed state.

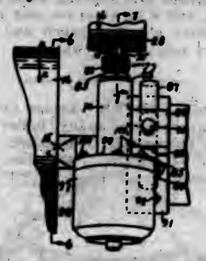


1,395,390. OSCILLATION-GENERATING SYSTEM. Lewis M. Clement, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1918. Serial No. 256,247. 8 Claims. (Cl. 250—17.)

3. In combination, an antenna circuit, an electric discharge device, means including circuit arrangements whereby said discharge device works directly into said antenna circuit to produce oscillations therein, and means operable by a single movement whereby the period of said

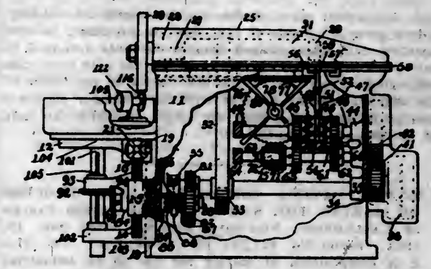
antenna circuit is changed and the circuits connecting said discharge device to said antenna circuit are modified for approximately maximum operating efficiency.

1,395,391. DEVICE FOR TRUING AND DRESSING GRINDING-WHEELS. Edward R. Conners, Covington, Ky., assignor to The Precision Truing Machine and Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 2, 1917. Serial No. 199,889. 13 Claims. (Cl. 125—11.)



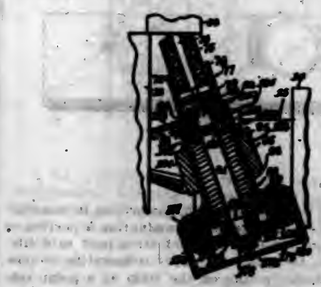
13. In a device for truing and dressing grinding wheels, the combination of a work-support, rotating means thereon for rotating the work, a support for a grinding wheel, rotating means thereon for said grinding wheel, a rotatable abrading part mounted on said work-support and arranged for coaction with said grinding wheel, means mounted on said work-support causing maintenance of rotation of said abrading part, and means for causing movement between said supports lengthwise of the axis of rotation of said grinding wheel for causing alternate coaction between said rotatable grinding wheel and said rotatable work and between said rotatable abrading part and said rotatable grinding wheel.

1,395,392. DEVICE FOR TRUING AND DRESSING GRINDING-WHEELS. Edward R. Conners, Cincinnati, Ohio, assignor to The Precision Truing Machine and Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 18, 1920. Serial No. 366,970. 7 Claims. (Cl. 125—11.)



1. In a device for truing and dressing grinding wheels, the combination of a work-support, rotating means thereon for rotating the work, a support for a grinding wheel, rotating means thereon for said grinding wheel, a rotatable abrading pencil mounted on said work-support and arranged for coaction with said grinding wheel, means for rotating said rotatable abrading pencil, and means for causing movement between said supports lengthwise of the axes of rotation of said work and said grinding wheel for selectively causing coaction between said rotatable

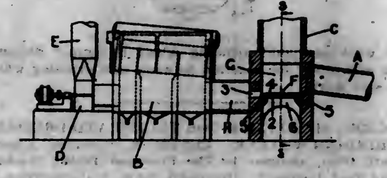
grinding wheel and said rotatable work and between said rotatable abrading pencil and said rotatable grinding wheel while maintaining the axes of rotation of both



said work and said grinding wheel at proper distance from each other for coaction between said grinding wheel and said work.

1,395,393. MECHANISM FOR TRUING AND DRESSING GRINDING-WHEELS. Edward R. Conners, Cincinnati, Ohio, assignor to The Precision Truing Machine and Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 7, 1920. Serial No. 415,402. 14 Claims. (Cl. 125—11.)

1. In mechanism for truing and dressing grinding wheels, the combination of a grinding wheel, a rotary abrading part, a support therefor, and a rotary magnetic chuck for adjustably positioning and holding of said support with relation to said grinding wheel.



1,395,394. MECHANISM FOR TRUING AND DRESSING GRINDING-WHEELS. Edward R. Conners, Cincinnati, Ohio, assignor to The Precision Truing Machine and Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 7, 1920. Serial No. 415,403. 12 Claims. (Cl. 125—11.)

1. In mechanism for truing and dressing grinding wheels, the combination of a grinding wheel, means for

rotating said grinding wheel, a normally quiescent rotary abrading pencil positioned with its axis of rotation presented toward said grinding wheel, means for causing reciprocation between said grinding wheel and said rotary abrading pencil, and a fly-wheel for said rotary abrading pencil, said rotary abrading pencil and said fly-wheel rotated solely by said grinding wheel.

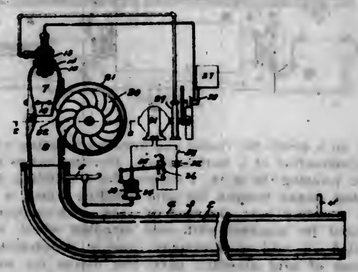
1,395,395. STACK-DAMPER. ALFRED COTTON, St. Louis, Mo., assignor to Heine Safety Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 10, 1919. Serial No. 343,703. 4 Claims. (Cl. 122—7.)

4. A vertical stack or flue provided with an opening, ledges arranged inside of said stack in proximity to said opening, cylindrical shaped damper elements arranged in said stack in parallel relation to each other with their ends supported on said ledges, and side ledges on the inside of the stack extending parallel with said damper elements and projecting higher than the ledges on which the ends of the damper elements rest.

1,395,396. PAVING COMPOSITION AND PROCESS OF MAKING THE SAME. CHARLES ALFRED CARLES DE CAUDEMBERG, Nice-Gare, France. Filed Jan. 15, 1921. Serial No. 437,587. 2 Claims. (Cl. 106—31.)

2. A composition of matter for use as an industrial product, and resulting from the combination of bitumen with rubber in a proportion of approximately 1–1.50 of rubber to 100 of bitumen, said composition having colloidal properties and a high point of fusion.

1,395,397. DISPLAY APPARATUS. CHARLES E. DELLENBARGER, Chicago, Ill. Filed Sept. 15, 1917. Serial No. 191,548. 12 Claims. (Cl. 40—96.)

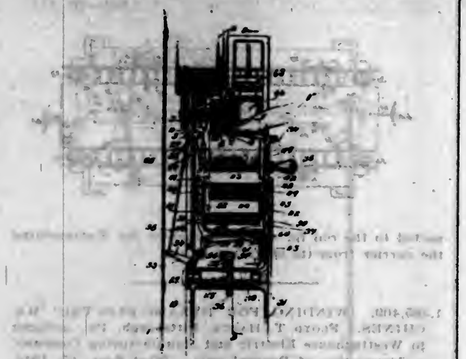


1. A device of the kind set forth, comprising in combination, an endless strip, means for illuminating a portion of said strip, means for drawing said strip past said illuminating means, including a pair of coöperating rollers, and a friction device acting on the strip at a point substantially in advance of the portion being illuminated, whereby said strap is held taut while passing said means.

1,395,398. STEREOPTICON. HERMAN A. DE VRY, Chicago, Ill., assignor to The de Vry Corporation, Chicago, Ill., a Corporation of Illinois. Filed Jan. 24, 1920. Serial No. 353,806. 17 Claims. (Cl. 88—24.)

1. In a stereopticon, the combination of a portable carrying case, a projecting lens in the case, a lamp-house movably held in the case, a plate-holder adapted to be held in the case, a condenser adapted to be held in the case, said lamp-house, condenser and plate-holder being vertically disposed in the case and conjointly movable to a substantially horisontal position outside of the case, and means to support the lamp-house, holder and condenser in a predetermined substantially horisontal operative position.

1,395,399. FLUID-HEATER. WILLIAM A. DOBLE and JOHN A. DOBLE, San Francisco, Calif., assignors to Doble Laboratories, San Francisco, Calif., a Corporation of California. Filed Mar. 2, 1917. Serial No. 151,027. 6 Claims. (Cl. 158—28.)

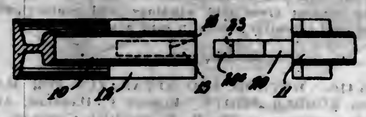


1. A fluid heater comprising a long tube, a jacket surrounding and spaced from said tube and forming with said tube a fluid containing and heating chamber, means for producing a fuel flame and directing it into one end of said tube whereby the products of combustion pass through said tube longitudinally and discharge from the opposite end thereof, a housing connecting the tube and said fuel flame producing means, a fluid inlet pipe connected to the chamber adjacent the gas discharge end of the tube and a heated fluid outlet pipe connected to the chamber at the flame inlet end of the tube.

1,395,400. TIME-RECORDER. RICHARD F. DOWNEY, Milwaukee, Wis., assignor of one-third to Arthur Leich and one-third to Jesse S. Berner, Milwaukee, Wis. Filed Dec. 23, 1919. Serial No. 346,859. 19 Claims. (Cl. 224—44.)

1. In an apparatus of the class described, a finger operable time recording means adapted to record the time

of operation on a sheet, and means extending into the path of the finger operating said recording means for

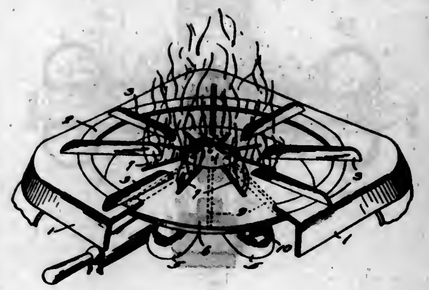


procuring an epidermic impression of said finger simultaneously and on the same sheet with the time record.

1,395,401. MANUFACTURE OF SOLUTIONS, PREPARATIONS, OR COMPOSITIONS HAVING A BASIS OF CELLULOSE ACETATE. HENRY DREYFUS, London, England. Filed Aug. 29, 1919. Serial No. 320,715. 2 Claims. (Cl. 106—40.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

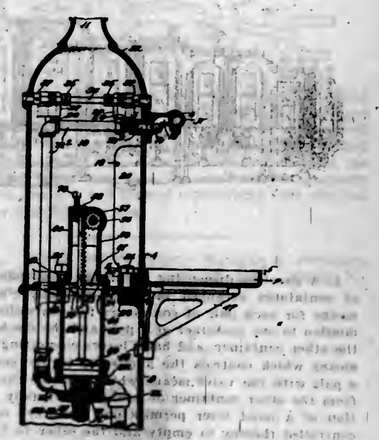
1. A composition of matter containing cellulose acetate and a cyclo-hexanone.

1,395,402. JOINT FOR STRUCTURES. ANTONY DUDINSKY, New York, N. Y. Filed June 27, 1921. Serial No. 480,511. 1 Claim. (Cl. 238—241.)



A pair of rail or beam members to be joined one of which is slotted inwardly from one side at the end, the rear portion of said slot being offset to present a shoulder, the slot at the said side of the member terminating short of the extreme rear end of the inner portion of the slot and presenting a short vertical shoulder, the extremity of the inner wall of said offset portion of the slot being curved concentric to the outer point of said last shoulder, the lower wall curving concavely upward to the rear end of the slot, and a complementary tongue formed on the other of said members and adapted to engage in said slot.

1,395,403. BINDING-TIP. STEPHEN IVEN FEKETE, Detroit, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed July 2, 1920. Serial No. 393,684. 3 Claims. (Cl. 206—135.)



1. The binding tip comprising a cap to inclose the end of the binding with which it is to be used and an attaching shank forming an extension of the back side of the cap and concealed by the binding.

1,395,404. GAS-BURNER ATTACHMENT. JAMES R. FLICK, Vineland, N. J. Filed Apr. 8, 1920. Serial No. 372,233. 2 Claims. (Cl. 158—113.)

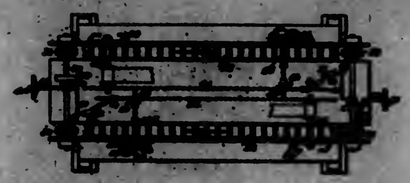
1. An attachment for the burners of gas stoves, comprising a frusto-conical casing or shell provided with slots extending radially from a central opening, narrow radial ribs extending from the inner surface of the shell and symmetrically arranged intermediate said slots to provide shallow converging channels, the inner edges of the ribs being substantially parallel with the inner surface of the shell.

1,395,405. LIQUID-DISPENSING APPARATUS. WILLIAM S. FOLANT, Stoneham, Mass., assignor to Standard Oil Company of New York, New York, N. Y., a Corporation of New York. Filed July 9, 1919. Serial No. 309,655. 12 Claims. (Cl. 221—103.)

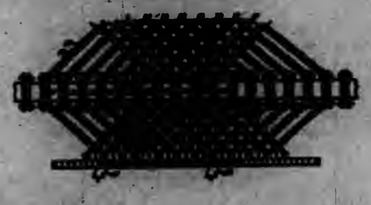
1. An apparatus of the character described having, in combination, pumping devices including a single actuating member, means connecting said pumping devices with a plurality of supply reservoirs holding different kinds of liquids, and means for regulating the pumping devices to cause the same to pump from either reservoir exclusively or from a plurality thereof simultaneously, said pumping devices including a separate delivery conduit for each kind of liquid that is pumped.

1,395,403. GREASE AND OIL CUP. JOHN WM. FRANZ, St. Louis, Mo., assignor of one-half to Edwin A. Hoffmann, St. Louis, Mo. Filed Jan. 26, 1921. Serial No. 440,917. 3 Claims. (Cl. 184—1 P.)

1. A grease cup provided with a closure plug, one face of said plug carrying a type.



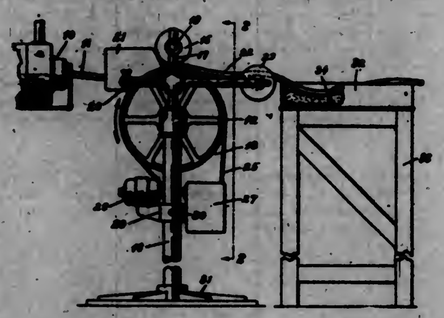
1,395,407. DISPENSING APPARATUS. DAVID G. FRANKS, University, Mo. Filed Mar. 18, 1920. Serial No. 366,873. 6 Claims. (Cl. 221—100.)



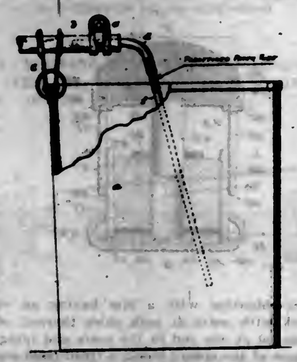
1. A gasolene dispensing apparatus comprising a series of containers arranged in pairs, normally closed valve means for each pair of containers for controlling the admission to one container of a pair and the discharge from the other container, and hand levers connecting the valve means which controls the admission to one container of a pair with the valve means which controls the discharge from the other container of said pair, whereby the operation of a hand lever permits one container of the pair controlled thereby to empty and the other to fill, the filling and emptying of said containers being simultaneous.

1,395,408. LUMBER EDGING AND MATCHING MACHINE. HENRY A. GALE, Fitchburg, Mass., assignor to Gale Box Machinery Company, West Fitchburg, Mass., a Corporation of Massachusetts. Filed May 17, 1921. Serial No. 470,246. 8 Claims. (Cl. 144—39.)

1. In a machine for edging and matching lumber, the combination with a carrier for the lumber, means for operating the carrier, a matcher head movable bodily into and out of operative position, a controlling rod having connections for moving the matcher head, and means connected to the rod for operation thereby for disconnecting the carrier from its operating means.

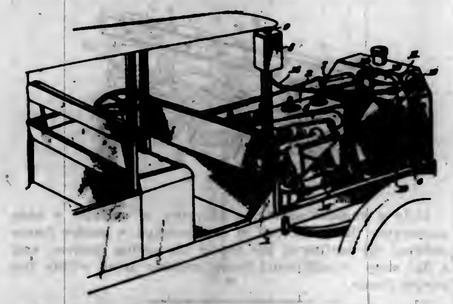


1,395,409. WINDING FOR DYNAMO-ELECTRIC MACHINES. FLOYD T. HAGUE, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 15, 1916. Serial No. 120,200. 14 Claims. (Cl. 171—238.)



1. In a dynamo-electric machine, the combination with an armature core, of a plurality of distinct windings of different coil-pitch mounted thereon, means for communicating current from said windings, and connections between equi-potential points in said windings.

1,395,410. METHOD AND APPARATUS FOR MARKING RUBBER STRIPS. ROBERT P. HASSLER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 1, 1921. Serial No. 488,751. 9 Claims. (Cl. 18—1.)

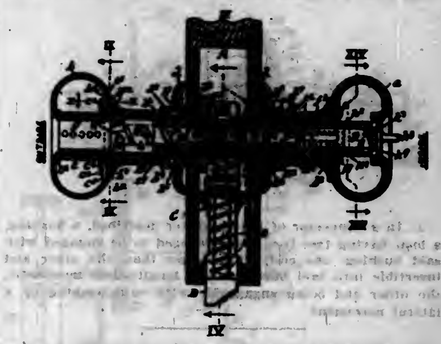


1. The method of marking rubber strip stock which comprises progressively impressing an intaglio marking in the surface of the raw rubber strip, filling the impressions to prevent their closure, and vulcanising the strip without a mold.

1,395,411. ICE-MACHINE. PHILIP HESSEL, Norfolk, Va. Filed July 31, 1920. Serial No. 400,467. 2 Claims. (Cl. 62—159.)

2. In an ice machine of the type set forth, a downwardly-turned supporting tube, and a delivery-tube made of paraffin-coated paper having its upper end fitted up into said depending supporting-tube, the coating on the tube serving to seal the end thereof in said delivery-tube.

1,395,412. FUEL-SUPPLY SYSTEM FOR INTERNAL-COMBUSTION ENGINES. CLARENCE O. HOFFMANN and WILLIAM A. MCKINNON, Detroit, Mich. Filed Oct. 18, 1917. Serial No. 197,227. 1 Claim. (Cl. 123—122.)



In a motor vehicle power plant which includes a radiator having a hollow upper chamber, an engine having a jacket communicating with the radiator, and a carbureter adapted to supply fuel to the engine, means for utilising the fuel for cooling the engine and for utilising the heat of the engine to raise the temperature of the fuel prior to its admission to the cylinder, comprising a fuel tank placed at a higher level than the level at which liquid is to be maintained in the radiator, a pipe connected to said tank and extending to the upper chamber of the radiator, a float controlled valve for said pipe within the upper chamber of the radiator, adapted to maintain the fuel at a substantially constant level within the radiator and a pipe connecting the top of the radiator below the fuel level with said carbureter to conduct warm fuel thereto.

1,395,413. ART OF MIXING RUBBER WITH COMMINUTED METAL. HARRY A. HOFFMAN and WALTER H. JUVE, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 31, 1920. Serial No. 370,256. 8 Claims. (Cl. 106—23.)

8. A composition of matter comprising vulcanized rubber through which is distributed finely-divided lead whose individual particles are immediately surrounded by rubber containing petrolatum.

1,395,414. KNOB-LOCK. LOUIS HUFFMAN, Toronto, Ontario, Canada. Filed Feb. 19, 1919. Serial No. 278,102. 20 Claims. (Cl. 70—91.)

5. In an apparatus of the kind described, the combination of a reciprocating yoke having a longitudinal guide thereon, a sleeve having exterior screw threads having its inner end shaped to engage said guide to prevent the rotation of said sleeve, an escutcheon threaded upon said sleeve for the purpose described, and an adjustable locking means adapted to connect the outside knob with said sleeve so as to prevent the rotation of the knob.

1,395,415. CHAIN-LINK CONNECTOR. HUGH T. HUGHES, Cleveland, Ohio, assignor to The Cleveland Chain & Mfg. Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 3, 1921. Serial No. 434,456. 7 Claims. (Cl. 24—68.)

5. In a chain connector, a lever provided at one end with a fulcrum link carrying a chain link and arranged and pivoted to normally extend at one side of the lever when closed, said link and lever being adapted to extend through the adjacent link of the chain to be connected, the arrangement being such that the lever will be normally held closed, the free end thereof interlocking with the link carried by said fulcrum link.

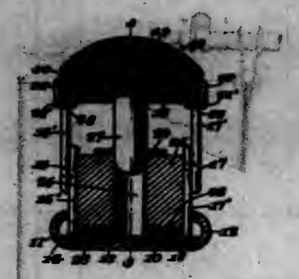
1,395,416. HOSE-SUPPORTER. WILLIAM S. HUNKINS, Los Angeles, Calif. Filed July 16, 1921. Serial No. 485,377. 4 Claims. (Cl. 24—76.)

1. A connector of the character described comprising, a tubular bushing having a relatively short opening in its top side at one end, a loop having two disconnected ends arranged to be inserted in and carried by the bushing, one end being longer than the said top opening in the bushing, the other end being of such length that when the loop is inserted in said bushing with the bend adjacent the long end inserted in said top opening, said short end may be inserted in the other end of said bushing.

1,395,417. HOSE SUPPORTER. WILLIAM S. HUSKINS, Los Angeles, Calif. Filed July 16, 1921. Serial No. 485,378. 4 Claims. (Cl. 24—76.)

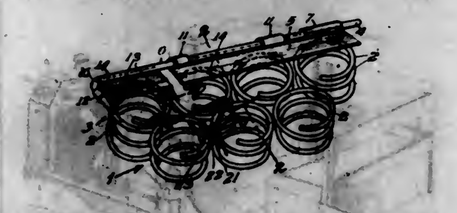
1. In a connector of the character described, a bushing, a loop having two free ends arranged to be engaged with said bushing, one end being longer than the other and insertible into said bushing by a longitudinal movement, the other end being engageable with said bushing by a lateral movement.

1,395,418. GOLF-BALL-MARKING DEVICE. ADOLPH G. HUFFMAN, Reno, Nev. Filed Feb. 7, 1921. Serial No. 443,120. 18 Claims. (Cl. 101—39.)



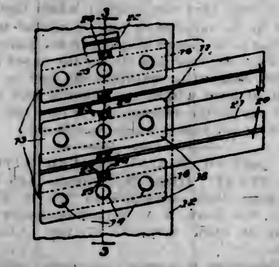
1. In a golf-ball marking device, the combination of a main frame-member; a base-member mounted upon said frame-member and having a fixed surface upon which a ball is adapted to roll; and an oscillatory lever mounted upon said frame-member and provided with marking means.

1,395,419. DISPLAY-STAND. HENRY M. HUTCHINS, New York, N. Y. Filed July 3, 1919, Serial No. 308,566. Renewed Aug. 31, 1921. Serial No. 497,298. 2 Claims. (Cl. 211—24.)



1. In a display stand, the combination with a base having a socket formed therein, of a support adapted to be separably connected with said base, means for connecting said support and base, comprising a threaded member carried by said support, and projecting downwardly through an opening formed therein, a resilient element positioned upon the downwardly projecting portions of said member, said element being arranged to snugly fit within said base socket, and means for compressibly engaging said element to control the effective diametric area thereof.

1,395,420. SPRING-TIRE. EVANS S. JOHNSON, Louis, Okla. Filed Mar. 3, 1921. Serial No. 449,882. 3 Claims. (Cl. 152—8.)

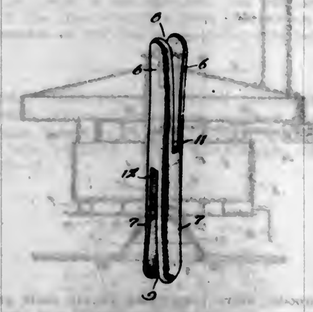


3. The combination with a rim having an encircling spacer block with seats at both sides thereof, of helical springs engaged at one end in the seats and lying against opposite faces of the spacer block, a tread band comprising pivotally connected links having perforated fingers against their inner faces constituting seats in which the outer ends of the springs are received and a tread mounted upon and encircling the tread band.

1,395,421. CUSHION-SPRING. GUSTAVE P. JOHNSON, Waukegan, Ill. Filed Mar. 24, 1921. Serial No. 455,043. 7 Claims. (Cl. 5—29.)

1. In a cushion spring, a plurality of springs, a base supporting the lower end of said springs, a border frame defining the outline of the top of the spring cushion, and a flat strip or additional frame member lying within the border frame.

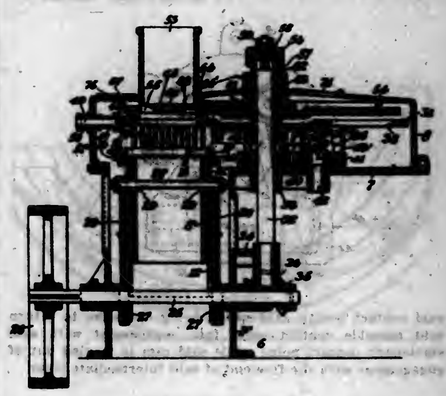
1,395,422. TRACTION-WHEEL. EDWARD A. JOHNSTON, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed May 21, 1917. Serial No. 170,049. 6 Claims. (Cl. 301—44.)



1. In combination, a wheel having a supporting portion, shouldered members permanently connected to said supporting portion, a removable lug supported on said wheel by the shouldered members, said supporting portion, shouldered members and removable lug having registering openings, and means received by said registering openings to lock the removable lug on said wheel.

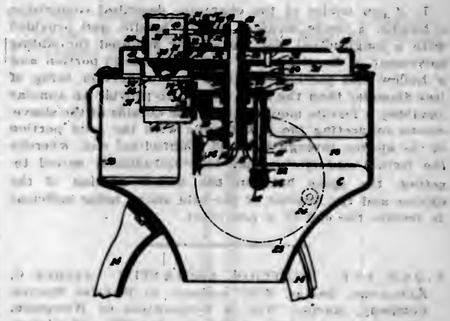
1,395,423. ROOFING-TILE. RICHARD JOSEPH, Massillon, Ohio. Filed May 17, 1921. Serial No. 470,316. 2 Claims. (Cl. 108—10.)

1. In a roofing tile, a body of plastic material, a transverse rib arranged to engage the roofing strip and a hooked member slidably mounted through said rib and arranged to engage the roofing strip.



1,395,424. CLOTHESPIN. THEODORE S. JUSTUS, Chicago, Ill. Filed Nov. 1, 1919. Serial No. 335,071. 1 Claim. (Cl. 24—138.)

A clothes pin of integral construction, comprising a solid body provided at each end with a pair of longitudinally extending spaced forks, the transverse axes of said pairs of forks being disposed at right angles to each other, and the slots between the forks of the respective pairs being terminated at their inner ends in spaced relation so as to leave a solid portion between the slots adapted in conjunction with the other pair of forks to resist the spreading strains imposed upon either pair of forks.

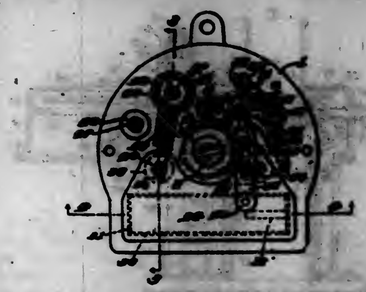


1,395,425. APPARATUS FOR CUTTING FRUIT, VEGETABLES, AND THE LIKE. JOSEPH E. KENNEDY, New York, N. Y. Filed Nov. 29, 1918. Serial No. 264,494. 38 Claims. (Cl. 17—18.)

1. In a vegetable cutter and the like, the combination of a holder for the vegetable, means to cut successive slices from the vegetable, a series of parallel and spaced apart cutters to which the slice is delivered as it is cut from the vegetable to cut the successive slices into a plurality of strips, a second series of parallel and spaced apart cutters and extending transverse to the first series of cutters to which the cut strips are delivered as they are cut to cut the strips into cubiform parts, and means to move the cutters to cut the slice into strips and cubi-

form parts transverse to the movement of the slicing cutter to cut the slice in the manner and for the purpose specified.

1,395,426. APPARATUS FOR CUTTING VEGETABLES AND THE LIKE. JOSEPH E. KENNEDY, New York, N. Y. Filed Apr. 29, 1919. Serial No. 293,572. 20 Claims. (Cl. 17—18.)

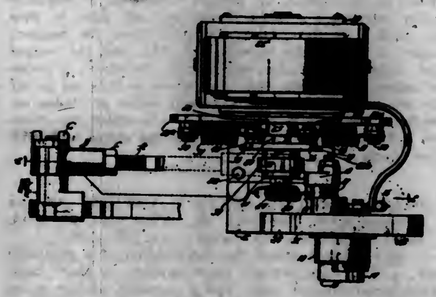


1. The combination of a hopper; a table to support an article in the hopper to project therefrom, a revoluble cutter interposed between the hopper and table to slice the portion of the article projecting from the hopper; means of adjustment between the table and the hopper and cutter to cut slices of variable thickness; a series of blades to which the slice is delivered as it is cut to cut the slice into strips; and a second series of blades extending transverse to the first blades to which the strips are delivered as they are cut to cut the strips into cubiform parts.

1,395,427. ELECTRIC-CONTACT DEVICE. ARTHUR ATWATER KENT, Rosemont, Pa. Filed Sept. 23, 1916. Serial No. 121,806. 11 Claims. (Cl. 123—148.)

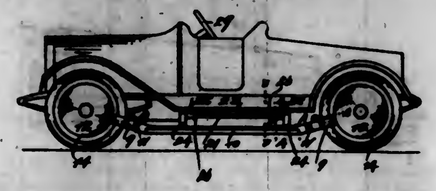
1. In a contact device the combination of a rotatable cam, a stationary contact point support, a short light sheet metal pivoted lever, and a movable contact point carried substantially at the free end thereof, a spring having one end attached to the free end of said lever and acting to hold said movable contact point against said stationary contact point, and a light lever having its free

end between said cam and the free end of said lever, and operative to transmit motion from said cam directly to the free end of said lever to intermittently separate



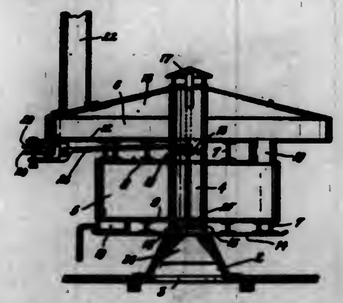
said contact points, said spring being operative to return said movable contact point into engagement with said stationary contact point while said cam is moving out of engagement with the free end of said intermediate lever.

1,395,428. PENHOLDER. HARRY KERLIN and JOHN R. MALANEY, Birmingham, Ala. Filed Apr. 15, 1921. Serial No. 461,628. 2 Claims. (Cl. 120—101.)



1. A pen holder of the character described comprising a handle, a sleeve mounted on the handle, and provided with a longitudinal slot, an ejector mounted for sliding movement in the sleeve and including a solid portion and a hollow end portion, the said hollow portion being of less diameter than the solid portion to provide an annular shoulder, a ferrule mounted upon the outside of the sleeve, means connecting the said ferrule with the solid portion of the ejector through the said longitudinal slot, whereby the ferrule and ejector may be longitudinally moved together, the space between the hollow portion of the ejector and the interior of the said sleeve being sufficient to receive the end of a pen point.

1,395,429. IGNITION APPARATUS. ARTHUR C. KLECKNER, Racine, Wis., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Sept. 18, 1920. Serial No. 411,065. 18 Claims. (Cl. 123—149.)



1. An ignition apparatus comprising an oscillatory push finger, an arcuate surface adjacent said push finger, said arcuate surface constituting part of the circumference of a circle having the push finger axis as its center, and an engine-driven actuator arranged to engage and move the push finger, the actuator being provided with means arranged to cooperate with said arcuate surface to disengage the actuator from the push finger when the latter has been moved through a predetermined angle.

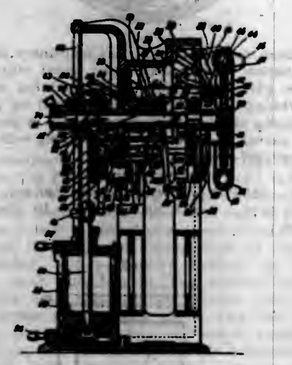
1,395,430. WHEEL-LOCK FOR AUTOMOBILES. HARRY KRAMER, New York, N. Y. Filed Apr. 26, 1920. Serial No. 376,436. 3 Claims. (Cl. 188—31.)

1. In a lock for vehicle wheels, a clamping device pivotally connected to said vehicle adjacent a wheel, a locking element carried by the pivot for said clamping device, and means to engage said locking element when the clamping device is moved to non-use position to maintain the clamping device in said non-use position.

1,395,431. BROODER-STOVE. JESSE E. KRESKY, Petaluma, Calif. Filed Jan. 21, 1920. Serial No. 352,974. 14 Claims. (Cl. 237—8.)

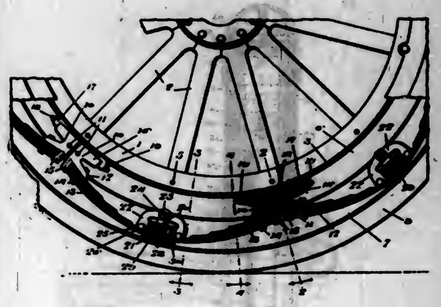
18. A brooder stove comprising an air shaft provided with apertures, a radiator surrounding said shaft and heating the air therein and means operative by variations in the temperature of the air discharging from said shaft for varying the volume of air passing through said shaft.

1,395,432. CLEAT FOR TRACTOR-WHEELS. JOHN MINOR KNOYER, Stockton, Calif. Filed May 21, 1920. Serial No. 383,181. 1 Claim. (Cl. 301—43.)



The combination with a wheel of a series of cleats secured to the rim, and disposed in angular relation with respect to the axis of the wheel, the opposed faces of the cleats inclining toward each other from the rim outwardly, the end edges of the cleats being parallel to the edges of the rim and the end faces of the cleats inclining toward each other from the peripheral surface of the rim outwardly.

1,395,433. STOVE. FRANK KRUX, Chicago, Ill. Filed June 7, 1920. Serial No. 387,128. 2 Claims. (Cl. 126—1.)

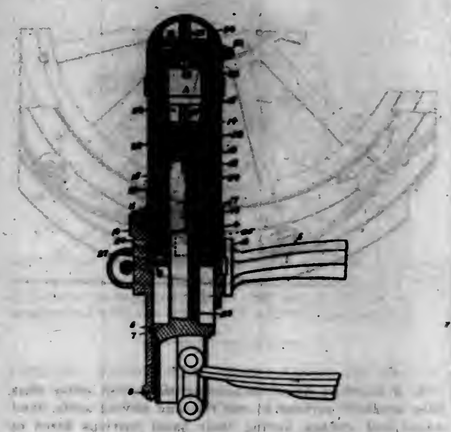


1. A duplex stove comprising a casing having a cover plate, a firebox contained centrally within the casing, ovens and boilers contained side by side within the casing and spaced from each on each side of said firebox, but connected at their tops, upright partitions rising in the respective spaces between the ovens and boilers, the upper ends of said partitions being lower than the connections between the ovens and boilers, a single flue communicating with the firebox and extending in opposite directions therefrom the full depth of the ovens, boilers, and partitions throughout the length of said flue, said flue having the cover plate for its upper wall and extending straight across the tops of the ovens and boilers, hence down the sides of the boilers, under said boilers, and upwardly between the partitions and the boilers, thence over the upper ends of the partitions, thence downwardly between the partitions and the ovens, and finally under the ovens and thence leading to an outlet, and a partition depending from the cover phlate into the firebox for splitting the hot air currents from the firebox to cause a part thereof to travel in one direction and another part to travel in the other direction from said firebox whereby both branches of said flue are supplied with hot air currents.

1,395,434. TIRE-CORE-STRIPPING MACHINE. CURT KUENTZEL, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 26, 1920. Serial No. 376,587. 36 Claims. (Cl. 18—2.)

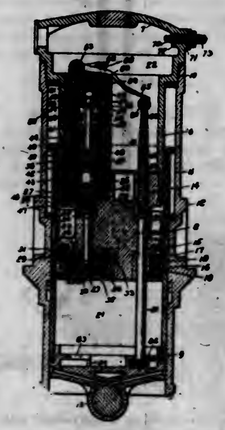
1. In a machine for stripping tire casings from cores, the combination of core-supporting means, and a semicircular series of tire-stripping members having a substantially fixed relation to the core circumferentially thereof and adapted to act radially thereof to force an edge of the tire casing over the core on one part of the tire circumference while the opposite part remains substantially fixed on the core until the first-said part is clear.

1,395,435. RESILIENT WHEEL. HERBERT S. LANCASTER, Wabash, Ind. Filed Dec. 30, 1919. Serial No. 348,347. 7 Claims. (Cl. 152—37.)



2. A resilient wheel embodying inner and outer rims, base members pivoted to one rim and having seats, laminated leaf springs having their basal portions fitted on said seats, and their free ends connected to the other rim, means for securing said springs on said seats, and means for adjusting said base members.

1,395,436. TURNING-TOOL. FREDERICK K. LAWRENCE, Chicago, Ill. Filed Mar. 8, 1920. Serial No. 364,129. 2 Claims. (Cl. 81—177.)

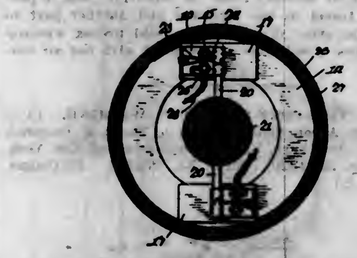


1. A turning tool having a universal joint, yokes pivotally connected together and each having a collar surrounding one part of the universal joint for steadying the same, a steadying handle fastened to one of said yokes, said handle having a cylindrical inner surface and an extension making a running fit with the inside of the handle, said extension being connected to one part of the universal joint for rotating it, and means for rotating said extenson relatively to the handle.

1,395,427. MAGNETIC SPRING. RICHARD LIEBAU, New Haven, Conn., assignor to The Westinghouse Air Spring Company, a Corporation of Pennsylvania. Filed Feb. 26, 1919. Serial No. 279,430. 4 Claims. (Cl. 267—22.)

1. The combination with a vehicle frame and the steel springs, of electromagnetic means between said frame and one end of each of said steel springs and constructed to operate in series therewith in resiliently supporting said frame.

1,395,438. AIR-SPRING SUSPENSION. RICHARD LIEBAU, New Haven, Conn., assignor to The Westinghouse Air Spring Company, a Corporation of Pennsylvania. Filed Feb. 26, 1919. Serial No. 279,435. 9 Claims. (Cl. 267—22.)



1. In combination with an air spring having telescoping members forming a cushion chamber, a pump arranged to discharge air into said chamber and means the operation of which is independent of the relative movement of said means for operating said pump and a device within said air spring for controlling the operation of said means.

1,395,439. INNER TUBE. LILES H. LIGHTFOOT, Signal Mountain, Tenn., assignor to Du Bois Rubber & Tube Company, Chattanooga, Tenn. Filed June 11, 1921. Serial No. 476,669. 2 Claims. (Cl. 152—13.)

2. An inner tube for pneumatic tires comprising a tubular member of elastic material, said tubular member being formed with outwardly curved central portions in its base tread and sides respectively, and inwardly curved portions in said tread and base, merging into said outwardly curved portions, the inwardly curved portions in the base being substantially shallower than the inwardly curved portions in said tread.

1,395,440. BRUSH-HOLDER. ALBERT THOMAS LOCHNER, Chicago, Ill., assignor to Wodack Electric Tool Corporation, Chicago, Ill., a Corporation of Illinois. Filed July 17, 1919. Serial No. 311,494. 15 Claims. (Cl. 171—324.)

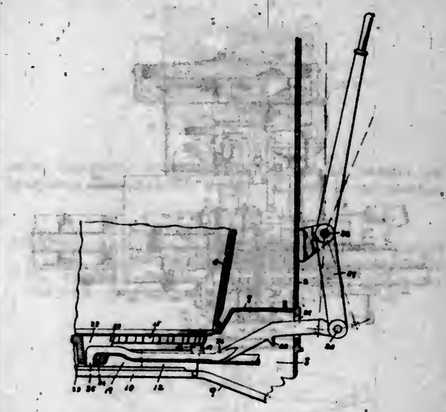
1. A brush holder for electrical machinery comprising, in combination, a one piece sheet metal clip having a transverse guideway at one end, a retaining member extending through said clip, a nut threaded on the end of said retaining member to clamp said clip in position, and a spring having a stationary end engaging said nut so as to be supported thereby.

1,395,441. PISTON. ELMER C. LONG, Quincy, Ill. Filed Dec. 9, 1918. Serial No. 265,947. 10 Claims. (Cl. 74—108.)

1. A piston having a tongue-shaped portion formed on its peripheral face, and a longitudinally formed slot extending into said tongue portion.

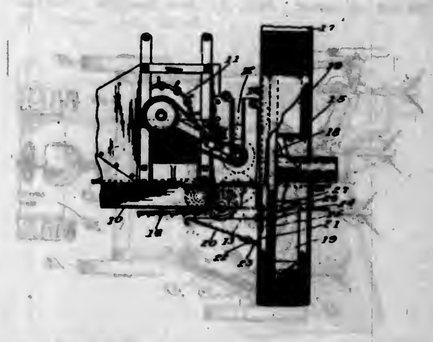
1,395,442. SPRAY-NOZZLE. PETER GRAHAM MACGREGOR, New York, N. Y., assignor to Pyrene Manufacturing Company, a Corporation of Delaware. Filed Dec. 18, 1918. Serial No. 267,289. 3 Claims. (Cl. 299—115.)

1. A spraying nozzle consisting of a casing having a chamber formed therein and a restricted orifice through the end wall thereof, a gyrator loosely mounted in said chamber and free to move into close contiguity to the end wall of the chamber, said gyrator comprising a cylindrical body having a central passage therethrough and a spiral passage formed in its periphery, the forward end of said gyrator being conical and the opposed inner wall of the chamber adjacent the orifice being curved.



1,395,443. FASTENING DEVICE. FREDERICK E. MARKERT, New York, N. Y., assignor to John Boyle & Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 19, 1921. Serial No. 438,398. 6 Claims. (Cl. 241—221.)

5. The combination with an article of the character described, having a folded edge of fabric and a reinforcing member within the fold, of a metal fastening device having a body portion in contact with one face of said edge portion, a pair of spaced prongs extending from said body portion through said fabric, back of said reinforcing member, and bent down against the face of said fabric over said member, and another prong extending from said body portion around said margin and bent down against said fabric and the inclosed reinforcing member, the last mentioned prong lying between the spaced prongs of the first mentioned pair, whereby said body portion and prongs firmly embrace and completely surround the folded edge of said article and the inclosed reinforcing member.

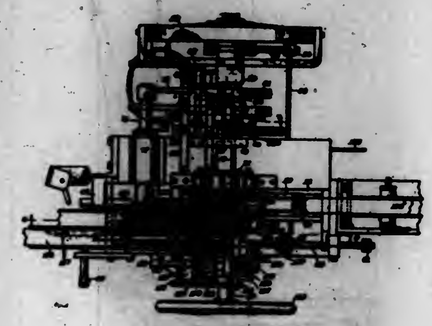


1,395,444. GRATE. WILLIAM L. MERSFELDER, Detroit, Mich., assignor to Detroit Stove Works, Detroit, Mich., a Corporation of Michigan. Filed Jan. 15, 1921. Serial No. 437,439. 2 Claims. (Cl. 126—170.)

1. In a grate, the combination of a base and a grate ring rotatably supporte.. thereon, a shaker bar having a hooked rear end, said grate ring having a depending lug provided with a substantially L-shaped pocket to receive

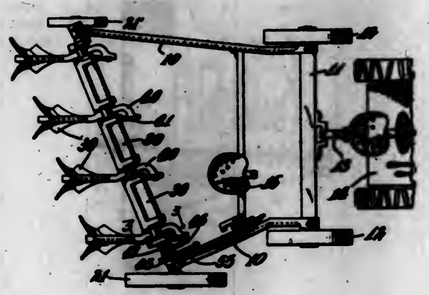
said hook, and means to reciprocate said shaker bar to rotate the grate ring.

1,395,445. ENSILAGE-CUTTER. GEORGE M. MERWIN, Berwyn, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Jan. 26, 1918. Serial No. 214,015. 1 Claim. (Cl. 146—26.)



In a feed cuttter and conveyer, a fan and cutter casing provided with an upper opening in which material to be cut is fed, a feed mechanism to feed material to said upper opening, cutting and fan mechanism in said casing and said casing having a lower opening to receive material dropped from said feeding-mechanism, a common pneumatic passage for said casing to discharge material received through both of said openings, and means for regulating the size of the lower opening to modify the suction effect of said fan discharge.

1,395,446. BOX-MAKING MACHINE. MICHAEL J. MILMOE, Glenellyn, Ill., assignor to W. C. Ritchie & Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 5, 1920. Serial No. 349,585. 10 Claims. (Cl. 93—40.)



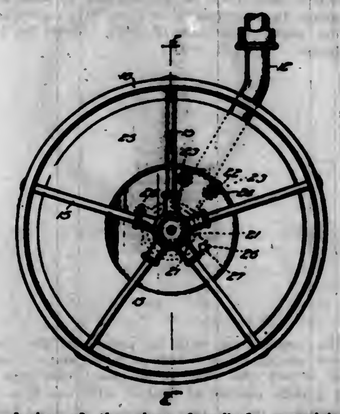
8. In a machine of the character described, the combination of a form, means to construct open-end paste-

board cover-shells on said form in succession, means to feed box-trays individually in succession into register

with such form, and means to strip the cover-shells in succession from said form and telescope them over the trays, substantially as described.

1,395,447. MULTIPLE PLOW. MICHAEL MONDRIUK, Akron, Ohio. Filed Mar. 21, 1921. Serial No. 453,986. 3 Claims. (Cl. 97—67.)

1. In a gang plow, a frame, a main shaft, wheels supporting said main shaft, a series of plowshares, arcuate collars to which said plowshares are fixed, sleeves on said main shaft, and means for engaging and disengaging said arcuate collars from said sleeves by movement of said arcuate collars longitudinally of the shaft.

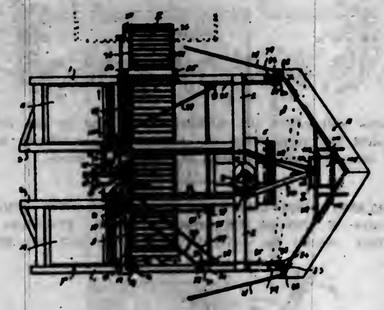


1,395,448. MACHINE FOR TESTING LUBRICATING-OILS. HUGH K. MOORE, Berlin, N. H., assignor to Berlin Mills Company, Berlin, N. H., a Corporation of Maine. Filed Aug. 27, 1917. Serial No. 188,293. 12 Claims. (Cl. 265—10.)

1. An apparatus for testing lubricating oils, comprising an immovable inverted conical bearing to which the lubricant is supplied, a complemental rotary member, means for exerting axial pressure on said member, and

means for measuring the power required to rotate said member.

1,395,449. CASTER-WHEEL. EDWARD MOWRY, Sterling, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Feb. 24, 1919. Serial No. 278,691. 2 Claims. (Cl. 280—157.)



1. A device of the class described, comprising, in combination, a supporting member, a wheel journaled thereon and having a hub provided with an annular flange, a bracket secured to said supporting member and provided with a channel portion engaging said flange, a wheel shield carried by said bracket and a U-shaped element engaged about the supporting member with its arm engaging the bracket and shield, and means for clamping all together.

1,395,450. ROAD-WORKING MACHINE. DAVID C. MOWRY, Geneva, Nebr. Filed Mar. 13, 1920. Serial No. 365,541. 3 Claims. (Cl. 37—48.)

1. A machine of the character described comprising a portable frame, a plow supported thereby and substantially V-shape in plan with the apex thereof forwardly directed, a rearwardly directed frame pivotally engaged with the plow at the apex portion thereof for swinging

movement in a vertical direction, a ground engaging member carried by said frame, means for vertically

swinging said frame, and a member carried by the plow with which the frame engages upon its upward movement to elevate the apex portion of the plow.

1,395,451. COMPOSITION FOR PROTECTIVE COATINGS. CHARLES S. PALMER, Pittsburgh, Pa. Filed Feb. 20, 1919. Serial No. 278,288. 9 Claims. (Cl. 106—36.2.)

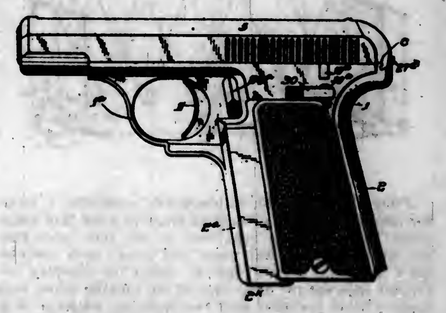
1. A composition, adapted for use in protecting metallic or alloy-like surfaces which are subjected to high heat, and which consists of approximately twenty parts of practically non-fusible solid material and from five to twenty parts of heat-conducting solid material, and a relatively small proportion of a liquid-like binder, insufficient in quantity to allow the mass to flow when heated but which is absorbed by the solid particles, while at the same time causing them to cohere, the indicated materials being largely granular and mixed intimately with said binder so as to produce a pasty mass.

1,395,452. CORE FOR HOLLOW WALLS. DAVID C. PATTERSON, Omaha, Nebr. Filed Feb. 16, 1920. Serial No. 359,172. 8 Claims. (Cl. 25—128.)

3. In an adjustable core for the purposes described, an elongated handle-member having a pair of opposed apertured horizontal flanges, a plurality of sections each consisting of a pair of side plates projecting below and adapted to engage the horizontal flanges of the handle-member, bolts or equivalent keepers carried by the flanges of the side plates and engaging in the apertures of the horizontal flanges of the handle-member, said apertures being angular in plan to permit the side plates of the sections to be disposed at predetermined distances from each other transversely and longitudinally of the handle-member.

1,395,453. FASTENING DEVICE. RALPH S. PRESCH, Hinsdale, Ill. Filed Dec. 5, 1918. Serial No. 265,400. 4 Claims. (Cl. 72—105.)

1. A member having an enlargement formed with outer and inner outwardly sloping portions and a portion between these sloping portions that is substantially parallel with the axis of the member; in combination with an ele-



ment engageable with said portions of the member enlargement and expansible thereby laterally of the member.

1,395,454. RADIOSIGNALING SYSTEM. JAMES HARRIS ROGERS, Hyattsville, Md. Filed Mar. 9, 1920, Serial No. 364,400. Renewed Sept. 12, 1921. Serial No. 500,271. 10 Claims. (Cl. 250—33.)

1. The combination with a submarine vessel having a metallic hull or sheathing, of an antenna extending longitudinally within and inclosed by said hull or sheathing and electrically connected to the same, and signal instruments associated with said antenna.

1,395,455. BREECH-LOADING FIREARM. ELBERT H. SEARLE, Grimes, Calif. Filed July 22, 1918, Serial No. 245,981. Renewed Sept. 19, 1921. Serial No. 501,827. 31 Claims. (Cl. 42—3.)

1. In a fire-arm, a reciprocating breech-closing member, a grip comprising relatively movable members, a lever mechanism against which said grip acts for retracting the breech-closing member, a fulcrum sustaining the lever at one point against the action of the grip, and means automatically releasing said fulcrum.

1,395,456. WHEEL. FREDERICK S. STAFFORD, Chicago, Ill., assignor to Henry G. Saal, Chicago, Ill. Filed Dec. 5, 1919. Serial No. 342,641. 5 Claims. (Cl. 301—37.)

1. A wheel having spokes and a rim portion upon said spokes and formed with an inner circular face; in combination with a disk engaging the inner circular face of said rim portion, said disk being formed of resilient metal

of dish form flaring away from the wheel when its resiliency is unconstrained and then engageable with the

wheel spokes at its unflaring portion and constrained to flatter form when secured to the wheel.

1,395,457. LUGGAGE-CARRIER FOR AUTOMOBILES. CLEO R. STANDLEY, Boone, Iowa. Filed Mar. 22, 1919. Serial No. 284,379. 1 Claim. (Cl. 224—29.)

A luggage carrier for automobiles, comprising a member composed of bars pivoted together to form lazy tongs metal loops pivotally connected to the four projecting end members of the lazy tongs, end frames each comprising a flat metal upright support, means for clamping the support adjacent the outer edge of the running board, said support being provided with two slots one adjacent each end, said loops being adapted to pass through said slots, providing a hinged connection between the lazy tongs and end members, said upper slots being of sufficient length to permit folding of the lazy tongs, each end frame provided with a member secured to the upright and designed to lie upon the top of the running board, and a brace rigidly secured to the part that extends over the running board and also to the upright.

1,395,458. TYPEWRITING-MACHINE. BURNHAM C. STICKNEY, Elisabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 30, 1919. Serial No. 334,426. 30 Claims. (Cl. 197—138.)

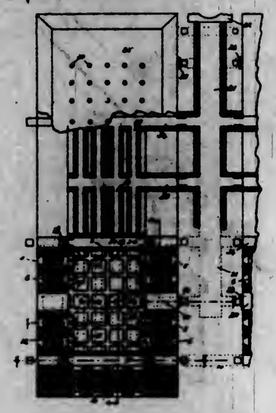
1. In a typewriting machine, in combination, a revoluble platen, two feed-rolls coöperating therewith, a finger-piece, and means whereby movement of said finger-piece from its central position to either one of its limiting po-

sitions will effect the withdrawal of one or the other of said feed-rolls from the platen, in accordance with the direction of movement of said finger-piece.

1,395,459. CONVERTIBLE HARROW AND DRAG. JOHN W. TAYLOR, Edwardsville, Kans. Filed Dec. 2, 1920. Serial No. 427,761. 4 Claims. (Cl. 55—103.)

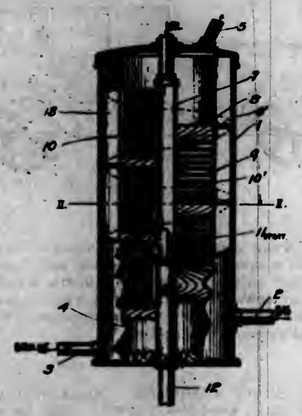
1. The combination of a harrow, an auxiliary section pivoted thereto, and means whereby the auxiliary section may be lowered to act as a drag on the surface of the ground.

1,395,460. DOUBLE-BARRELED GUN. JOHN TALIAFERRO THOMPSON, Newport, Ky., assignor, by direct and mesne assignments, to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed May 8, 1920. Serial No. 379,787. 46 Claims. (Cl. 42—3.)



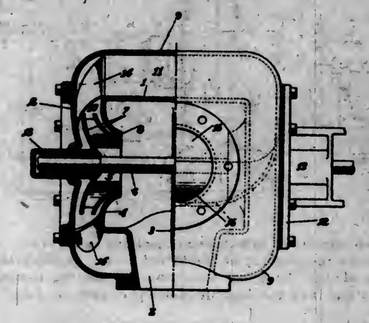
1. A gun comprising a frame, a plurality of barrels fixedly associated with said frame, and a breech closure mounted on said frame to move rearwardly and forwardly into and out of firing position and adjustable to be selectively placed in operative relation with either of said barrels.

1,395,461. AUTO WARNING-SIGNAL. JOHANNES H. TUBBERGEN, Afton, Calif. Filed Apr. 25, 1921. Serial No. 464,418. 2 Claims. (Cl. 116—50.)



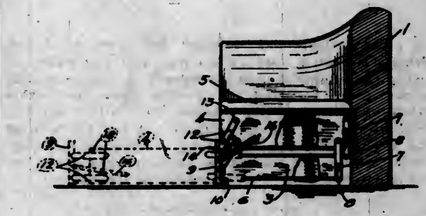
1. A signal device comprising a pair of casings provided with horizontally disposed guide flanges, means for connecting the casings together to hold them in continuous alinement while permitting their overall length to be altered, said casings being adapted to be removably attached to a vehicle, and a pair of signal plates disposed between the guide flanges and adjustably connected together to allow their overall length to be altered.

1,395,462. KILN FOR BURNING ANY AND ALL SORTS OF CLAY PRODUCTS, GLAZED WARE, AND POTTERY. HARRY WEBSTER, Newport, Ky. Filed May 13, 1918. Serial No. 234,048. 7 Claims. (Cl. 25—139.)



1. A kiln of the character described, comprising a series of heating chambers, with a solid wall dividing the chambers from each other, a main flue for the products of combustion common to all the chambers, with furnaces along the side of the kiln opening into their respective chambers and passages opening downwardly through the floor of each chamber, with transverse passages underneath the floor connecting with the main flue, for the purpose described.

1,395,463. ABSORPTION-TANK. THOMAS WIGHT, Kansas City, Mo. Filed July 22, 1918. Serial No. 246,016. 6 Claims. (Cl. 261—118.)

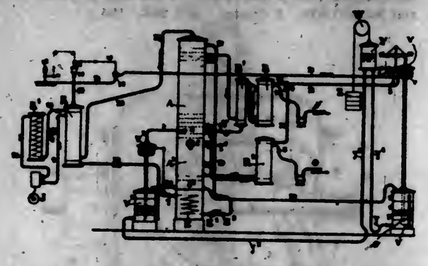


1. An absorption tank for gasolene comprising a casing having a gas inlet, a spiral chamber in the casing, oil film supporting grids in the chamber, and oil discharge spray nozzles in the casing.

1,395,464. DOUBLE-BALANCE CENTRIFUGAL PUMP. WALTER R. WOOCK, HERBERT J. WOOCK, and ERIC M. WOOCK, Lodi, Calif., assignors to Superior Manufacturing Company, Inc., Lodi, Calif. Filed Aug. 3, 1920. Serial No. 401,010. 3 Claims. (Cl. 253—194.)

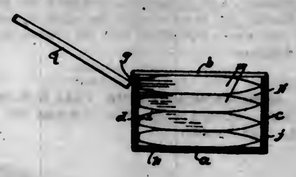
1. A centrifugal pump including a pair of opposed runners, a common intake chamber therebetween, another chamber surrounding the intake chamber and extending over the runners, and deflectors arranged in the outer chamber adjacent the periphery of the runners and adapted to direct the water therefrom into the central portion of the outer chamber.

1,395,465. ARMCHAIR AND BED. CORA E. BAIRD, Long Beach, Calif. Filed Apr. 23, 1921. Serial No. 463,781. 4 Claims. (Cl. 5—46.)



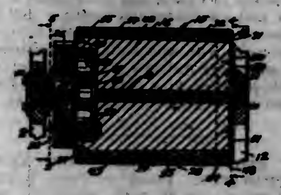
2. Convertible furniture comprising a chair frame including a stationary mattress and a removable mattress mounted thereon to form a seat for a chair, a cross plate in front of said mattresses and having a link connection with the movable mattress, said movable mattress having a link connection with said stationary mattress movable along said stationary mattress to permit of withdrawal of the movable mattress to a point upon the floor and in prolongation of the stationary mattress so as to form a bed.

1,395,466. REGULATING MEANS FOR GAS-SEPARATING APPARATUS. EMILE AUGUSTIN BARBET, Paris, France. Filed June 25, 1919. Serial No. 306,621. 5 Claims. (Cl. 62—122.)



1. In rectifying apparatus for treating mixed liquefied gases, regulating devices automatically operated by the variations of pressure in the various parts of the apparatus to maintain regular working of said apparatus, said regulating devices comprising in combination a regulator operated by the rise or fall of pressure at the base of the rectification column and controlling the supply of the liquid gas to be rectified, a second regulator operated by the difference in pressure between the feed chamber and the base

of the rectification column and controlling the supply of heating medium to the rectification column, a valve which causes any excess of heating medium to be returned to the



pump supplying said heating medium and a valve which reduces the amount of liquid fed to the rectification column should the pump supplying the heating medium deliver less than the requisite amount of said medium.

1,395,467. CIGAR-PACKAGE. MEYER BAYUK, Philadelphia, Pa. Filed Mar. 26, 1920. Serial No. 368,822. 1 Claim. (Cl. 131—11.)

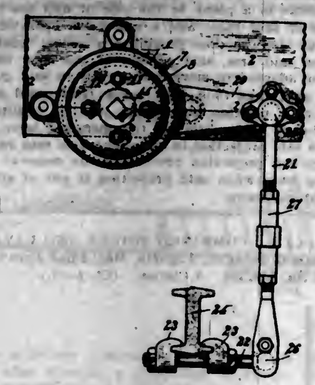
A package comprising an outer thin sheet metal box, having a bottom, a front wall, a rear wall, end walls and a lid, a rigid lining for the box formed of loose separately inserted front, rear and end wooden plates, and cigars within the package extending transversely with relation to the front and rear plates, the front and rear plates being held in position by the end plates, to prevent the longitudinal crushing of the cigars, while the end plates are held in position by the lateral pressure of the cigars.

1,395,468. SAND-PAPERING MACHINE. MICHAEL L. BEAL, Pasadena, Calif. Filed Aug. 4, 1919. Serial No. 315,276. 6 Claims. (Cl. 51—190.)

1. A sand papering machine having a frame, a horizontal shaft mounted in the frame, a tapered core rotatably mounted on the shaft, longitudinal radial tongues on the core, an expanding drum adapted to be removably mounted upon the core, said drum composed of a plurality of arcuate members adapted to be separated by the said longitudinal tongues upon the core, an elastic band encircling the said drum, a cylinder encircling the elastic band, a sheet of sand paper covering the said cylinder and means for removably holding the drum upon the core.

1,395,469. THREE-WAY VALVE. JAMES D. BARROW, Aurora, Ill., assignor to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed Dec. 2, 1918. Serial No. 265,002. 18 Claims. (Cl. 251—76.)

1. A three-way valve comprising a body having a valve chamber, inlet, outlet, and exhaust passages communicating with said chamber at longitudinally separate points, and a slide valve movable longitudinally in said chamber to connect said outlet passage with either said inlet passage or said exhaust passage, said valve being constantly subjected to fluid pressure tending to move it longitudinally in said chamber.

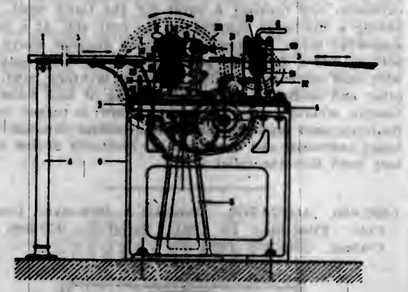


1,395,470. WHEELED TOY. CHARLES F. BLACK, Dayton, Ohio, assignor to The Republic Tool Products Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 31, 1921. Serial No. 441,253. 8 Claims. (Cl. 46—48.)

1. In a device of the character described, a shaft, an inertia wheel rotatably mounted on said shaft, and means for imparting initial rotation to said inertia wheel and for transmitting power from said inertia wheel to said shaft and causing said shaft to rotate in the same direction in which said inertia wheel rotates.

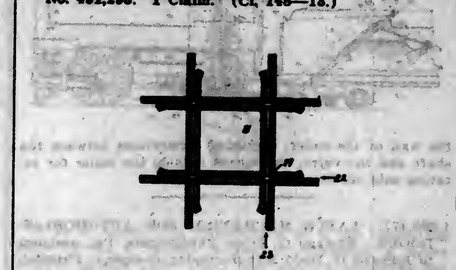
1,395,471. SHOCK-ABSORBER. CHARLES C. BLACKMORE, Dayton, Ohio. Filed Feb. 7, 1921. Serial No. 442,984. 22 Claims. (Cl. 267—9.)

2. In a device of the character described, a fixed member, a movable member rotatably mounted on said fixed member, said members having opposed friction surfaces, and said movable member having a part spaced from said fixed member, and a yieldable device extending between and connected with said part of said movable member and said fixed member, said yieldable device being arranged to



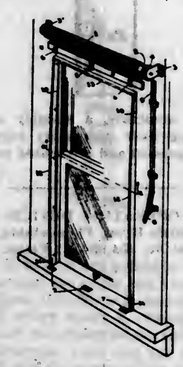
cause said friction surfaces to engage one another with progressively increasing pressure as said movable member is rotated from its normal position.

1,395,472. PROCESS FOR IMPROVING COTTON FABRICS. GUSTAV ADOLF BOSSHARD, Arbon, Switzerland, assignor to the Firm A.-G. Seeriet, Bleicherei, Filiale Arbon, Arbon, Switzerland. Filed July 9, 1920. Serial No. 395,101. 6 Claims. (Cl. 8—20.)



2. In the process of producing transparent effects of cotton fabrics, treating the fabric while stretched to nitrosulfuric acid at temperatures below zero degrees centigrade.

1,395,473. MACHINE FOR CUTTING CARDBOARD STRIPS FOR MAKING MATCHES. PEDRO BOSSO, Buenos Aires, Argentina. Filed Mar. 28, 1921. Serial No. 456,069. 9 Claims. (Cl. 18—10.)

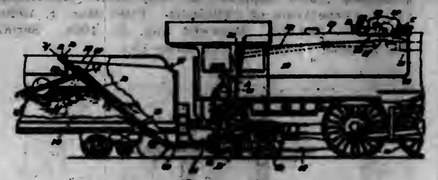


1. A machine for cutting cardboard strips or the like for the manufacture of matches, consisting of a frame mounted on standards, a table arranged in continuation of the frame and provided with guides for feeding the sheets of cardboard to the machine, two grooved ribbed cylinders so arranged that alternately ribs of each cylinder extend into the grooves of the other cylinder, said grooves covering the entire surface of the cylinders and each extending entirely around the circumference of its respective cylinder, and "combs" so placed as to extend into the grooves of each cylinder, there being a comb for each cylinder.

1,395,474. TREATMENT OF RAILS, SWITCH-POINTS, FROGS, AND CROSSINGS. NELSON H. BRAY, San Francisco, Calif., assignor to Bray Metal Hardening Co., a Corporation of California. Filed Mar. 1, 1920, Serial No. 362,452. Renewed Aug. 10, 1921. Serial No. 491,298. 1 Claim. (Cl. 148—13.)

The treatment of railway tracks comprising a plurality of rails arranged in alinement with adjacent rail ends unconnected in the tread portions thereof and with each of such rails comprising a head and an upright web formed integral from steel containing sufficient carbon to be responsive to heat treatment in a marked degree, which consists in local heating of parts only of the rail heads at the said adjacent rail ends to a temperature above that of decalescence of the metal by the direct application thereto of an oxy-acetylene flame without heating the remainder of the structure except by conduction of heat from the said part to which the flame is applied and rapidly cooling the said heated portions.

1,395,475. ROLLING SCREEN. JULIEN A. BRIED, Oakland, Calif. Filed Feb. 26, 1917. Serial No. 151,016. 11 Claims. (Cl. 156—39.)

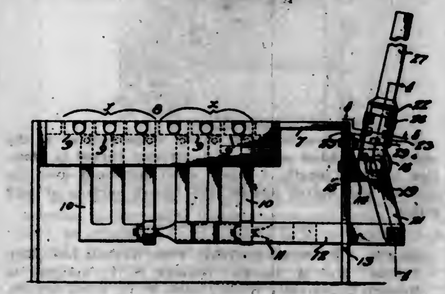


1. In a window screen or shade, strips secured at the edges of a window opening and convexly curved in direction of their length, a fabric sheet tensioned over the opening and seated against the convex surface of said strips.

1,395,476. BOOSTER-ENGINE FOR STEAM-LOCOMOTIVES. RAY M. BROWN, Yonkers, N. Y., assignor to Howard L. Ingersoll, White Plains, N. Y. Filed Apr. 28, 1920. Serial No. 377,145. 14 Claims. (Cl. 105—48.)

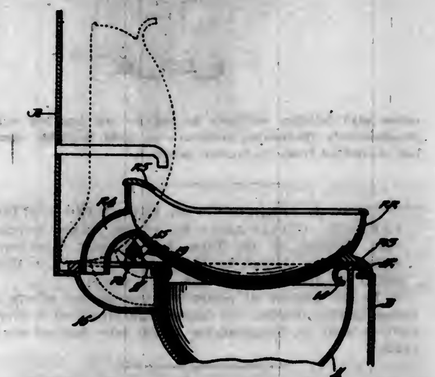
1. In combination with the boiler of a steam locomotive, a booster motor for the locomotive, a throttle valve

located within the boiler, and means for operating the throttle valve comprising a rock shaft extending through



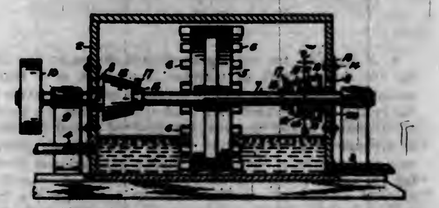
the wall of the boiler, operating connections between the shaft and the valve, and means outside the boiler for rotating said shaft.

1,395,477. LATCH MECHANISM FOR AUTOMOBILE-DOORS. EDWARD G. BUDD, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 22, 1919. Serial No. 339,899. 6 Claims. (Cl. 292—173.)



1. In a latch structure, a slidably mounted locking bolt, an operating lever detachably engaging said bolt, and a spring compressed and interposed between said lever and bolt.

1,395,478. OPERATING DEVICE FOR SHAKING-GRATES. LESTER BUDD, Philadelphia, Pa. Filed Jan. 29, 1920. Serial No. 354,956. 1 Claim. (Cl. 126—169.)

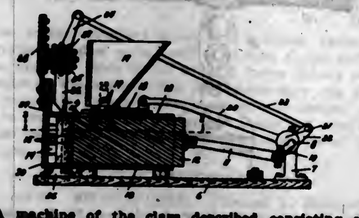


A device of the character described including a grate frame, a part secured to said frame and having an upwardly extending fixed side plate with two laterally projecting lugs spaced apart to provide a guideway therebetween; a pivoted grate-rocking lever having an arm movable in a plane to the side of and spaced from the ends of said lugs; and a removable operating lever having an end portion providing a socket adapted to slide over said arm, said portion of the lever having a projection adapted to move downwardly in said guideway between said lugs to a level below them, said arm extending to a position above said lugs to facilitate the application of said portion of the operating lever to said arm with said projection in alinement with said guideway, said lugs and projection preventing the removal of said operating lever when said projection is out of alinement with said guideway.

1,395,479. COMBINED TOILET AND LAVATORY. WILLIAM G. BUNKER, Augusta, Me. Filed Apr. 22, 1921. Serial No. 463,596. 4 Claims. (Cl. 4—1.)

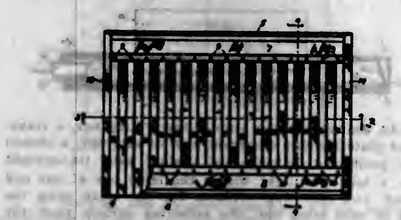
1. In combination, a toilet and lavatory, the toilet comprising a bowl having a suitable support, a rear extension portion having a passage which opens into the side of said bowl below the rim and having an opening in the top, said lavatory comprising a bowl hinged to said toilet extension and forming a cover for the toilet bowl, and having a discharge opening in the rear side at a point somewhat below the top but at some distance above the bottom, and a discharge pipe, one end of which connects with said discharge opening from the lavatory bowl, the other end leading into the top opening of said toilet extension, whereby when the lavatory bowl is turned up on its hinge said discharge pipe will telescope into the said toilet extension and discharge the contents of the lavatory bowl into the toilet bowl.

1,395,480. AGITATOR. WILLIAM A. BUTCHART, Denver, Colo. Filed Mar. 22, 1921. Serial No. 454,580. 11 Claims. (Cl. 259—136.)



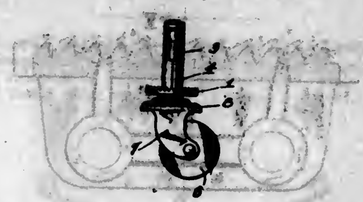
1. In apparatus of the character described, the combination with a container having an opening and an agitating element having a shaft extending through said opening, of a closing appliance comprising two members cooperatively forming an annular tortuous passage around the shaft and between said opening and the interior of the container, the surface of a terminal portion of said passage, sloping toward an open end of the same inside the container.

1,395,481. ARTICHOKE-TRIMMER. ROBERT W. CLINE, San Jose, Calif., assignor of one-half to Floyd S. Moore, San Jose, Calif. Filed Feb. 23, 1921. Serial No. 447,207. 6 Claims. (Cl. 146—11.)



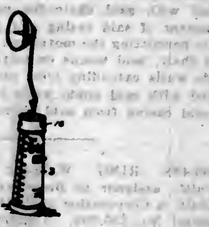
6. An artichoke trimmer including a blade having a cutting edge forming a compound forwardly and outwardly extending curve, and having a rearwardly extending lower surface arranged at an angle to the path of travel of said cutting edge.

1,395,482. POTATO-SEED-CUTTING MACHINE. GEORGE A. DAVIDSON, Ada, Minn. Filed May 31, 1921. Serial No. 473,868. 3 Claims. (Cl. 146—7.)



1. A machine of the class described consisting of a suitable frame, a box secured to the frame, a knife frame secured in one end of the box, a plunger slidably mounted in the box, said box having a hole through which potatoes may be dropped between said knife frame and plunger, a hopper secured above the box, a feeder adapted to feed potatoes from said hopper to said hole, and means for simultaneously actuating said feeder and plunger.

1,395,483. PALLET. CHARLES A. DENNEY, Portland, Ind. Filed Nov. 29, 1920. Serial No. 427,125. 5 Claims. (Cl. 24—17.)

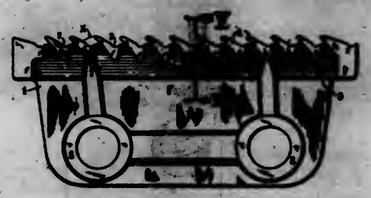


2. A pallet comprising a grid, supporting bars extending across near the ends of the grid and contacting therewith, a flat plate covering the other side of the grid, and means whereby all of said parts are securely fastened together by the material of which they are composed, all substantially as shown and described.

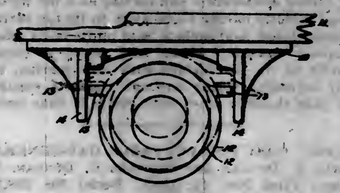
1,395,484. TOP-BEARING CASTER. DANIEL B. DIBB, Newark, N. J., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 20, 1921. Serial No. 462,903. 5 Claims. (Cl. 16—18.)

8. In a caster, the combination of a leg supporting plate having a central opening therethrough, a sleeve secured to said plate about said opening, extending upwardly therefrom and having a lateral flange at the top, a spring member having a cross portion beneath said flange and downwardly-extending portions on opposite sides entirely within said sleeve, bent inwardly at alined points, a member adapted to secure said cross spring portion beneath said flange, the lower surface of said member being curved downwardly and serving as a top pintle bearing, and a pintle having a concavity in its top surface and a shoulder below said surface, said pintle being adapted to be pressed upwardly within said sleeve to engage the concavity in its top surface with said bearing, said inwardly extending spring portions yieldably engaging beneath said shoulder when said pintle is thus positioned.

1,395,485. COZY FOR PORTABLE GAS-GENERATORS. DAVID C. DUNCAN and RUSSELL C. DUNCAN, Duluth, Minn. Filed Nov. 15, 1919. Serial No. 338,311. 1 Claim. (Cl. 150—52.)



The combination with a gas generator requiring intermittent access through the upper end thereof and having gas pipe connections through said upper end, of a two piece cozy, one of which pieces is removably attached to the body portion of the generator leaving the lower end or base of the generator bare, and the other piece of a shape to act as a cap for covering the upper end of the generator and acting as a closure for the upper end of the other piece, said cap overlapping the upper end of said other piece, and said cap being removable with the upper end of the generator.



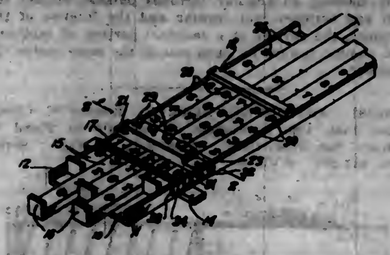
1,395,486. TRAVELING-GRATE STOKER. WILLIAM M. DUNCAN, Alton, Ill. Filed Apr. 17, 1919. Serial No. 290,665. 5 Claims. (Cl. 110—40.)

1. In a mechanical stoker provided with a fuel inlet, a traveling grate comprising grate links movable under said fuel inlet, each of said grate links comprising a web having at its top margin a longitudinal row of fuel supporting tongues which extend laterally from said top mar-

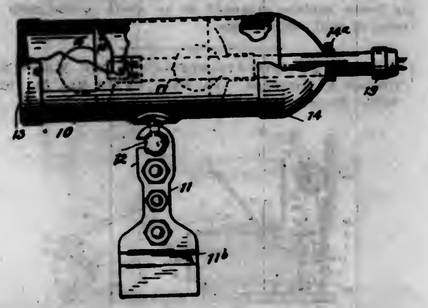
gin to form the fuel supporting top of the link, said fuel supporting tongues being separated from each other to provide a longitudinal row of draft passageways between them, and said row of fuel supporting tongues being provided with extensions having inclined top faces for deflecting the fuel away from the open upper ends of said draft passageways, the inclination of said faces being upwardly in a direction opposite to the direction of travel of the grate.

1,395,487. JOURNAL BOX AND MOUNTING. JAMES R. FLEMING, Scranton, Pa. Filed Feb. 18, 1920. Serial No. 359,585. 8 Claims. (Cl. 308—42.)

1. A structure as characterized comprising a cylindrical bearing casing; a chair for said casing; means associated with said chair for maintaining the transverse alinement of said casing and parts associated therewith while permitting the movement of said casing to and from said chair, said means embodying a plurality of vertical guide walls extending from said chair; and means associated with said guide walls for limiting the separation of said casing from said chair.



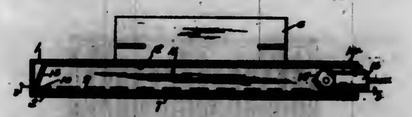
1,395,488. RING. WALLACE G. GINDER, Los Angeles, Calif., assignor to Brock and Company, Los Angeles, Calif., a Corporation of California. Filed June 1, 1920. Serial No. 385,704. 3 Claims. (Cl. 63—17.)



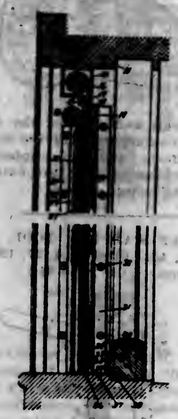
1. A finger ring having a neck extending at approximately right angles therewith, the under portion of said neck being provided with a notch adapted to receive a portion of the loop member of another ring, whereby when both rings are placed upon a finger they will be held together in locked relation.

1,395,489. ADJUSTABLE GUIDE FOR TRANSFER MECHANISMS. FRANK B. GLOVER, New York, N. Y. Filed Apr. 10, 1920. Serial No. 372,882. 7 Claims. (Cl. 33—23.)

1. A transfer guide comprising a base, a plurality of rigid, juxtaposed bars slidable unlimitedly thereon, said bars having a longitudinal row of uniformly spaced depressed characters, and means for adjusting said bars to form various combinations of the characters as read transversely across the bars.

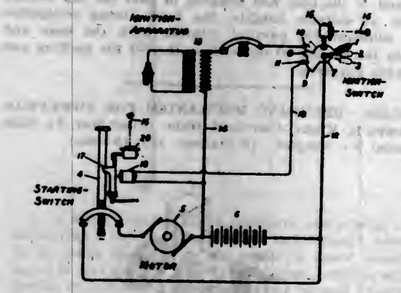


1,395,490. LAMP. WALTER W. GRAFF, East Cleveland, Ohio, assignor of one-half to John O. Schmitt, Cleveland, Ohio. Filed Jan. 14, 1918. Serial No. 211,756. 1 Claim. (Cl. 240—41.)



In a lamp, a casing having a lens at its front end, and at its rear end having a cup-shaped or concave closure, a plunger freely slidable through said closure, and provided at its forward end with a lamp and reflector, said lamp, reflector, plunger and rear end closure being removable as a unit from the casing, and when so removed, the closure being movable along the plunger so as to surround the lamp and reflector and serve as a hood therefor.

1,395,491. ILLUMINATED LICENSE-PLATE. LEON R. GRANNIS, Long Beach, Calif. Filed Feb. 3, 1921. Serial No. 442,150. 2 Claims. (Cl. 40—132.)

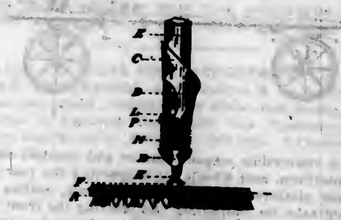


1. An illuminated sign comprising a lamp box, a transparent plate forming the front wall of said box, a stencil sheet positioned immediately against said transparent plate, a source of light within the lamp box at one end thereof, and reflecting surfaces for the same upon the walls of said lamp box, the reflecting surface upon the end wall opposite the source of light being inclined so as to project the rays of light outwardly through the open front of the lamp box, and the reflecting surface upon the end wall at the source of light comprising reflectors inclined upwardly and downwardly from the source of light so as to project the rays of light against the top and bottom reflecting surfaces of the lamp box.

1,395,492. WINDOW-SCREEN. LEOPOLD GUGGENHEIMER, Hastings-upon-Hudson, N. Y., assignor, by direct and mesne assignments, to Rolup Screen Company. Filed Nov. 8, 1919. Serial No. 336,586. Renewed Aug. 24, 1920. Serial No. 405,736. 14 Claims. (Cl. 156—39.)

8. The herein described window attachment comprising a rolling window screen and a window shade, guideways on opposite sides of the window frame having parallel parts in which the screen and shade may run and offsets from said parallel parts, and guiding devices attached to the edges of the screen and shade and adapted to engage and run in the aforesaid offset portions of the guideways.

1,395,493. SWITCH-LOCK. EDWARD A. HALBLEIB, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed May 17, 1917. Serial No. 169,267. 3 Claims. (Cl. 171—97.)

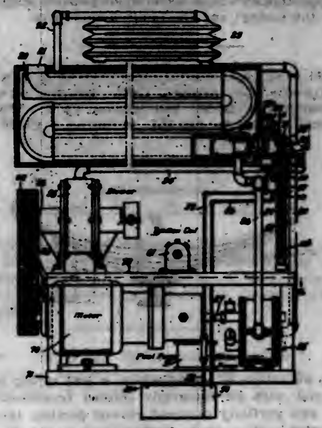


1. In starting and ignition apparatus for an internal-combustion engine, a starting-switch for controlling an electric starting-motor; a detent normally coöperative with said switch to retain it against operative movement; an electromagnet for tripping the detent; an ignition-switch, for controlling the electric ignition-apparatus of the engine, located at a point remote from the starting-switch; connections, between said electromagnet and the ignition-switch, for energising the magnet when the ignition-switch is in closed-circuit position with respect to the ignition-apparatus; and a mechanical lock for retaining the ignition-switch in open-circuit position with respect to both the magnet and the ignition-apparatus.

1,395,494. SELF-LUBRICATING SPRING. FRANK R. HARRINGTON, Los Angeles, Calif., assignor of one-half to Frederick A. Miller, Los Angeles, Calif. Filed June 24, 1920. Serial No. 391,851. 6 Claims. (Cl. 267—50.)

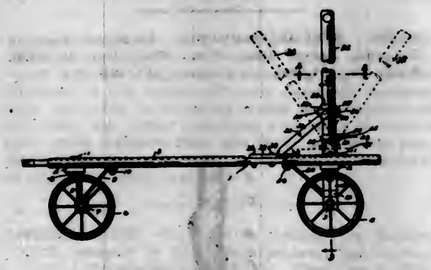
2. As an article of manufacture, a leaf spring provided at its end with an integrally formed transverse downwardly and partially returned curved portion, the end of said curved portion of the spring lying in the plane of a surface of the spring, and integrally formed ears adapted to be bent so as to close the ends of said downwardly and partially returned curved portion; one of said ears being formed with a transverse depression in its open edge whereby lubricant may be placed within the well portion formed by the downwardly and returnedly curved and closed portion of the spring; there being means within said well portion for holding and distributing a lubricant.

1,395,495. SCRUBBING-BRUSH. JEREMIAH FRANCIS HOLLAND, Beaver Dam, Wis. Filed Mar. 9, 1920. Serial No. 364,560. 2 Claims. (Cl. 306—2.)



2. In a scrubbing brush comprising a brush member with parallel inverted hook members on the back thereof on a line at right angles to the longitudinal axis of said brush member at its middle point, said hook members having a rounding and smooth top side or contour.

1,395,496. HEATING SYSTEM. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Mar. 26, 1919. Serial No. 285,271. 10 Claims. (Cl. 158—36.)



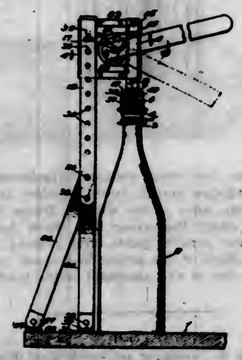
4. In a heating system, the combination with a heat generator including a liquid fuel burner; of an air pressure system for the burner; a fuel system including a supply tank and fuel reservoir; means dependent on the

air pressure system for delivering fuel from the reservoir to the burner; and common means independent of the

heat generator for controlling the rate of air supply and of fuel supply.

1,395,497. CONVERTIBLE CHILD'S WAGON, COASTER, AND SCOOTER. CHARLES HUSEMAN, St. Louis, Mo. Filed Apr. 14, 1921. Serial No. 461,813. 3 Claims. (Cl. 280—87.5.)

1. A convertible wagon, coaster and scooter, composed of a platform, rear wheels for supporting the rear portion of said platform, a swiveling front-axle, rolling means on said axle, for supporting and steering the front portion of said platform; a steering king-bolt having its lower end connected to said swiveling front-axle and extending up through an aperture in the platform to a point above the latter; a tongue-bracket fixed on the upper end of said steering kingbolt; a tongue or handle having its end pivotally attached to said tongue-bracket; a ring mounted to permit said handle to rotate within it and having diametrically-opposite pins projecting from its outer periphery; and handle-braces pivotally-connected to said platform at their rear ends, and having perforated forward ends which may be mounted on said pins, or detached therefrom, as required to convert the device to the desired form of vehicle.

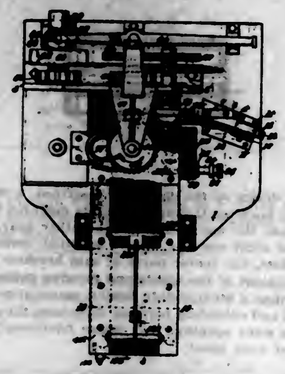


1,395,498. ARCH-SUPPORT FOR THE HUMAN FOOT. MAX KAPPNER, Cincinnati, Ohio. Filed Apr. 26, 1920. Serial No. 376,611. 1 Claim. (Cl. 36—71.)

A foot-arch support for the human foot consisting of a somewhat flexible plate conformed in general outline to cover the underside of the normal arched portion of the foot and rest at its ends upon the external shoe sole, having a bent up inner side of the plate extending into and forming a narrow trough with a swaged-up portion

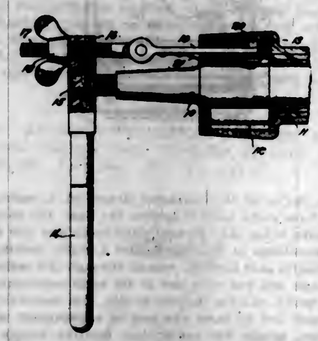
of the plate as a rest and seat for the downward projections of the rear-enlargement of the first metatarsal, the internal cuneiform, and the scaphoid bones; and having a socket depression near the outer side of the plate for seating the cuboid bone.

1,395,499. BOTTLE-CAPPING TOOL. MARLON O. KASSON, Chicago, Ill. Filed Sept. 27, 1920. Serial No. 413,005. 7 Claims. (Cl. 226—84.)



4. In a bottle capping device having a flat substantially rectangular base for supporting a bottle to be capped, a cap sealing device, a readily collapsible frame secured to one end of the base and adapted to hold the cap sealing device at suitable heights, the frame being collapsible into substantially parallel relation with the base and within the horizontal dimensions thereof for packing and shipping purposes.

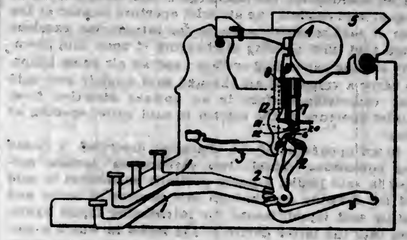
1,395,500. BRUSHING MECHANISM FOR SWEEPERS. JAMES B. KIRBY, Cleveland, Ohio. Filed Mar. 24, 1920. Serial No. 368,250. 10 Claims. (Cl. 15—60.)



1. In a carpet sweeper, a casing, brackets carried at opposed points thereof and defining pockets, blocks carried by said brackets, a brush shaft journaled in said blocks, a carrying wheel located in each pocket and journaled to the corresponding block, and driving connections between each wheel and said shaft.

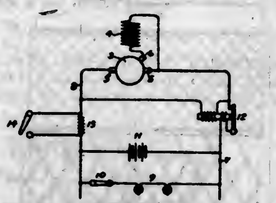
1,395,501. COLLAR-IRONING MACHINE. DENJIRO KISHIMA, Oakland, Calif., assignor to Hitoichiro Kishima, Oakland, Calif. Filed Mar. 17, 1920. Serial No. 366,558. 4 Claims. (Cl. 68—9.)

1. In a machine of the character described, a frame, means for creasing a collar along the fold line thereof, means through which the collar is advanced and moistened prior to its engagement with the creasing means, means for shaping the collar mounted in the frame, and on to which collars are advanced from said creasing means, a chamber through which collars after having been operated upon by said shaping means are moved, and means for heating said chamber.



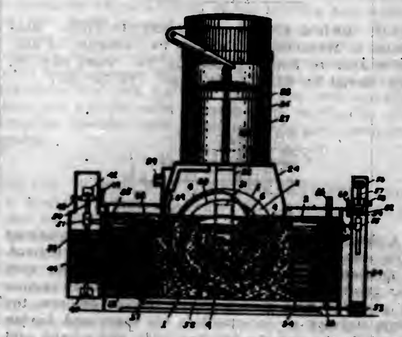
1,395,502. ROLLER-BEARING-SLEEVE PULLER. JACOB KRAY, Elgin, Ill. Filed June 25, 1920. Serial No. 391,621. 3 Claims. (Cl. 29—63.2.)

1. A roller bearing sleeve extractor comprising a handle having a socket and a passage therethrough extending in the same direction as the socket, a screw loosely engaged in said passage, a nut on the screw coacting with the handle to adjust the screw relatively to said handle, and an extracting member pivoted to the end of the screw on the same side of the handle as the socket.



1,395,503. TYPEWRITING-MACHINE. ALFRED G. F. KUNOWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 11, 1919. Serial No. 289,208. 9 Claims. (Cl. 197—183.)

1. In a typewriting machine comprising a platen, typebars having types thereon and pivots for said type-bars, the combination of a single metallic arresting means effective for all of said type-bars and interposed in their path

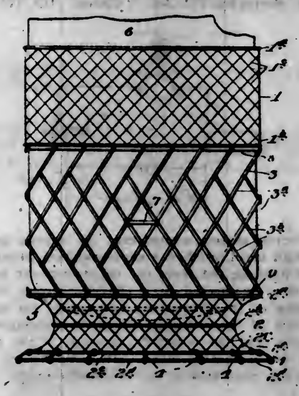


of movement so as to be encountered thereby at approximately the time the types come in contact with the platen, and a resilient support for said arresting means.

1,395,504. ELECTRIC SYSTEM. EARLE P. LEE, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 17, 1919. Serial No. 331,295. 2 Claims. (Cl. 171—313.)

1. An electric system comprising: an electric generator provided with main brushes, a supplementary brush, and a shunt field-winding fed from the supplementary brush; a storage-battery connected in a charging-circuit with the main brushes of the generator; and means for throwing into and out of the charging circuit a resistance of an amount such that the resulting increase in the terminal voltage of the generator more than compensates for the increase in the resistance of the charging-circuit.

1,395,505. MACHINE FOR CARBURETING AIR. MARCUS S. LEVY, Oakland, and LEOPOLD B. DE LATTRE, San Francisco, Calif., assignors, by direct and mesne assignments, to Leontine Dandeville, San Francisco, Calif. Filed Aug. 6, 1918. Serial No. 248,655. 5 Claims. (Cl. 261—28.)



1. In a machine of the character described the combination of a vaporizing pan comprising a long conduit pro-

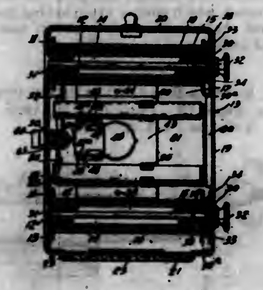
vided with a sloping bottom forming the vaporizing surface; an inlet opening for the admission of gasolene, and an outlet opening for the discharge of air, both located at the top of said conduit; an air inlet aperture located at the bottom of said conduit; a device for introducing gasolene through said inlet opening discharging it upon said downwardly sloping vaporizing surface; and an air pump adapted to carry a volume of air through said conduit over said sloping vaporizing surface in an upward direction from said inlet aperture at the bottom to said outlet opening at the top.

5. In an apparatus of the character described, a closed casing containing liquid, two carbureting devices submerged in said liquid, a pump partially submerged in said liquid for drawing air through said devices in series and agitating said liquid, means for introducing liquid hydrocarbon into the latter device of the series in which a portion of the hydrocarbon is vaporized, and means for introducing the unvaporized hydrocarbon into the first device of the series.

1,395,506. BOLSTER OR PILLOW-ROLL SUPPORT. NELLIE FORSMAN MANSURE, Chicago, Ill. Filed Apr. 1, 1920. Serial No. 370,582. 3 Claims. (Cl. 248—90.)

3. A bolster-support comprising a cylindrical upper section, a base-section having a constricted intermediate portion, and a collapsible intermediate section comprising sets of parallel bars pivotally joined together and pivotally connected with the upper section and the base section.

1,395,507. BRICK AND WALL CONSTRUCTION. SYLVESTER A. MARSTELLER, Carrick, Pa., assignor of one-half to John H. Roney, Pittsburgh, Pa. Filed Mar. 10, 1916. Serial No. 83,232. 6 Claims. (Cl. 72—89.)



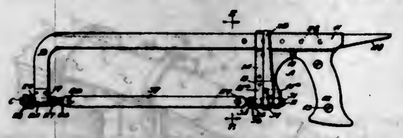
3. A channel brick including a flat body portion having parallel side members projecting from one face thereof, said members being provided at their outer edges with mortar grooves and the opposite face of the body portion being provided with corresponding mortar grooves, the members defining an intermediate air space and having substantially the size of a building brick, and a hand hold projecting into the said air space from an intermediate portion of the body portion.

1,395,508. ROAD-MAP. EARL W. MASON, Los Angeles, and CHESTER D. MILLER, San Diego, Calif. Filed Aug. 12, 1919. Serial No. 317,084. 8 Claims. (Cl. 40—86.)

1. In a device of the character described, a casing having a sight opening, U-shaped brackets mounted in the casing one near the upper end and the other near the lower end of the sight opening, spools mounted horizontally in said brackets, the center parts of said brackets extending across the front of the spools and forming guides near the sight opening, a strip of thin flexible material wound upon the spools and extending between them over the guides and across the sight opening; and means frictionally opposing rotation of each spool.

1,395,509. ROAD-MAP. EARL W. MASON and CHESTER D. MILLER, Los Angeles, Calif. Filed Mar. 31, 1920. Serial No. 370,155. 8 Claims. (Cl. 40—86.)

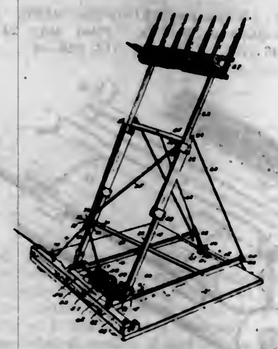
1. In a device of the character described, a casing comprising a base and a body hinged to the base, the body comprising ends, sides each formed with bores and one formed with indentations at the bores, and a sight opening, two rods carried in said bores to extend through the casing, and so that each rod has only one of its ends removable from the bore which carries it, two spools, one removably carried on each rod to have one end in engagement with an indentation, means for preventing relative rotary movement between the spools and the rods, means for yieldingly holding the spools against the indentations, said means comprising resilient members mounted in the rods and contacting with the inner wall of the casing opposite the indentation side thereof, an electric light arranged in the casing control means for the light, and a strip of thin flexible material wound on the spools and extending between them across the sight opening.



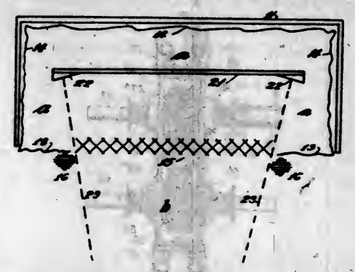
1,395,510. DRAFTING-TOOL. CARL F. MIENION, Cincinnati, Ohio. Filed Oct. 4, 1920. Serial No. 414,404. 4 Claims. (Cl. 33—41.)

1. In a drafting tool, a plate having a straight edge, an opening in the plate, a linear member mounted in the plate so as to extend across said opening, said mounting being

adapted to permit a variety of angular positions of the linear member, the linear member having a series of apertures therein through which the point of a stylus may be inserted, and means for locking the linear member in fixed position in the plate.

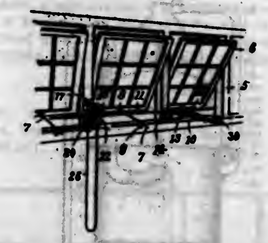


1,395,511. HACKSAW-FRAME. SAXTON J. MORGAN, Albany, Wis. Filed June 25, 1919. Serial No. 306,513. 13 Claims. (Cl. 145—84.)



10. In a device of the class described comprising a handle, a bolt for engaging one end of a hack saw blade, a sleeve on said bolt having slidable engagement in said handle, means to prevent rotation of said sleeve relative to said handle comprising a lug on said sleeve arranged to engage in a slot in said handle, a pin in said bolt projecting radially therefrom, a plurality of notches provided in the end of said sleeve to receive said pin, resilient means for urging said bolt into position to release said blade, and means engaging the lug on said sleeve adapted when actuated to move said bolt to communicate a straining stress to the hack saw blade comprising a cylindrical cam rotatable on said sleeve and a lever for rotating said cam.

1,395,512. EXTENSION SWINGING STACKER. GEORGE L. MURPHY, Hayden, Colo. Filed Oct. 11, 1919. Serial No. 330,132. 5 Claims. (Cl. 214—141.)

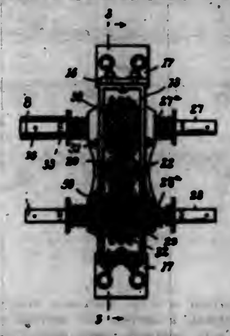


1. In a stacker, the combination with means for raising a load to be stacked, of means operated by the load raising means for moving the load laterally in either direction.

1,395,512. MOTION-PICTURE STAGE ILLUSION. OLIN ANDREW OWEN, Bradley Beach, N. J. Filed Dec. 29, 1919. Serial No. 346,218. 2 Claims. (Cl. 88—24.)

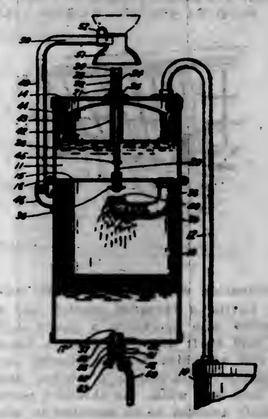
1. In combination, a stage inclosure draped with light absorbing materials, a screen for motion pictures suspended within said inclosure, said screen provided with beveled edges and having a color blending with said draperies, the front of said inclosure provided with an aperture smaller than said screen and bordered on the bottom side with a row of box plants.

1,395,514. POWER DEVICE FOR WINDOW-OPERATORS. JOHN J. PARKER, Bridgeport, Conn. Filed Sept. 16, 1920. Serial No. 410,727. 2 Claims. (Cl. 74—40.)



1. In combination with a longitudinally movable operating shaft having a threaded portion and adapted to actuate window sash operators, a power device for reciprocating said shaft and comprising a housing having side walls and attaching flanges whereby said housing may be adjustably attached to a window casing, alined bearings in said side walls, the threaded portion of said operating shaft adapted to be mounted in said bearings, an operating wheel mounted in the housing and between the side walls thereof, said operating wheel having threaded engagement with the threaded portion of said operating shaft to cause the same to move longitudinally, thrust bearings upon said threaded portion and between said wheel and side walls, a chain upon said operating wheel, and a guide roller for said chain, said guide roller supported beneath said wheel and arranged upon said housing.

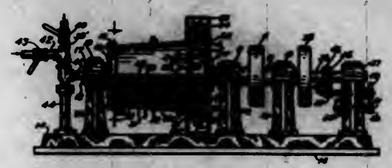
1,395,515. POWER FOR WINDOW-OPERATORS. JOHN J. PARKER, Bridgeport, Conn. Filed Dec. 8, 1920. Serial No. 429,155. 1 Claim. (Cl. 74—40.)



In combination with two-way window sash operators, a power device comprising a housing and means for adjustably attaching the same to a support, two longitudinally arranged threaded shafts journaled in the housing and adapted to move longitudinally and in opposite directions therein, a spiral gear mounted upon each of the said shafts and in threaded engagement therewith, an operating shaft journaled in the housing at a right angle to the above mentioned threaded shafts and intermediate thereof, a

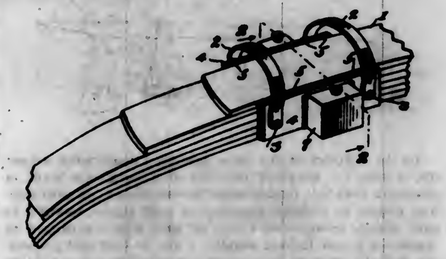
spiral gear mounted upon the said operating shaft and meshing with the two above mentioned spiral gears on the threaded shafts, an operating pulley mounted upon the

outer end of the operating shaft, and means connected therewith for rotating the same together with its shaft, whereby the threaded shafts will be caused to move in opposite directions for the purpose described.



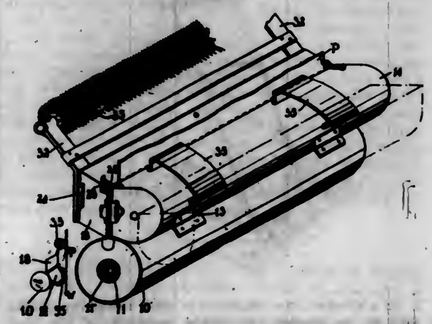
1,395,516. LIQUID-SUPPLYING APPARATUS. MOR[illegible] PARNES, New York, N. Y. Filed Dec. 30, 1919. Serial No. 348,454. 9 Claims. (Cl. 158—36.)

1. In an apparatus of the class described, the combination with a fuel supply source and a vacuum producing means, of a tank having an upper and lower chamber, a tubular connection between said supply source and said upper chamber, a U-shaped tubular connection between said chambers, a connection between said vacuum producing means and said upper chamber, valves controlling the passages in said last named connections, a hollow rod engaging between said valves, said hollow rod being open to both chambers above the liquid therein, and a float operable in said upper chamber whereby said valve rod is raised or lowered according to the fluctuation of said float.



1,395,517. CENTRIFUGAL CONCENTRATOR. WILBUR H. PECK, Los Angeles, Calif. Filed Nov. 23, 1920. Serial No. 426,047. 6 Claims. (Cl. 233—7.)

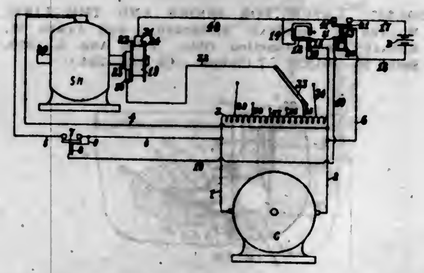
1. In a centrifugal concentrator, the combination of a rotatably journaled hollow shaft, a horisontally positioned rotatable separating vessel, mounted on the overhanging end of said hollow shaft, a central shaft, rotatably journaled within the hollow shaft, a core member rotatably supported within the vessel by said central shaft, the core member provided with a longitudinally positioned central sleeve adapted to be withdrawn longitudinally with the core, from its supporting shaft while maintaining



the latter in journaled placement, said core forming with the vessel a separating channel, means for introducing pulp for separation into the vessel and means for discharging the separated pulp from the vessel, substantially as described.

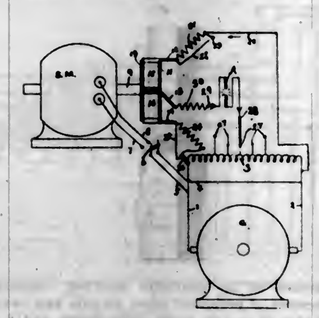
1,395,518. AUTO-SPRING OILER. JOHN H. PETTIT, Great Falls, Mont. Filed Aug. 26, 1920. Serial No. 406,222. 4 Claims. (Cl. 184—1.)

2. In a device of the class described, the combination of a plate provided upon its upper and lower edges with a series of inwardly-extending horisontal prongs, a flat wick against said plate between and secured by said prongs, a tank against said plate on the opposite side to said wick, said plate provided with an aperture opening into said tank, an auxiliary wick extending through said aperture and connected to said first-mentioned wick, and substantially U-shaped spring clamps secured to the outside of said plate between its edges for holding the same upon a spring.



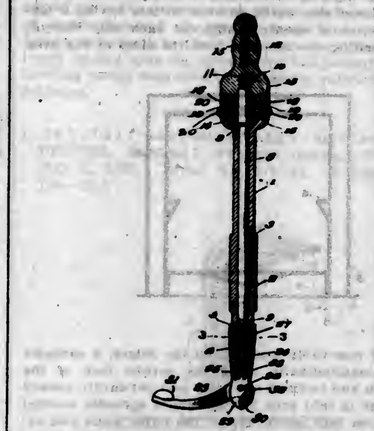
1,395,519. WALL-PAPERING MACHINE. STANLY PYTLAK, McMechen, W. Va. Filed May 21, 1921. Serial No. 471,405. 3 Claims. (Cl. 216—6.)

1. A wall papering machine comprising a cylinder adapted to hold a roll of paper, a mandrel in said cylinder,



a brush holder in the form of a casing hinged to said cylinder, a rotary brush in said holder, a paste box presenting a flat face across which the paper is adapted to pass, said brush holder presenting an open side registering with said flat face, said paste box having openings therein for the discharge of paste into the said brush holder.

1,395,520. ALTERNATING-CURRENT RECTIFIER. CHARLES J. QUILL, San Francisco, Calif., assignor of one-half to William M. Filben, St. Paul, Minn. Filed Aug. 21, 1917, Serial No. 187,479. Renewed Aug. 18, 1921. Serial No. 493,461. 1 Claim. (Cl. 175—364.)



A current rectifier comprising an alternating current supply circuit, a synchronous motor operated thereby, an alternating current ring, a pair of quarter segments electrically connected with the ring, a brush bearing on the ring, another brush bearing on the segments, a load circuit for direct current, an extension therefrom to the alternating current supply, a polarity indicating circuit closer in the direct circuit, and means to drop the motor out if it is not in step to deliver current of the proper polarity.

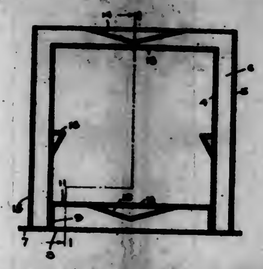
1,395,521. ALTERNATING-CURRENT RECTIFIER. CHARLES J. QUILL, San Francisco, Calif., assignor of one-half to William M. Filben, St. Paul, Minn. Filed Jan. 31, 1917, Serial No. 145,789. Renewed Aug. 18, 1921. Serial No. 493,462. 2 Claims. (Cl. 175—364.)

2. An alternating current rectifier comprising a source of alternating current supply, a synchronous motor operated thereby, a commutator having two oppositely placed segments carried by the shaft of the synchronous motor, a plurality of brushes bearing upon said commutator, connections between certain of said brushes and the main circuit, a direct current load, an electric circuit connecting one of said brushes and the direct current load with the auto transformer whereby upon the operation of the synchronous motor direct current will be delivered to said load.

1,395,522. NAIL-EXTRACTOR. THOMAS D. RICHARDSON, Cheyenne, Wyo. Filed Mar. 2, 1920. Serial No. 362,854. 2 Claims. (Cl. 254—19.)

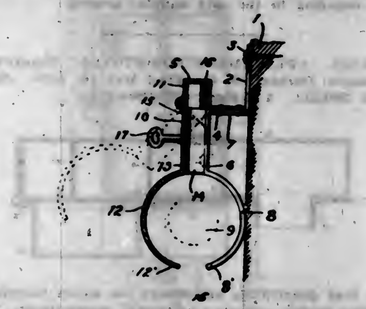
1. In a nail-extracting tool, the combination of a tubular standard having a tapered lower end provided with an external annular groove, a plunger slidably mounted in the standard, a nail-extractor comprising a socket member adapted to fit upon the tapered lower end of the standard and provided with an internal annular groove, and a split ring engaging in the said annular grooves.

1,395,523. ATTACHMENT FOR STOVES. ERASTUS W. ROGERS, Durham, N. C. Filed May 10, 1920. Serial No. 380,211. 1 Claim. (Cl. 126—215.)



A heat distributing attachment for stoves including a housing having separate longitudinal compartments, there being an inlet opening in the bottom of the housing at one end and communicating with both compartments and a plurality of outlet openings in the top of the compartments, said housing being provided in one end with a smoke outlet in communication with both compartments, a closure for the smoke outlet, a damper pivotally mounted in each compartment between the outlet and the smoke-outlet, there being an outlet slot in the top of the housing between the top outlets, a slide normally closing said outlet slot, means extending from one end of the housing for attaching the device to a stove in position to receive hot products of combustion through the inlet opening, thereby to support one end of the housing beyond the side of the stove, and a warming pan removably connected to the bottom of the projecting portion of the housing.

1,395,524. OVEN. ERASTUS W. ROGERS, Durham, N. C. Filed May 10, 1920. Serial No. 380,212. 1 Claim. (Cl. 126—275.)



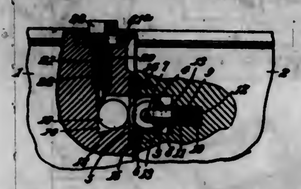
An oven including inner and outer side and top walls spaced apart to provide an air space therebetween, there being a central longitudinal outlet slot in the top of the

inner wall and outlet openings in the lower portion of the outer wall, end walls connected to the inner and outer top and side walls, a base secured to the bottoms of the walls and having ledges extending inwardly from the lower end of the inner side walls, an oven bottom having a longitudinal series of openings adjacent each side thereof, flanges extending downwardly from the sides of the oven

bottom and removably mounted on the ledges, a spreader extending longitudinally along the bottom face of the oven bottom and inclined upwardly and outwardly toward the openings in said oven bottom, and a spreader secured to the bottom face of the top of the outer walls and extending longitudinally theerof above the outlet opening in the top of the inner wall.

1,395,525. CLOAK AND ROBE LOCK. FREDERICK SAGERMAN, Canton, Ohio. Filed Feb. 19, 1920. Serial No. 359,974. 1 Claim. (Cl. 296—77.)

A device of the character described including a supporting bracket having a lock housing, clamp-members respectively connected to said bracket on opposite sides of the housing, one of said members being stationary with respect to the bracket, and the other member being pivotally connected thereto for swinging adjustment toward and away from the stationary member, and a locking mechanism carried by said pivoted member for alinement with the lock housing of the bracket when the two clamp-members are in proximity to each other, whereby a portion of the lock may be projected into the said housing to hold the members in proximity.



1,395,526. BOLT AND RETAINER THEREFOR. EDWARD A. SCHAFER, Wheeling, W. Va. Filed Mar. 24, 1919. Serial No. 284,758. 2 Claims. (Cl. 85—5.)

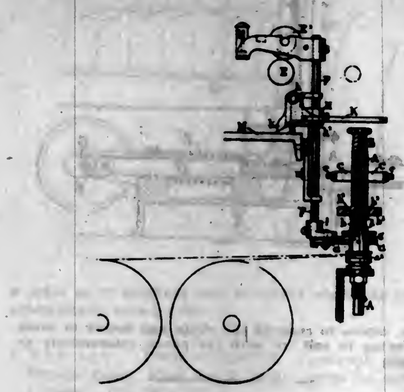
1. A bolt retainer comprising, in combination with a bolt having an annular channel formed therein adjacent to its point, a clamp-like bolt-retainer of approximate C-shape disposed in closely embracing relation to said channel, the body of said retainer being of relatively greater thickness than the depth of said channel, said retainer terminating in jaws of greatly increased thickness provided with rounded adjacent faces adapted to facilitate disposal of said retainer within and removal of it from said channel, said retainer being adapted to be sprung

around said channel into a position in which said jaws lie in engagement, and means for securing said jaws together for maintaining said retainer in position.

1,395,527. LATCH FOR DOORS AND THE LIKE. WALTER H. SHERMAN, Steubenville, and JAMES W. ECKARD, Mingo Junction, Ohio. Filed Aug. 5, 1920. Serial No. 401,207. 7 Claims. (Cl. 292—264.)

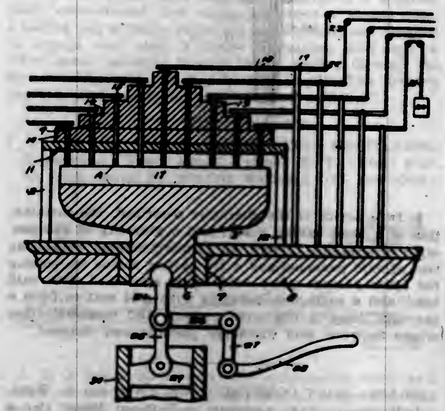
1. The combination with a door and an adjacent doorway-defining wall having confronting recesses in their meeting edges, of a latch for said door, said latch comprising a rotary disk located in one of said recesses, a yoke in which said disk is rotatably mounted, yieldable means normally holding said yoke and said disk thrust outward to a position in which a peripheral portion of the latter is received within the opposite recess for securing said door in closed position, and rotary means disposed within the last mentioned recess in engagement with the adjacent periphery of said disk and movable for thrusting the latter back within its recess.

1,395,528. SOCKET-WRENCH. FRANK IGNACIO SILVA, Wailuku, Hawaii. Filed Nov. 26, 1920. Serial No. 426,582. 4 Claims. (Cl. 81—121.)



4. A wrench of the character specified, comprising a tubular member of polygonal cross section, and having an elongated slot in one or more of its facets and a sleeve of polygonal cross section slidably fitting within the tubular member, and a finger piece carried by said sleeve and extending through said slot for sliding said sleeve.

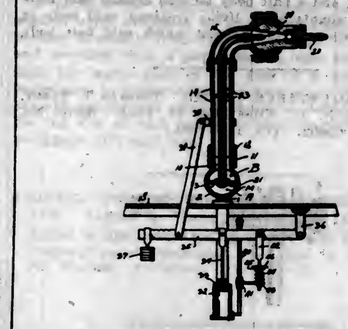
1,395,529. STOP-MOTION FOR DOUBLING-FRAMES. WILLIAM STOTT, Rochdale, England. Filed May 20, 1920. Serial No. 382,023. 1 Claim. (Cl. 116—7.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



In a hand operated stop motion for the spindles of doubling frames, the combination with a rabbeth self con-

tained spindle, a friction driving cone and a driven cone member thereon, of a vertically sliding rod placed adjacent to the spindle, a bracket to support the rod and within which it slides, a bracket on the lower end of the rod, a friction brake plate affixed to the lower bracket to embrace the driving cone on the spindle, and when raised to engage the driven cone member, a bracket on the upper

end of the sliding rod adapted to carry the top roller of the machine, a hand lever pivoted to the bracket on the sliding rod and a fulcrum on the handle resting on the supporting bracket, all so disposed that on raising the handle the sliding rod is raised and with it the top roller and the driven cone member, and at the same time the rotation of the latter retarded and stopped substantially as described.

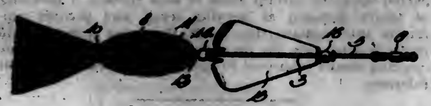


1,395,530. PRESS. ARCHIBALD JACKSON STRANB, Tamaqua, Pa., assignor to Atlas Powder Company, Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 11, 1920. Serial No. 409,550. 7 Claims. (Cl. 100—19.)

1. In a multiple press a plurality of press points, a work-carrying head movable toward said press points to simultaneously bring the work into engagement with all of said press points and individually adjustable weighted pressure creating means for each of said press points.

3. In a multiple press a work-carrying head mounted for movement, a plurality of press points, a member in which said press points move said member having a stepped upper surface and said press points being supported upon the several steps of said surface, a plurality of levers disposed at varying levels and pivoted uniformly intermediate their ends the inner ends of said levers resting upon the press points and yieldable pressure creating means connected to said levers outwardly of their fulcrums.

1,395,531. AUTOMATICALLY-ACTUATED OIL-BURNER. HOWARD L. SWENNEY, Oakland, Calif. Filed May 1, 1920. Serial No. 378,191. 8 Claims. (Cl. 158—28.)



1. The combination with a furnace, of a gas burner having a fuel supply and a fluid pressure supply, the burner being mounted for movement into or out of operative relation to the furnace, means actuated by a decrease of pressure of the fluid automatically shifting the burner out of its operative position, means automatically cutting off the supply of fuel to the burner upon a movement of the burner to its inoperative position, and means acting automatically to prevent a reestablishment of communication between the source of fluid pressure supply and the burner after the burner has been shifted to its inoperative position until the burner is again manually shifted to its operative position.

1,395,532. THEFT-PREVENTING ATTACHMENT FOR STEERING-WHEELS. ELBERT REED TILDEN, West Concord, Minn. Filed May 4, 1920. Serial No. 378,739. 1 Claim. (Cl. 70—129.)

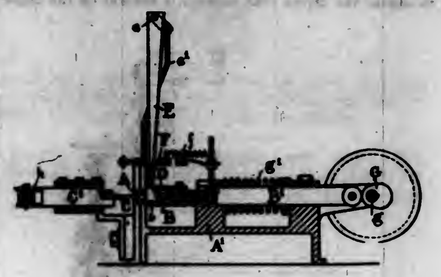
An attachment for steering wheels comprising, a casing formed of sections, and means carried by one of the sections for locking the sections against relative movement outwardly comprising, flexible members arranged to embrace the other section, plates secured to the flexible members, and staples secured to the first section and adapted to extend through said plate for holding the flexible members in embracing position with respect to the other section.

1,395,523. FISH-BAIT. ORLEY C. TUTTLE, Old Forge, N. Y. Filed May 12, 1921. Serial No. 468,827. 5 Claims. (Cl. 43—43.)

1. The combination with a fish hook and a carrying wire therefor, of a body of metal surrounding the adjacent portions of said hook and wire and rigidly securing them together, and a bait body secured around said hook and wire and simulating a living creature, said body of metal constituting a core around which said bait body is formed.

1,395,534. ADJUSTABLE TILLER. THOMAS T. TVEDT, City Island, N. Y. Filed Mar. 14, 1921. Serial No. 452,041. 1 Claim. (Cl. 114—169.)

In a device of the character described, the combination with a rudder stock and a tiller or quadrant, of a circular disk secured to the rudder stock, a flanged member forming part of the tiller or quadrant and recessed to fit said circular disk, a clamping ring also recessed to fit said circular disk, and a series of bolts extending through said flanged member and ring, and clamping the disk between them.



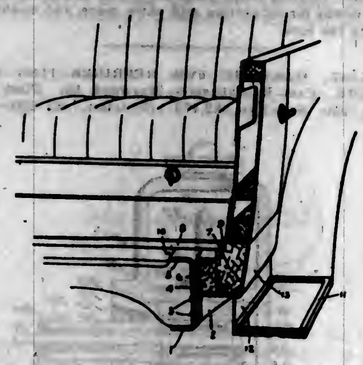
1,395,535. SHOE-HEEL. FRANK J. WALKER, Wichita, Kans. Filed Dec. 27, 1920. Serial No. 433,143. 6 Claims. (Cl. 36—35.)

1. A heel lift comprising a resilient body, and a retaining element embedded centrally therein and comprising a resilient coil having a central eye for the passage of a securing element.

1,395,536. MACHINE FOR THE PRODUCTION OF METAL TAGS SUCH AS USED ON LACES. GEORGE E. WALKER, Prestwich, SAMUEL H. WALKER, Southport, and FRANK HEWITT, Radcliffe, England. Filed Feb. 9, 1920. Serial No. 357,467. 1 Claim. (Cl. 153—1.5.)

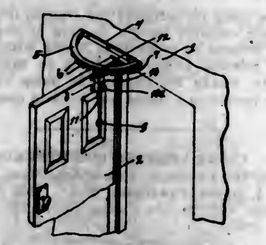
A tag forming machine constructed with a fixed or stationary die former, a reciprocating bar carrying a cutting tool and punch at one side of the die former, a reciprocating bar carrying needle punches at the other side of the die former, the two bars being connected to move simultaneously in opposite directions to approach and recede from one another, and an oscillating chute to deliver the tag material in front of the die

former, means to suspend the chute and means to cause it to swing to and fro with the punch substantially as described.



1,395,537. COMBINATION-BLOWPIPE. GEORGE L. WALKER, New York, N. Y., assignor to Air Reduction Company, Inc., a Corporation of New York. Filed Jan. 8, 1919. Serial No. 270,116. 5 Claims. (Cl. 158—27.4.)

1. In a device of the character described, the combination of a head having a seat and a plurality of gas passages terminating therein, an annular channel connecting two of said passages and a tip having means for closing the other passage when said tip is assembled with said head, and a surface coöperating with said seat to form a gas-tight joint, a discharge passage and communicating means between said discharge passage and channel.

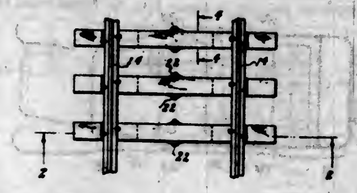


1,395,538. BODY CONSTRUCTION. WILLIAM G. WALL, Indianapolis, Ind., assignor to National Motor Car & Vehicle Corporation, Indianapolis, Ind., a Corporation of New York. Filed June 5, 1920. Serial No. 386,787. 3 Claims. (Cl. 296—28.)

1. In a body construction a frame, brackets secured to the outer face of said frame and having their top surface a substantial distance below the top of the frame, a body base supported by the brackets and extending above the frame, and a floor supported by the body base at such

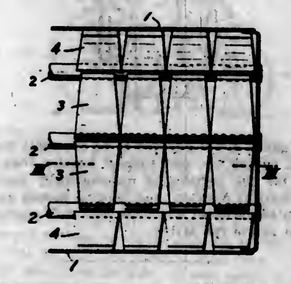
a point as to overhang and be spaced above the frame, substantially as set forth.

1,395,539. DOOR-ADJUSTER. ANTANAS WALUS, Shelton, Conn. Filed Feb. 5, 1921. Serial No. 442,616. 1 Claim. (Cl. 292—341.)



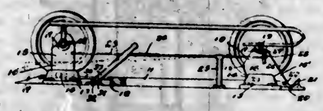
A device of the class described comprising a substantially semi-circular rack supported above a hinged door, a slotted bolt slidably supported on said door and adapted to engage said rack, a frame containing said bolt, a clamp screw mounted in said frame passing through the slot, whereby said bolt may be held in raised or lowered position, and means for manipulating said bolt.

1,395,540. BRAKE-OPERATING MECHANISM. CHARLES A. WARD, Mount Vernon, N. Y. Filed Mar. 18, 1919. Serial No. 283,310. 4 Claims. (Cl. 188—204.)



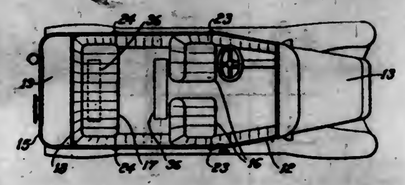
1. In a brake mechanism, the combination with two brakes, means for operating said brakes, comprising concentric shafts, one of which is mounted in bearings and the other of which is supported by the first, and connections between the respective shafts and the brakes, of bushings having a different coefficient of expansion from that of said shafts, concentrically spacing said shafts and constituting the only bearing support of that one of said shafts which is carried by the other.

1,395,541. RAILWAY-TIE. HENRY R. WHEELEY, York, Pa. Filed Oct. 14, 1920. Serial No. 416,515. 1 Claim. (Cl. 238—79.)



A railway tie comprising a metallic casing with a wooden core, shoulders of triangular cross section projecting upwardly from the top surface of said casing and provided with a perpendicular side adapted to engage the outer edge of the foot of a rail, anchoring projections in trellis formation formed on the under side of said casing and spaced apertures being provided in the top side of said casing for receiving spikes adapted to engage with said core.

1,395,542. PERFORATED ARCH AND BRICK THEREFOR. ALFRED H. WILLETT, West New York, N. J., assignor to American Arch Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 4, 1918. Serial No. 265,192. 3 Claims. (Cl. 110—87.)

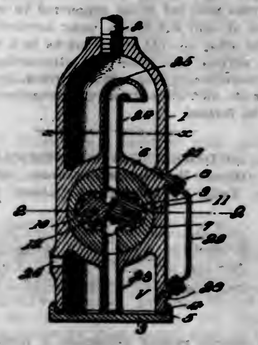


1. In an arch construction for fire boxes provided with supporting tubes, the combination of a plurality of reversible fire bricks adapted to be supported in rows upon the tubes, each of said fire bricks being narrower at one end than at the other so that if the bricks in a row be assembled with narrow and wide ends alternating in adjacent bricks an imperforate arch will be formed, but if assembled with all wide and all narrow ends together, a perforate arch will be formed.

1,395,543. AUTOMATIC MOTOR-VEHICLE-JACK DEVICE. GEORGE H. WILLEMS, Roanoke, Ill. Filed Feb. 5, 1920. Serial No. 356,480. 3 Claims. (Cl. 254—89.)

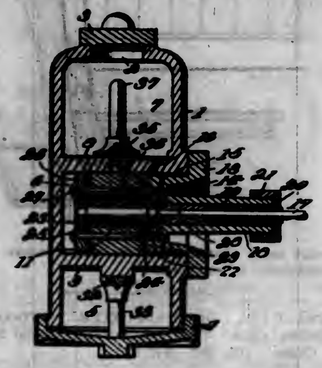
1. In a vehicle raising appliance, a lifting roll device having a fixed axis, and freely revoluble, a vehicle-mounted roll-engaging member having a lower surface inclined upwardly toward the front, its lower part being below the level of the top of the roll, and means to hold a vehicle against rearward movement at times.

1,395,544. AUTOMOBILE-BODY. JOHN ERUMAN, Greenwich, Conn. Filed Apr. 26, 1921. Serial No. 464,741. 7 Claims. (Cl. 296—26.)



4. In an automobile, side frame members, a body element adapted to rest thereon, a pair of latch arms at each side of said body element adapted to engage the said frame elements, and a toggle bar device adapted to move said latch arms into and out of operative position, and to assume an approximate dead center position when said latch arms are in operative position, said latch arms having studs on their free ends adapted to engage in sockets in the said side frame members.

1,395,545. GAME. JOHN B. ALEY, Pittsburgh, Pa. Filed Mar. 10, 1920. Serial No. 364,754. 3 Claims. (Cl. 124—15.)



1. In a game, a doll adapted to be revolubly mounted on a support, having one end thereof heavier than its opposite end, for the purpose of automatically resetting the doll in a vertical position, and musical means on said doll adapted to be actuated when the said doll receives a blow tending to rotate the latter.

1,395,546. AIR-PUMP. CARL E. ANDERSON, Maywood, Ill. Filed Nov. 13, 1919. Serial No. 337,632. 6 Claims. (Cl. 230—90.)

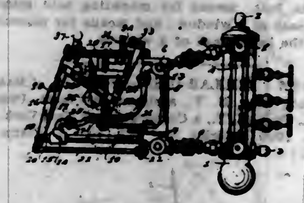
1. An air pump including in combination, a pump casing having a central section dividing and separating the casing into a lower vacuum chamber and an upper compression chamber, said central section having a cylindrical bore, a pump body fitting said bore and having pump chambers therein, passages respectively connecting the pump chambers with the vacuum chamber and the compression chamber, rotating pump gears located in said pump chambers, means for supporting said pump gears, and means for closing the bore.

1,395,547. GAS-PUMP FOR REFRIGERATING SYSTEMS. CARL E. ANDERSON, Maywood, Ill. Filed May 19, 1920. Serial No. 382,470. 15 Claims. (Cl. 230—90.)

1. A gas pump for refrigerating systems including a casing, a pump chamber therein opening at one face of the casing, a housing or pump body fitting within said pump chamber, rotating pumping pistons in said housing or pump body, means for closing the pump chambers, and means for providing a liquid seal for said closing means.

1,395,548. CIGAR-LIGHTER FOR STEERING-WHEELS. EDWARD H. ANSHELM, Cambridge, Mass., assignor to Daniel I. Hayes, Pawtucket, R. I. Filed Jan. 20, 1920. Serial No. 352,729. 14 Claims. (Cl. 175—296.)

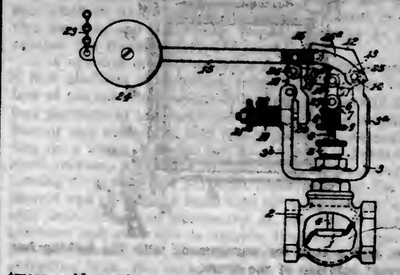
1. A steering wheel embodying therein a hollow spoke constituting a casing, a source of electric supply, and manually operated flame producing means located within said spoke and connected with said source of electric supply.



14. A cigar lighter having, in combination, a casing provided with an opening in the side thereof, a fuel receptacle adapted to oscillate within said casing and through said opening, a wick in said fuel receptacle, an electric switch, means to normally hold said fuel receptacle against said switch and thereby break an electric circuit therethrough, a pair of electrodes, and means to automatically close said electric circuit through said switch and ignite said wick during the oscillatory movements of said fuel receptacle.

1,395,549. GROUND-GRIPPING DEVICE FOR TRACTORS. HENRY BAUCHET, Sens, France. Filed Aug. 11, 1919. Serial No. 316,754. 2 Claims. (Cl. 301—44.)

1. In a detachable ground-gripping device for tractor wheels, the combination of a metal bar adapted to extend across the rim of the tractor wheel, formed at each end with a bent-over lug adapted to receive the edge of the tractor wheel rim, a pair of hook bolts engaging said lugs, shaped so as to bend around the adjacent wheel spokes, and a spring detachably connected at its end to said hook bolts.



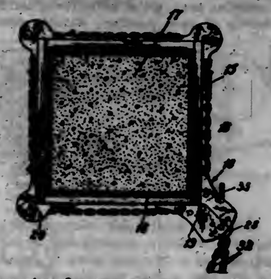
1,395,550. LOW-WATER SIGNAL FOR STEAM-BOILERS. WILLIAM C. BLUNDELL, Los Angeles, Calif., assignor of one-half to Mary R. Blundell and one-half to Oliver W. Smith, Los Angeles, Calif. Filed Nov. 19, 1917, Serial No. 208,041. Renewed Mar. 9, 1920. Serial No. 364,519. 2 Claims. (Cl. 200—137.)

1. In a device of the character described, including a rigid frame and an expansion tube extending in a substantially horizontal plane therefrom, said frame having upper and lower horizontal extensions thereon, a rod rigidly attached to the lower portion of said frame and extended at its outer end beyond the end of said expansion tube, a bar pivoted to the end of said expansion tube and extended upwardly and downwardly from its fulcrum, the lower end thereof being pivotally connected to said rod, a bar pivoted at its lower end to the lower extension of said frame and extending upwardly through and above the upper arm of said frame and having a contact member thereon, a bar connected with said contact bar at a point near the fulcrum thereof and also connected at its opposite end with the upper end of said first mentioned bar, and a stationary contact on said upper frame extension wherewith said first mentioned contact may be engaged when said tube is expanded, for the purpose described.

1,395,551. SNAP-MOVEMENT VALVE MECHANISM. CHARLES F. BRAND, Wheeling, W. Va. Filed Oct. 9, 1920. Serial No. 415,768. 5 Claims. (Cl. 137—139.)

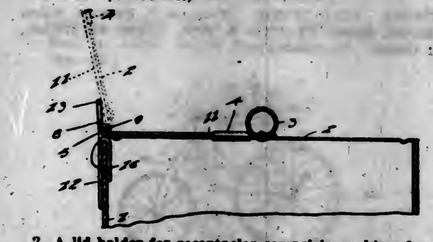
1. A snap-movement valve mechanism comprising a valve, a yoke associated with said valve, a member fulcrumed upon an arm of said yoke and having flexible connection with the opposite arm of said yoke, a lever pivoted upon the first-mentioned arm of said yoke and having flexible connection with said member and adapted for movement to produce initial actuations of the latter, means yieldingly resisting said initial actuations and accelerating final movements of said member, flexible connections between said member and the stem of said valve, and yieldable means whereby said valve is maintained seated during elevating movement of said member until the accelerating movement occurs.

1,395,552. VELOCIPEDE. WILLIAM C. BRIDGES, North Easton, Mass. Filed Apr. 9, 1920. Serial No. 372,564. 1 Claim. (Cl. 208—113.)



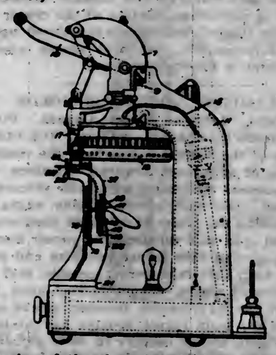
A velocipede comprising a pair of arcuate frame bars secured together intermediate their ends and having their lower ends diverging whereby to constitute a rear fork, the forward ends of said frame bars being disposed together and being formed near the extremity with outwardly curved portions which mate to define a collar, a head having a reduced portion revolubly engaged within said collar, a handle bar at the upper end of said head, a front fork carried by the lower portion of said head, a crank axle journaled through the lower end of said front fork and provided with pedals, a front wheel on said front axle within the front fork, a rear axle extending across the lower extremities of the frame bars, a pair of rear wheels rotatable upon said rear axle and slidable thereon whereby to dispose in contacting relation at the center thereof or at the ends thereof, and members secured upon said rear axle and engageable with said wheels whereby to hold in the latter in selected position.

1,395,553. CLAMPING DEVICE FOR MOLDS. DANIEL JAMES BROPHY, Montreal, Quebec, Canada. Filed Dec. 27, 1920. Serial No. 433,245. 1 Claim. (Cl. 144—291.)



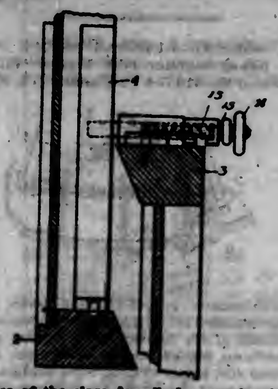
In a device of the character described, the combination of a plurality of supplemental corner members, each of said corner members comprising adjustable pivoted plates, flanges formed upon said plates, means engaging the flanges for locking the plates in adjusted positions, chain hooks provided upon said supplemental corner members, a chain passing around said corner members and engaging said hooks, a main adjustable corner member, said member comprising pivoted plates, flanges formed upon the pivoted plates of the main corner member, means engaging the flanges of the main corner member for retaining the plates of the main corner member in their adjusted positions, a drum journaled in said main corner member, hooks provided upon said drum for engaging said chain, flanges having openings therein formed upon said drum; an operating bar engageable in the openings of the flanges

for rotating said drum and drawing the corner members together, a locking bar engageable in the openings of the



flanges, and a stop for engagement with the locking bar to prevent rotation of the drum.

1,395,554. LID-HOLDER FOR COOKING UTENSILS AND RECEPTACLES. WILLIAM W. BROWN, Medford, Oreg. Filed Mar. 25, 1921. Serial No. 455,599. 2 Claims. (Cl. 53—8.)



2. A lid holder for receptacles comprising a hinged rod, a pair of U-shaped members having their arms coiled about said rod to form hinge connections and one of said members secured to a receptacle and the other member secured to a lid, the coiled portions of one of said members positioned on the rod outwardly of the coiled portions of the other member to prevent the latter from sliding off of said rod.

1,395,555. WORK AND MATERIAL HOLDER FOR STAMPING-MACHINES. WILLIAM E. CHOATE, Hamilton, Mass., assignor, by mesne assignments, to Federal Finance Corporation, a Corporation of Massachusetts. Filed Feb. 5, 1920. Serial No. 356,555. 11 Claims. (Cl. 41—7.)

1. A device of the class described comprising a platen and an opposed apertured pressure plate shiftable relatively to the platen and having means for clamping a transfer medium adjacent the aperture therein.

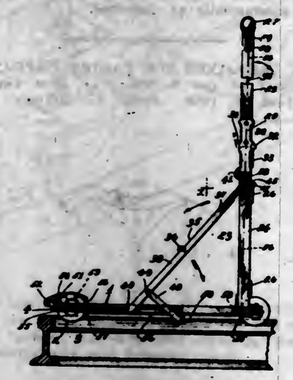
1,395,556. WINDOW-LOCK. ANSON B. CLAY, Newton, Iowa; Allen Perry administratrix of said Anson B. Clay, deceased. Filed June 25, 1919. Serial No. 306,536. 1 Claim. (Cl. 292—175.)

In a device of the class described a member having an elongated socket defined by rearwardly diverging walls and provided at its lower end with an enlarged opening, the member having a cross bar defining the lower edge of the opening; a casing; a bolt slidable in the casing and having a solid wedge-shaped head, one end of the head being engaged within the casing when the other end of the head is engaged beneath the cross bar, the head being insertible into the socket by way of the opening and exerting a positive wedging action on the diverging walls of said member when the bolt is retracted forcibly; spring means for advancing the bolt; means for mounting said member on the upper sash of a window; and means for mounting the casing on the lower sash of a window.

1,395,557. COLLAR-DISPLAY FORM. CHARLES M. CONNOLLY, Troy, N. Y., assignor to Cluett, Peabody & Co., Inc., Troy, N. Y., a Corporation of New York. Filed Nov. 6, 1920. Serial No. 422,149. 1 Claim. (Cl. 211—24.)

A collar display form having an upright member with a rearwardly projecting fin formed with a plurality of hooks adapted to receive the back portions of a plurality of collars supported one above another encircling the upright member.

1,395,558. SLIDING-TOP DESK. LEONARD S. CRONE, New York, N. Y. Filed Nov. 6, 1920. Serial No. 422,217. 3 Claims. (Cl. 45—91.)

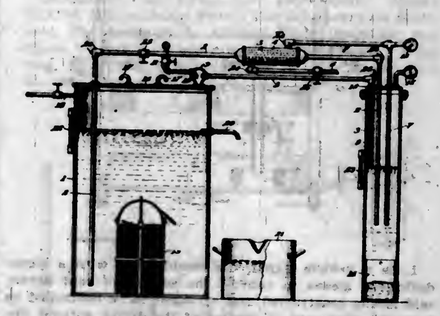


1. In a desk and filing cabinet, a body-member having filing compartments formed therein, a stationary top

thereon, horizontally sliding tops and cover-members mounted upon the body-member, supporting-brackets secured to the sliding-top and body-member and adapted to carry same in its horizontal movement and maintain it

throughout its movement at the level of the stationary-top, chambers formed at the ends of the filing compartments for housing the said supporting-brackets, and anti-friction-members formed upon the brackets and engaging between same and the walls of the chambers.

1,395,559. RAILROAD-FLAGMAN'S CARRIAGE. FREDERICK A. W. DAVIS, Pelham, N. Y. Filed May 23, 1916. Serial No. 99,271. 8 Claims. (Cl. 105—142.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



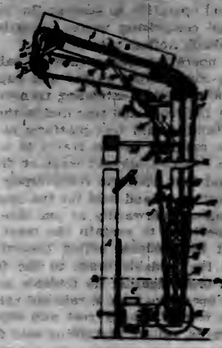
1. A foot carriage adapted to operate at high speed in balanced action upon a single railroad rail, comprising a platform member of restricted lateral area to afford a support only for the foot of the operator, a single roller member extending transversely of said foot platform and in the median line thereof and mounted one at each of the terminal front and rear ends of said platform, said respective roller members conforming to and affording a braced bearing upon the tread and also both sides of the head of the single rail, whereby they are operative in a balanced guide movement thereon, and a hand-hold member projective upwardly from said foot platform at the front thereof whereby the balanced action of the foot platform can be sustained by the operator under the inertia of the guided travel of the roller members upon the single rail, substantially as set forth.

2. A carriage operative upon a railroad rail, comprising a foot platform constituting a rest and support for the foot of the operator, rollers extending transversely of said foot platform at the front and rear and in the median line thereof and sustaining said foot platform in balanced action on a single railroad rail in travel in a guide movement thereon, a foldable upright mast or framework extending from said foot platform transversely at the front thereof and affording a hand-hold for the operator, and a brace extending rearwardly at one side of said foot platform and operative to sustain the mast in operative position and comprising means operating as a lock against the foldable action thereof.

3. A carriage operative upon a railroad rail, comprising a foot platform constituting a rest and support for the foot of the operator, rollers extending transversely of said foot platform at the front and rear and in the median line thereof and sustaining said foot platform in balanced action on a single railroad rail in travel in a guide movement thereon, a foldable upright mast or framework extending from said foot platform transversely at the front thereof and affording a hand-hold for the operator, a foldable brace extending rearwardly at one side of said foot platform and operative to sustain the mast in operative position against the foldable action thereof, and means extending from the foldable brace to the foot platform for locking said brace against its foldable action.

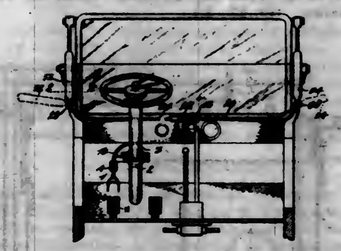
4. A carriage operative upon a railroad rail, comprising a foot platform constituting a rest and support for the foot of the operator, rollers sustaining said foot platform over a railroad rail and operative in a guide movement thereon, a foldable upright mast or framework extending from said foot platform and affording a handhold for the operator, a foldable brace operative to sustain the mast in operative position and constituting a lock against the foldable action thereof, and means for locking said brace against its foldable action.

1,395,560. APPARATUS FOR DETERMINING THE AMOUNT OF CERTAIN CONSTITUENTS IN GASES. EDWIN H. DE LANY and STEPHEN H. PAYNE, New York, N. Y. Filed Oct. 18, 1920. Serial No. 417,690. 6 Claims. (Cl. 23—3.)



1. In gas absorbing apparatus, an absorbing tower adapted to contain an absorbing medium, a gas inlet having its discharge end submerged in said medium, and recording devices connected with said tower and with said inlet whereby differences in pressure in said tower and inlet may be ascertained.

1,395,561. SHEAF-ELEVATOR. ABRAHAM M. DELLINGER, Lancaster, Pa. Filed Nov. 17, 1919. Serial No. 338,560. 6 Claims. (Cl. 198—118.)

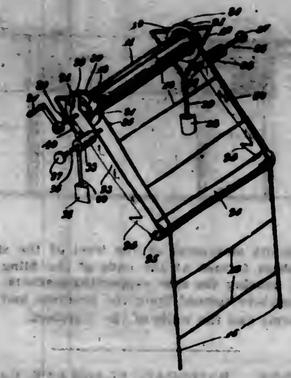


6. In an elevator, the combination of an endless carrier with a frame for the same consisting of three connected sections, and a pivot supported by a fixed structure and connected to the upper portion of the middle section for allowing horizontal turning of said middle section, the latter being connected to the lower part of the frame by a vertically disposed loose pivot substantially alined with the first mentioned pivotal connection to permit

free horizontal turning movement of the middle section relative to said lower section and slight compensating

sliding movement to allow for the slight relative displacement of the pivots.

1,395,562. SIGNAL-CONTROLLING DEVICE. GEORGE M. DOWD, New York, N. Y. Filed Apr. 7, 1919, Serial No. 288,053. Renewed Aug. 12, 1920. Serial No. 403,140. 7 Claims. (Cl. 116—52.)



1. In a vehicle signal, the combination with a signal device, of means to control the setting of said device, said means constructed and arranged to be controlled by a lateral movement of one leg of the driver without displacing movement of the foot.

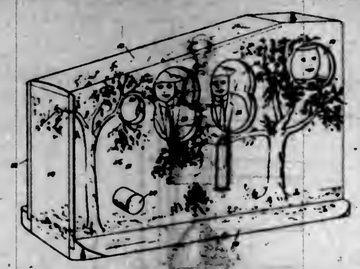
2. In a vehicle signal, the combination with a signal device, of means for setting said device including a member adapted to be engaged by the leg of the driver between the ankle and the knee to be moved by a lateral movement of the leg without displacing movement of the foot.

1,395,563. FLEXIBLE-LADDER SUPPORT. STANISLAUS THOMAS DRODZEWSKI, Toledo, Ohio. Filed Sept. 10, 1918. Serial No. 253,554. 1 Claim. (Cl. 256—43.)

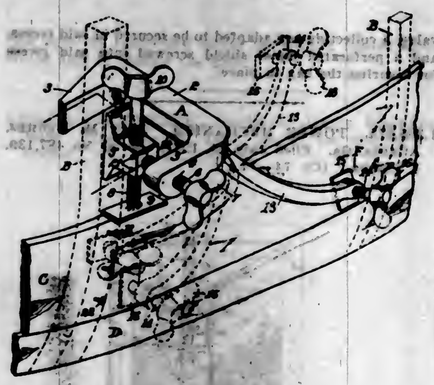
In a flexible ladder support, the combination of a spindle provided with an operating handle, a pair of flat bars supporting said spindle, spurs at the lower ends of the bars for engaging the outer wall of a building, a spindle journaled in the extreme lower ends of said bars, said spindles adapted to guide and receive the flexible ladder, rods internally screwed to said bars, tubular supports for said rods on the outer sides of said bars, resilient springs in said supports abutting with one end against the outer sides of said bars and with the other against collars on said rods within said tubular supports, and

operating heads on the outer ends of said rods for permitting an attachment of the ladder support in a window opening, substantially as described.

1,395,564. RETAINER FOR LADIES' CAPE-COLLARS. MAGDALENA DE LOS S. ENSIQUEZ, New York, N. Y. Filed June 20, 1919. Serial No. 305,660. 1 Claim. (Cl. 2—98.)



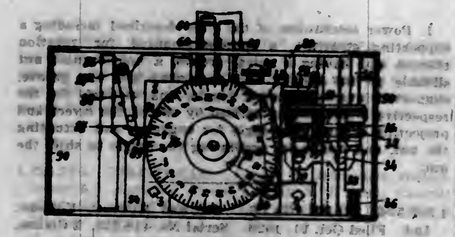
A temporary retainer as characterized, comprising a body portion shaped to cover the rear of the shoulders and neck of the wearer, said body portion having two non-extensible supporting throat portions for encompassing the neck of the wearer, a narrow waist extension pendant from said body portion, the end whereof is adapted to rest in service adjacent the waist of the wearer; a resilient belt permanently attached to said waist extension, the ends of said belt meeting for mutual engagement at the front of the person; and means for uniting in service, the ends of said throat extensions.



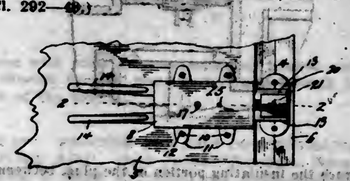
1,395,565. TOY. EDWARD ERICKSON, Fresno, Calif. Filed Dec. 4, 1920. Serial No. 428,510. 4 Claims. (Cl. 46—45.)

1. The combination with a housing having a wall provided with spaced slight openings, of a primary figure mounted for vertical movement within the housing and movable to project at the top thereof, a secondary figure

normally visible through one of the slight openings, and means coacting with both figures for actuating the secondary figure to shift the same to a position visible through another of said openings and simultaneously elevate the primary figure.

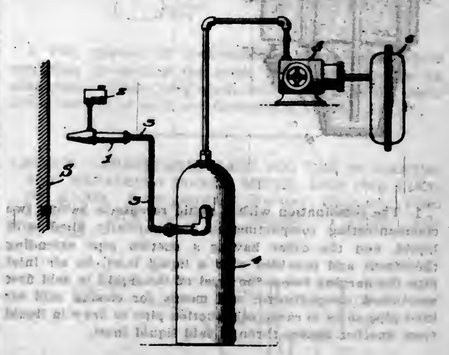


1,395,566. PLANKING-CLAMP. PHILIP H. FLUHR, Nyack, N. Y. Filed Aug. 6, 1920. Serial No. 401,654. 13 Claims. (Cl. 144—292.)



1. In a tool of the class described, gripping means, a clamping jaw movable relatively thereto and rotatably supported thereby, and a second clamping jaw swingingly connected with said gripping means.

1,395,567. AUTOMATIC GAS LIGHTER AND EXTINGUISHER. VICTOR FORTI, Paris, France. Filed Dec. 1, 1920. Serial No. 427,593. 10 Claims. (Cl. 161—9.)

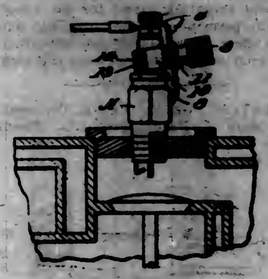


1. An automatic lighting and extinguishing apparatus comprising a clockwork movement actuating a graduated dial provided with peripheral notches and carrying a fixed pointer and two adjustable pointers, one of said adjustable pointers effecting the release of an actuating barrel for gas admission and for lighting the permanent and the temporary burners, the second adjustable pointer controlling said actuating barrel for the purpose of extinguishing the permanent burner, the said fixed pointer being used to effect the release of said actuating barrel to produce a partial extinguishing during the night.

1,395,568. LATCH. GEORGE FRANK, deceased, Titonka, Iowa, by MARY J. FRANK, executrix, Titonka, Iowa. Filed July 19, 1920. Serial No. 397,297. 1 Claim. (Cl. 292—69.)

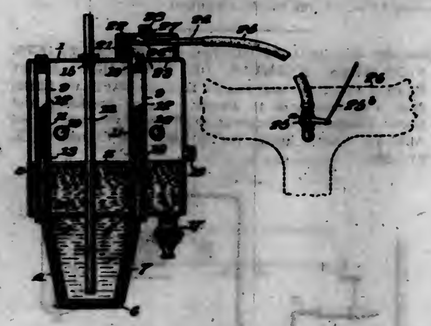
A latch comprising a housing, a pair of pivotally connected latch bars in the housing and projecting from the ends thereof, one of the projecting ends having handle portions, and the other projecting ends being adapted to engage a keeper, a rotatable cross head between the bolts for spreading the same, a spindle carrying the cross head and projecting rearward from the housing, and an operating handle on the outer end of the spindle, the aforesaid handle portions of the bolts and the operating handle of the spindle being on opposite sides of the closure to which the latch is applied.

1,395,569. METHOD OF DRYING OR SETTING PAINTS, VARNISHES, ENAMELS, OR THE LIKE. HARRY BUXTON HARTMAN and FRANK EDWARD HARTMAN, Scottdale, Pa., assignors to Electric Water Sterilizer and Ozone Company, a Corporation of Pennsylvania. Filed Aug. 10, 1920. Serial No. 402,635. 4 Claims. (Cl. 91—68.)



1. A method of drying or setting paints, varnishes, enamels or the like which consists in subjecting the paint composition to the action of ozone simultaneously with the application thereof.

1,395,570. TESTING DEVICE FOR SPARK-PLUGS. GRANVILLE S. P. HOLLAND, Jr., Norfolk, Va. Filed Apr. 6, 1920. Serial No. 371,613. 3 Claims. (Cl. 175—183.)



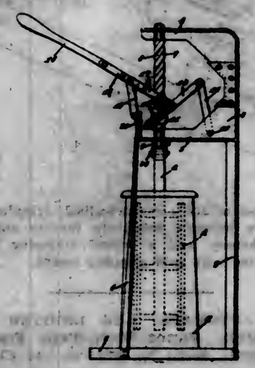
1. A short circuiting device for spark plugs, comprising a metallic conductor adapted to engage the upper

terminal and the body of a spark plug, a spring clip located intermediate the ends of the conductor and adapted

to embrace the insulating portion of the plug, between the terminal and the body, and a handle of insulating material.

1,395,571. CARBON-REMOVING MEANS FOR INTERNAL-COMBUSTION ENGINES. FRANK P. HOWARD, Lisbon, N. H. Filed Feb. 28, 1920. Serial No. 362,066. 4 Claims. (Cl. 123—190.)

1. The combination with a liquid receptacle having two communicating compartments, one partially filled with liquid, and the other having a suction pipe extending therefrom, and provided with a liquid inlet, an air inlet pipe discharging below the level of the liquid in said first mentioned compartment, and means for closing said air inlet pipe so as to cause said suction pipe to draw in liquid from another source through said liquid inlet.

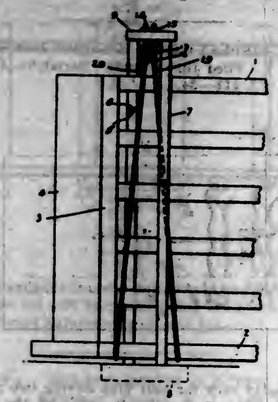


1,395,572. APPARATUS FOR TAKING SOUNDINGS. PERCY SHAFORTH HUDSON, Liverpool, England. Filed Jan. 31, 1921. Serial No. 441,236. 3 Claims. (Cl. 73—5.)

2. In apparatus for taking soundings, an attachment for collecting samples from the sea bottom, comprising in combination a sinker, a cup-shaped receptacle having a threaded recess in the lower part thereof, a rod connecting said receptacle to the sinker, a conical valve slidable on the rod and adapted when in its lowest position to close the mouth of the receptacle when the apparatus is being hauled up, the bottom of the sinker being provided with a screw shaped to receive the upper part of the sliding

valve, a collecting bag adapted to be secured in said recess, and a perforated metal shield screwed into said recess for securing the bag in place.

1,395,573. POWER MECHANISM. JOHN M. HUGHES, Atlanta, Ga. Filed July 23, 1921. Serial No. 487,139. 3 Claims. (Cl. 74—14.)



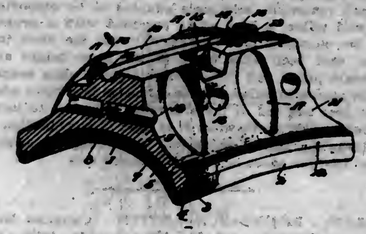
1. Power mechanism of the class described including a supporting structure, a spindle mounted for rotation thereon and having a spiral groove, a nonrotatable nut slidable on the spindle and projecting into the groove, connected levers forming a toggle, link supports for the respective levers, means carried by one of the levers and projecting beyond the toggle for engaging and actuating the nut, and means for oscillating the toggle to shift the nut.

1,395,574. FARM-GATE. THOMAS HUSTON, Kokomo, Ind. Filed Oct. 21, 1920. Serial No. 418,528. 2 Claims. (Cl. 20—76.)

1. A supporting means for a gate, comprising a pair of gate supporting loops in spaced relation, suspension means

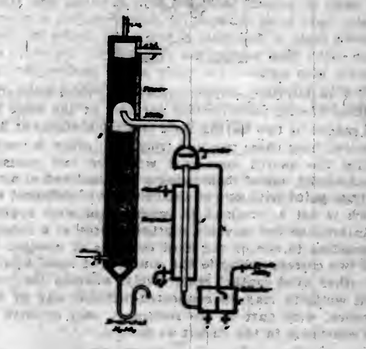
to which said loops are attached, said loops co-acting during the opening of the gate to maintain a rigid connec-

tion with the suspension means to create a torsion effect which aids in closing the gate.



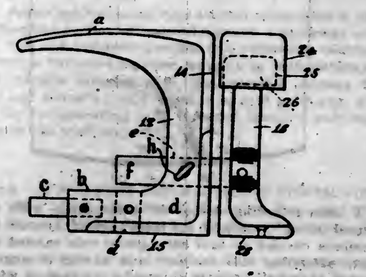
1,395,575. LANDSCAPE. IDA HELEN JARVIS, Brookline, Mass. Filed Jan. 17, 1921. Serial No. 437,875. 3 Claims. (Cl. 41—84.)

1. A device of the class described comprising a backing board, a plurality of relatively large feathers secured against said backing board to represent a number of trees, and comparatively small feathers secured against said board to simulate the undergrowth beneath the trees.



1,395,576. TIRE-TREAD. AARON E. JENNINGS, Owensboro, Ky., assignor of one-half to S. J. Gish, Central City, Ky. Filed Dec. 29, 1919. Serial No. 347,981. 3 Claims. (Cl. 152—1.)

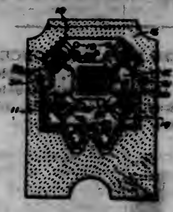
2. A tire tread comprising a body having a circumferential tread surface and oppositely sloping side faces, the body being formed at intervals upon its said side faces with traction lugs and between the lugs with recesses extending transversely into the body, the said body being



formed with other recesses oppositely located and opening through the said tread surface and through the side faces of the body.

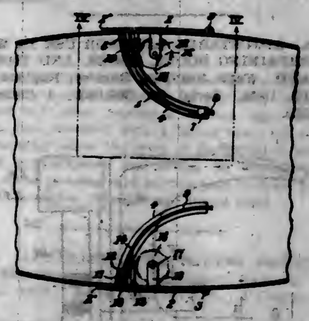
1,395,577. PROCESS FOR THE CONCENTRATION OF NITRIC ACID. OLAF JENSEN, Notodden, Norway, assignor to Norsk Hydro-Elektrisk Kvaelstofaktieselskab, Christiania, Norway. Filed Feb. 24, 1920. Serial No. 360,618. 3 Claims. (Cl. 23—1.)

1. The process of concentrating nitric acid, which comprises circulating the crude nitric acid through an evaporator, withdrawing nitric acid vapor from the circulating current of acid, and drying said vapor.



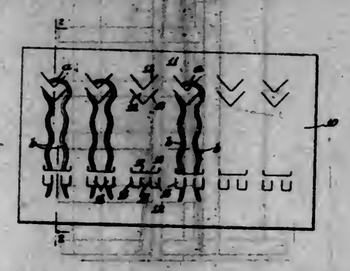
1,395,578. ADJUSTABLE LAST FOR USE IN MAKING AND REPAIRING BOOTS, SHOES, AND THE LIKE, BY HAND. FRED JOHNSON, Burnley, England. Filed June 10, 1919. Serial No. 303,063. 1 Claim. (Cl. 12—123.)

A shoe last, comprising a body portion having two bases arranged at a right angle to each other and each pro-



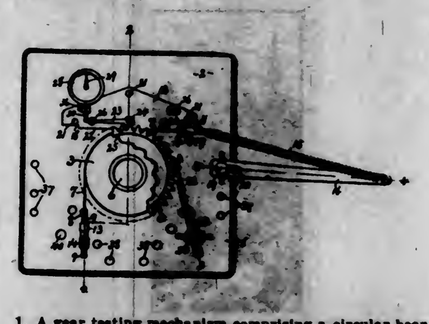
sided with a similar slot, one of the bases forming also a pillar, and the other base having a heavy side plate projecting from it substantially parallel to the said pillar, a small removable sole piece adapted to be supported by the said pillar, a heel pillar provided with a projecting bar for engaging interchangeably with the slots in the bases, said heel pillar being of the same height as the aforesaid pillar and the sole piece when supported by the aforesaid pillar, and an extension heel piece adapted to fit over one end of the aforesaid heel piece to increase its height and width when it is used in combination with the large size base-plates, thereby rendering the same tool to be used for shoes of various different size.

1,395,579. RESISTANCE-SWITCH. CHARLES BROOKE JONES, above Cynwyd, Pa. Filed Jan. 16, 1920. Serial No. 351,852. 6 Claims. (Cl. 219—48.)



1. A switch comprising a plurality of fixed contacts, two of them having their contact surfaces at the same height and spaced by two having their contact surfaces at heights different from these two and from each other, a resistance within the switch connected with the two contacts of equal height, one of them being a terminal and at an intermediate point with one of the contacts of different height, which is not a terminal, in combination with a plurality of interconnected movable contacts, three at a height corresponding to one of the fixed contacts of unequal height and two corresponding to the contacts of equal height and the other fixed contact respectively, whereby the terminal fixed contacts may be connected without any of the resistance, with part of the resistance only or with all of the resistance in the circuit as desired.

1,395,580. SHIP-RETARDING DEVICE. LOUIS JONESIC, Joliet, Ill. Filed Jan. 22, 1921. Serial No. 439,209. 1 Claim. (Cl. 114—145.)

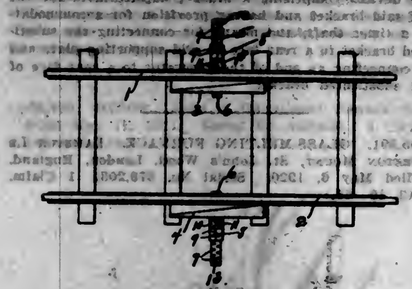


A ship retarding device in combination with a ship, hinged plates carried by the sides thereof, arcuate tubular members carried by said ship, guide rods carried by said plate extending into the ship and having a longitudinal groove cut in the face at the inner arc thereof with rack teeth formed in the bottom of the groove, a pinion journaled adjacent the arcuate rod and having one edge resting into the said groove for engagement with the rack teeth, a motor carried by said ship having a gear upon one end for engagement with the said pinion and the pulley upon the opposite end for rotating said shaft.

1,395,581. DISPLAY-CARD. ADALBERT JOSEPHSON, New York, N. Y. Filed June 9, 1921. Serial No. 476,161. 4 Claims. (Cl. 211—24.)

1. A display card for hair pins having two parallel series of slits formed therein, the slits of the uppermost of said series being substantially V shaped and arranged in pairs one above the other and each pair forming a V shaped tongue with the point of the V directed toward the opposite edge of said card, and the lowermost of said series being groups of U shaped slits forming tongues, each of said groups being slightly offset from the corresponding V shaped tongue at the upper edge of said card.

1,395,582. GEAR-TESTING MECHANISM. OSCAR C. KAYLE, Syracuse, N. Y. Filed Aug. 2, 1919. Serial No. 315,020. 9 Claims. (Cl. 73—51.)



1. A gear testing mechanism comprising a circular bearing, a member in rolling contact with said bearing, means for maintaining said contact, means for supporting a gear to be tested coaxially with the circular bearing, a contact device mounted upon and movable with said member in contact with a tooth of the gear and having an independent movement caused by imperfections in said tooth, and means for indicating the amount of movement of said device from a normal position.

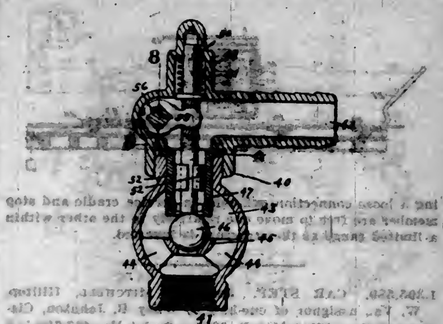
1,395,583. HOLDER FOR CAR AND LOCOMOTIVE REPLACING FROGS. DARWIN B. KEITH, Fort Worth, Tex. Filed June 11, 1921. Serial No. 476,745. 3 Claims. (Cl. 104—253.)

1. A frog holder comprising a bar having an upstanding inclined gripping member integral therewith at one end and an upward bend in said bar near said gripping member, a shoe slidably mounted on said bar and consisting of

a body member mounted under said bar and lateral members bent above said bar and bolted together and forming

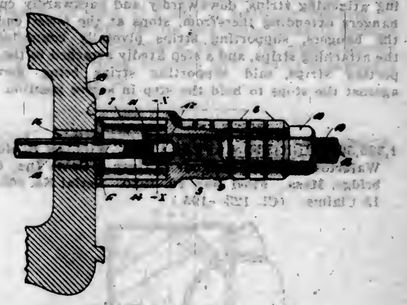
an inclined gripping member for cooperating with the gripping member on said bar, and means for positioning said shoe at different adjustments on said bar.

1,395,584. MULTIPLE-UNIT ELECTRIC HEATER. WILLIAM A. KENNEDY, Leonia, N. J., and AUGUST J. MOTTLAU, Far Rockaway, N. Y.; said Mottlau assignor to said Kennedy. Filed May 26, 1920. Serial No. 384,445. 11 Claims. (Cl. 219—45.)



1. In combination, a plurality of reflectors outwardly pointing in different directions as much as 90 degrees apart; heating units associated with the reflectors in different numbers respectively; and means for supplying current to said units in various numbers.

1,395,585. SOCKET-WRENCH. THOMAS S. KIRBY, Chattanooga, Okla. Filed Sept. 3, 1920. Serial No. 407,840. 4 Claims. (Cl. 81—112.)



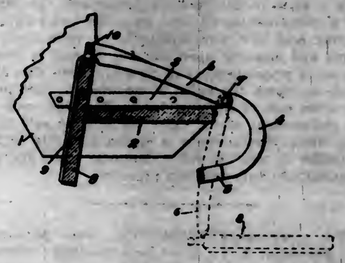
1. A wrench including a head provided with converging shoulders, and coacting jaws slidably connected with the head and having shanks substantially triangular in cross section and provided with inclined faces coacting with said shoulders whereby the jaws will be urged toward each other as the head is advanced upon the jaws, corresponding faces of the shanks abutting when the jaws are closed.

1,395,586. AUTOMATIC SHUT-OFF VALVE. WILLIAM P. KNICKERBOCKER, Irvington, N. J. Filed July 20, 1918. Serial No. 245,882. 4 Claims. (Cl. 137—139.)

1. In a valve of the character described, the combination of a casing having an inlet, an outlet and a valve port connecting said inlet and said outlet, a valve controlling said port and mounted upon one side thereof to close the same upon a preponderance of pressure upon that side of the port on which the valve is mounted, a rigid plunger on the other side of the port for holding said valve open, guides independent of the valve for holding said plunger against lateral displacement, a spring normally actuating said plunger to hold the valve yieldingly open, and means for opening said valve against pressure.

1,395,587. CAM-SHAFT REMOVER. JOHN MCLACHLAN, East Elmhurst, N. Y. Filed July 26, 1920. Serial No. 398,926. 4 Claims. (Cl. 29—85.)

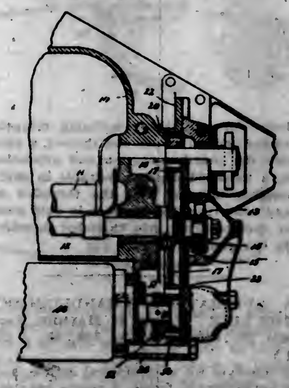
1. A device for removing cam-shafts, comprising a casing, a chamber portion at one end thereof, a guideway connected with the chamber portion and extending laterally therefrom, a threaded member movable in said guideway, a head member integral with the threaded member for guiding and centering said member in said guideway, and means for reciprocating said threaded member and head member in the guideway.



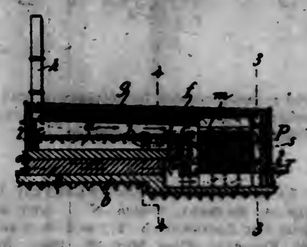
1,395,588. APPARATUS FOR HANDLING SEWER-PIPE AND THE LIKE. WALTUS H. MATHEW, Toronto, Ohio. Filed Mar. 29, 1920. Serial No. 369,595. 7 Claims. (Cl. 214—1.)

1. In a conveyer for a cylindrical article, a carrier consisting of an invertible frame, a cradle adapted to engage upon one side the cylindrical surface of the article and mounted in said frame, and a stop member also mounted

in said frame and adapted to extend across the end of the article when in place in the cradle member, the mounting of the cradle end of the step member in the frame including a loose connection, whereby in service cradle and step member are free to move one relatively to the other within a limited range as the structure is inverted.

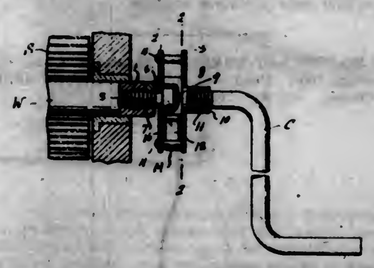


1,395,589. CAR-STEP. JOHN R. MITCHELL, Hilltop, W. Va., assignor of one-half to Wiley B. Johnson, Clemont, Va. Filed May 7, 1921. Serial No. 467,728. 3 Claims. (Cl. 105—447.)



1. An extension step attachment for car steps, comprising attaching strips, downwardly and backwardly curved hangers extending therefrom, stops at the lower ends of the hangers, supporting strips pivotally connected to the attaching strips, and a step fixedly attached to the supporting strips, said supporting strips being movable against the stops to hold the step in active position.

1,395,590. IGNITION APPARATUS. WILLIAM B. MOORE, Watertown, Mass., assignor to Gray & Davis Inc., Cambridge, Mass. Filed Mar. 12, 1920. Serial No. 365,230. 13 Claims. (Cl. 123—195.)



1. Devices for providing battery ignition for an engine which has a laterally extending supporting plate, a bracket removably of said plate and secured to the side of the engine, a generator mounted removably of said bracket; said device comprising a bracket substitutable for the first said bracket and having provision for accommodating a timer shaft, and means for connecting the substituted bracket to a rear face of said supporting plate and for connecting an end of the generator to a rear face of said substituted bracket.

1,395,591. GLASS-MELTING FURNACE. LAMBTON LE BRETON MOUNT, St. John's Wood, London, England. Filed May 6, 1920. Serial No. 379,208. 1 Claim. (Cl. 49—55.)

A glass melting furnace comprising a tank for molten glass having raised bottom regions at opposite sides thereof and a vertical flow feed outlet through each such region, a bridge beneath which the molten glass is constrained to flow before reaching the raised bottom portions aforesaid, fluid fuel burning means at and above one end of the tank, a recuperator at the opposite end thereof, and a casing having recesses below the raised bottom regions of the tank for the reception of molds into which the glass is to be delivered.

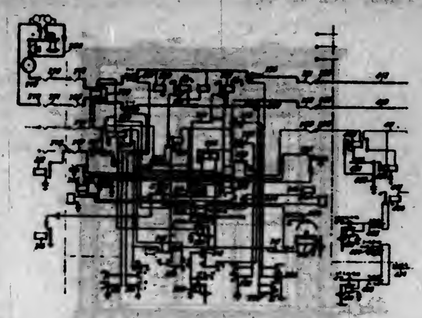
1,395,592. OVERWINDING-PREVENTER. DANIEL E. OSOM, Bennettsville, S. C. Filed Apr. 26, 1920. Serial No. 376,640. 4 Claims. (Cl. 185—43.)

2. The combination with a shaft and means placed under tension by the shaft upon rotation thereof; of a winding device comprising two plates in spaced relation, means connecting said plates and maintaining the same in spaced relation, a shaft extending through one of the plates and fixed thereto, one end portion of the shaft being engageable with the first named shaft, the opposite end portion of said second named shaft extending between the plates, a block positioned between the plates and provided with a means in a face to receive the end portion of the second named shaft between the plates, whereby said second named shaft serves as a support for said block, said block being provided with a trunnion freely directed through the second plate, a rotating medium coacting with the trunnion, and a spring member

operatively supported by the plates and frictionally engaging the block, whereby the shaft and block may rotate in unison, the periphery of the block being provided with means coacting with the spring member, to give an audible signal upon rotation of the block independently of the second named shaft.

1,395,593. HINGE. JOHN M. OSNIANSKI, Newark, N. J. Filed May 11, 1921. Serial No. 468,620. 4 Claims. (Cl. 16—126.)

2. A temple hinge formed of two members, each member comprising a base plate and transversely projecting knuckles, said knuckles being closely adjacent one end of the base plate, the knuckles being separated by a space equal to the width of a knuckle, each base plate at the outer edge of the knuckle being beveled to form a miter abutment for the swinging members, said abutment extending the entire width of each member, the members being identical in outline in cross-section.

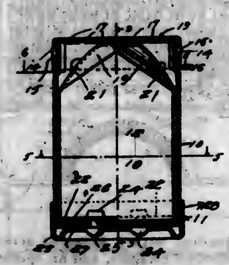


1,395,594. BOX OR RECEPTACLE. RAYMOND O. PFEIFFERLE, Madelia, Minn. Filed Dec. 15, 1919. Serial No. 345,066. 3 Claims. (Cl. 40—10.)

1. The combination with a box cover having a depending flange, a label holding frame having a depending flange arranged to fit about and extend below the flange of the box cover, an inwardly extending flange arranged in superposed relation to the box cover and adapted to project forwardly and overhang the box cover to provide therebetween a compartment for the reception of the label, the flange of said frame having a slot therein of less width than the diameter of said label, whereby the label will have to be sprung into position.

1,395,595. TELEPHONE SYSTEM. LIPA POLINKOWSKY, Antwerp, Belgium, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 1, 1919. Serial No. 334,021. 15 Claims. (Cl. 179—27.)

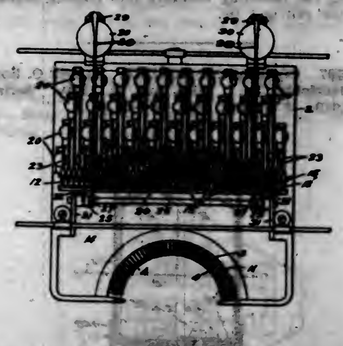
1. In a telephone exchange system, telephone lines, an operator's position, an indicating mechanism at said position, a group of trunks leading to said position, said indicating mechanism being common to the trunks of said group, means for extending said lines over said trunks to the operator's position, and means controlled by said indicating mechanism for rendering said trunks non-selectable when a predetermined number of lines have been extended to the operator's position.



1,395,596. RAIL-FASTENER. JOHN B. ESSTMAN, Washington, N. C. Filed Aug. 30, 1920. Serial No. 406,951. 5 Claims. (Cl. 238—60.)

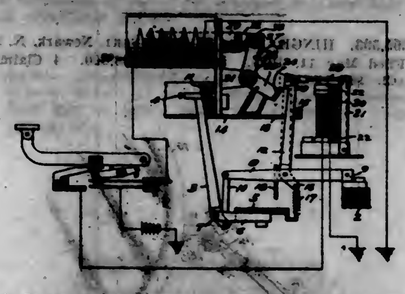
1. In a rail fastener, the combination with a tie having openings in its sides, of a pair of fastening members removably engaged with the tie, and means passable through the members and openings of the tie for simultaneously drawing the fastening members into binding engagement with the rail and tie.

1,395,597. CONDIMENT-HOLDER. ALBERT O. ROBERTS, Philadelphia, Pa. Filed Aug. 3, 1920. Serial No. 400,919. 3 Claims. (Cl. 65—57.)



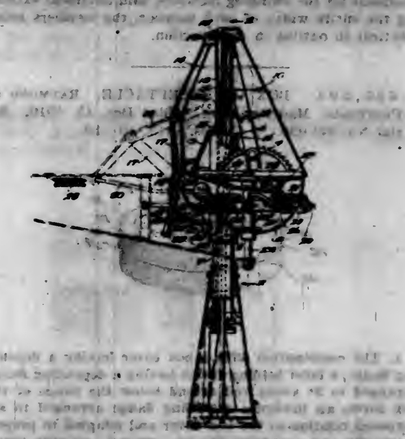
1. A condiment holder having a cylindrical casing, a removable perforated cap or cover and a revoluble base, and an agitator and ejector arranged within the casing and carried by the base, said agitator and ejector consisting of a plate disposed diametrically with its edges arranged adjacent to the side wall of the casing and provided at its upper end with inclined wings integral therewith and extending on opposite sides of the agitator and ejector and having their upper edges arranged in scraping relation with the under surface of the cap or cover.

1,395,592. REFRIGERATOR. Howard H. Dow, Louisville, Ky. Filed May 29, 1920. Serial No. 385,208. 9 Claims. (Cl. 62—97.)



An ice box including an outer heat insulating casing, an inner food receptacle having walls of thin heat conducting material, said receptacle being spaced from the sides and top of the casing to form an ice receiving space, access means from the exterior end of the casing to the food receptacle and ice space and a supporting lattice frame within the food receptacle, said frame constituting means for stiffening the thin walls of the food receptacle and preventing bending thereof, said frame being exposed to the interior of the food receptacle whereby to permit attachment of food supporting hooks.

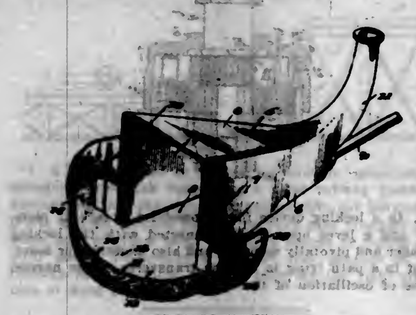
1,395,599. ELECTRICAL ACTUATING MEANS FOR TYPEWRITER TYPE-BARS AND OTHER DEVICES. Ferdinand Satterstrom, Hastings, Minn., assignor to Magnetic Power Transmitter Company, Faribault, Minn., a Corporation of Minnesota. Filed Jan. 31, 1920. Serial No. 355,487. 7 Claims. (Cl. 197—14.)



1. The combination, with a series of actuating levers, of a series of selecting magnets, and an operating magnet, each selecting magnet, when energized, serving to bring the corresponding actuating lever into position to be moved by the operating magnet, a series of keys corresponding to the actuating lever, each provided with a contact device, and a universal contact bar, movably supported and arranged to be operated by any key, each key serving, when operated, to first bring its contact device into connection with said contact bar, and thereafter to move said bar to close an electrical circuit through said bar, the operating magnet and the selecting magnet corresponding to the operated key.

1,395,[illegible]. ELECTRICAL ACTUATING MEANS FOR TYPEWRITER TYPE-BARS AND OTHER DEVICES. [illegible], Minneapolis, Minn., assignor to Magnetic Power Transmitter Company, Faribault, Minn., a Corporation of Minnesota. Filed Oct. 29, 1920. Serial No. 420,485. 5 Claims. (Cl. 197—14.)

1. In an electrical actuating mechanism of the class described, the combination with a movable power-bar or member, of a plurality of magnets, armatures connected to and coöperating with said bar, and arranged to be actuated by said magnets, and means stopping the movement of one of the armatures before the other armature reaches the limit of its movement.

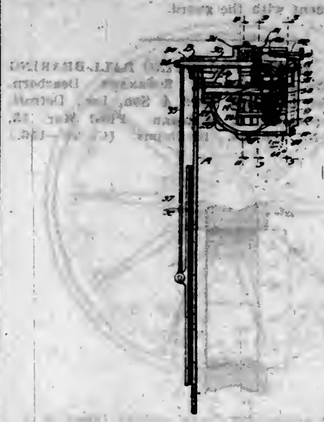


1,395,601. WINDMILL. Daniel E. Scholes, Chicago, Ill., assignor to Aermotor Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 7, 1921. Serial No. 450,279. 21 Claims. (Cl. 170—47.)

1. In a windmill, the combination with a wind wheel having a substantially horizontal shaft; of a pinion upon said shaft; a gear wheel in mesh with said pinion; a casing inclosing said gearing and comprising an upper or cover portion and a lower or body portion closed by said cover portion and on which body portion said shaft, pinion, and gear wheel are rotatively supported, this body portion of the casing having an upright open ended sleeve portion located between the axes of said pinion and gear wheel; an upright tubular column surrounded by and constituting a bearing for said sleeve portion of the casing to enable the casing and the parts carried thereby to turn in a substantially horizontal plane of rotation; an upright load shaft passing through the tubular column and into the cover portion of the casing where it has power connection with the gear wheel; and mechanism upon

the exterior of the casing for pivoting said wheel in and out of the wind and having an operating connection extending through the tubular column and which connection is upon the exterior of the casing above said column.

1,395,602. RESONANCE-CHAMBER FOR SOUND-REPRODUCING APPARATUS. Hermann Schroder, New York, N. Y. Filed June 4, 1920. Serial No. 386,466. 5 Claims. (Cl. 181—27.)

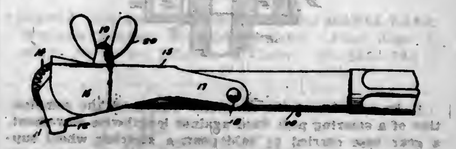


1. A resonance chamber for sound reproducing apparatus having in its lower portion a bottom, and a wall completely surrounding the bottom and providing a basin adapted to contain a volume of liquid.

1,395,603. PISTON-PACKING. Henry Sharl, Cleveland, Ohio. Filed Mar. 26, 1921. Serial No. 456,282. 2 Claims. (Cl. 74—169.)

1. In combination a piston having one or more circumscribed grooves therein and a packing ring in said groove or grooves comprising a continuous resilient packing ring divided at a single point and having a partly cylindrical and a partly conical surface at its inner side, said packing being substantially the same in width as the width of the groove in which it is disposed, and a flat rolled spring steel follower ring rolled and pressed into beveled form engaging the beveled surface on the inner side of the outer packing pressing outward and downward engaging one of the sides of the circumscribed groove in the piston.

1,395,604. WINDSHIELD-CLEANER. Stephen G. Skinner, Wilmette, Ill. Filed Feb. 14, 1921. Serial No. 444,718. 4 Claims. (Cl. 121—164.)



1. A device of the class described comprising a pair of opposed cylinders, connected pistons adapted to reciprocate in said cylinders, a suction conduit, said suction conduit comprising a terminal in the form of a tube having a flanged end, means carried with the cylinders providing a surface over which the flanged end of the conduit is adapted to move, there being two ports in said last mentioned means with which said tube may communicate, each port communicating with one of said cylinders, a snapover device comprising a quick motion arm movable in a plane parallel to the surface aforesaid, an aperture in said arm through which said tube freely extends, a spring acting between said arm and the flanged end of said tube, and tending at all times to urge the flanged end of the tube against the aforesaid surface, and means carried with the pistons adapted to operate the snapover device to cause said tube alternately to communicate with said ports.

1,395,605. CHAIN-TIGHTENING LEVER. William B. Smith, Niagara Falls, N. Y., assignor to American Chain Company, Inc., a Corporation of New York. Filed Jan. 20, 1910. Serial No. 272,160. 6 Claims. (Cl. 24—69.)

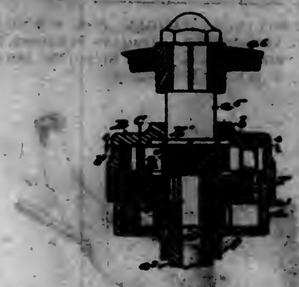
3. A chain tightening lever having connections near one end with the ends of the chain to be tightened, one of said connections being detachable, and having near its other end a normally open hook fashioned to engage a torsionally displaced link of the tightened chain and adapted to be locked thereto by the resistance of said link to torsional displacement, said hook being offset in helical form from the body of the lever, and the tip of the hook overlapping the chain edge line of the lever body.

1,395,606. EMERY-WHEEL DRESSER. Carl E. Soderstrom, Muskegon, Mich. Filed Jan. 13, 1920. Serial No. 351,206. 1 Claim. (Cl. 125—37.)

The combination with an emery wheel dressing tool having a handle provided with a bifurcated head rotatably supporting a dressing element and said head having a vertical opening arranged rearwardly of the bifurcation, of a guard disposed over the head and handle and including side and top walls, said top wall having its forward portion inclined upwardly and disposed near the dressing element, said side walls being arranged over the sides of the head and extended rearwardly beyond

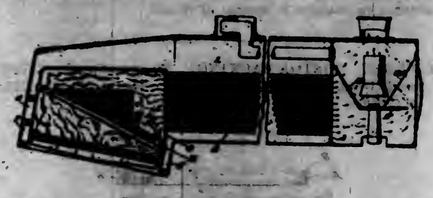
the rear end of the top wall to form arms, means pivoting arms to the handle, a bolt in said opening and extending through the top wall of the guard, and a nut on said bolt for engagement with the guard.

1,395,607. ART OF PRODUCING BALL-BEARING STRUCTURES. Charles B. Sorensen, Dearborn, Mich., assignor to Henry Ford & Son, Inc., Detroit, Mich., a Corporation of Michigan. Filed Mar. 15, 1920. Serial No. 366,664. 15 Claims. (Cl. 29—156.)



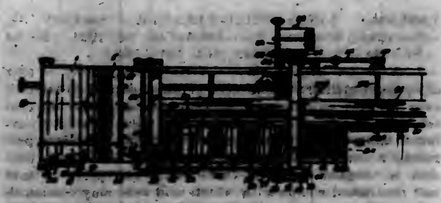
1. The method of producing a ball race members which consists in subjecting the member blank to pressure application intermediate the sides of the blank to vary the density of the blank cross-sectionally and produce an embryo race member having an approximate race groove face and with the portion of greater density corresponding approximately with the bottom of the groove, and then completing the groove by a removal of groove face material.

1,395,608. STEERING-WHEEL LOCK. Theodore D. Stanley, Detroit, Mich., assignor to Leland Lock Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 17, 1919. Serial No. 338,615. 9 Claims. (Cl. 70—129.)



1. In a device of the character described, the combination of a steering post fixed against lengthwise movement, a gear case carried by said post, a steering wheel supported by a stub shaft adapted for lengthwise movement with reference to the steering post, planetary gearing housed in the gear case for operably connecting the stub shaft with the post, a swinging annulus completely encircling the stub shaft and one of said gears and shiftable to a concentric or an eccentric position and adapted to maintain the steering wheel in either an operative or an inoperative relation to the steering post, and manually operable means for shifting the position of the swinging annulus.

1,395,609. LOCK FOR STEERING-WHEELS. Theodore D. Stanley, Detroit, Mich., assignor to Leland Lock Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 17, 1919. Serial No. 338,616. 7 Claims. (Cl. 70—129.)

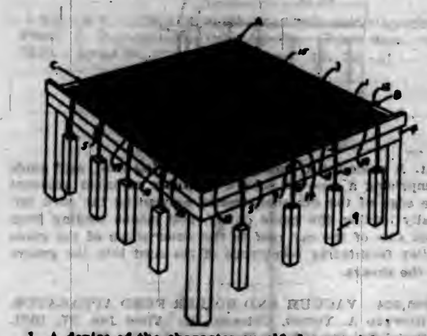


5. In a locking device for automobiles, a locking member, and a lever operatively connected with the locking member and pivotally mounted and also mounted for movement in a path lying in a plane transverse to the normal plane of oscillation of the lever.

1,395,610. BOILER-FURNACE. Joseph H. Stannard, Jr., Columbia, S. C. Filed Oct. 7, 1919. Serial No. 328,150. 3 Claims. (Cl. 110—37.)

3. In a horizontal fire tube boiler, including a fire box provided with a grate, a crown sheet and a substantially vertical tube sheet, an arch extending from side to side of the fire box and throughout the greater part of the length thereof, said arch including an upwardly projecting portion, substantially triangular in longitudinal section with its vertical portion extending to approximately above the level of the lower half of the series of fire tubes and spaced from and parallel to the tube sheet, for the purpose described.

1,395,611. THRESHING-MACHINE. James Sidney Starling, North Tonawanda, N. Y. Filed Oct. 11, 1915, Serial No. 55,299. Renewed Jan. 22, 1921. Serial No. 439,317. 15 Claims. (Cl. 130—13.)

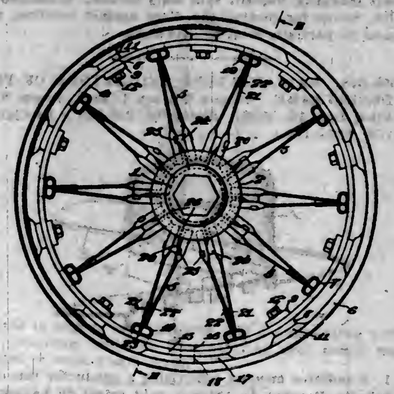


5. In a flax thrashing machine the combination of a feeding table, means for feeding flax straw along said table, holding the straw in a position transversely to the table with the bolls of the straw overhanging the edge of the table, an upper and lower series of rubbing rollers for rubbing the bolls of the straw as the straw moves along the table and a beater for beating the bolls after it passes from the rollers.

1,395,612. LANDING STAGE OR STATION FOR AIR-CRAFT. William J. Stewart, Philadelphia, Pa. Filed Dec. 16, 1920. Serial No. 431,110. 5 Claims. (Cl. 244—2.)

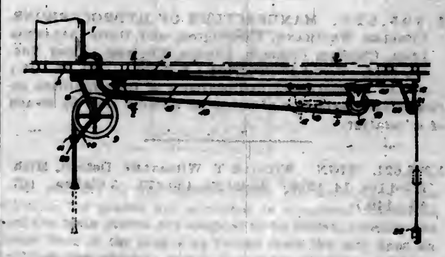
1. A landing stage or station for aircraft comprising a skeleton framework supporting a rigid runway platform having terminal portions arranged at different horizontal levels and an inclined portion between said terminal portions, said platform being formed of boards or planks laid with spaces therebetween for the free passage of air through said platform, thereby relieving the rigid structure of wind stresses.

1,395,613. WIRE-SCREEN-STRETCHING DEVICE. Frederick A. Stickle, Cincinnati, Ohio, assignor, by mesne assignments, to The Lunkenheimer Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 17, 1919. Serial No. 283,173. 8 Claims. (Cl. 140—109.)



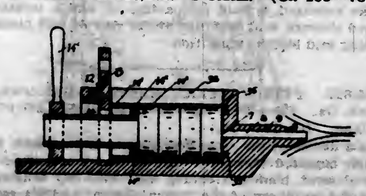
1. A device of the character specified, comprising a supporting means for screen frames, and a plurality of members to engage the screen wire mounted on the support located on two sides, at least, of the frame, and means to automatically move said members to exert a stretching strain on the wire in two directions.

1,395,614. PNEUMATIC TIRE. Robert Stock, Sandusky, Ohio. Filed May 23, 1919. Serial No. 299,274. 6 Claims. (Cl. 152—13.)



1. A transversely divided pneumatic tire and means engaging each end of the tire for sealing it and moving the ends longitudinally.

1,395,615. VEHICLE-WHEEL. Robert Stock, Sandusky, Ohio. Filed Jan. 15, 1920. Serial No. 351,593. 22 Claims. (Cl. 301—78.)



1. A metal vehicle wheel comprising a hub, a felly having open ventilating slots, and spokes connecting said hub and felly.

1,395,616. AIR-HOSE SUPPORT. Otto Strosberg, Creighton, Nebr. Filed Oct. 2, 1920. Serial No. 414,238. 4 Claims. (Cl. 299—77.)

1. In an air hose support a supported trackway, a carriage slidably mounted on the trackway, a fixed pulley, a pulley carried by the carriage, an air hose passing around the last mentioned pulley and having one end fixed and its opposite end depending from the fixed pulley to be manually pulled downwardly, and means for moving the carriage away from the fixed pulley to draw the hose to elevated position.

1,395,617. APPARATUS FOR TWISTING METAL BARS. William Stubbs, Sheffield, England. Filed June 3, 1920. Serial No. 386,181. 1 Claim. (Cl. 153—78.)

An apparatus for twisting metal bars into spiral form, comprising a base, forming a die holder, a tubular guide at one end of said holder, a tray provided with a passage

at the other end of the holder for receiving the fins to be formed, a plurality of flat cylindrical disks disposed within the holder, each of said disks having a helical slot disposed centrally thereof, said slots forming a continuous helix, means for locking the disks against rotation, and means for partially rotating said disks.

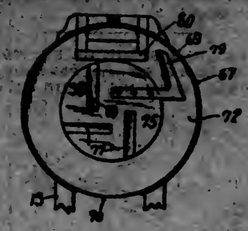
1,395,618. RADIATOR-TUBE AND METHOD OF PRODUCING SAME. George William Tuerff, Rome, N. Y. Filed Dec. 18, 1919. Serial No. 345,739. 10 Claims. (Cl. 113—112.)

1. A radiator member comprising a conductor tube and a spirally disposed fin thereon, said spiral fin having on its inner edge a series of alternately oppositely bent tabs forming a staggered soldering footing disposed alternately above and below the plane of the fin in contact with the surface of said tube for intimate connection therewith.

1,395,619. [WITHDRAWN.]

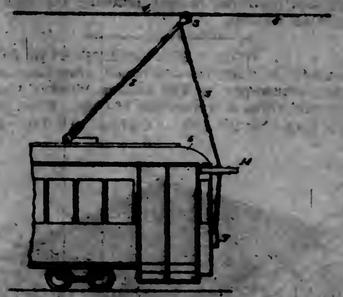
1,395,620. MANUFACTURE OF HYDROCARBONS. Charles Weizmann, Kensington, and David Alliston Legg, Clapham Common, London, England. Filed Nov. 10, 1917. Serial No. 201,464. 3 Claims. (Cl. 26—24.)

1. The production of hydrocarbons of the naphthene series by polymerization of butene in a liquid state by means of a catalyst.



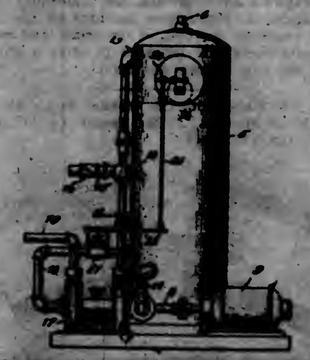
1,395,621. SIGN. William T. Wemaltey, Detroit, Mich. Filed Dec. 14, 1920. Serial No. 430,679. 5 Claims. (Cl. 40—140.)

1. A sign comprising a frame, permanently fixed partitions dividing the frame into block receiving compartments, said partitions having alined central openings, blocks arranged in said compartments, and a locking bar passed through said openings at the rear of said blocks for holding said blocks in position.



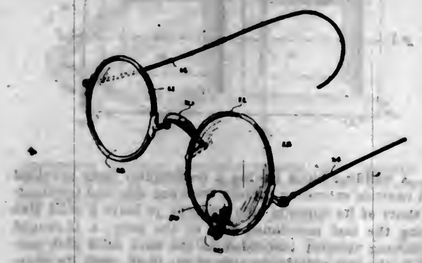
1,395,622. FEED-CUTTER. Emory O. Williams, Red Oak, Ga. Filed Dec. 10, 1918. Serial No. 266,076. 1 Claim. (Cl. 146—36.)

In a device of the class described, a main frame, a feed trough mounted thereon, a cutting device including a rotary element, blades extending approximately tangentially from the periphery of the rotary element and intersecting the path of travel of the material to be cut, at the point of discharge thereof from the trough, one flat side of the blades moving in approximate contact with the end and sides of the trough, and adjustable cutting plates along the bottom of the trough opening between the successive blades



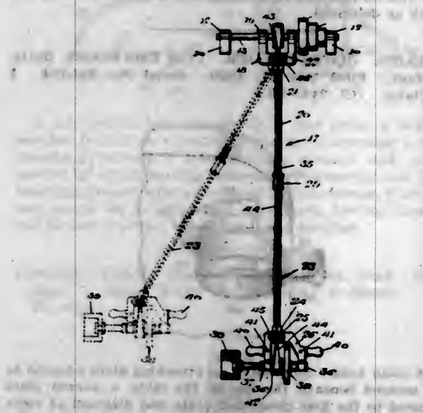
and the lower end portion of the trough acting as a holding device.

1,395,623. RETRIEVER-CORD GUIDE FOR TROLLEY-POLES. William H. Wells, North Vancouver, British Columbia, Canada, assignor of one-half to Ernest Jean Deacon, Vancouver, British Columbia, Canada. Filed Apr. 1, 1921. Serial No. 457,695. 4 Claims. (Cl. 191—38.)



1. A guide for a trolley pole retrieving cord, said guide comprising a grooved sheave rotatably mounted adjacent the edge of the car roof, means preventing the cord laterally leaving the guide pulley, and means leading from each side of the car roof to the outer edges of the guide pulley facilitating reentrance of the cord into the groove of the sheave.

1,395,624. VACUUM AND BOILER FEED APPARATUS. Howard A. Young, Chicago, Ill. Filed Jan. 27, 1921. Serial No. 440,468. 4 Claims. (Cl. 103—79.)



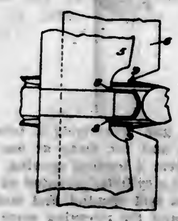
1. In an apparatus of the character described, the combination of a tank, means for delivering steam and water of condensation from a heating system to said tank, a pump connected with the tank, and means controlled by the water level in said tank for admitting water from the tank to said pump, whereby such surplus water is delivered under pressure to a boiler or the like.

1,395,625. ATTACHMENT FOR EYEGLASSES. Leo Jay Zimmerman, Ladysmith, Wis. Filed May 13, 1921. Serial No. 469,184. 7 Claims. (Cl. 88—41.)

1. An attachment of the character described, comprising a pair of members pivotally connected at their one ends, a lens supported by the free end of one of said members, and spring means associated with said members whereby they will be caused to press toward one another.

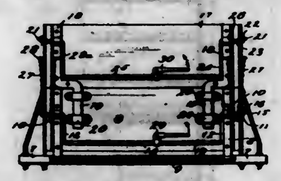
1,395,626. FLEXIBLE OPERATING MECHANISM. Percy L. Billingsley, Orlando, Fla. Filed Sept. 29, 1919. Serial No. 327,276. 7 Claims. (Cl. 74—21.)

7. An operating mechanism including a pair of members, a pivot connecting them, a shaft rotatable in one member, a pulley on the shaft, a belt passing around said pulley and having runs extending along the other member at opposite sides thereof, and means for guiding said runs of the belt to pass the opposite ends of said pivot in the axis thereof, to bend on a line substantially coinciding said axis.



1,395,627. FASTENING DEVICE. John T. Binkley, Chicago, Ill. Filed Dec. 10, 1919. Serial No. 343,943. 6 Claims. (Cl. 292—98.)

1. The combination with a container comprising sections having walls adapted to close together, of a socket carried by one of said walls, a dowel carried by the other wall and provided with a catch-shoulder, a spring-projected catch working through the wall carrying said socket and



adapted to engage said shoulder, and a push-button movably connected with the wall carrying said socket and adapted to retract said catch.

1,395,628. MEANS FOR FOLDING THE PLANES OF AIRCRAFT. Harold Bolas, Clifton, Bristol, England, assignor to George Geach Parnall, Bristol, England. Filed Jan. 6, 1921. Serial No. 435,432. 1 Claim. (Cl. 244—12.)

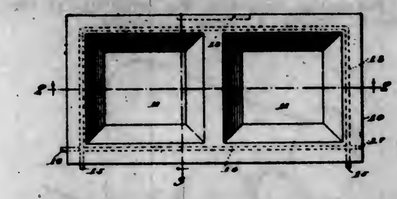
In aircraft of the heavier than air multiplane type wherein the planes are arranged in staggered formation and the main planes are adapted to be folded, forming the hinge lines of the planes as viewed from the side upon an inclined line which is parallel or substantially parallel to an imaginary line joining the leading edges of the main planes, said hinge lines when viewed from the front being inclined to the vertical the bases of the hinge lines being farther apart than the upper ends thereof.

1,395,629. DEADLOCK FOR END DROP-GATES. Charles C. Brakefield, Allensville, Ky., assignor of one-half to Jesse B. Boyd, Allensville, Ky. Filed Apr. 12, 1920. Serial No. 373,269. 1 Claim. (Cl. 296—57.)

In a wagon body, a sectional end gate comprising a lower and an upper section, the lower section hinged at its lower end to the rear base sill of the body, said hinge including straps secured to the outer face of said lower section and provided with bearings for a latch member, said latch comprising a yoke shaped body portion disposed longitudinally of the gate section and arms, each arm

having a journal pin mounted in the aforesaid strap bearings and extending laterally outwardly therefrom, said pins provided with bent ends or lugs, eyes at the sides of the wagon body adapted to receive said lugs, the upper section of the gate provided with bearing straps for a corresponding latch mechanism, said straps of the upper section offset and extending downwardly and engaging keepers on the outer face of the lower section, and a chain secured at one end to the upper section, and its opposite end to the side of the wagon body, whereby the gate as a unit may be supported in horizontal position to form a shovel board.

1,395,630. NON-RECOIL GUN. CLELAND DAVIS, Englewood Cliffs, N. J. Filed Nov. 18, 1920. Serial No. 424,980. 15 Claims. (Cl. 89—40.)



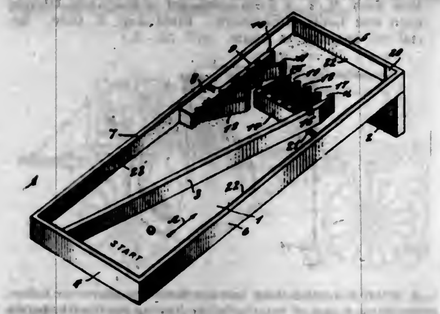
13. A non recoil gun comprising a tubular gun body open at both ends, and cut away at one side near its central region to form a loading opening, a door in the form of a segment of a cylinder mounted on said gun body, and adapted to close said opening, and means for locking said door in place and for releasing same when desired, substantially as described.

1,395,631. COFFERDAM. HENRY D. DEAN, Benton Harbor, Mich., assignor of one-half to Fred J. Petrovics, Chicago, Ill. Filed Apr. 29, 1919. Serial No. 293,431. 8 Claims. (Cl. 114—229.)

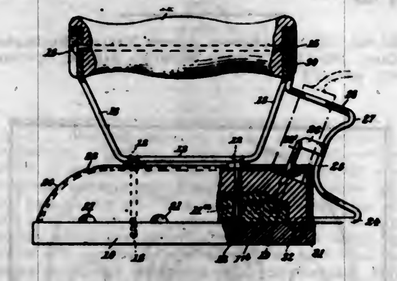
1. A boat patch comprising a body, a frame, and a gasket, said body comprising similar sheets of metal having similarly positioned apertures therethrough fixed to said frame, and said gasket being fixed to the outer edges of said frame.

1,395,632. BUILDING-BLOCK. VAN EMERY EASTERDAY, Urbana, Ill. Filed Jan. 17, 1920. Serial No. 352,007. 2 Claims. (Cl. 72—42.)

2. A building block having a rectangular body provided with cavities extending therein from one side and terminating short of its opposite side whereby to leave a solid slab closing the last mentioned side of the body, a U-shaped reinforcing member embedded in the said solid slab parallel to the last mentioned side of the body, with its angular portions disposed around and beyond the limits of the said cavities and terminating in parallel extremities projecting beyond one face of the block parallel with and adjacent to opposite ends of the block, the opposite face of the body of the block having a lengthwise recess located at an approximately central point between its ends, in the plane of the said reinforcing member, and a reinforcing rod extending longitudinally through the block body and crossing the extensions of the U-shaped member adjacent to the said extremities of the latter, said rod projecting at one end beyond one end of the block and having its opposite end terminating in a recess in the opposite end of the block as described.



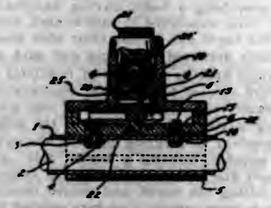
1,395,633. CLOTH-HOLDER. CURT ENGLEHARDT, Butte, Mont. Filed May 21, 1920. Serial No. 383,104. 1 Claim. (Cl. 248—20.)



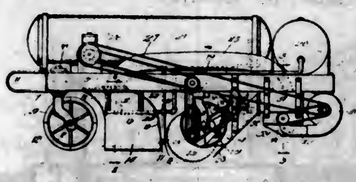
A cloth holder comprising an attaching plate adapted to be secured beneath the top of the table, a curved plate secured to the first mentioned plate and disposed at right angles thereto, the attaching plate extending beyond the curved plate to provide an attaching flange having perforations therein and inwardly curved spring fingers extending from the curved plate and having their free ends in contacting engagement to yieldingly receive the cloth.

1,395,634. GAME. WILLIAM FROTHINGHAM, New York, N. Y. Filed May 29, 1920. Serial No. 385,095. 10 Claims. (Cl. 46—62.)

1. A game device comprising a shallow box, a partition wall extending from adjacent one end wall convergingly toward one side wall and forming therewith a converging passage, said partition wall terminating a short distance from the opposite end wall, and a series of auxiliary partition walls arranged in the box between the partition wall and the other side wall to form a series of compartments opening generally toward said opposite end wall, into one of which a ball projected down the converging passage may roll.



1,395,635. ELECTRIC IRON. THOMAS D. FINIZIO, Kitchawan, N. Y., assignor to Steatite Electric Products Corporation, a Corporation of New York. Filed Apr. 16, 1920. Serial No. 374,495. 13 Claims. (Cl. 219—25.)



1. An electric iron comprising a base plate, a heating member formed as a unitary structure comprising a heat absorbing element, a heat emitting element, and means carried by said absorbing element for connecting said heat emitting element with a source of electric energy, a handle, and means for securing said base plate, heating element and handle together, substantially as specified.

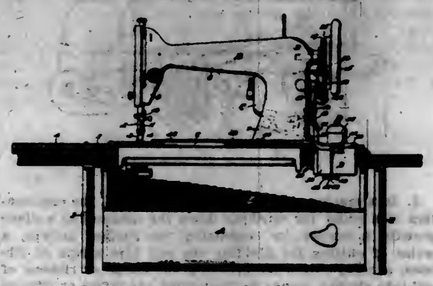
1,395,636. LOCK. JESSE H. GILMS, Ogden, Utah. Filed Sept. 7, 1920. Serial No. 408,455. 9 Claims. (Cl. 70—90.)

1. In combination with the notched column and notched steering post of an automobile; of means for locking the post to the column, comprising spring influenced lugs normally out of the notches of the steering post, means for moving the lugs into said notches, means retaining the lugs so positioned, and means operable to permit the spring influenced lugs moving out of said notches and for releasing said retaining means.

1,395,637. WEED-KILLING IMPLEMENT. EUGENE C. GRAVES, Kankakee, Ill. Filed Nov. 22, 1919. Serial No. 339,895. 14 Claims. (Cl. 97—71.)

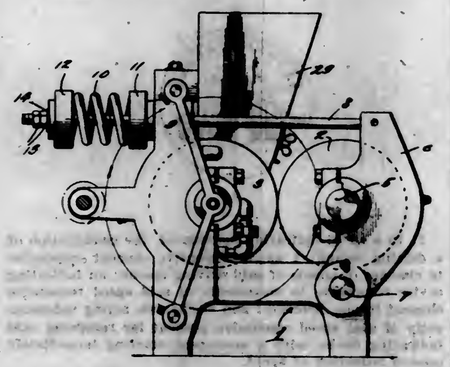
1. In a machine of the character described, the combination of a roller for crushing down the upstanding surface growth, a burner for consuming the surface growth, a series of cutters for dividing the soil into strips or ribbons, a cross cutter for breaking the strips or ribbons of soil into chunks, means for delivering the strips or ribbons to the cross cutter, a screen for segregating the roots from the soil, means for delivering the soil from the cross cutter to the screen, and means for discharging the roots, the whole being mounted for transportation across a field, substantially as described.

1,395,638. SPEED-INDICATING INSTRUMENT. LEO J. GRUBMAN, Erie, Pa., and GEORGE A. DUDEN, Brooklyn, N. Y. Filed May 14, 1919, Serial No. 297,013. Renewed Nov. 13, 1920. Serial No. 423,982. 15 Claims. (Cl. 116—57.)



1. In a speed indicating instrument, the combination of a driving means; a speed responsive element responsive to changes of speeds of said driving means; an indicating device responsive to movements of said speed responsive element in one direction; and mechanism acting independently of said speed responsive element for returning said indicating device with a movement starting immediately upon a reduction of speed.

1,395,639. SHOE. MICHAEL G. GRUNDMANN, Faribault, Minn. Filed Jan. 26, 1921. Serial No. 440,008. 2 Claims. (Cl. 12—142.)



1. A method of making a turn shoe consisting in the use of inner and outer soles which are first secured together at a point remote from their margins, the portion of the inner sole beyond its point of securement to the outer sole being then turned upwardly and sewed to the shoe upper, following which the latter is turned inside out to expose the said outer sole and incase the inner sole.

1,395,640. MOTOR ATTACHMENT FOR SEWING-MACHINES. Martin Heinze, Elizabeth, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed July 18, 1919. Serial No. 311,849. 8 Claims. (Cl. 172—179.)

1. A motor attachment for sewing machines comprising, a bracket adapted for attachment to the frame of a sewing machine, a driving motor carried by said bracket with its shaft in position for operative connection to the sewing machine, and a motor-controller mounted on said bracket and electrically connected to said motor.

1,395,641. CHEMICAL APPARATUS. Ralph V. Heuser, Yonkers, N. Y. Filed Aug. 8, 1918. Serial No. 248,963. 4 Claims. (Cl. 100—47.)

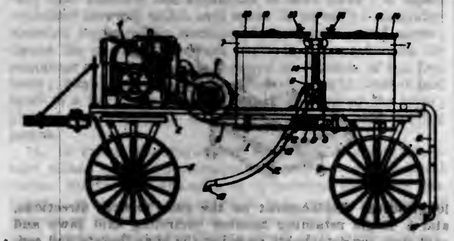
1. In an apparatus of the class described, a pair of high pressure rolls, one of which is composed of disks having porous material between them and extending to the periphery of the roll, a chamber within the roll into which said porous material extends, and means connected with said chamber for drawing off the liquid released from the material treated by the rolls.

3. In an apparatus of the class described, a pair of pressure rolls operable to turn toward each other and equipped with means for exerting high pressure at the periphery thereof, one of said rolls being solid and the other composed of a multiplicity of solid disks with annular grooves formed on the opposed faces of said disks with apertures extending through the walls thereof to afford communication between the grooves of the various disks, porous elements arranged between said disks, and pipes connected with said grooves and adapted to be connected with suction means whereby the liquid released by the pressure of the rolls on the material treated is drawn into said grooves and conveyed to a suitable place of deposit.

1,395,642. TEA-CARTRIDGE. Benjamin Hirschhorn, New York, N. Y., assignor to National Tea Bag Co., New York, N. Y., a Firm composed of Benjamin Hirschhorn and Louis Hirschhorn. Filed Aug. 5, 1920. Serial No. 401,293. 1 Claim. (Cl. 53—3.)

A device for extracting essence from tea-leaves or coffee, comprising a bag of textile fabric having its mouth drawn into folds, a suspending string abutting with one of its ends against said folds, and a metal strip encircling and compressing said folds for closing the mouth of said bag and for attaching said string thereto, the ends of said strip being spaced apart and the gap between said ends being disposed at an oblique angle to a plane in which one of the flat faces of the encircling ring is located, thereby preventing said string from becoming disengaged from said bag.

1,395,643. GAME. George Albert Kelley, Burlington, Kans. Filed Dec. 3, 1919. Serial No. 342,052. 1 Claim. (Cl. 46—41.)

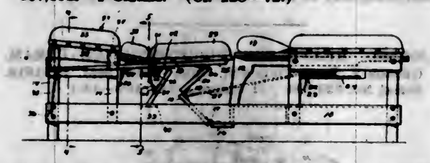


A game comprising a board having marginal flanges, a transparent cover supported by said flanges, arcuate strips secured to the board and having their ends spaced to provide oppositely arranged entrances and said strips form inner and outer fields, a plurality of relatively spaced circular members secured to the board centrally thereof and having entrance, and the entrances of one member being arranged oppositely to the entrance of the adjacent member, said members coöperating to form runways, and the innermost member forming a center field, game pieces on said board and adapted to be moved through the entrances by tilting the board, and curved members having spaced ends to form assorting pockets secured to the board within the inner field.

1,395,644. COTTON-HARVESTER. Gerard S. Kerr, Whittenburg, Tex. Filed Sept. 22, 1917. Serial No. 192,608. 10 Claims. (Cl. 56—42.)

2. In a collecting machine, the combination with a pair of tanks, an air impelling device and a collecting pipe,

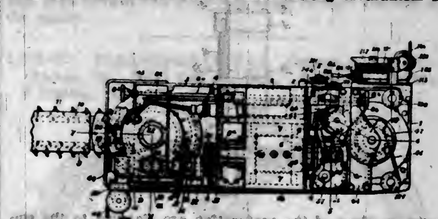
of valve mechanisms for controlling the operative connection of said device and of said pipe to said tanks, and means for controlling said valve mechanisms.



6. In a cotton harvester, the combination with a pair of tanks and means for actuating a current of air through said tanks, of means for selectively controlling the operative connection of said actuating means to the one or the other of said tanks.

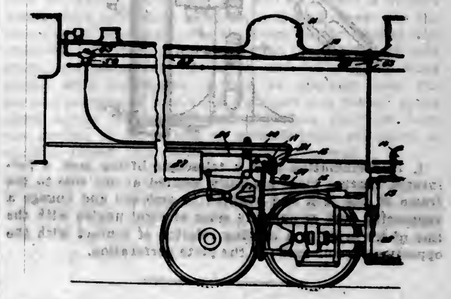
1,395,645. DIRECTION-INDICATOR. Walter M. Lebdom, Oakland, Calif. Filed Oct. 14, 1920. Serial No. 416,840. 8 Claims. (Cl. 116—29.)

1. In a direction indicator of the class described, in combination, a cylinder having a division wall centrally thereof, a piston in each end of the cylinder, an arrow swingingly mounted upon a shaft adjacent the outer end of each piston, and gear and rack means connecting each shaft with its respective piston, whereby when said pistons are moved inwardly to a predetermined degree, said arrows will assume a vertical position, and when said pistons are moved outwardly to a predetermined degree the arrows will assume a horizontal position.



1,395,646. CHIROPRACTIC TABLE. John H. Laue, San Antonio, Tex. Filed May 7, 1921. Serial No. 467,552. 4 Claims. (Cl. 128—72.)

1. In a chiropractic table including a frame, a stationary leg support carried thereby, and an upright frame at the end of the frame opposite the leg support; an elongated supporting bar hinged intermediate its ends upon said upright frame, spring means opposing movement of said hinged bar, a head rest carried by the forward end of said bar, a chest support on the intermediate portion of said bar, and an abdomen support upon the rear end of said bar.

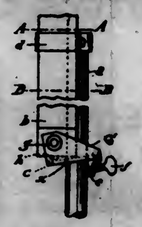


1,395,647. MINING-MACHINE. Nils D. Levin, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Sept. 28, 1916, Serial No. 122,705. Renewed Jan. 28, 1921. Serial No. 440,806. 9 Claims. (Cl. 262—30.)

7. In a mining machine, the combination of a main frame adapted to rest upon and slide over the floor of the mine, of a horizontally extending elongated cutting mechanism pivotally supported on said main frame, means to rotate said cutting mechanism about its pivot during cutting operation, means to lock said cutting mechanism in

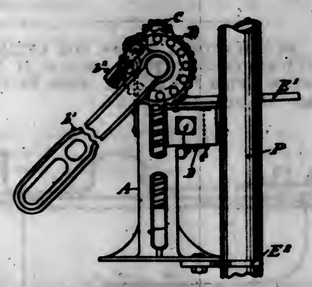
any one of several angular positions relative to the main frame, and feeding and guiding mechanism comprising means to move the machine bodily relative to the coal face, and means independent of said moving means to balance the strains produced thereby.

1,395,648. STEAM-SUPPLY MEANS FOR CYLINDERS OF RAILWAY-LOCOMOTIVES. Samuel H. Lewis, Richmond, Va. Filed July 20, 1918. Serial No. 245,936. 11 Claims. (Cl. 121—187.)



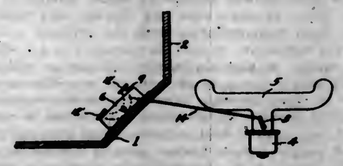
1. An apparatus for supplying steam to the cylinder or cylinders of a railway locomotive while moving, a fluid pressure motor having a slow leak therein, said motor being free from communication with the cylinder or cylinders of the locomotive so that its operation is not effected by the change of pressure in the cylinder or cylinders, means to supply steam to the cylinder or cylinders operated by the fluid pressure motor, a pressure chamber to supply fluid pressure to the motor, and means to control the inlet and outlet of fluid pressure to and from the chamber, said control means having positive connection with a movable part of the locomotive to operate in unison therewith, the motor being adapted to be set into action when the speed of the locomotive reaches a predetermined point and to become idle when the speed is below such predetermined point and when the locomotive is standing.

1,395,649. ADJUSTABLE SHORE. George W. Meyer and Charles A. Roos, Cincinnati, Ohio. Filed Nov. 28, 1919. Serial No. 341,047. 5 Claims. (Cl. 248—2.)



1. In a shoring device the combination of a relatively stationary element, a member telescopically adjustable thereon, and an integral metallic plate pivoted to one of said members and extending across horizontally and embracing the other member in a perforation of the plate cor-

responding with the contour of the embraced member and in a sliding fit such that upon canting said plate, the



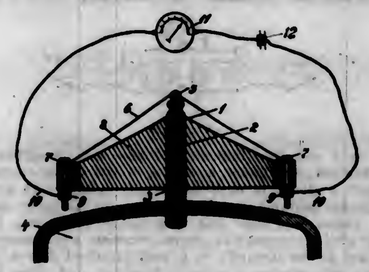
curbs or edges of the perforation are clamped to the embraced element at the contact side and the outer side simultaneously.

1,395,650. LIFTING-JACK. GEORGE W. MEYER and CHARLES A. ROOS, Cincinnati, Ohio. Filed Sept. 27, 1920. Serial No. 413,238. 3 Claims. (Cl. 254—97.)

1. In combination with a telescopic lifting jack, a perforated canting plate pivotally secured at one side to the frame of the jack and adapted to embrace and engage a supporting post at opposite sides at right angles with the line of its pivot in a canting relation of contact with the opposite edges or curbs of the plate perforation.

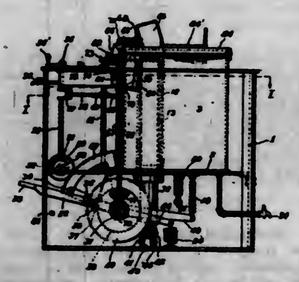
1,395,651. THROTTLE-PEDAL. DAVID MILLS, Seattle, Wash. Filed Sept. 27, 1920. Serial No. 413,186. 3 Claims. (Cl. 74—61.)

1. The combination with the actuating lever of a carbureter throttle valve, of a pivotally supported pedal having a notched surface, an actuating rod connecting the pedal with the said lever, and a yieldable member engaging the notched surface of the pedal to retain the latter at different positions of adjustment.



1,395,652. SCOURING DEVICE. ANDREW MOTTER, Buffalo, N. Y. Filed Feb. 28, 1921. Serial No. 447,289. 6 Claims. (Cl. 15—56.)

1. A device of the character described, comprising a handle having a stem, a pair of separable jaws removably mounted on said stem, the rear portions of said jaws embracing said stem while the front portions thereof are adapted to grasp a cleaning member between them, said stem and the rear portions of said jaws having complementary interlocking elements which hold the jaws against



longitudinal displacement on the stem in both directions, and a single retaining member encircling said jaws and said stem for detachably securing the jaws thereto and contracting the same to grip said cleaning member.

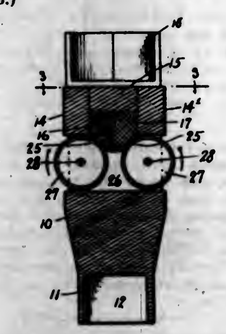
1,395,653. PRESSURE-MEASURING INSTRUMENT. WALTHER NERNST, Berlin, Germany, assignor to The Firm Siemens & Halske Aktiengesellschaft, Berlin-Siemensstadt, Germany. Filed June 14, 1919. Serial No. 304,284. 4 Claims. (Cl. 175—183.)

1. A device of the kind described, comprising a wire formed of a material whose electric resistance increases in proportion to the tension applied thereto, means for applying tension to the wire including a pressure responsive member, and an electric measuring instrument and generating means in circuit with said wire, whereby the said instrument may be used to measure such pressure.

1,395,654. MEANS FOR DISPENSING ICE-CREAM. GEORGE V. POSS, Cleveland, Ohio. Filed Sept. 15, 1919. Serial No. 323,790. 11 Claims. (Cl. 107—14.)

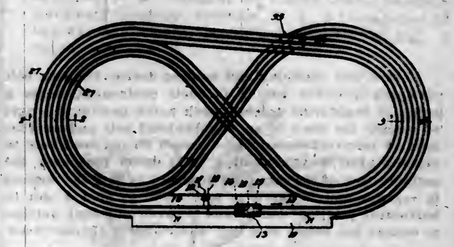
10. In means for dispensing ice cream, the combination of a main frame; a foot lever pivoted therein; a spring secured to the floor of said frame and to the inner end of said

lever; a pawl secured to said lever; a ratchet mounted in said frame and adapted to be actuated by the pawl upon the forward movement of the lever; a telescoping screw adapted to be actuated by said ratchet; means adapted to vary and regulate the actuation of said screw; a cream container through which said screw is movable; manually-operable transmission-members for retracting said screw; means for cutting the cream portions expressed from the container by the successive forward movements of the foot lever; means limiting the engagement of said ratchet and pawl to a part only of the return movement of the lever; and manually-operable means for actuating said cutting means.



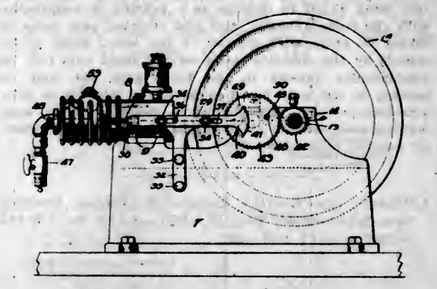
11. In means for dispensing ice cream, a cream reservoir, means forming a refrigerating chamber, a cylindrical casing within said chamber, a cylindrical vertically disposed post centrally mounted in said casing, a series of cylindrical cream containers surrounding said post, vertically disposed means for forcing cream from said container, and means for varying and regulating the amount of cream forced from the containers.

1,395,655. MEANS FOR FEEDING AND CUTTING ICE-CREAM. GEORGE V. POSS, Cleveland, Ohio. Filed Sept. 15, 1919. Serial No. 323,791. 8 Claims. (Cl. 107—24.)



1. In means for feeding and cutting ice cream, the combination of a main support; a container for retaining a block of cream; means carried by the container for forming the block into a plurality of separate layers; means adapted to cut said block longitudinally and transversely simultaneously; means for forcing said block from said retainer and into juxtaposition to said cutting means; and means for operating said cutting means by the rearward movement of said forcing means.

1,395,656. WRENCH. HENRY SCHLUTS, Pittsburgh, Pa., assignor of two-fifths to Jacob L. Knoedler, Option, Pa. Filed Apr. 20, 1920. Serial No. 375,327. 2 Claims. (Cl. 81—165.)



1. A socket wrench, comprising a stock, having an upper recessed portion, jaws having their complemental shanks slidably mounted within said recess, there being integral spacing portions connecting the jaws with the shanks, one of said spacing portions being provided with a shoulder, coöperating with a correspondingly recessed portion on the end of the other or complemental shank to limit movement of the jaws toward each other, said jaws having recesses which coöperate to provide a polygonal nut engaging socket, and means for operating said jaws toward and from each other to vary the size of the socket.

1,395,657. PLEASURE-RAILWAY. GEORGE A. SCHMIDT, Chicago, Ill. Filed Oct. 14, 1920. Serial No. 416,833. 3 Claims. (Cl. 104—63.)

1. In a pleasure railway the combination with a track structure having a covering therefor adapted to exclude light over a major portion of the track structure, a loading and unloading platform adapted to support a part of a track structure communicating at both ends with the aforesaid track structure so that a car passing over the entire track structure will be within a closure where light is at least partially excluded except for the time that it is passing over the track on the loading and unloading platform, a car adapted to be operated on said track, and means for controlling said car whereby when loaded with passengers it may be operated over the covered portions of said track structure and flashed under speed across the loading and unloading platform from one portion of the closed or covered track structure to another closed and darkened portion thereof.

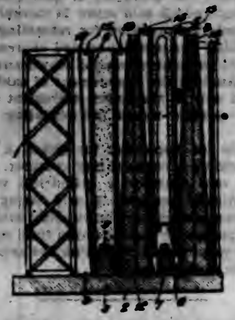
1,395,658. GAS-ENGINE. JOHN SCHOLTZ, Philadelphia, Pa., assignor of one-third to Stanley A. Brosa, Oreland, Pa., and one-third to Gustave W. Sunday, Philadelphia, Pa. Filed Aug. 1, 1919. Serial No. 314,619. 1 Claim. (Cl. 123—90.)

An engine of the character described including an exhaust valve; a bar having slots and a hooked end; a stem on said valve having a screw threaded portion extending through said hooked end of the bar; nuts on said screw threaded end engaging opposite portions of the hooked end of the bar; a support having means extending through slots in said bar; means operatively connected to a movable part of the engine and operative to engage said bar and move the latter to open said valve; and means for moving said valve into a closed position as the bar is released by said operatively connected means; substantially as described.

1,395,650. BOLT-CLAMP FOR VISE-JAWS. CHARLES ALONZO, Chicago, Ill. Filed Apr. 27, 1921. Serial No. 464,327. 2 Claims. (Cl. 81—28.)

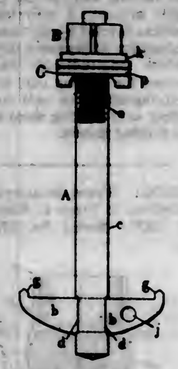
1. In a bolt clamping and holding device, two like bolt clamping members having in their confronting edges a series of registering notches, each notch providing a part to receive the head of an angular-head bolt and another part to receive the head of a round button-head bolt to prevent axial movement of a bolt; dowel pins near the bottom edges of the clamping members to hold the notches in register and to serve as bolt rests, to hold a bolt in horizontal position and means between adjacent notches to engage the shank of a bolt and clamp it therebetween.

1,395,660. CHILD'S VEHICLE. EMIL ALLEN, Bethel, Conn. Filed Apr. 4, 1919. Serial No. 287,647. 1 Claim. (Cl. 280—105.)



The combination in a four-wheeled child's vehicle, of a body board, a bearing in the body board, a front axle bed, a semi-circular cut-out in the axle bed, a front axle rod carried by the axle-bed, a steering rod, a steering wheel on the steering rod, a spherical head on the steering rod, an X-shaped slot in the spherical head, said slot being gaged to operate as a bearing in conjunction with the front axle rod, and said steering post being retained in place with respect to the other parts of the vehicle by the spherical head on the front axle rod, the semi-circular cut-out in the front axle bed, and the bearing in the body board, without the medium of other attachments, and operated as a steering device when manipulated through the medium of the steering wheel, all substantially as set forth.

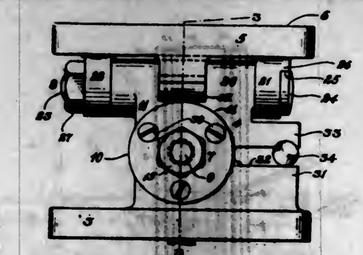
1,395,661. PACKAGE. EDWARD H. ANGIER, Framingham, Mass. Filed Dec. 18, 1916. Serial No. 137,681. 3 Claims. (Cl. 206—46.)



1. A wrapper for tires or the like of a length to encompass the tire and of a width corresponding substantially to the cross-sectional perimeter of the tire, said wrapper having independent transverse reinforcing filaments and independent longitudinal reinforcing filaments along a central zone thereof.

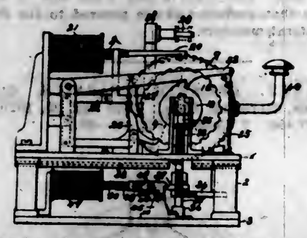
1,395,662. METHOD AND APPARATUS FOR CASTING CEMENTITIOUS BLOCKS. GEORGE W. ATTERBURY, New York, N. Y. Filed June 3, 1920. Serial No. 386,175. 7 Claims. (Cl. 25—121.)

1. The method of making large blocks of cementitious material in molds having vertical sides of so light construction as to require support against the hydrostatic pressure when first filled comprising supporting the sides of the mold only until the cast material sets sufficiently to first relieve the hydrostatic pressure, then withdrawing the mold and casting from the support and retaining the casting in the mold for further hardening and curing.



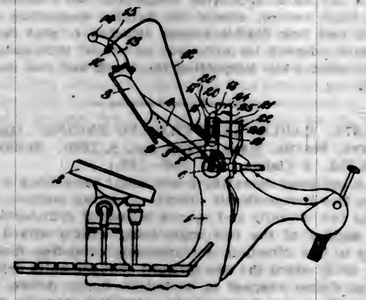
1,395,663. DEVICE FOR SECURING RAILWAY-RAILS TO THEIR SLEEPERS. EUGÈNE BELLAN and HENRI LEON LAINÉ, Paris, France. Filed Apr. 12, 1919. Serial No. 289,751. 3 Claims. (Cl. 238—277.)

1. A device for securing rails to their sleepers comprising an anchor bolt, formed with a mortise at its lower end, a claw encircling the stem of the bolt for engaging the foot of the rail, a nut screwed on the stem and engaging the claw, means for preventing loosening of the nut, anchor arms fitted in said mortise, means for centering the said arms in the mortise, and hook members on the said claw and lug members on the anchor arms for engaging and penetrating the sleeper and preventing splitting.



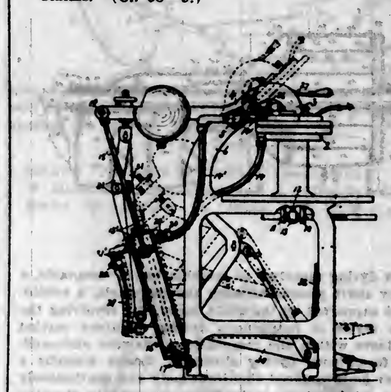
1,395,664. WORK-SUPPORT. EMIL BENSON, West Hartford, Conn., assignor to The Carling Tool & Machine Company, Hartford, Conn., a Corporation of Connecticut. Filed May 27, 1920. Serial No. 384,787. 4 Claims. (Cl. 51—239.)

1. A work support including in combination, a base member, a work receiving member, an intermediate member, pivotal connections respectively between the base member and intermediate member and the intermediate member and the work receiving member, and means in-



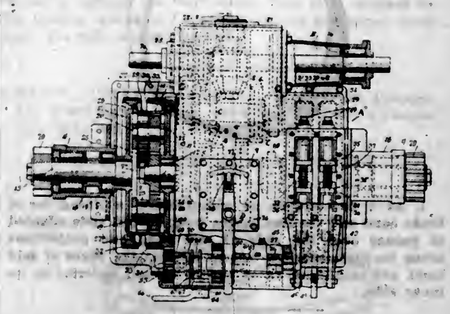
cluding a cylindrical surface for gaging the amount of angular adjustment between the pivotally associated members.

1,395,665. TIME-RECORDING APPARATUS. WALTER BOLLIER and IRMA DIEMAND, Zurich, Switzerland. Filed Apr. 29, 1915. Serial No. 24,838. 9 Claims. (Cl. 234—48.)



1. A workman's time recorder in which is embodied means for marking simultaneously two cards inserted below marking wheels, a shaft upon which the marking wheels are directly attached, electrically actuated means included in a circuit which is intermittently opened and closed, a platen for pressing the cards toward the printing wheels and electric actuated means independent of the hereinbefore mentioned circuit for controlling the platen which is controlled to operate effectually only when two cards are in position beneath the marking wheels.

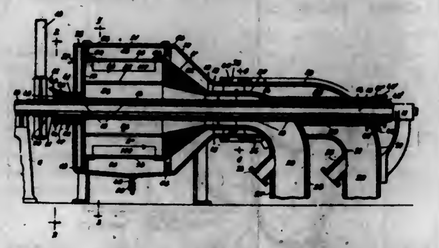
1,395,666. SAFETY ATTACHMENT FOR PRESSING-MACHINES. CHARLES L. BEALBY and SYDNEY PRESTWICH, Cincinnati, Ohio, assignors to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 23, 1916. Serial No. 133,033. 2 Claims. (Cl. 74—105.)



1. A pressing machine, comprising a stationary pressing member, a coöperating movable pressing member mounted to swing about an axis, a guard mounted to swing about a different axis, an actuating member carried by said movable pressing member, an operating part operatively connected to said guard, said actuating member engaging said operating part during closing movement of the press and passing said operating part at the closing point to release the guard, and means for returning the guard to normal position.

1,395,667. GARMENT-PRESS. HERSCHEL H. CHASE, Syracuse, N. Y., assignor to United States Hoffman Machinery Company, Syracuse, N. Y., a Corporation of Delaware. Filed May 11, 1920. Serial No. 380,683. 3 Claims. (Cl. 68—9.)

1. In a garment pressing machine the combination with coacting pressing elements movable one in relation to the other, means for applying steam to the garment between said elements, and means for withdrawing the steam only when the pressing elements are open, said last named means comprising a suction pump actuated by the movable pressing element when moved away from the other pressing element.



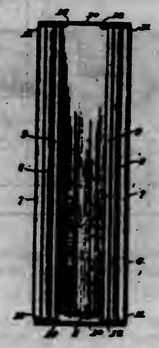
1,395,668. TRANSMISSION AND STEERING MECHANISM FOR FARM-TRACTORS. DANIEL C. DRILL, Greenville, Ohio. Filed Sept. 22, 1919. Serial No. 325,493. 11 Claims. (Cl. 180—17.)

1. In transmission gearing, the combination, of an engine drive shaft, a plurality of shafts having driving relations with opposite drive wheels, a plurality of units of planetary transmission gearing interposed between the drive shaft and said opposite shafts, and mechanism for

controlling each of said planetary gear units independently of the other, whereby power from said engine may be transmitted to cause said wheels to rotate in inverse directions relative to each other, and means connecting the opposite units of planetary transmission gearing to cause the units to rotate in unison.

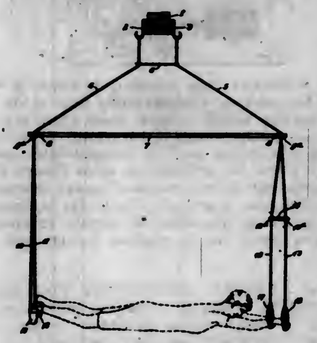
1,395,669. DYEING-MACHINE. HOWARD M. DUDLEY, Philadelphia, Pa. Filed Dec. 1, 1919. Serial No. 341,678. 8 Claims. (Cl. 8—19.)

1. In a dyeing machine, in combination, a receptacle, a stationary shaft passing through the receptacle, a revoluble sleeve supported by the shaft, means for revolving the sleeve, a series of foraminous dyeing chambers carried by the sleeve within the receptacle, a chamber surrounding the foraminous dyeing chambers, means whereby a liquid may be introduced simultaneously and continuously into all portions of one end of the surrounding chamber and means whereby a liquid may be passed through the dyeing chambers and then through the receptacle.



1,395,670. DETACHABLE LINING FOR BRAKE-BANDS. JOSEPH W. EDELL, Cleveland, Ohio, assignor of one-half to Michael J. Maruna, Cleveland, Ohio. Filed Sept. 2, 1919. Serial No. 321,021. 3 Claims. (Cl. 188—249.)

1. As a new article of manufacture, a lining for a brake band and the like having hook shaped ends adapted to engage over the ends of said band and projections along its edges adapted to bear against the edges of said band, and said lining faced with frictional material on its inner side.

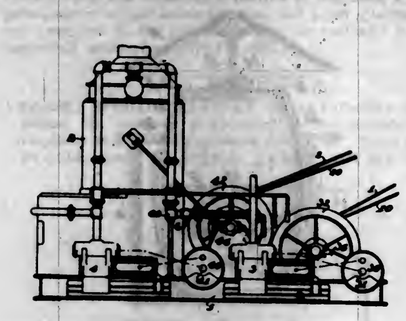


1,395,671. DOOR STRUCTURE. AXEL F. ERICKSON and DANIEL W. SHIRK, Aurora, Ill., assignors to All-Steel-Equip Company, Aurora, Ill., a Corporation of Illinois. Filed Aug. 9, 1920. Serial No. 402,386. 7 Claims. (Cl. 189—46.)

3. A door consisting of a plate having folded back leaves along its longitudinal edges, lateral members on said leaves, and lateral members on the adjacent portions of

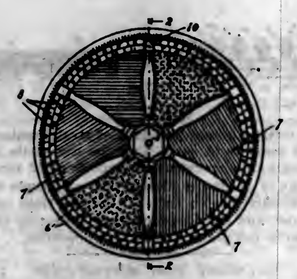
the plate that contact and are secured to the first mentioned lateral members.

1,395,672. DRY-SWIM APPARATUS. GUSTAV A. FISCHER, Cleveland, Ohio. Filed Apr. 29, 1920. Serial No. 377,486. 7 Claims. (Cl. 46—69.)



1. A dry swim apparatus comprising the combination of a rigid carrier, means for flexibly suspending said carrier and four flexible swings attached to said carrier and each adapted for universal movement independently of any other while supporting the hands and feet respectively.

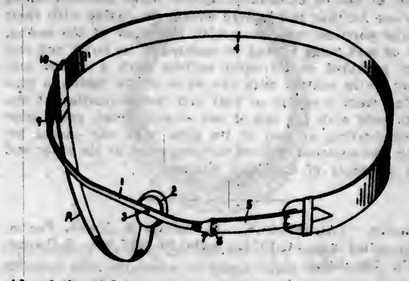
1,395,673. CABLEWAY-OPERATING ENGINE. GERALD FRINK, Seattle, Wash. Filed Apr. 8, 1920. Serial No. 372,272. 6 Claims. (Cl. 254—185.)



1. A cableway operating power plant comprising a base frame, two independently operable hoisting engines, each having two laterally and equally separated cylinder units, said engines of the two units being axially alined and facing in like direction, a transversely extending forward drive shaft which the two forward cylinder units drive, a pair of drums adapted to be independently driven from said shaft, a rear transversely extending shaft to which the two rearmost cylinder units are operatively connected, a pair of drums independently driven from the last named

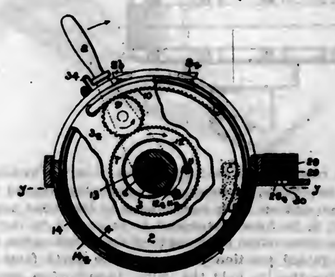
shaft, the first named drums being located rearwardly of the forward driving shaft and the last named drums being located forwardly of the rearmost driving shaft, a

trackway cable having its opposite ends connected to the two drums of one shaft and a traversing cable having its opposite ends connected to the two drums of the other shaft.



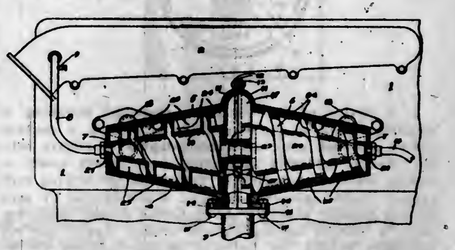
1,395,674. AMUSEMENT DEVICE. EVA N. HENNEGAN, Cincinnati, Ohio. Filed May 29, 1920. Serial No. 385,319. 3 Claims. (Cl. 46—41.)

1. An amusement device comprising a base member, indicia arranged in a circle on said base member, each indicium being associated with one of a plurality of colors, a rotatable member mounted on said base member, said rotatable member being provided on its face with divisions each of which is colored to correspond with one of the colors of said indicia, spaces in each of said divisions, each of the spaces being provided with an indicium corresponding to certain indicia on the base member and being also provided with printed matter, and a pointer on the rotatable member for indicating an indicium on the base member.



1,395,675. TRUSS. HERMAN H. HITTENBERGH, Oakland, Calif. Filed June 4, 1918. Serial No. 238,115. 2 Claims. (Cl. 128—105.)

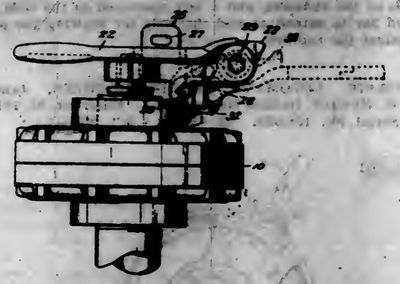
1. A reversible truss comprising a single rigid bar having a substantially straight portion of its length to lie across the abdomen and having one end curved to partially extend around either side of the body and conform to the contour thereof to cooperate therewith for positioning a truss pad in either of the reversible positions of said truss, a truss pad on the inside of the straight portion of the bar and located thereon relatively to its curved end to lie opposite the rupturable tissues on one



side of the abdomen, and a belt connected to the ends of said bar to extend around the body for drawing the pad against the rupture.

1,395,676. AUTOMATIC VENDING-MACHINE. JAMES W. HUGHES, Haddon Heights, N. J. Filed Oct. 23, 1917. Serial No. 198,028. 22 Claims. (Cl. 232—1.)

1. In a vending machine of the character stated, the combination of a table for holding the article to be vended, and two curved vertically arranged covers rotatable about the same axis one of said covers inclosing the rear portion of the table and the other the front portion, locking means for normally locking the front cover in closed position, manually operable means for opening and closing the rear cover for inserting the articles to be vended, and power means energized by the manually operable means for automatically opening the front cover when it is released by the locking means and also for closing the front cover when the rear cover is opened.



1,395,677. INTAKE-MANIFOLD. BARRY IVOR, Chicago, Ill. Filed May 21, 1920. Serial No. 383,262. 4 Claims. (Cl. 257—241.)

1. A device of the character described, consisting of a casing tapered from its middle portion toward each of its

ends and having communication near each of its ends with an explosion chamber of an internal combustion engine, a pair of hollow externally tapered plugs communicating with one another and located within the casing with their tapered portions coinciding with the taper of the casing, each of said plugs having an opening in its outer end and each provided on its outer surface with a spaced convolute rib in contact with the walls of the casing, a pipe leading from a supply of heat and communicating at one of its ends with the end of one of said plugs, and a pipe communicating at one of its ends with the casing between the adjacent ends of the plugs and at its other end with a supply of explosive mixture.

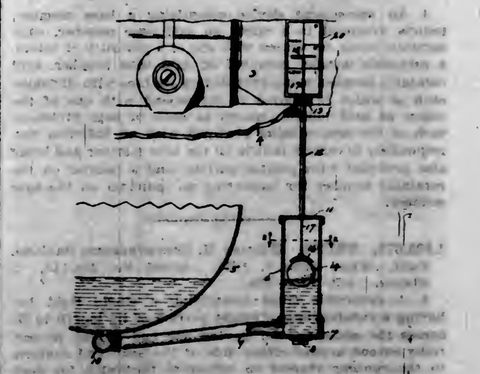
1,395,678. VALVE-LOCK. LAWRENCE R. JONES, Peoria, Ill. Filed Aug. 14, 1919. Serial No. 317,494. 3 Claims. (Cl. 70—125.)

1. A valve lock providing a valve stem; a handle providing two parts, an inner part removably secured to the said stem and an outer part hinged to the inner part and adapted to be folded over and to be locked to the inner part; an obstruction in the path of the handle when moved toward folded position to prevent the parts from being locked together to hold the valve, except when the valve is in a pre-selected position, and means for securing the inner part of the handle to the stem rendered inaccessible by the overlying folding part.

1,395,679. IGNITION-SWITCH. WILLIAM KAESLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 4, 1918. Serial No. 226,622. 10 Claims. (Cl. 200—44.)

1. A device of the character described including a mounting plate, a pin secured to said plate, a contact maker provided with an orifice adapted to receive said pin, thereby rotatably supporting said contact maker, a locking member supported by said plate for locking said contact maker against movement, a pin carried by said locking member, a second pin supported by said mounting plate, a member secured to said contact maker, and an integrally formed ear for said member adapted to cooperate with said pins to limit the movement of said contact maker.

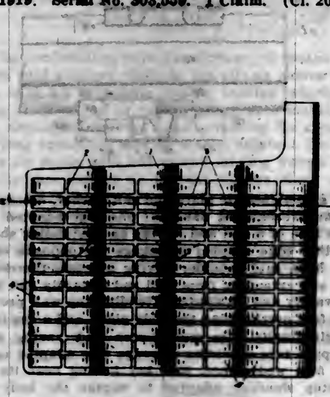
1,395,680. ANIMAL-TRAP. JAMES HAGERMAN, Lancaster, Pa. Filed May 20, 1921. Serial No. 471,115. 18 Claims. (Cl. 43—64.)



1. An animal trap comprising a barrel, a hood supported above said barrel, a cover element adapted to rest on said barrel or be raised above the latter, a spider element extending across the top of the barrel, a post on the spider element extending through said cover element and formed with a notch, and a latch arm hinged on said barrel and adapted to engage in said notch to hold the cover in raised position.

1,395,681. METHOD OF AND MACHINE FOR STRAIGHTENING BARS. GEORGE A. KEENAN, Pittsburgh, Pa. Filed July 2, 1920. Serial No. 393,521. 4 Claims. (Cl. 153—54.)

1. The method herein described of straightening a metal bar which consists in submitting the bar while otherwise free of longitudinal tension to a succession of three double undulations of gradually diminishing amplitude and causing such undulations to traverse the bar from end to end in one plane, and then repeating the operation in a plane transverse to the plane of the first operation.



1,395,682. OIL-GAGE FOR MOTOR-CARS. LEWIS E. KITCHEN, Indianapolis, Ind. Filed Apr. 20, 1921. Serial No. 462,525. 3 Claims. (Cl. 73—52.)

1. In an oil cage, a vertical tube having communication at its lower end with a receptacle the contents of

which is to be measured, a spherical float in the tube and of considerably less diameter than the bore of the tube, said float being free and unattached, a concave cap resting upon and receiving a portion of the float, a dial permanently located above the tube, and a rod attached at its lower end to the cap and having an indicator at its upper end cooperating with the dial.

1,395,683. STORAGE BATTERY. SWAN J. LEVEEN, Rock Island, Ill., assignor of one-third to Carl Shields and one-third to J. T. Marren, Rock Island, Ill. Filed June 12, 1919. Serial No. 303,559. 1 Claim. (Cl. 204—29.)

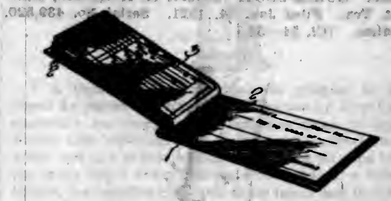
A device of the class described, comprising a frame provided with a plurality of vertical bars and a plurality of horizontal bars intersecting the same, forming vertical sections, alternate sections thereof being disposed in zigzag relation to the adjacent sections thereof.

1,395,684. MANUFACTURE OF PERBORATES. OTTO LIEBKNECHT, Frankfort-on-the-Main, Germany, assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed Jan. 27, 1917. Serial No. 145,017. 4 Claims. (Cl. 204—9.)

1. In electrolytic processes with a normally soluble base metal cathode, the step which consists in adding to the electrolyte a protecting substance to stabilise the base metal cathode and prevent solution and deposition thereof in the end product.

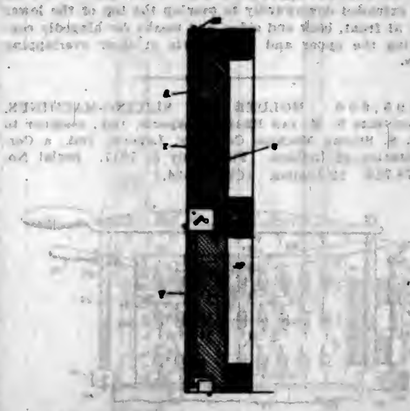
1,395,685. MANUFACTURE OF ALKALI PERBORATES. OTTO LIEBKNECHT, Frankfort-on-the-Main, Germany, assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed Jan. 27, 1917. Serial No. 145,018. 5 Claims. (Cl. 204—9.)

1. In the process of producing alkali perborates by electrolysing a solution of alkali carbonate and alkali borate, maintaining the alkali bicarbonate, formed during the process, within the limits of the dissolving power of the electrolyte.



1,395,686. PNEUMATIC TIRE. GEORGE W. LINDLEY, Philadelphia, Pa. Filed Sept. 16, 1916. Serial No. 284,292. 2 Claims. (Cl. 152—18.)

1. A cord tire having the cord layers made up of a cloth fabric comprised of parallel weft or shuttle threads or cords and of parallel running lines of knitted threads through parallel rows of loops of which the weft threads or cords pass, said cloth fabric being cut on the bias and



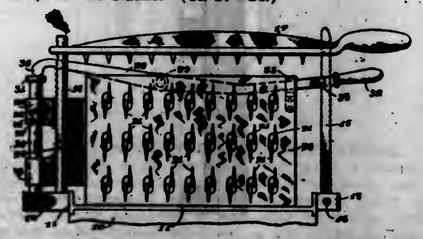
incorporated in the tire so that the lines of cords of different bias cut strips of fabric cross each other.

1,395,687. ENVELOP CHECK-BOOK STUB. ELMER S. LINDMARK, Brooklyn, N. Y. Filed Jan. 24, 1921. Serial No. 439,635. 2 Claims. (Cl. 283—63.)

1. A check-book having groups of blank checks and containers between the groups, each container being provided upon one side with delineated spaces for entering a record of the checks of its group when used, the containers providing filing receptacles for the checks of their respective groups when canceled.

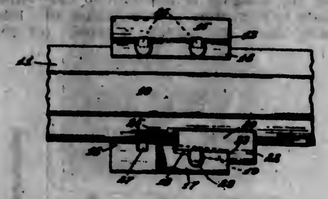
1,395,688. DOOR-LATCH. ALEXANDER MCCULLOCH, Govan, Saskatchewan, Canada. Filed Aug. 9, 1920. Serial No. 402,110. 1 Claim. (Cl. 292—37.)

In combination with a door, a vertical opening formed in said door, an upper and lower arm positioned in said opening, a key in the upper end of said opening, said key having its inner end attached to the upper end of said upper arm, a means for tensioning the other end of said



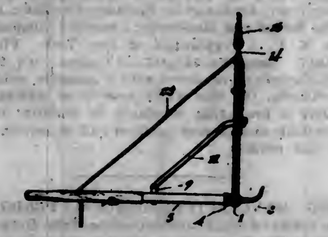
key outwardly from said door, a key positioned in the lower end of said opening, a means for tensioning one end of said last mentioned key outwardly from said door, a means connected to the end of said lower arm for drawing said key against the tensioned means a casing mortised into said door, oppositely positioned openings in top and bottom of said casing, a connecting bar mounted in said openings, said bar having its upper end connected to the lower end of said upper arm, said connecting bar having its lower end connected to the upper end of said lower arm, lugs extended inwardly from said connecting bar, a key reciprocatively mounted in said casing to operate in the opposite direction to said connecting bar, a tension for positioning one end of last said key to extend out past said casing, a lug formed on the upper side of last said key, a cylindrical operating member journaled in said casing, lugs radially positioned on said operating member, one of said lugs being positioned between the first mentioned said lugs and the other said lug being positioned in front of the lug on the last mentioned key and a handle suitably mounted in said operating member so that on the turning of the same the said keys will be pulled flush with the outer facing of said door.

1,395,689. HORSE-BOOT. JOSEPH H. MCKENZIE, Beaumont, Tex. Filed Jan. 24, 1921. Serial No. 439,520. 3 Claims. (Cl. 54—58.)



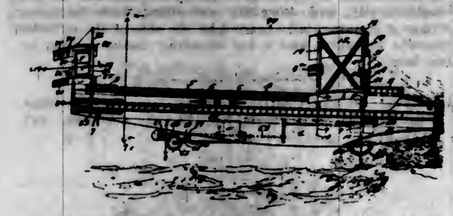
2. A horse-boot comprising a lower part to fit over the upper part of the hoof and extended upward to cover the pastern joint, an upper part to cover and protect the leg and extended downwardly to overlap the top of the lower part at front, back and sides, and means for hingedly connecting the upper and lower parts at their overlapping sides.

1,395,690. HOLDER FOR SLICING-MACHINES. CORNELIS F. M. VAN BERKEL, Laporte, Ind., assignor to U. S. Slicing Machine Company, Laporte, Ind., a Corporation of Indiana. Filed July 5, 1917. Serial No. 178,736. 12 Claims. (Cl. 17—24.)



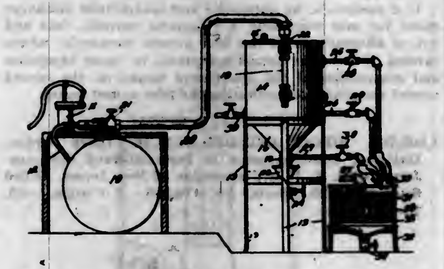
1. In a slicing machine, a support for material to be sliced, a plurality of holders independently carried by said support for securing material on said support in position to be sliced, one of said holders having its material-engaging face movable into an operative position parallel with the cutting plane of said slicing machine, and means for retaining each of said holders in inoperative position on said support during operation of the other holder.

1,395,691. COMBINED TIE-PLATE AND RAIL-ANCHOR. WILLIAM P. WARD, Alderson, W. Va. Filed May 13, 1921. Serial No. 469,269. 4 Claims. (Cl. 238—304.)



1. In a combined tie plate and rail anchor, a body plate having an overhanging flange at one edge adapted to engage the base of a rail and having an upstanding shoulder at its other edge adapted to engage the opposite edge of the rail base, said shoulder having a recess therein near one end and extending from said end inwardly and having a downwardly and forwardly extending top wall providing a wedge face overhanging the body plate, and a key insertible longitudinally into said recess and having an inclined upper face providing a wedge face adapted to slide on said first wedge face, said key having near its outer end a stop shoulder adapted to engage the body plate shoulder thereof to limit the insertion of the key, said key also having a straight inner side with an undercut recess therein adapted to receive the adjacent longitudinal edge portion of the rail base, and said plate and key having complemental spike receiving recesses adapted to aline when the key is in place for locking the key in the plate.

1,395,692. BALE-FORK. HERBERT AUGUSTUS WATERMAN, Liberal, Mo. Filed Sept. 2, 1920. Serial No. 407,694. 10 Claims. (Cl. 294—124.)



1. A bale fork comprising a bar having spikes for impaling the bales, a handle extending radially from the bar in the opposite direction to the spikes, a hanger for suspending and transporting the bar, hinged to the bar at the center thereof, releasable means for holding the bar with the handle and the spikes at right angles to the hanger, and trip mechanism for releasing said means, said holding means comprising a link pivoted to the handle and extending through the hanger, said hanger having a stop pin and the link, a notch for engagement by the pin, and a plate mounted to slide on the hanger and having an opening through which the link extends, said plate being normally spring pressed downward, and a flexible member connected with the plate for moving the same upwardly to release the link.

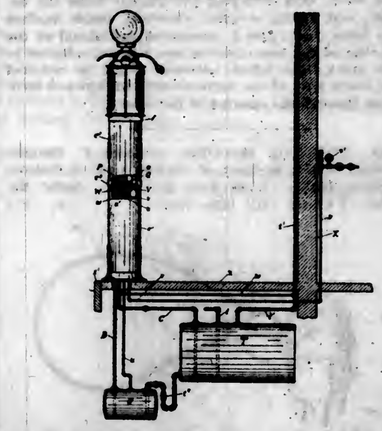
1,395,693. AIRPLANE. JOSEPH G. YONKERS, Brooklyn, N. Y. Filed Jan. 19, 1920. Serial No. 352,575. 3 Claims. (Cl. 244—2.)

1. In combination with an airplane, of means for propelling said airplane while in the air, an engine for operating said air propelling means, landing wheels located at the forward end of the air plane, said landing wheels being resiliently mounted so as to take up the shock during a landing operation, landing wheels adjacent the rear end of the air plane, said last named landing wheels being resiliently mounted so as to take up the shock during a landing operation, means whereby power from the engine may be utilized for rotating the forward landing wheels so as to propel the airplane forwardly while on the ground, and skids located adjacent the forward and rear landing wheels whereby the initial shock of landing will be taken up.

1,395,694. APPARATUS FOR PURIFYING GASOLENE. WILLIAM ALLINSON, Des Moines, Iowa. Filed Oct. 9, 1920. Serial No. 415,747. 17 Claims. (Cl. 210—44.)

1. An apparatus for purifying gasolene or the like, comprising a tank, a cone-shaped member below said tank, a neck on said tank and partially extended into said cone-shaped member, a tube communicating with said cone-shaped member, valve controlled outlets in said tank spaced one above the other, a second tank, each of said valve controlled outlets communicating with said second tank and a filtering device in said second tank.

1,395,695. AEROPLANE PROPULSION MEANS. MERRITT H. ANDERSON, Antioch, Calif. Filed June 15, 1920. Serial No. 389,507. 1 Claim. (Cl. 244—25.)



In an aeroplane driving means a low speed engine, said engine having a shaft extending therethrough, worm gears mounted on the opposite ends of said shaft, gear casings extending from said engine in opposite directions, a series of parallel shafts mounted within said casings, a propeller mounted upon the end of one of said shafts of each casing and speed increasing gears mounted upon said shafts within said casings, said speed increase being in the direction from the engine toward said propellers.

1,395,696. SELF-MEASURING LIQUID-DISPENSING APPARATUS. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Oil Tank and Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Oct. 27, 1919. Serial No. 333,596. 2 Claims. (Cl. 221—100.)

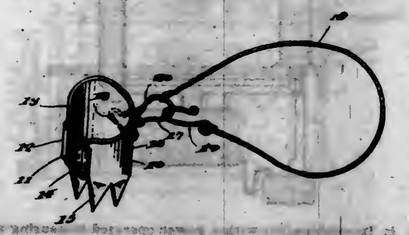
1. A liquid dispensing apparatus adapted to dispense liquid by gravity, having in combination an elevated liquid container, an overflow pipe terminating at its upper end within said container at a predetermined level and at its lower end in a source of liquid supply, a fill pipe terminating at its upper end within said container at a level above that of the overflow pipe and at its lower end in the source of liquid supply, a discharge pipe terminating at its upper end within the container and at its lower end in an exteriorly discharging outlet fixed to and movable with said discharge pipe, said discharge pipe being manually adjustable as to height.

1,395,697. LOCKING CONTROL FOR POWER-OPERATED MEASURING AND DISPENSING APPARATUS. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Oil Tank and Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Feb. 9, 1920. Serial No. 357,231. 5 Claims. (Cl. 221—99.)

1. In combination with a power operated measuring and dispensing apparatus having an elevated liquid container, means for setting the apparatus in filling position, means for filling the elevated liquid container, a keeper to pre-

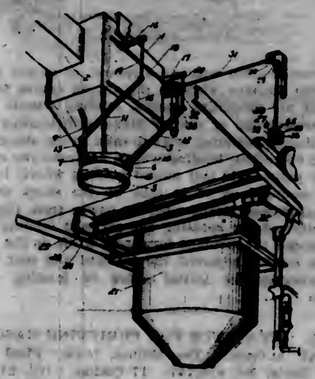
vent the inserting of the apparatus while the electrical locking mechanism is being tilted, a guard to prevent the application of power except when the apparatus is in its tilt position and a unitary control to throw the hooper into lock position and turn on the power.

1,395,698. COMBINED ROCKING AND REVOLVING CHAIR. CHESTER E. BAUM and ROBERT A. PEACOCK, Delaware City, Del. Filed May 17, 1920. Serial No. 382,100. 6 Claims. (Cl. 155—99.)



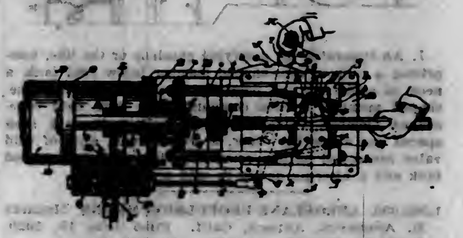
1. An exercising chair comprising a universal rocking base; a chair or seat mounted upon said base and having independent rotary movement thereon, and a hand rail supported by the base and surrounding said chair or seat.

1,395,699. HEADLIGHT FOR VEHICLES. ARCHIBALD BRAKE and RICHARD KENNETH BRAKE, Toronto, Ontario, Canada. Filed May 8, 1920. Serial No. 379,953. 2 Claims. (Cl. 240—41.)



1. A headlight comprising a source of light; a reflector positioned with regard to the source of light to produce a converging beam of light; a tubular shield extending forward from the reflector well toward the principal focus of the beam and having an opening at its forward end of sufficient size to permit only of the passage of the focused rays and direct rays diverging but slightly from the optical axis, and having a light absorbing inside surface along its lower part; and a crescent-shaped shield at the forward edge of the lower part of the reflector adapted to eliminate stray light which normally would be reflected from the lower part of the reflector with an upward inclination out through the opening of the tube.

1,395,700. COW-TAIL HOLDER. ANDREW C. BRIXEN, Westmond, Idaho, assignor of one-half to P. A. Nelson, Sandpoint, Idaho. Filed June 11, 1921. Serial No. 476,875. 1 Claim. (Cl. 119—105.)

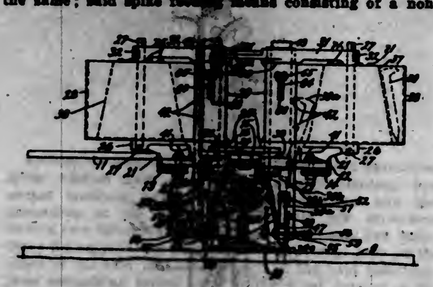


1. A cow tail holder comprising an open-ended and longitudinally split tail encircling cylinder, a tail pivotally carried by the cylinder at one side of the split, a hook carried by the cylinder at the other side of the split for engagement by the tail, one end of the cylinder having longitudinally and inwardly extending hair engaging prongs, a loop pivotally carried by the side of the cylinder opposite the split, and a leg engaging means carried by the loop.

1,395,701. DUST-GUARD. THOMAS CAIN, Topeka, Kans. Filed Nov. 12, 1920. Serial No. 424,859. 6 Claims. (Cl. 214—41.)

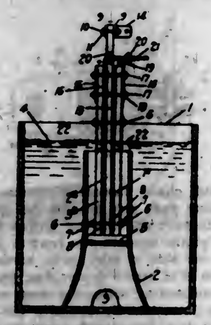
1. A receptacle, an extensible and contractible discharge spout for said receptacle, a receptacle movable into and out of alinement with the first named receptacle, means carried by the first named receptacle to cause expansion and contraction of the spout, and means on the second named receptacle for actuating the first named means.

1,395,702. SHANK AND BIT PUNCH. JESSE DERSON, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 18, 1920. Serial No. 410,546. 5 Claims. (Cl. 79—8.)



1. In a shank and bit punch, the combination of clamping members for clamping the article to be punched, a cylinder, a clamping piston and a piercing piston reciprocating in said cylinder, operative connections between the clamping piston and the said clamping members, a pin connected to be operated by the piercing piston and means for controlling the supply of motive fluid to said cylinder for operating said pistons.

1,395,703. RAIL-SPIKING DEVICE FOR RAILWAYS. NILS ERICSON, St. Paul, Minn. Filed June 15, 1921. Serial No. 477,714. 6 Claims. (Cl. 104—17.)



1. In a spiking device for railway tracks, a frame movable on the track rails, means carried by the frame for guiding spikes down to driving position, said guiding means comprising for each rail a vertically disposed guiding tube

at each side of the rail, said tubes having each a side opening into which to feed the spikes one at a time, means for carrying the spikes into said openings, a spike driving plunger slidable in each tube and projecting always above the same; said spike feeding means consisting of a non-

rotatable hopper near the side opening of each tube and having a bottom opening leading into the side opening of the tube, a rotary cylindrical magazine inside each hopper and provided with peripherically arranged spike pockets, and means for rotating the two magazines at each rail simultaneously by steps each of which brings a filled spike pocket to register with the adjacent spike guiding tube.

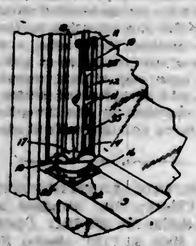
1,395,704. ELECTROLYTIC CELL. JOHN GERSTLE, Dayton, Ohio, assignor to The Electro Chemical Company, Dayton, Ohio, a Corporation of Ohio. Filed Dec. 6, 1920. Serial No. 428,463. 5 Claims. (Cl. 204—5.)

1. In an electrolytic cell, the combination with spaced-apart electrodes, of supporting means therefor mounted on the floor of the cell, through which the electrolyte can pass to the space between said electrodes.

1,395,705. BALL-DISPENSING DEVICE FOR GAME APPARATUS. HERBERT C. GRANNIS, Indianapolis, Ind., assignor to Briant Specialty Company, Indianapolis, Ind., a Corporation. Filed Aug. 26, 1918. Serial No. 251,475. Renewed June 27, 1921. Serial No. 480,908. 2 Claims. (Cl. 46—61.)

1. The combination with a game apparatus including an alley for rolling balls, of a ball return raceway comprising a fixed ball supporting floor and a movable floor, means for hingedly mounting the movable floor, means for supporting said hinged floor in normal horizontal position, and means for actuating said supporting means for releasing and for positively returning the movable floor to normal position.

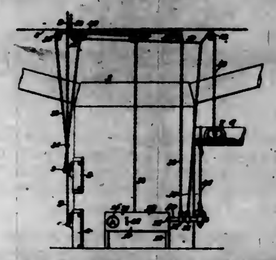
1,395,706. ROTARY WELL-DRILLING APPARATUS. EDGAR B. GENTH, Bellevue, Pa. Filed Dec. 22, 1919. Serial No. 346,663. 24 Claims. (Cl. 255—19.)



1. In a rotary well drilling apparatus, the combination with a drill-pipe, of a combined motor and water-swivel structure having a common rotative shaft, and means for connecting a drill-pipe section to the shaft including a slidable coupling-member.

1,395,707. CRIMPED JOINT FOR BATHROOM-FIXTURES. WILLIAM H. GUERSON, Waterbury, Conn., assignor to The Chase Companies, Inc., Waterbury, Conn., a Corporation. Filed Sept. 13, 1920. Serial No. 409,892. 2 Claims. (Cl. 285—25.)

2. A bathroom fixture having a struck-up fastening plate and a tubular member, the former having spiled an assembling opening surrounded by segmental flanges separated by crimp-receiving notches, and the latter having an abutment-bead and an assembling sleeve which is crimped to form locking-flutes entering the said notches for holding the two parts together.



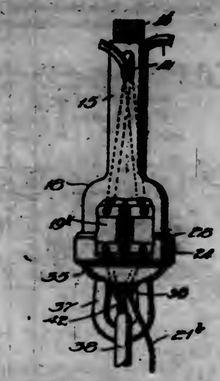
1,395,708. VENTILATING-SASH LOCK. FRANK P. GRODE and FRED HUTTIG, Kansas City, Mo. Filed May 27, 1920. Serial No. 384,744. 8 Claims. (Cl. 292—240.)

1. A sash lock comprising a vertical latch engaging strip adapted to be secured to one of the sash members,

a movable latch bar adapted to be mounted on the other mesh member, and provided with a toothed end portion, said latch strip being formed with serrations pointing in a direction away from the plane separating said mesh members, and means for swinging said latch bar into and out of position for hooking the toothed end portion of said bar around said latch engaging strip and for longitudinally reciprocating said bar when in strip engaging position.

1,395,709. AUTOMATIC FURNACE-DAMPER-CONTROLLER. ERNEST J. HENRY, Cedar Rapids, Iowa. Filed Apr. 21, 1919. Serial No. 291,495. 5 Claims. (Cl. 161—8.)

1. Furnace draft-controlling apparatus, comprising a lever weighted at one side of its pivot, a chain on the weighted side connecting with the draft-damper, a chain on the opposite side connecting with the check-damper, a trip-lever to support the weighted lever, an alarm-clock whose vibrator engages said trip-lever, a preponderating weight connected with said weighted lever, and opposite said weight, and means breakable by the excess heat of the furnace to support said preponderating weight therefrom.

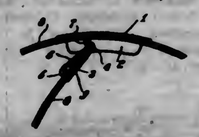


1,395,710. ELECTRIC-LIGHTING FIXTURE. MAX HERSKOVITS, Chicago, Ill. Filed Oct. 18, 1918. Serial No. 258,721. 6 Claims. (Cl. 240—78.)

1. An electric lighting fixture, comprising a hollow fixture stem formed at one end with means for directly attaching it to a fixture supporting member, and formed at its other end with an open-ended enlargement to provide a receptacle for the reception of the interior of an electric contact member, there being a shoulder formed on the outer face of said enlargement and a lower holding member, at the open end of said receptacle detachably secured against said shoulder and acting to secure said electric contact member in the receptacle, said lower holding member being provided with shade holding means.

1,395,711. ELECTRIC-LIGHTING FIXTURE. MAX HERSKOVITS, Chicago, Ill. Original application filed Oct. 18, 1918, Serial No. 258,721. Divided and this application filed Mar. 3, 1919. Serial No. 280,259. 11 Claims. (Cl. 240—78.)

11. An electric lighting fixture, comprising a hollow fixture stem formed at one end with means for attaching it to a fixture supporting member and formed at its other end with an open ended enlargement to provide a receptacle, and a lower holding member detachably connected

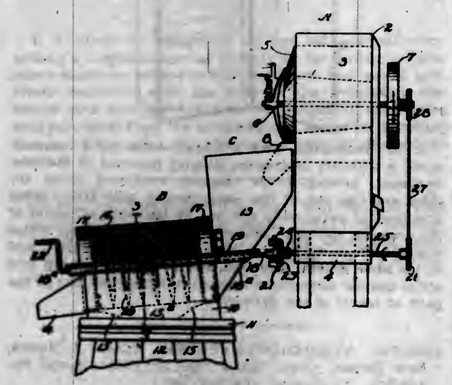


to the open end of said receptacle and formed with a cap for closing the open end of the receptacle and with solid fixture supporting means, there being a separate outlet opening in the cap for conductor cords.

1,395,712. NON-SKID CHAIN-FASTENING MEANS. ERNEST P. HOSLEY, Syracuse, N. Y. Filed Feb. 8, 1921. Serial No. 443,880. 2 Claims. (Cl. 152—14.)

1. A non-skid chain fastening means comprising a member extending part way around the spoke of a wheel near the rim thereof and having means for holding the end links of a chain beneath the central part of the rim of a wheel on one side of said spoke, means for clamping said member to said spoke comprising parts having one end thereof interlocking with the first mentioned member and means diametrically opposite the holding means for locking the last mentioned parts together, substantially as and for the purpose set forth.

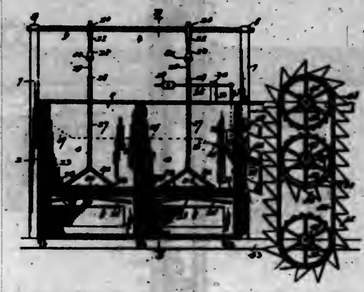
1,395,713. BELT-BUCKLE. ERNEST N. HUMPHERY, New Britain, Conn. Filed July 22, 1921. Serial No. 486,674. 3 Claims. (Cl. 24—191.)



1. In a buckle, a front plate having rearwardly extending flanges at the upper and lower edge, a plate pivotally connected between said flanges, another plate pivotally connected to the free end of the first plate and coacting therewith to grip one end of a belt, a cam near the free end of the last mentioned plate, said cam lying adjacent to the pivotal portion of the first mentioned plate when the parts are assembled with a belt whereby said cam will operate to grip the adjustable end of a belt between it and the back of a front plate.

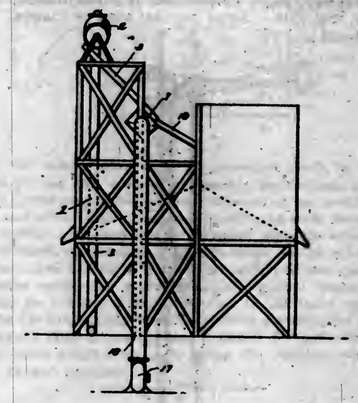
1,395,714. FORCEPS. ALBERT BAXTER JOHNSON, New Britain, Conn. Filed Apr. 12, 1921. Serial No. 460,824. 1 Claim. (Cl. 32—34.)

Forceps constructed and arranged for use in extracting lower wisdom teeth comprising a pair of pivotally connected members having handles at one end and jaw structures at the other end, the said jaw structures having two individual jaws for each of the said jaw structures for coöperating with the two individual jaws of the other of the said jaw structures, and the said individual jaws comprising forcep jaws at the front portion of the jaw structures for engaging with the body of the tooth to be extracted, and elevator jaws of generally wedge-shaped form of cross-section for being entered between the said tooth and the next tooth.



1,395,715. POPCORN-SIFTING MACHINE. EUSTACE R. KNOTT, Sharon, Mass. Filed Dec. 28, 1916. Serial No. 139,383. 2 Claims. (Cl. 130—16.)

1. A sifter comprising a revoluble, open-ended screen having an internal barrier forming a longitudinal central passage-way, and a plurality of axially spaced segmental deflectors for interrupting the direct flow through the passage-way of the material being screened.



1,395,716. MINERAL OR COAL SEPARATING JIG. HARRY D. KOSTENBAUDER, Aristes, Pa. Filed Oct. 2, 1920. Serial No. 414,168. 1 Claim. (Cl. 83—79.)

In a mineral separator, a jig casing provided with a pan receiving separating compartment, a perforated pan in said compartment provided with an opening at one end, one edge of said opening having a depending wall, a chute engaging through the wall of the casing and communicating with said compartment, a trap mounted for pivotal movement in said opening for closing the same, said chute communicating with said compartment at a point opposite and below the depending wall, whereby the trap may assume an inclined position in alinement with the bottom of the chute when overbalanced by the weight of the mineral thereon, so that one edge of the trap may assume a position even with the upper surface of the pan,

gravity means for holding the trap normally closed, and a second chute for carrying off the lighter particles of the mineral.

1,395,717. SAND, GRAVEL, AND STONE CLEANING MACHINE. FRANK LE COCQ and IRWIN LE COCQ, Aberdeen, S. D. Filed Apr. 28, 1920. Serial No. 376,179. 3 Claims. (Cl. 83—54.)

1. A separator for grading machines including a plurality of screens, means for delivering a distinctive grade of material over each of the screens, a hollow body carrying said screens, partitions dividing said body into chambers to provide a separator chamber for each screen, means for directing an air blast into the body and through said openings and screens successively, and a valve for controlling the admission of said air blast to each chamber, the air blast when admitted to each chamber passing upwardly through the screen.

1,395,718. OIL-WELL PACKER. PATRICK H. MACK, Bradford, Pa., assignor to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 28, 1919. Serial No. 341,172. 8 Claims. (Cl. 166—13.)

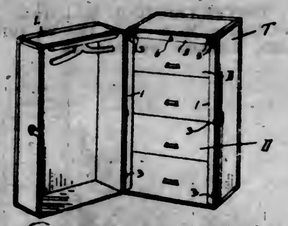
1. In a well packer, a body member, a packing surrounding the body member, a telescoping member associated

with the lower end of the body, said telescoping member having a serrated bore therein, and yieldable locking

means on the body coacting with the serrations in the bore.

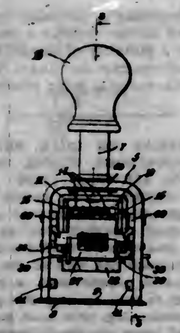
1,395,719. OIL-WELL PACKER. PATRICK H. MACK, Bradford, Pa., assignor to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 28, 1919. Serial No. 341,173. 8 Claims. (Cl. 166—18.)

1. The combination with a well packer, of a container adapted to be secured to the lower end of the packer and including a hollow body, a closure for the lower end of the body, said closure provided with an outlet passage, means controlling the passage of material through said outlet passage, and means whereby the packer will be expanded after the controlling means has been moved to open the outlet passage.



1,395,720. WELL-SEAL. PATRICK H. MACK, Bradford, Pa., assignor to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 28, 1919. Serial No. 341,176. 4 Claims. (Cl. 166—10.)

1. A well seal including a coupling member threaded at its upper end and adapted to be connected with a casing section, said coupling member having an extension threaded at its lower end, a compressible packing member surrounding the threads on said extension, and projecting below the end of said extension, means for binding the



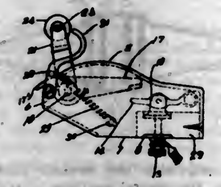
compressible member to the extension, and a shoulder above the threaded extension and with which the top of said packing member contacts.

1,395,721. LOCKING DEVICE. RANDOLPH MADISON, Petersburg, Va. Filed Mar. 2, 1921. Serial No. 449,019. 3 Claims. (Cl. 45—94.)

2. In combination with a container having a compartment, a plurality of drawers slidably mounted in the compartment, locking strips hingedly connected along the sides and one end of the compartment, said strips being arranged to swing into and out of the path of travel of the drawers, operative connection between adjacent strips whereby all of said strips have movement in unison and in the same general direction, and means for locking said strips against swinging movement in a direction out of the path of travel of the drawers.

1,395,722. NUMBERING-MACHINE. ALBERT J. MARKS, New Britain, Conn. Filed Jan. 12, 1921. Serial No. 436,779. 17 Claims. (Cl. 101—83.)

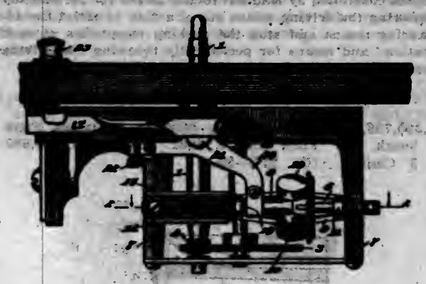
1. In a numbering machine, a U-shaped frame, stationary abutment pins on said frame, a numbering head re-



ciprocable in said frame and carrying numbering wheels, a yoke pivoted to said numbering head and carrying a comb, and a spring for urging the numbering head in one direction, said yoke being adapted to contact with the stationary abutment pins projecting from said frame for moving the yoke on both the up and down stroke thereof for shifting the numbering wheels.

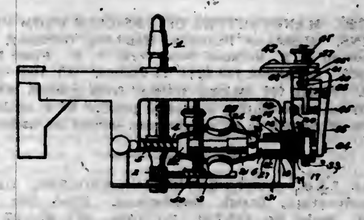
1,395,723. PARACHUTE FOR USE WITH AEROPLANES. FRANK CHARLES MEARS, Edinburgh, Scotland. Filed July 1, 1919. Serial No. 307,966. 6 Claims. (Cl. 244—21.)

1. A parachute equipment for use with aircraft comprising a container carried directly by the airman, a parachute normally housed in said container and means positively connected with the aircraft and detachably connected with said parachute for automatically abstracting said parachute from the container and means for unrolling the parachute when the airman has jumped clear of the aircraft.



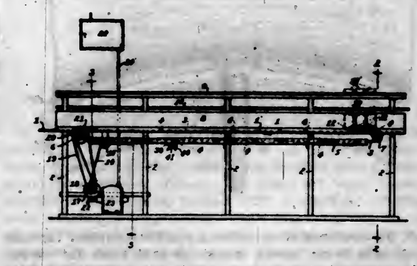
1,395,724. SAFETY DEVICE FOR MOVING-PICTURE MACHINES. CHARLES F. MEHL, HENRY B. LIEBLER, JAMES HALL, and EDWARD J. NOBER, Cleveland, Ohio. Filed June 18, 1919. Serial No. 305,204. 4 Claims. (Cl. 88—17.)

1. The combination with a moving picture machine and the motor and light circuit therefor, of a switch, automatically operating means for opening the switch upon the breaking of the film, and means for simultaneously locking said automatically operating means in its inoperative position and said switch in its open position.



1,395,725. BRAKING MECHANISM FOR TALKING-MACHINE MOTORS. LEVIN H. MULLIKIN, Easton, Md. Filed Mar. 26, 1920. Serial No. 369,140. 2 Claims. (Cl. 188—187.)

1. The combination with the governor shaft and a centrifugal governor thereon provided at one end with a loose collar, of a sliding brake member having a laterally extending arm swiveled at its free end to the said loose



collar, a guide-way for the slide, and a stop in the path of the said slide to limit its movement.

1,395,726. BRAKE MECHANISM FOR TALKING-MACHINE MOTORS. LEVIN H. MULLIKIN, Easton, Md. Filed June 7, 1921. Serial No. 475,705. 12 Claims. (Cl. 188—187.)

9. The combination with the governor shaft having a worm at one end, a speed responsive sleeve loose on the shaft, speed responsive means connected at one point with that end of the sleeve next to the worm to slide the sleeve and rigidly connected at another point with the other end of the shaft, an annular braking member on the extremity of the sleeve beyond said fixed connection of the speed responsive means, of a non-revoluble tubular brake slide having an annular braking member on its inner end opposing the first named braking member, a bearing on which the brake slide is mounted, and means for adjusting the brake slide longitudinally to bring the braking members into proper relation.

1,395,727. PACKING-TABLE. CLARENCE W. OBERMATT, San Francisco, Calif. Filed Nov. 26, 1920. Serial No. 426,461. 10 Claims. (Cl. 226—2.)

1. A packing-table comprising a frame having a working top with a plurality of successive packing stations;

means for advancing packing receptacles to said stations successively; means for driving said advancing means; means controlled by said advancing means for periodically throwing the driving means out of action to arrest the advancing means and stop the packing receptacles at each station; and means for periodically throwing the driving means into action again.

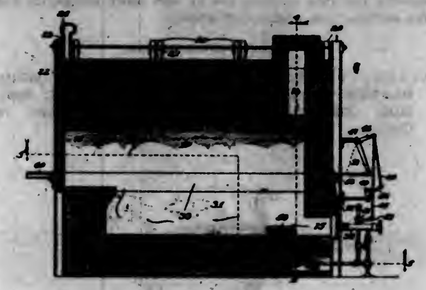
1,395,728. BARREL-CLEAT. NORMAN A. OEHMS, Pittsburgh, Pa. Filed Mar. 9, 1921. Serial No. 450,882. 5 Claims. (Cl. 217—89.)

1. A barrel cleat comprising a body having strengthening flanges extending therealong, said body terminating at each end in a substantially flat hook portion, and a strengthening rib formed in each of the hook portions.

1,395,729. MANUFACTURE OF ARTICLES FROM PROTEINS. HERMANN PLAUSON, Hamburg, Germany, assignor to D. R. Rotman, New York, N. Y. Filed Feb. 8, 1921. Serial No. 443,424. 11 Claims. (Cl. 106—38.)

1. A process for making articles from protein which consists in consolidating a protein powder by a colloidal solution of protein in an organic non-solvent as binder.

1,395,730. RUST-PREVENTING PROCESS. DAVID REICHINSTEIN, Zurich, Switzerland. Filed Dec. 18, 1916. Serial No. 137,720. 2 Claims. (Cl. 87—27.)



1. A process for preventing the rusting of iron surfaces of steam operated apparatus contacted by steam containing air at high temperatures, which comprises adding from time to time a gaseous base mixed with nitrogen to the steam containing air.

1,395,731. VALVE-PAD FOR PNEUMATIC TIRES. NATHAN F. RICE, Chicago, Ill. Filed Oct. 20, 1919. Serial No. 331,772. 16 Claims. (Cl. 152—13.)

15. In combination, a valve, a resilient element through which said valve passes, means on said valve for clampingly engaging said element; and a non-extensible flexible member coöperating with said element to prevent the same being moved out of engagement with said clamping means.

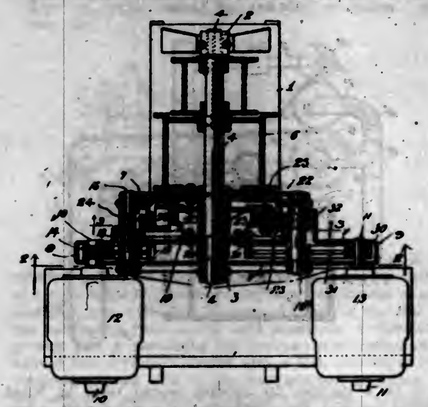
1,395,732. METHOD OF ENAMELING WARE. ROBERT ROADHOUSE, Des Plaines, Ill., assignor of one-half to Thomas E. McCaig, Chicago, Ill. Filed Mar. 9, 1921. Serial No. 450,862. 6 Claims. (Cl. 25—132.)

1. In a furnace for enameling and the like, a chamber, means for producing combustion therein, control means for stopping said combustion, means for scavenging the products of combustion and means for closing the chamber during the baking operation.

1,395,733. TANNING. ADOLF RÖMER, Stuttgart, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Dec. 23, 1916. Serial No. 138,665. 3 Claims. (Cl. 149—5.)

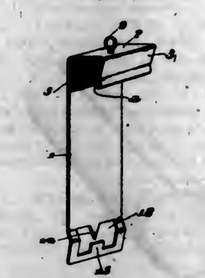
3. The process of tanning which comprises treating the skins in a bath containing formaldehyde and subsequently in a bath containing a soluble aromatic compound containing an amino group and capable of forming an insoluble product with formaldehyde.

1,395,734. WHEEL. RALPH R. ROOT, Cleveland, Ohio, assignor to The Globe Machine & Stamping Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 20, 1920, Serial No. 431,851. Renewed Sept. 15, 1921. Serial No. 500,955. 4 Claims. (Cl. 301—63.)



1. A wheel comprising two annular parts which are secured together, the central portions of said parts being spaced apart and each provided with a central extension, a hollow cylindrical member within and extending between said extensions, a hollow spool member with flaring portions within the cylindrical member and rollers between the outer surface of the spool member and the inner surface of the cylindrical member and means carried by the boss portions for holding the said spool in position.

1,395,735. HOISTING APPARATUS. HARRY SAWYER, Muskegon, Mich., assignor to Shaw Electric Crane Company, Muskegon, Mich., a Corporation of Michigan. Filed July 12, 1916. Serial No. 108,830. 11 Claims. (Cl. 254—184.)

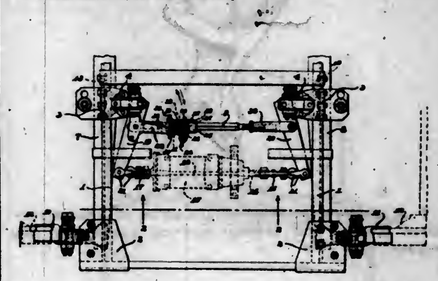


1. In a combined rack and hoist mechanism, the combination with a motor, a hoist drum and a rack drum,

said drums located adjacent each other, of a planetary gear system located at one side of said drums and between

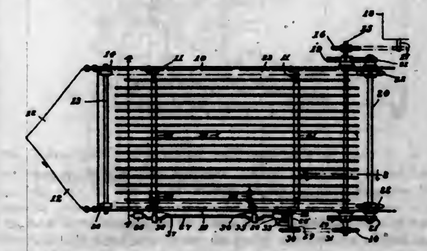
said drums and motor and actuated by said motor for simultaneously driving said drums.

1,395,736. CHECK HOLDER AND NOTCHER. WALTER H. SAWYER, Philadelphia, and ANDREW C. BOYD, Lansdowne, Pa. Filed Feb. 17, 1921. Serial No. 445,802. 7 Claims. (Cl. 211—37.)



1. A check notcher comprising a check supporting plate having an opening formed therein, and a notching member integral and substantially rigid with said plate, said notching member extending partially across and terminating materially short of the opposite side of said opening and having its sides materially spaced from the sides of said opening, whereby a check may be passed over said opening and under said notching member and notched thereby by movement with respect thereto.

1,395,737. SPARK-INTENSIFIER. PETER A. SCHAEFER, Greensburg, Pa. Filed Aug. 24, 1920. Serial No. 405,580. 3 Claims. (Cl. 175—183.)

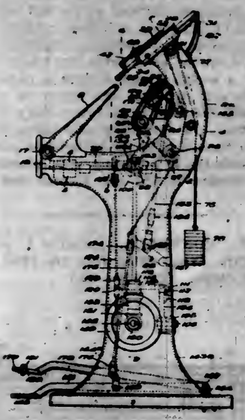


1. A device of the character described including an insulating core, terminals secured to one side of the core and offset to extend axially thereof, an electrode mounted upon the core to provide spark gaps between the electrode and said terminals, thimbles fitting over the terminals to abut the offsets therein, and a housing tube extending between and supported by the thimbles to inclose said spark gaps.

1,395,738. SLACK-ADJUSTER. BERNARD SCHECHTER, St. Louis, Mo. Filed Sept. 14, 1920. Serial No. 410,238. 20 Claims. (Cl. 188—202.)

5. In a slack adjuster, the combination of an adjusting rod, a surrounding cylindrical ratchet block fixed thereto with respect to rotation, a second cylindrical ratchet block not fixed thereto with respect to rotation, each block having teeth integrally formed at its end which may engage the teeth of the other, a hollow cylindrical rotatable housing surrounding and operating rotatably the second aforementioned ratchet block extending longitudinally from said housing, a socket equipped with a flared end which is embraced by said ears and into which the adjusting rod screws, set bolts threaded in said ears and gripping lightly behind said flare, an outwardly and upwardly extending dog integrally formed with the cylindrical portion of said housing, a horizontally swinging arm, provided with an arcuate slot formed in the end thereof and engaged by said dog.

1,395,739. CONVEYER. CHARLES L. SCHLADINSKA, Fountain City, Wis. Filed July 16, 1920. Serial No. 396,869. 1 Claim. (Cl. 130—82.)

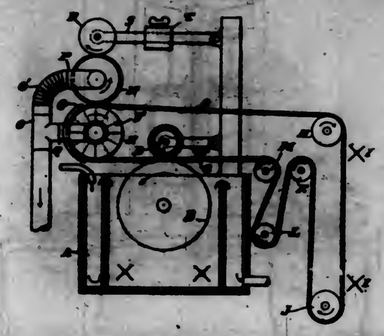


A shaking screen including a frame, transverse bars connecting the sides of the frame, an inverted channel member on each of the bars for longitudinal slidable movement with respect thereto, the bight of each inverted channel member being formed with a plurality of transverse notches, a longitudinal shaft supported on one side of the frame and having crank portions, screening bars disposed in the said notches and extending longitudinally within the frame, and pitmen connected to certain of the outermost of the screening bars and operatively connected with the crank portions of the longitudinal shaft.

1,395,740. SHOE-HEEL. EDWARD O. SCHLOEMER and HARRY SCHEINBERG, St. Louis, Mo. Filed June 16, 1920. Serial No. 389,283. 4 Claims. (Cl. 36—40.)

1. A shoe heel provided with a series of relatively inclined sockets, and fastener-receiving anchors in said sockets.

1,395,741. MACHINE FOR TURNING SHOES. JOHN E. SCOTT, Lynn, Mass., assignor to Hamel Shoe Machinery Company, a Corporation of Massachusetts. Filed June 2, 1919. Serial No. 301,292. 40 Claims. (Cl. 12—57.)



1. A shoe turning machine having, in combination, an endless sole feeding device, said device comprising a series of spurs normally lying within the body of the device, and means for moving said device to feed a sole during the turning operation the parts being constructed and arranged to cause said spurs to project beyond the body of the device during a portion of the movement of said device.

16. In a machine for turning shoes, in combination, turning devices, and means constructed and arranged to engage the interior of the unturned upper and to roll the same outwardly at the bend thereof during the turning operation.

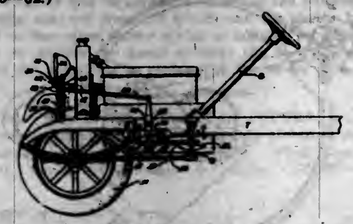
22. In a shoe turning machine, a horn having a rearwardly inclined shoe supporting surface, turning means carried by said horn, an upper distending element movable toward and from said horn, means for guiding said element for movement in a substantially rectilinear path and in a plane substantially parallel to said supporting surface, and means for moving said element.

1,395,742. MACHINE FOR MAKING PULP TUBES. WILLIAM R. SEIGLE, New York, N. Y. Filed June 28, 1920. Serial No. 392,371. 8 Claims. (Cl. 92—66.)

1. In a machine for forming wound tubes of felted fibrous material, the combination of a web-carrier, a segmental suction roll on which the web-carrier travels, and a suction mandrel roll bearing on the web-carrier and segmental suction roll.

1,395,743. BRAKE OR CLUTCH BAND LINING. WILLIAM R. SEIGLE, New York, N. Y. Filed June 28, 1920. Serial No. 392,373. 4 Claims. (Cl. 188—259.)

1. Brake or clutch lining, the body of which consists of a curved-surfaced band of felted fibrous material of layer-accretion construction, in which the original curvature of formation is preserved.



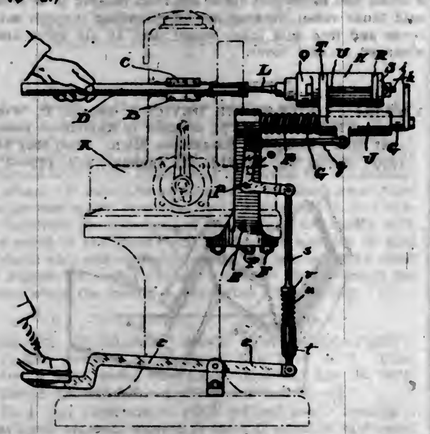
1,395,744. METHOD OF IMPREGNATING POROUS OR BIBULOUS MATERIALS AND THE PRODUCT THEREOF. WILLIAM R. SEIGLE, New York, N. Y. Filed June 28, 1920. Serial No. 392,376. 26 Claims. (Cl. 91—70.)

1. The method of impregnating porous or bibulous material with an oily composition, comprising preparation of a heat-polymerizable oil by partial molecular saturation of its free bonds with an introduced reagent, filling the material with said partially molecularly saturated oil, and completion of molecular saturation of the oil within the material under heat.

7. Porous or bibulous material, impregnated with an oil molecularly saturated in part by an introduced reagent, and in part heat-polymerized.

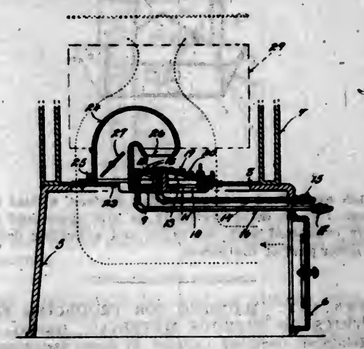
23. Brake-lining or the like, comprising a body of porous material uniformly impregnated with a mixture of gilsonite and heat-polymerized, partially hydrogenated tung oil.

1,395,745. DIRIGIBLE HEADLIGHT. FAY E. SHAFER, St. Louis, Mo., assignor to Shafer Safety Auto Post Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 14, 1920. Serial No. 410,305. 2 Claims. (Cl. 240—62.)



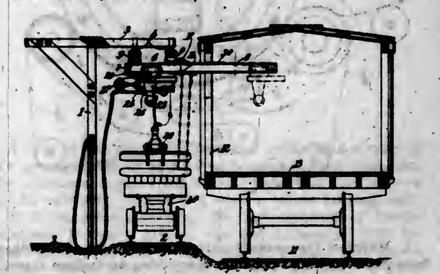
1. In an automobile light adjuster, the combination of rotating lights, standard for said lights, arms extending at a right angle from said standards, a link pivoted to said arms, an arm extending horizontally out to the side of the automobile from one of said standards, a vertically-pivoted arm, a connecting rod joining the aforementioned arm to said vertically-pivoted arm, a link connecting said vertically-pivoted arm to the conventioned guide-rod of the ordinary automobile steering apparatus, a reduced portion on said link, a guide sleeve for said link, said sleeve being pivoted on the lower end of the aforesaid vertically-pivoted arm, springs coiled about the reduced portion and on each side of the sleeve, means for causing the springs to re-act upon the sleeve in the form of a shoulder on one side and a nut and its locking nut on the other side, a ball formed on one end of the link, said ball fitting into a socket, said socket being a portion of a split clamping member of the guiding arm.

1,395,746. ANIMAL FOOD COMPOSITION AND METHOD FOR PREPARING SAME. LEE C. SHARP, Plattsmouth, Nebr., assignor to Alfa-Maise Manufacturing Company, Wilmington, Del. Filed Sept. 2, 1919. Serial No. 321,060. 3 Claims. (Cl. 99—11.)



1. An animal food product consisting principally of mature and cured corn stover comminuted to thin flaky particles of a length averaging less than an inch, and having the parts thereof flattened and crushed by pressure.

1,395,747. SHANK AND BIT PUNCH. WILLIAM A. SMITH, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 24, 1920. Serial No. 376,206. 8 Claims. (Cl. 76—5.)

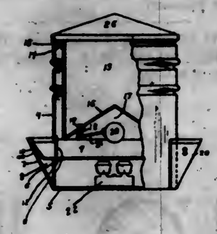


1. In a machine for re-opening the bits and shanks of hollow drill steels and similar tools, the combination of means for holding the drill steel, a pin adapted to enter the drill steel, punching mechanism in the form of a fluid actuated hammer tool for hammering the pin into the drill steel, said hammer tool having a reciprocating piston and an anvil block located at the forward end carrying said pin, and manually actuated means for feeding the punching mechanism forward.

1,395,748. OIL-BURNER. ALEXANDER O. TESCH, Chicago, Ill. Filed Mar. 8, 1921. Serial No. 450,547. 5 Claims. (Cl. 158—91.)

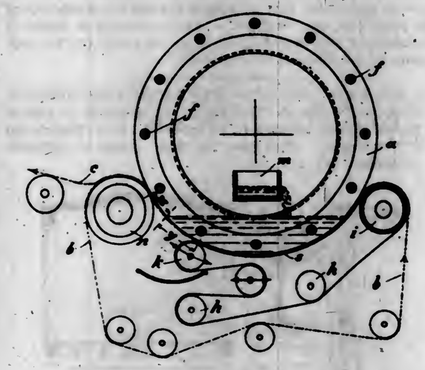
1. In an oil burner, a circular burner plate, means for supplying liquid fuel to the center thereof, a plurality of concentric wicks set in said plate for absorbing the fuel, means for inducing a current of air downwardly onto the plate to spread the fuel uniformly toward the periphery of the plate and over said wicks, and a concentric series of perforations through the plate near its periphery for supplying air to mingle with said fuel.

1,395,749. LOADING AND UNLOADING DEVICE. HOWARD W. THORN, Chrome, N. J., assignor to United States Metals Refining Co., Chrome, N. J., a Corporation of New Jersey. Filed Sept. 24, 1919. Serial No. 325,863. 9 Claims. (Cl. 212—15.)



1. A loading and unloading device, comprising a hinged rail, and supporting means for said rail and on which said rail is movable, a carriage movable on said rail, and hoist means on said carriage, one part of said rail being attached to the supporting means, and the other part hingedly connected with said first part and provided with lateral extensions adapted to space said rail from the sides of a doorway into which the rail is adapted to be extended.

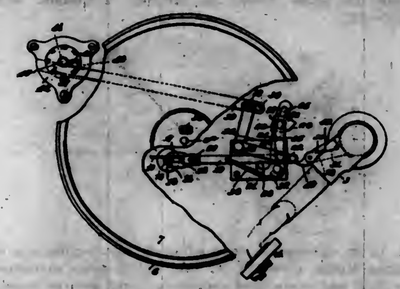
1,395,750. STOCK-WATERER. PAUL B. THRASHER, Sioux City, Iowa, assignor to William Warnock Company, Sioux City, Iowa, a Corporation of Iowa. Filed Feb. 20, 1920. Serial No. 360,258. 1 Claim. (Cl. 119—73.)



A stock-waterer comprising a jacket, a trough extending across and protruding through the walls of the jacket, a

water supply tank resting upon the trough, the bottom of the tank being provided with a valved opening above the trough, and raised to provide a space between the tank and

trough and afford a large heating surface, a float in the trough free to move vertically in said space and operatively connected with the valve, and a heating device in the lower part of the jacket.



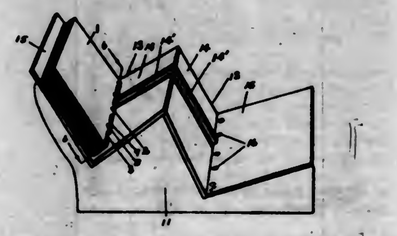
1,395,751. MACHINE FOR PRODUCING SMALL STRIPS OF FIBROUS MATERIAL. GUSTAV TÜRK, Meiningen, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed May 5, 1919. Serial No. 294,994. 6 Claims. (Cl. 92—39.)

1. Machine for manufacturing narrow strips of fiber from paper pulp and the like, comprising an endless traveling sieve, an impermeable apron within the sieve and in contact with the sieve for part of its length, a plurality of disks, resting on the sieve and means for feeding pulp between the disks.

1,395,752. AUTOMATIC RELEASE AND BRAKE MECHANISM FOR TALKING-MACHINES. ANTHONY VASSELLI, Newark, N. J., assignor, by mesne assignments, to The Harriman National Bank of the City of New York, trustee. Filed Jan. 29, 1918. Serial No. 214,301. 28 Claims. (Cl. 192—116.)

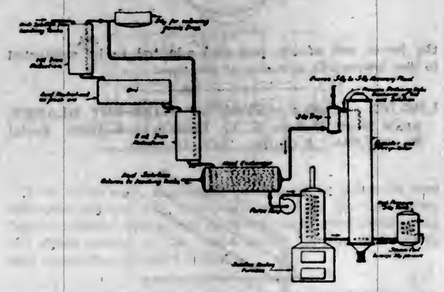
12. A device of the character described, having a motor, a brake, a pivoted tone-arm, means for applying the brake, an element for retracting the brake, an arm carried by the tone-arm, a finger carried by the arm and movable in one direction only relatively thereto, a slide carrying the element whereby movement of the tone-arm in one

direction bringing the finger into engagement with the slide to cause the said element to retract the brake.



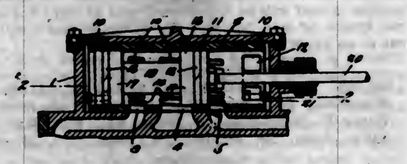
1,395,753. APPARATUS FOR USE IN PREPARING LIQUID OR SEMILIQUID MATERIALS. LOUIS A. WEHLE, Buffalo, N. Y. Filed Oct. 30, 1920. Serial No. 420,810. 8 Claims. (Cl. 99—2.)

1. The combination of an inner and an outer vessel arranged one partly within the other, and a cover arranged over said inner vessel and having a part extending into the space between said inner and outer vessels to form a liquid seal when said outer vessel contains liquid, the liquid in said outer vessel also serving to cool the contents of said inner vessel.



8. The combination of two vessels, one of which is arranged partly within the other and at a distance from the side and bottom walls of said other vessel to form a space for a cooling liquid, a cover for the inner vessel which extends into the space between said two vessels to form a liquid seal to prevent air or gas from passing to or from said inner vessel, racking means extending through said cover and into said inner vessel, and an air valve also arranged in said cover.

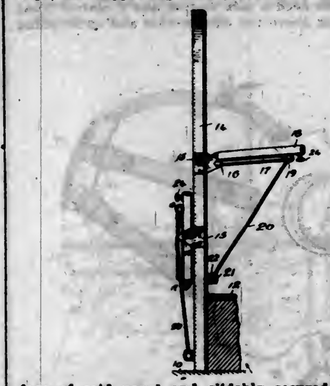
1,395,754. LOOSE-SHEET DEVICE. GEORGE P. WIGGINTON, Kalamazoo, Mich., assignor to Kalamazoo Loose Leaf Binder Company, Kalamazoo, Mich. Filed May 14, 1920. Serial No. 381,313. 11 Claims. (Cl. 129—1.)



11. The combination with sheets, of a binder comprising a pair of binder members, posts removably engageable with said sheets and binder members and constituting a binding means for the sheet body so that it may be removed from the binder as a unit, and a sheet support comprising a pair of sheet holders disposed so that the body of sheets may be arranged on one of the holders and the posts removed from the sheets and the sheets transferred to the other holder which is adapted to aline the sheets to receive the posts so that the body of sheets held by the posts may be replaced in the binder as a unit.

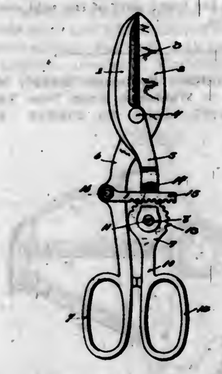
1,395,755. HYDROMETALLURGY OF COPPER. GILBERT A. BRAGG, Thomson, Nev., assignor to Metals Research Company, a Corporation of Maine. Filed Aug. 16, 1920. Serial No. 403,761. 9 Claims. (Cl. 75—18.)

1. The method of extracting copper from ores, roasted matte, or other copper-bearing material, which comprises leaching the material to obtain a copper sulfate solution, heating the copper sulfate solution, and introducing sulfur dioxid into the heated copper sulfate solution; substantially as described.



1,395,756. VALVE. WILLIAM A. MCREYNOLDS and ROSMER BRIGGS, Haselton, Kans. Filed June 20, 1919. Serial No. 305,541. 1 Claim. (Cl. 121—193.)

In a device of the class described a steam chest and a casing in the steam chest, the chest and the casing having coöperating ports, the casing including a wall having a bottom edge, said wall being inclined with respect to the adjacent wall of the steam chest to provide for the passage of steam, the casing being adapted to be swung away from the bottom of the chest and to be supported on said edge to facilitate the alinement of the ports of the casing with the ports of the chest; and an element movable in said inclined wall and coöperating with the bottom of the chest to dispose the casing at right angles to the bottom of the chest when the casing is supported on said edge.

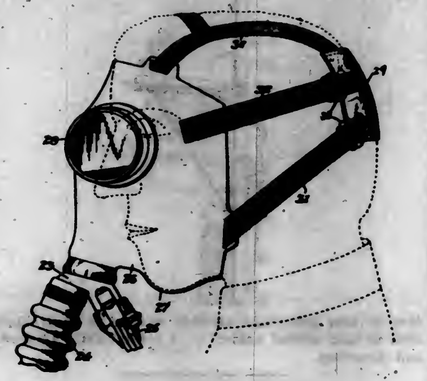


1,395,757. FOLDABLE SEAT FOR PREPAYMENT-CARS. JOHN S. MCWHIRTER, New York, N. Y. Filed Oct. 5, 1915, Serial No. 54,117. Renewed Apr. 29, 1921. Serial No. 465,500. 1 Claim. (Cl. 155—83.)

In a seat structure, a rigid vertical panel forming a seat back, brackets secured to the side edges of said panel and provided with inwardly facing pins, a seat provided with slotted guideways on its under surface near its side edges, said pins being located in the slots of said guideways, and supporting arms pivotally secured to the front

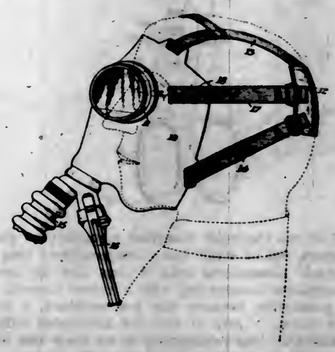
face of said panel and slidably secured at their upper ends in said slotted guided ways substantially as shown and described.

1,395,758. OPERATING MEANS FOR HINGED TOOLS. ALEXANDER MASECZYK, Milwaukee, Wis. Filed Mar. 15, 1920. Serial No. 365,797. 1 Claim. (Cl. 30—13.)



A tool of the character described comprising a pair of jaw members, one of which has a comparatively long handle extension terminating with a grip, and the other a handle extension terminating with a recess forming ears, a pivot connection between the jaw members, a handle extension having a grip at one end associated with the long handle grip, and terminating at its inner end with a circular tooth head mounted between the ears, a pivot connection between the head and ears, the said tooth head being spaced from the bottom of the ear recess to form a rack guide, and a transversely disposed straight rack in pivotal union with the long handle, the same being extended into the guide formed by the ear recess and adapted to be adjustably meshed with the teeth of the aforesaid head, whereby the opening and closing movement of the jaws will be predeterminingly regulated.

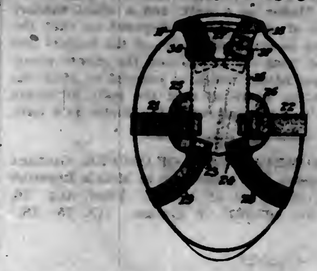
1,395,759. GAS-MASK. RANDOLPH MONRO, New York, N. Y., assignor to Waldemar Kops, New York, N. Y. Filed Apr. 30, 1919. Serial No. 293,612. 2 Claims. (Cl. 128—141.)



1. In a gas mask, a hood made from a unitary blank of flexible material having symmetrical oppositely dis-

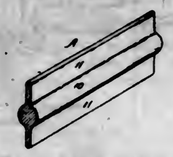
posed parts in its lower edge united by a single joint to completely shape the blank into the hood, whereby there is provided in the hood a chin section and a central front portion extending above the chin section and outstanding

materially from the body of the hood so as not to contact with the nose and mouth of the wearer, there being a tubular opening in the lower part of the said central front portion of the mask.



1,395,760. GAS-MASK. RANDOLPH MONRO, New York, N. Y., assignor to Waldemar Kopa, New York, N. Y. Filed Apr. 30, 1919. Serial No. 293,613. 10 Claims. (Cl. 128—141.)

1. In a gas mask, a hood, a harness, and a connection for securing the harness to the hood so constructed as to cause the hood to wrinkle at the temple portions thereof thereby improving the fit of the hood to the face of the wearer.



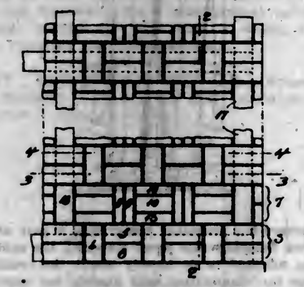
1,395,761. GAS-MASK. RANDOLPH MONRO and EDWARD KLAUBER, New York, N. Y., assignors to Waldemar Kopa, New York, N. Y. Filed Apr. 30, 1919. Serial No. 293,872. 3 Claims. (Cl. 128—141.)

1. In a gas mask and in combination with the hood thereof, a harness comprising a pad adapted to lie on the upper back portion of the head of the wearer, a set of straps diverging upwardly from the top of the pad and adapted to be connected to the upper front portions of the hood, and a set of straps diverging downwardly from

the lower end of the pad and adapted to be connected to the lower side portions of the hood.

1,395,762. MANUFACTURE OF WING-NUT BLANKS. ADAM MUFF, Buffalo, N. Y. Filed Sept. 8, 1920. Serial No. 408,984. 4 Claims. (Cl. 10—86.)

1. A method of manufacturing wing nut blanks, consisting in forming a bar of metal having a longitudinal axial enlarged portion and flange portions of reduced cross section extending outwardly therefrom, and cutting said bar into short pieces in such a manner that the enlarged portion thereof will be cut substantially at right angles to the length of said bar and the flange portions will be cut at an angle to said right angled cut.

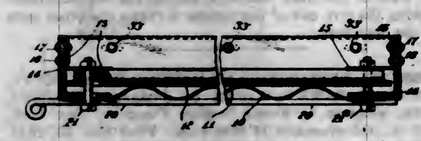


1,395,763. BATH BRUSH AND SPRAYER. JAMES A. MULHERIN, St. Louis, Mo., assignor of one-third to Henry D. Delkeskamp, St. Louis, Mo. Filed Mar. 14, 1921. Serial No. 452,167. 1 Claim. (Cl. 15—69.)

A fountain brush including a hollow rubber head provided with a marginal groove intermediate its faces, a handle equipped with a frame mounted in said groove

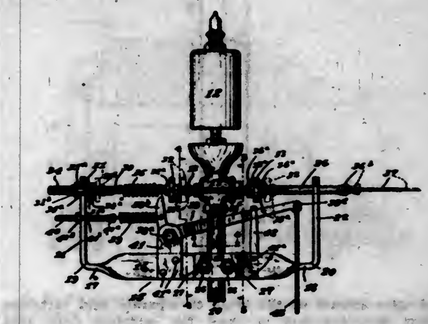
and lying within the plane of the head, and a tube engaged with the head for supplying water to the latter, one face of the head having apertures formed therein through which the water is emitted.

1,395,764. BRICK WALL. ERNST EVALD OTTERSTRÖM, Stockholm, Sweden. Filed Feb. 28, 1920. Serial No. 361,952. 7 Claims. (Cl. 72—37.)



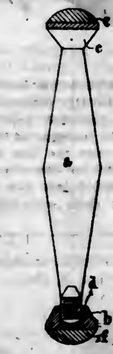
1. A brick wall, consisting essentially of bricks in two different groups, one group of which in section shows two recumbent bricks and between them erect bricks, and the other group of the same height as the first group and consisting of erect bricks.

1,395,765. WELT GROOVING AND BEVELING MACHINE, JAMES O. PERKINS, Auburn, N. Y., assignor to Hamel Shoe Machinery Company, a Corporation of Massachusetts. Filed July 3, 1918. Serial No. 243,118. 3 Claims. (Cl. 12—67.)



1. In a device for operating upon welts, a support provided with a guide opening therein, a detachable plate on said support projecting partly across said opening, a knife seated within said opening and under the projecting portion of said plate, and a screw mounted for adjustment within said support and arranged to intersect said opening at an acute angle whereby said screw serves to adjustably wedge said knife within the opening and against the projecting portion of said plate.

1,395,766. FIRE-DOOR. ELLIS J. G. PHILLIPS, Aurora, Ill., assignor to Richards-Wilcox Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed May 17, 1920. Serial No. 382,010. 11 Claims. (Cl. 189—46.)

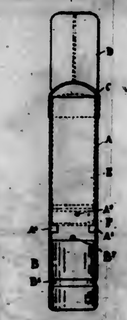


1. A door comprising two sheet metal plates spaced apart forming the body of the door, two angle bars secured to each of the side portions of said plates respectively, and means securing said angle bars together.

1,395,767. SIGNAL-CONTROL MECHANISM. WILLIAM H. POSSINGER and GIDEON T. CUNNINGHAM, Twin, Wash. Filed June 2, 1920. Serial No. 386,118. 10 Claims. (Cl. 187—139.)

1. The combination with a whistle, of a signal control mechanism comprising a support, a movable frame mounted thereon, tensioned means for the frame and a plurality of operating means for moving the frame.

1,395,768. MEANS FOR GAGING THE DIAMETERS OF INTERNAL ANNULAR GROOVES. FRANK POUNTNEY, Birmingham, England, assignor to Rudge-Whitworth Limited, Coventry, Warwick, England. Filed Oct. 31, 1918. Serial No. 260,549. 5 Claims. (Cl. 33—178.)

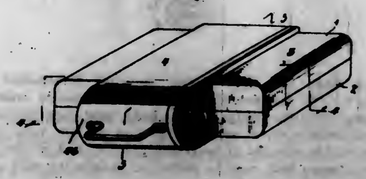


1. A gage for determining internal dimensions of bodies by the contact of diametrically opposite ends of said gage with the surface of the body, said gage including shaped contact pieces at each end and flexible connecting means which extends at least the greater part of the distance between said ends to permit of shortening said gage if required for insertion.

1,395,769. BOMB. FRANCIS RANKEN, Kingsway, London, England. Filed Sept. 16, 1919. Serial No. 324,207. 5 Claims. (Cl. 102—29.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An incendiary bomb including in combination a cylindrical casing, a heavy member in one end thereof, a separate cartridge with incendiary composition therein

contained in said casing, a detonator cap detachably secured to said separate cartridge containing means adapt-



ed upon impact of the bomb to separate said cartridge from said cap and to expel the cartridge from said casing.

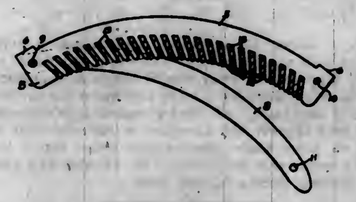
1,395,770. PNEUMATIC TIRE. HARLAN S. RECTOR, Chicago, Ill. Filed Oct. 20, 1919. Serial No. 331,922. 3 Claims. (Cl. 152—20.)

2. The combination with a rim having channeled outer periphery, of a pneumatic tire comprising a tube adapted to contain air under pressure provided with integral flanges lapped around the margins of the rim, and adapted to grip the rim and secure the tire by pressure against longitudinal displacement on the rim, and reinforcement in the flanges and extended into the wall of the tube to stiffen the flanges and their connection with the tube.

1,395,771. PORTABLE SAFE. MICHAEL C. REGAN, Washington, D. C. Filed Sept. 8, 1920. Serial No. 408,838. 4 Claims. (Cl. 109—1.)

1. A portable safe comprising a housing having an opening extending therethrough, a container adapted to be slidably inserted in said opening, and project therethrough, said container having openings in its top and bottom walls intermediate the ends thereof, and spring arms pivotally carried on said housing having enlargements adapted to enter said openings for locking said container in said housing, and means for releasing said enlargements from said openings.

1,395,772. SUSPENDED TROUSERS-PROTECTOR. EDWARD L. RICHARDSON, Brooklyn, N. Y. Filed Nov. 19, 1919. Serial No. 339,104. 8 Claims. (Cl. 2—135.)



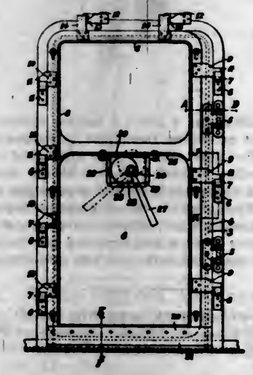
1. A trouser leg protector comprising a pair of guards formed from flexible water proof material, the said guards each being adapted to fit loosely about the trouser legs, and means for supporting said guards for independent movements with respect to the trouser legs in order to permit the lower ends of the same to constantly remain below the shoe tops irrespective of the posture of the wearer.

1,395,773. PROCESS FOR TREATING SHARK-SKINS AND THE LIKE. ALLEN ROGERS, Brooklyn, N. Y., assignor to Ocean Bond Co. Inc., New York, N. Y., a Corporation of New York. Filed July 19, 1919. Serial No. 311,921. 10 Claims. (Cl. 149—2.)

10. The method of treating shark skins and the like, which consists in subjecting them to an acidified solution of common salt and subsequent removal of the excess of acid from the skins by a solution of common salt.

1,395,774. HAIR-WAVER. ARNOLD SCHIERR, New York, N. Y. Filed Mar. 9, 1921. Serial No. 451,053. 9 Claims. (Cl. 132—35.)

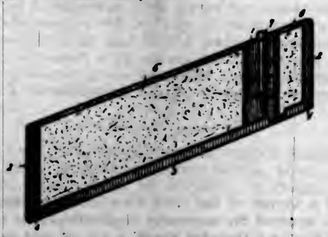
9. In a hair waver, a pair of arcuate parallel comb members, bridges connecting the ends of said members and spacing them apart, teeth on the members, the teeth of one member disposed at an opposite angle to the teeth of the other member, a tongue pivoted at one end between the ends of the comb members, and means for removably locking the free end of the tongue between the other ends of the members.



1,395,775. EXPLOSIVE AND METHOD OF MANUFACTURING SAME. WALTER O. SNELLING, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Mar. 25, 1920. Serial No. 368,606. 17 Claims. (Cl. 52—11.)

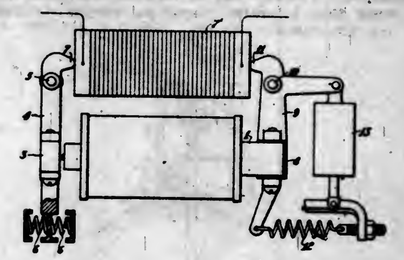
3. An explosive composition comprising an inorganic nitrate coated with a solid nonexplosive vulcanized oil and sensitized by admixture with a solid detonating explosive.

1,395,776. METHOD OF TREATING UNDRIED ORGANIC NITRATES AND THE LIKE. WALTER O. SNELLING, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Original application filed Mar. 16, 1920, Serial No. 366,390. Renewed Jan. 21, 1921. Serial No. 439,064. Divided and this application filed Mar. 16, 1921. Serial No. 452,733. 7 Claims. (Cl. 52—21.)



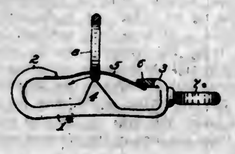
1. The method of treating wet materials to reduce the water content without drying which comprises the step of mixing the material with a concentrated solution of a solid body having high solubility in water, and subsequently removing the excess solution.

1,395,777. BULKHEAD-DOOR. ORSINI STUART, Liverpool, England. Filed May 26, 1921. Serial No. 472,845. 3 Claims. (Cl. 114—117.)



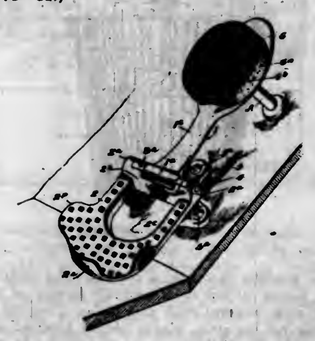
1. The combination of a partition having a doorway formed therein; a floor substantially flush with the lower margin of said doorway, said floor having a slot extending below its surface and across said doorway; a door hinged to said partition and adapted in its closed position to overlap the margins of said doorway; and a locking structure comprising two interengaging sets of wedging locking elements one set being movable to produce engagement and disengagement, and including a wedging bar which in the engaged position lies on said slot and overlaps the adjacent edge of said door.

1,395,778. HUMIDIFIER. F BALTIS SURBECK, Lewiston, Idaho. Filed June 11, 1920. Serial No. 388,104. 2 Claims. (Cl. 131—30.)



2. A humidifier comprising a sheet having its side edges turned inwardly and its lower edge turned upwardly forming a holder, the ends of the lower upturned edge being soldered to the side edges forming a trough, an absorbent pad fitting snugly between the side edges and the back of the holder and spaced from the bottom of the trough, and said plate having a laterally offset tapering water inlet formed therein for the introduction of water into the trough.

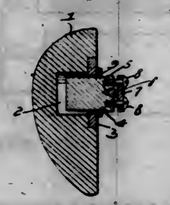
1,395,779. ELECTRIC REGULATOR. WILLIAM A. TURBAYNE, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Oct. 10, 1919. Serial No. 329,848. 8 Claims. (Cl. 171—229.)



3. In an electric regulator, a compressible pile, operating means therefor located at opposite ends thereof, common electromagnetic means for controlling said operating means, one of said operating means being damped while the other is undamped.

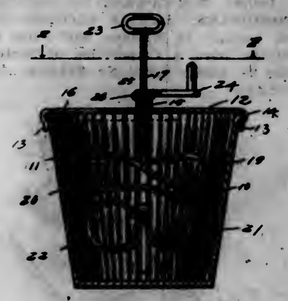
1,395,780. SPRING-LINK. ORVILLE WHEELER, Waverly, Iowa. Filed Feb. 17, 1921. Serial No. 445,674. 3 Claims. (Cl. 24—236.)

1. A device of the character described, comprising an open link, and a flat spring fastened at one end of the link, movable inward and having its free end contacting with the inner wall of the opposite end of the link to close the opening, said link having an interior boss opposite, projecting medially against and placing said spring under tension.



1,395,781. PEDAL FOR OPERATING ACCELERATORS OF AUTOMOBILES. ALLEN A. WILLIAMS, Cedar Rapids, Iowa, assignor to Williams Soft Pedal Company, Cedar Rapids, Iowa, a Corporation of South Dakota. Filed June 24, 1920. Serial No. 391,334. 10 Claims. (Cl. 74—81.)

2. An attachment for the purpose specified comprising a support adapted to be secured to the floor of an auto-



mobile adjacent the accelerator; a heel member hinged to said support; and a toe member hinged to said support so that said members can be independently raised.

1,395,782. TRUSS. Jay W. Wilson, Cleveland, Ohio. Filed Mar. 31, 1919. Serial No. 286,238. 1 Claim. (Cl. 128—124.)

A device of the kind set forth and comprising a truss pad formed with a pocket in its reverse side, the said pocket being counter-bored to form an enlarged mouth, a bearing plate seated in the enlarged mouth portion, an adjusting screw passing through and threadingly engaging the bearing plate and entering the said pocket, the adjusting screw being formed with a transversely disposed U-shaped groove on its outer end, a supporting arm resting in said groove, a plate bearing against the arm on the opposite side from the groove, screws passing loosely through the plate and threadingly engaging the adjusting screw, said screws being disposed one on each side of the arm whereby the adjusting screw may be positioned at various points under the arm of the pad adjusting member and away from the arm in the manner and for the purpose specified.

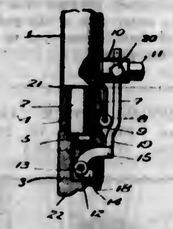
1,395,783. BUCKET CLOTHES-WASHER. Jane A. Wright, Bordentown, N. J. Filed Apr. 26, 1918. Serial No. 230,921. 2 Claims. (Cl. 259—107.)

1. In a washing machine, a receptacle, a slidable and rotatable beater within the receptacle formed of a single strand, a stem integral with and rising from the beater, a mounting for the stem, a grip formed integral with the stem at its top to facilitate depression of the beater, and means extending from the stem below the grip operable to rotate the beater.

1,395,784. DAMPER. Joseph Alexander, Chicago, Ill. Filed May 15, 1920. Serial No. 381,634. 3 Claims. (Cl. 126—295.)

1. In combination, a pipe; a damper spindle in the pipe with one end extending therefrom; a supporting plate attached to the pipe and having a bearing engaging the damper spindle; a lever attached to the damper spindle and disposed at an angle to said supporting plate; a wire loop extending around the damper spindle, lever and supporting plate; a bolt disposed through the supporting plate and lever; and a nut threaded on the bolt, the bolt and nut binding said lever against said supporting plate.

1,395,785. COMBINED WRENCH AND PIPE-TONGS. Christen Andersen, Hurup, Denmark. Filed July 28, 1919. Serial No. 313,672. 2 Claims. (Cl. 81—157.)

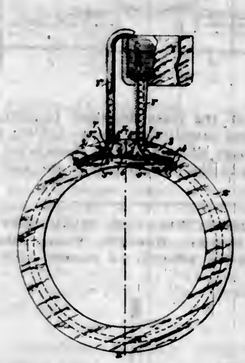


1. In a wrench of the class described, a handle, a jaw slidably mounted for movement longitudinally of the handle and having a threaded shank, a nut on said shank for adjusting the jaw as aforesaid, a second jaw slidable transversely of the handle and first mentioned jaw, a lever connected to the transversely sliding jaw for actuating the same, spring means cooperating with the lever and tending to shift the transversely sliding jaw toward the handle, and a movable section on the handle cooperating with the shank nut to hold the longitudinally sliding jaw in adjusted position, said section being shiftable to free the last mentioned jaw for movement.

1,395,786. GAME. Fred H. Andersson, Paterson, N. J. Filed Jan. 22, 1921. Serial No. 439,140. 7 Claims. (Cl. 46—59.)

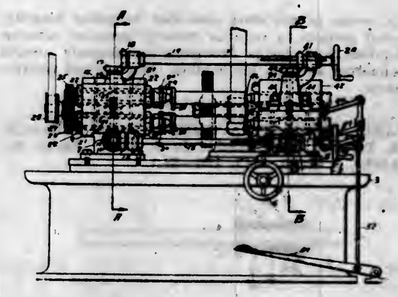
1. A game, including projectiles, cylindrical means for projecting said projectiles, said means being fixedly arranged at an angle to the vertical and adapted to simultaneously project said projectiles angularly to the vertical thus allowing same to fall at a distance from said game.

1,395,787. EDGE SETTING AND BURNISHING MACHINE. Otis B. Angell, Haverhill, Mass., assignor to Hamel Shoe Machinery Company, a Corporation of Massachusetts. Filed June 6, 1918. Serial No. 238,570. 8 Claims. (Cl. 12—103.)



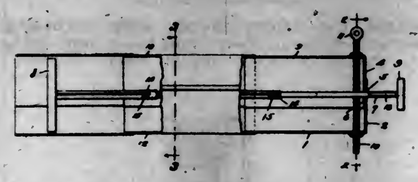
6. In an edge setting machine, in combination, an edge iron having a burnishing face, means for supporting said iron for movement under pressure of the work in a direction perpendicular to said face, a beading wheel mounted for bodily movement with respect to said iron, and means whereby movement of the iron under pressure of the work produces a corresponding relative movement of said iron and wheel.

1,395,788. TERMINAL FOR WIRES OF ELECTRIC CIRCUITS. Stanley Anthony, Boston, Mass. Filed Oct. 28, 1918. Serial No. 259,962. 3 Claims. (Cl. 173—259.)



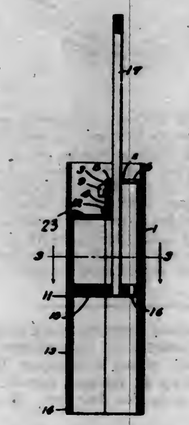
1. A screw for an electrical terminal connection, said screw having a screw threaded shank and a head, the under face of which is shaped to diverge from the plane of the peripheral portion of said head progressively from said periphery to the shank.

1,395,789. BALL-DEBURRING MACHINE. Raymond H. Bannell, Waterbury, Conn. Filed Nov. 7, 1919. Serial No. 336,511. 4 Claims. (Cl. 51—130.)



1. A ball-deburring machine comprising upright coöperative deburring members forming between them a general ball-race forming an elevated intake, one of said members having an interrupted segment; means for feeding by gravity and by way of its elevated intake spheroidal objects to and into said ball-race for deburring treatment therein; and a transfer-insert, the latter occupying said interrupted segment and affording both an intake ball-race section and a delivery ball-race section, said intake and delivery sections constituting terminal continuations of said ball-race.

1,395,790. COMPOUND GRINDING-HEAD FOR GRINDING TWO CYLINDRICAL MACHINE PARTS AT THE SAME TIME. Theis F. Bernard, Detroit, Mich., assignor to Frederick M. Ehehalt, Detroit, Mich. Filed May 17, 1920. Serial No. 382,190. 10 Claims. (Cl. 51—237.)

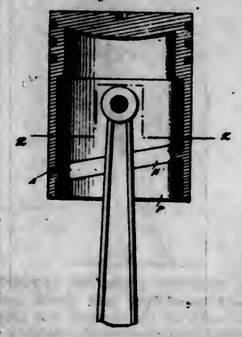


1. A compound grinding head with two pairs of work supporting spindles for holding and grinding two cylindrical machine parts at the same time, in combination with the horizontal table of the grinding machine, and the rotating grinding wheel positioned so as to simultaneously act on both the work pieces, a head stock, and a tail stock to support the spindles, a horizontal sliding plane splined to the spindle supports, a screw for making a horizontal adjustment of the same to bring the work to and from the grinding wheel.

1,395,791. CONDUCTOR FOR MINE EXPLOSIVES. ROBERT LEE BOWMAN, Knoxville, Tenn. Filed Jan. 19, 1921. Serial No. 438,416. 6 Claims. (Cl. 86—21.)

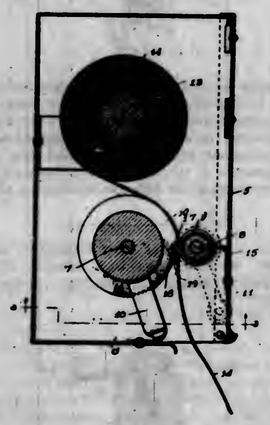
4. A device of the class described including opposed separable sections constituting charge holding means and an ejecting plunger slidable therein there being a fuse receiving opening in the plunger and in the wall of one of said sections.

1,395,792. CONDUCTOR FOR MINE EXPLOSIVES. ROBERT LEE BOWMAN, Knoxville, Tenn. Filed Jan. 19, 1921. Serial No. 438,417. 6 Claims. (Cl. 86—21.)



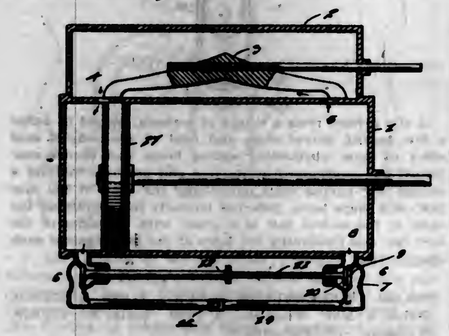
1. A device of the class described including hingedly connected sections, a follower slidably mounted between the sections, and means extending continuously around the connected sections for holding them against relative movement.

1,395,793. PENCIL ATTACHMENT. JACOB L. BROSCHART, Trenton, Mo. Filed July 8, 1920. Serial No. 394,689. 1 Claim. (Cl. 120—84.)



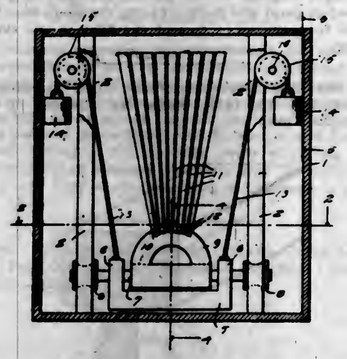
The combination with a pencil, of a rubber sleeve slidably mounted thereon, said sleeve having inwardly extending flanges adjacent its ends thereby forming an air chamber extending substantially throughout the length of the finger engaging member when said finger engaging member is disposed on a pencil, the exterior of said finger engaging member being reduced in diameter centrally and tapered outwardly toward its ends and terminating in annular outwardly extending beads, the forward end of the sleeve beyond the bead being conically shaped, the bead within the inner end of the forward end of the sleeve being outwardly spaced in relation to the annular bead extending outwardly from said end of the sleeve thereby in connection with the tapered shape of the sleeve from its central portion toward its end preventing slipping of the fingers on the sleeve.

1,395,794. ENGINE-PISTON. ZENO ARNO BRUEGGER, Boise, Idaho. Filed Feb. 2, 1920. Serial No. 355,891. 1 Claim. (Cl. 74—108.)



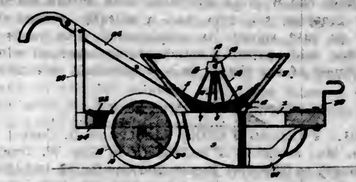
In combination, a cylinder, a piston adapted to work therein, a flange formed interiorly of the piston and extending circumferentially thereof, said flange being inclined and bent to provide a continuous channel inclined with respect to the piston and which is adapted to trap the oil as it descends along the inner walls of the piston, said piston being formed with a passage which establishes communication between the lowest point of the channel and the outer side of the piston whereby the oil trapped in the channel is conveyed to a predetermined point exteriorly of the piston.

1,395,795. DISPENSING DEVICE. ALVIN EMIL CARLSON, Nevis, Minn. Filed Oct. 19, 1920. Serial No. 417,923. 5 Claims. (Cl. 211—83.)



1. A dispensing device, including a pair of rotatable shafts, a drum secured to one of said shafts, means presenting a contact face forming a part of the second of said shafts, said drum being formed with a recessed portion, a spring having one of its ends attached to said drum, teeth secured to the opposite end of said drum, said teeth being adapted to lie in said recessed portion, and to engage a sheet of material interposed between said drum and contact face, the free end of said spring being adapted to swing outwardly and to cause a severance of the strip of material upon said drum being rotated to a point at which the free end is clear of the contact face.

1,395,796. AUTOMATIC CYLINDER-COCK. JAMES J. CARMICHAEL, Ridgway, Colo. Filed Jan. 28, 1916. Serial No. 74,909. 3 Claims. (Cl. 121—136.)



1. A cylinder cock including a pair of casings depending from a steam cylinder at opposite sides of the piston thereof, said casings having valve seats therein in close proximity to said cylinder and packing glands located at their inner sides, valves located in the casings for engaging said valve seats and having stems passing through the glands and adjustably connected, and a discharge pipe connected to said casings.

1,395,797. CLOTHES-DRYING CABINET. PATRICK J. CATELLO, Rome, N. Y., assignor of one-half to Maxwell F. Schneible, Rome, N. Y. Filed Apr. 27, 1920. Serial No. 377,005. 1 Claim. (Cl. 68—84.)

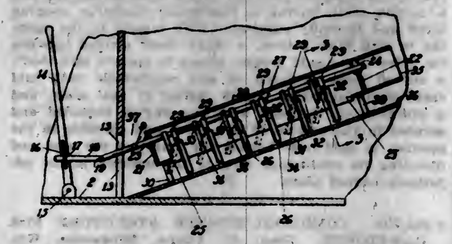
A device of the class described comprising a cabinet, a carriage therein having arms, a shaft fixed in said arms, rollers on the shaft, guide means for the rollers, flexible members secured to the arms, guide means over which the flexible members are trained, counter balances for the carriage on said flexible members, article supporting means journaled on the shaft intermediate the arms, and said article supporting means under the imposition of weight being adapted to move the carriage into binding contact with the cabinet for the purpose specified.

1,395,798. PLANTER. WILLIAM C. CATLETT, Pritchett, Tex. Filed Oct. 20, 1920. Serial No. 418,218. 1 Claim. (Cl. 221—118.)

In a seed distributing mechanism of the class described comprising a hopper provided with a false bottom therein, a curved plate having a registering discharge opening below and laterally adjustable with respect to the opening in said false bottom, a crank shaft pivoted between the sides of the said hopper, means to operate said shaft, a curved block mounted on and oscillatable with said crank shaft, agitating fingers carried by said shaft, and a plurality of resilient, agitating fingers threaded and secured in the bottom of said block and operable in the opening in said false bottom for agitating the seed and directing its continuous flow to the opening in the adjustable curved plate.

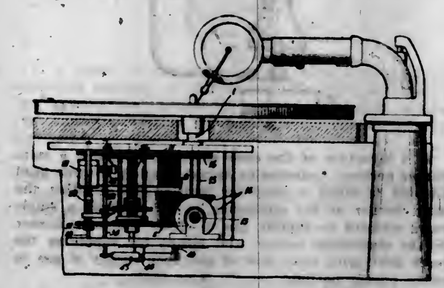
1,395,799. COMBINED BURNER STRUCTURE FOR GAS-STOVES. EMIL L. CLAUS, Milwaukee, Wis. Filed Mar. 21, 1919. Serial No. 284,103. 2 Claims. (Cl. 158—115.)

1. A structure of the class described including a main burner portion, a simmering burner portion, a torch head adapted to direct a torch for igniting gas at either the main burner or the simmering burner portion, a single valve adapted to supply gas to either the main burner or the simmering burner, and means for supplying the torch head with torch flow of gas upon supply of gas to either burner portion.



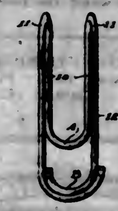
1,395,800. WRENCH. EDWIN W. COCHRAN, Catawba, N. C. Filed May 24, 1921. Serial No. 472,120. 1 Claim. (Cl. 81—163.)

A wrench having a shank provided at one end with a grip portion and at the other end with an enlarged head



having a longitudinal guide channel, jars having contacting slides fitted in said guide channel, an operating spindle arranged in a longitudinal slot in the shank and provided at its inner end with an operating head within reach of a hand grasping the grip, and a spirally webbed disk carried by said spindle in engagement with racks on said slides, said operating spindle being arranged within the thickness of the shank, in a longitudinal slot formed therein.

1,395,801. FUEL-AGITATOR. ADOLPHUS H. CORUM, St. Louis, Mo., assignor of one-fourth to Guy W. Dunlap, one-fourth to Theodore Boyce, and one-fourth to Lilburn J. Dunlap, St. Louis, Mo. Filed June 24, 1921. Serial No. 480,100. 3 Claims. (Cl. 259—39.)

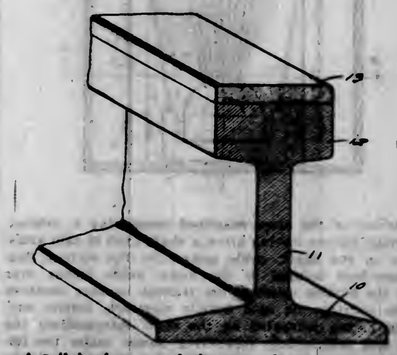


1. The combination of a runway, braces fastened thereto and projecting therefrom, a casing borne by the said braces, the said casing having bearings in its ends, an operating rod slidable in the said bearings, and means for actuating the said rod, the said casing and operating rod being located adjacent to the wall of a coal bunker and there being an opening through the said wall leading to the shoveling floor.

1,395,802. REWIND DEVICE FOR PHONOGRAPHS. JOSEPH HUNTER DICKINSON, Cranford, and LOUIS GREINER COLLYER, Upper Montclair, N. J., assignors to The Aeolian Company, a Corporation of Connecticut. Filed June 23, 1916. Serial No. 105,410. 13 Claims. (Cl. 185—40.)

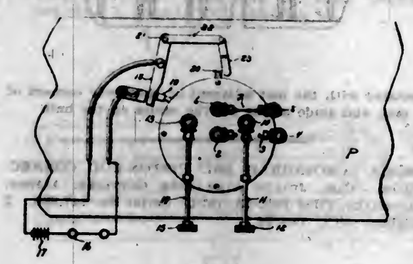
3. In combination with the spring-motor of a phonograph, an electric motor connected to wind said spring motor; switch-means comprising electrical contacts in circuit with the electric motor; nut and screw means operatively related to each other and to the spring-motor for causing one of their members to travel in different directions consequent upon the winding and unwinding respectively of said motor; said member, after traveling a given distance upon the winding of the spring motor, being arranged to operate the switch means in contact-opening direction, and after traveling a given distance upon the unwinding of the spring motor, to partially operate the switch-means in contact closing direction; and an automatic brake for said spring-motor which is normally released but which is applied by the aforesaid traveling member after it has traveled beyond the position wherein it operates the switch-means in contact-closing direction.

1,395,803. PAPER-CLIP. JOHN T. DU BOIS and FRANK B. HASTER, Detroit, Mich. Filed Sept. 20, 1920. Serial No. 411,627. 1 Claim. (Cl. 24—261.)



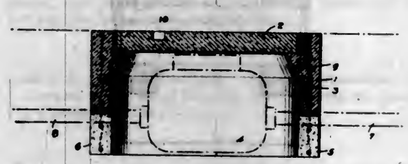
A clip formed from a length of material looped to define a jaw having spaced sides and bent at the ends of said sides to form upstanding spring loops and thence continued and overlapped at its free end portions to form a second jaw having sides paralleling the sides of the first jaw, said loops being deflected laterally for sustaining the sides of the second jaw in a plane with the sides of the first jaw and tensioning the sides of the jaws against each other.

1,395,804. HEEL-FILLER BLOCK. JAMES E. EMOND, Belen, N. Mex. Filed Dec. 2, 1920. Serial No. 427,828. 3 Claims. (Cl. 238—165.)



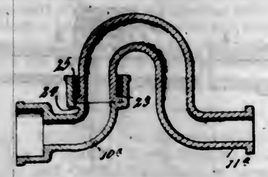
3. In a track construction the combination of a main line rail, a lead rail and switch point having abutting ends and running in the same plane parallel to the main line rail and filler secured to the lead rail and switch point and unattached to the main rail; said block having rounded corners adapted to rest against the webs of the rails and switch point and further having chambers therein that extend from the upper face of the filler to one side wall thereof.

1,395,805. RAIL. RUDOLPH FRIEDLMANN, Cleveland, Ohio. Filed Sept. 16, 1919. Serial No. 324,060. 1 Claim. (Cl. 238—148.)



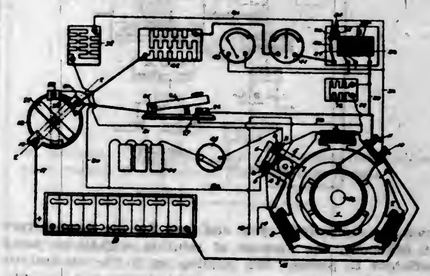
A rail having a surfacing cap of greater resistance to wear than the body of the rail itself, said cap being substantially of the same width as the tread portion of the rail with the base of the cap substantially parallel with the base of the rail and the upper surface of the cap, whereby the cap is reversible for application to the rail, and said cap being applicable to the rail and rolled thereon while the rail and cap are at a welding temperature.

1,395,806. TIME-CONTROLLED LIGHTING SYSTEM. FRED H. FINKE, Milwaukee, Wis. Filed June 9, 1921. Serial No. 476,170. 2 Claims. (Cl. 200—35.)



1. In a device of the character described, an electric switch, a clock having an alarm hammer operable at a predetermined time to deliver blows on said switch to close the same, and a lever connected with the switch and operable thereby, to render said hammer inoperative after the switch has been closed.

1,395,807. WATER-METER BOX. NATALE FORNI, Santa Rosa, Calif. Filed Jan. 4, 1921. Serial No. 435,041. 1 Claim. (Cl. 72—9.)



A water meter protecting box comprising a concrete casing, a substantially annular continuous reinforcing metallic member embedded in said casing, said casing having an annular flange extending inwardly near the upper end, a pair of pipe receiving notches near the lower end, and a covering plate of concrete adapted to rest on said flange, said plate having a tool receiving notch extending partially therethrough whereby the plate may be bodily removed at any time while presenting continuously a solid cover.

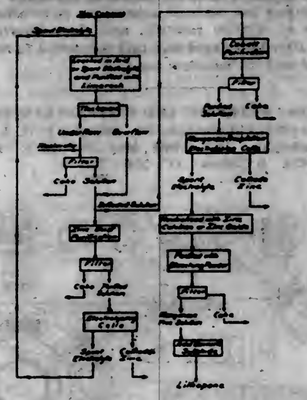
1,395,808. PIPE-JOINT. EUGENE FORBES, Budd Lake, N. J. Filed Oct. 20, 1919. Serial No. 332,055. 1 Claim. (Cl. 285—203.)

A coupling comprising one right angular tubular member having a short end and a long end, a relatively deep cylindrical socket of corresponding dimensions formed at the extremity of each end portion, a second tubular member having a semi-circular bend at one end and a right angular bend at its other end, a flange at each extremity of the second member, either adapted to fit in either socket, whereby when the semi-circular terminal of the second member is inserted in the socket of the short end of the first member the other terminals may be in alinement and capable of relative rotation, and rings inserted in said socket after the flanged terminal is inserted to form a packing and hold the members together.

1,395,809. STARTING AND IGNITION SYSTEM. URIAH D. GARVER, Philadelphia, Pa., assignor to G. J. BÜCHLER, Philadelphia, Pa. Filed May 22, 1918. Serial No. 235,923. 9 Claims. (Cl. 290—33.)

1. The combination of a dynamo electric machine; an ignition generator; a storage battery; and automatic means for connecting the storage battery in circuit with the field winding of the ignition generator when the voltage of the dynamo electric machine falls below a predetermined point.

1,395,810. SIGHT-ARM ATTACHMENT FOR EXCAVATING-MACHINES. CHARLES L. GEORGE, Findlay, Ohio, assignor to The Buckeye Traction Ditcher Company, Findlay, Ohio, a Corporation of Ohio. Filed Oct. 14, 1920. Serial No. 416,853. 4 Claims. (Cl. 33—185.)



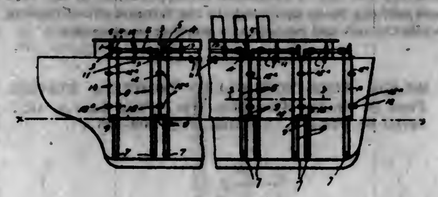
1. In an excavating machine, a truck frame, a bucket chain carrying boom pivotally projecting from the truck frame, for vertical swinging adjustment, a sight-arm carrying frame pivotally projecting over the boom longitudinally thereof for vertical swinging adjustment to vary the angle between the two, a sight arm carried by the sight arm carrying frame, and adjustable means connecting the sight arm carrying frame and boom for adjustably maintaining them in predetermined fixed relation.

1,395,811. TREATMENT OF ZINC-BEARING ORES. HERBERT WILLIAM GEPP, Melbourne, Victoria, Australia, assignor to Electrolytic Zinc Company of Australasia Proprietary Limited, Melbourne, Australia. Filed Nov. 7, 1919. Serial No. 336,452. 6 Claims. (Cl. 204—18.)

1. An improved process for the treatment of zinc bearing ores consisting in the combination with electrolytic

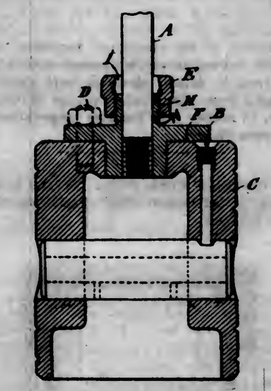
treatment for the recovery of metallic zinc in which the ores are leached with acid solutions (spent electrolyte) and the resultant zinc bearing solution subjected to electrolysis the spent electrolyte then being used cyclically to leach another batch of ore, of a method for the treatment of zinc bearing solutions removed from time to time

from the electrolytic cycle and used for the manufacture of lithopone, the amount of solution withdrawn being sufficient to prevent the building up in the electrolytic cycle of impurities beyond workable limits and also permitting the washing of the leached residues without increasing the volume of the electrolyte.



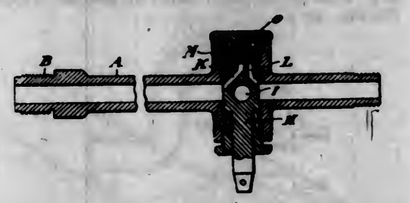
1,395,812. MULTIPLE LOOKING-GLASS. Edward V. Gerber, Leavenworth, Kans. Filed Mar. 12, 1921. Serial No. 451,695. 3 Claims. (Cl. 45—98.)

1. A multiple looking glass having a standard, a main or primary mirror having a universal mounting upon said standard, arched crane arms swiveled upon the standard and extending over the main or primary mirror, and supplemental or secondary mirrors universally mounted upon the extremities of said crane arms.



1,395,813. SHIP-PROTECTOR. Francesco Gregoianne, San Antonio, Tex. Filed Sept. 4, 1918. Serial No. 252,653. 1 Claim. (Cl. 114—220.)

A ship having a mat for disposition over the exterior of its hull, a latch to secure the mat adjacent to the deck, a winding drum on the deck, guide means for the mat, cables associated with the drum, said cables also being



associated with the mat adjacent of the lower corners of the mat, and guide means for the cables on the hull.

1,395,814. CROSSHEAD AND PISTON-ROD CONNECTION. Carl Julius Alexander Gottlieb, Aarhus, Denmark. Filed Feb. 23, 1921. Serial No. 447,295. 2 Claims. (Cl. 74—84.)

1. Crosshead and piston-rod connection, characterised by a cross head, a connection piece fixed to said cross head and having a partially threaded, partially smooth bore for the piston-rod and provided with a slotted end in continuance of said bore, and a check-nut which when screwed on the connection-piece over its slotted end secures a firm grip on the rod.

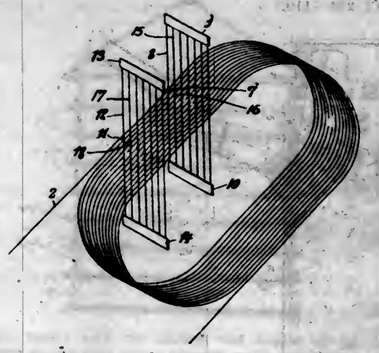
1,395,815. LUBRICATING DEVICE FOR STUFFING-BOXES. Carl Julius Alexander Gottlieb, Aarhus, Denmark. Filed Feb. 23, 1921. Serial No. 447,296. 1 Claim. (Cl. 184—28.)

In a lubricating device for stuffing boxes, a tube adapted for connection with a stuffing-box and normally in free

communication with an oil cup for the feed of the lubricant, a cock dividing said tube into a supply and delivery side, a reciprocatory pump piston fitted in the supply side of said tube and normally held in the rear of the oil-supply opening, and a cock having a bore for ordinary gravity feed and force feed bores, and a spring-actuated valve normally closing said force feed bores when the cock is turned to close the gravity feed bore.

1,395,816. STATION-INDICATOR. Charles M. Gravatt, Port Royal, Va. Filed Mar. 24, 1920. Serial No. 368,471. 5 Claims. (Cl. 40—53.)

2. A station indicator, comprising a casing, a pair of reels in the casing, a curtain wound at its ends on the reels and movable from one reel to the other, gear wheels on the reels, a slidable and cushioned gear frame in the casing, pinions on the gear frame, means for sliding the frame to bring the pinions thereon into engagement with the respective gears of the reels, an electric motor, and a gear train on said frame operatively connecting the motor with said pinions.



1,395,817. TOBACCO-PIPE. Herbert Gregson, Weehawken, N. J. Filed Nov. 22, 1919. Serial No. 340,055. 2 Claims. (Cl. 131—12.)

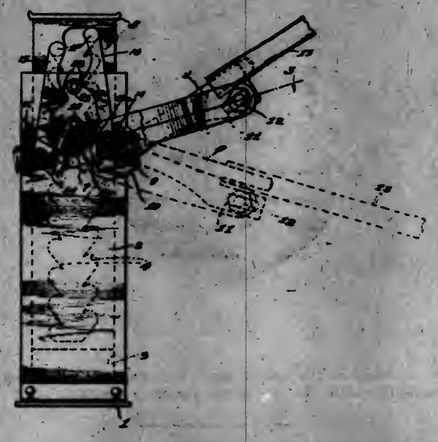
1. In a tobacco pipe, a bowl provided at its base with a centrally disposed protuberant solid member forming with the wall of the bowl an annular draft chamber from which leads a bore connected with the pipe stem, the said bore opening into one side of the said annular draft chamber above the bottom thereof and a distance below the top of the said protuberant member.

1,395,818. METHOD OF HEDDLING AND WARPING. William F. Gruhn, North Bergen, N. J., assignor to Endless Belt Corporation, Inc., a Corporation of New York. Filed Feb. 15, 1918. Serial No. 217,331. 7 Claims. (Cl. 139—94.)

1. The method of heddling and warping in, comprising positioning a warp thread and forming an initial portion of a heddle, and thereafter adding the remaining portion

or portions of the heddle while inclosing the positioned warp thread in the eye of the resulting heddle.

1,395,819. LAMP SHADE AND TESTER. Virgil A. Guy, Englewood, Colo. Filed June 4, 1920. Serial No. 386,458. 7 Claims. (Cl. 175—183.)



1. A device of the character described comprising a lamp shade having means for embracing a lamp socket member for electrical connection with one terminal of the lamp, and means on said shade in electrical connection therewith for supporting the shade and for engaging conductors of electrical circuits for testing same.

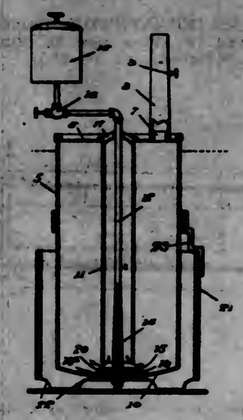
1,395,820. DEZINCING LEAD. Henry Harris, London, England. Filed Jan. 29, 1920. Serial No. 354,851. 3 Claims. (Cl. 75—15.)

1. In the process of desincing lead, heating the molten lead with a molten mixture of an alkali chlorid and a substance or substances which lower the melting point of the alkali chlorid.

1,395,821. LIFTING-JACK. William N. Hanson, Attica, Mich., assignor of one-third to Harry H. Palmer and one-third to Lewis T. Dennis, Imlay City, Mich. Filed Jan. 20, 1921. Serial No. 438,727. 3 Claims. (Cl. 254—110.)

1. A lifting jack comprising a frame, a load carrying member vertically adjustable upon said frame, a pair of racks arranged in opposed spaced relation upon said load-carrying member, a lever pivoted upon said frame for actuating the load-carrying member vertically, pawls carried by said lever respectively engageable with said racks, a pair of divergent trigger members arranged between the pivotal ends of said pawls, and bearing thereupon, and a spring interposed between said trigger members and acting through the same upon the pawls to urge the same into engagement with their respective racks.

1,395,822. LENS SYSTEM FOR TERRESTRIAL TELESCOPES. Charles S. Hastings, New Haven, Conn. Filed July 10, 1920. Serial No. 395,287. 9 Claims. (Cl. 88—32.)



1. An optical system for telescopes consisting solely of a complex objective of negative focal length and a complex ocular of positive focal length, the said objective and the said ocular being composed of units of positive focal length only.

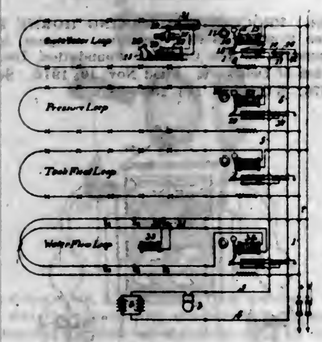
1,395,823. TOOL FOR SCRAPING CYLINDRICAL SURFACES. Rose D. Heacox, Washington, D. C. Filed Mar. 16, 1921. Serial No. 452,868. 4 Claims. (Cl. 145—47.)

1. In a tool for scraping cylindrical surfaces, a holder, a scraper blade having an arcuate cutting edge and means for bending said scraper blade to vary the effective arc of the cutting edge with respect to the general plane of the blade in the holder and the holder.

1,395,824. OIL-BURNER. William Hommel, Albert Lea, Minn., assignor of one-half to Abe Hirsch, Albert Lea, Minn. Filed Oct. 9, 1920. Serial No. 415,628. 7 Claims. (Cl. 158—91.)

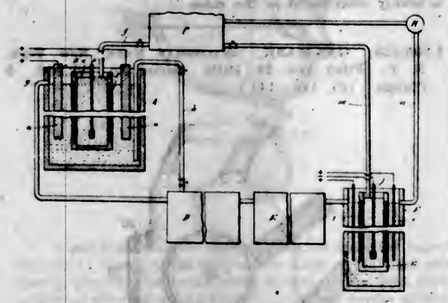
1. An oil burner comprising a depending air supply pipe, disks disposed across the lower discharge end of said pipe and arranged for the flow of fuel between them to the edges thereof, said disks being spaced from the pipe for the radial flow of air past the edges of the disks, and means for supplying fuel between said disks.

1,395,825. CLAMPING DEVICE. Peter A. Hoffman, Hastings, Minn. Filed Feb. 18, 1921. Serial No. 446,167. 5 Claims. (Cl. 45—54.)



3. A clamping device comprising a pair of blocks adapted to be placed on a suitable support and to grip articles therebetween, a sheet of flexible material extending along the support between the blocks, a drum in each block over which the end of the flexible material is wound, and means coöperating with the drums constantly tending to wind the material thereon whereby the blocks are under a constant tendency to move toward each other.

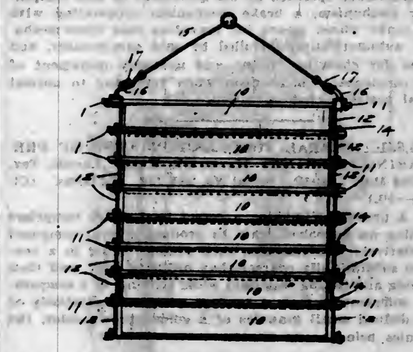
1,395,826. SUPERVISORY SIGNALING SYSTEM. Richard M. Hopkins, Rutherford, N. J., assignor to American District Telegraph Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 18, 1918. Serial No. 223,146. 2 Claims. (Cl. 177—352.)



1. In a supervisory signaling system, the combination of a signal and a circuit therefor; a normally closed supervisory circuit including an electroresponsive device provided with switching contacts having a normal position and a position of change, a manually controlled

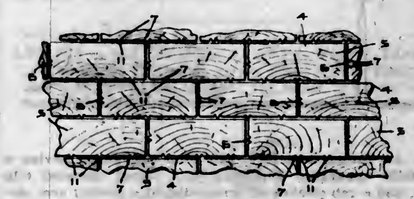
switch and connections between the switch and said contacts whereby the latter may be cut into and out of the

signal circuit in both said positions, a circuit closer in said supervisory circuit and a supervised device controlling said circuit closer.



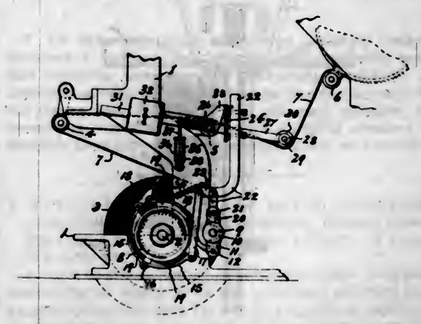
1,395,827. SEPARATING METALS BY ELECTROLYSIS. Noak Victor Hybinette, Christiania, Norway. Filed Feb. 16, 1920. Serial No. 358,969. 15 Claims. (Cl. 204—97.)

1. The process of plating metals upon a cathode which is separated from the anode by a filtering diaphragm, which comprises effecting a flow from the cathode to the anode of an electrolyte which enters the cathode compartment with an excess of free sulfuric acid beyond the amount to be tolerated at the depositing surfaces of the cathode; substantially as described.



1,395,828. SEWER-REFILLING TRAY. Benedict D. Jacovett, Lorain, Ohio. Filed Apr. 18, 1921. Serial No. 462,367. 3 Claims. (Cl. 296—30.)

1. A refilling tray having a plurality of plates maintained in load-retaining relation by contact with the ground, and means mounting the plates for relative movement to discharge the load through disengagement

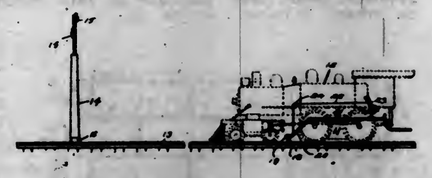


of the plates with the ground and weight of the load thereon as the tray spans opposed walls of a trench.

1,395,829. WOOD-BLOCK PAVEMENT. Harry G. Jennison, Toledo, Ohio. Filed July 23, 1919. Serial No. 312,851. 9 Claims. (Cl. 94—14.)

1. A rigid grain up wood paving block having on two vertical sides thereof integral V-shaped lugs continuous with adjoining V-shaped grooves, forming a W in cross-section with a high central apex, the grooves on one of the faces of the blocks intercepting the arching portion of longer arc age rings on the blocks.

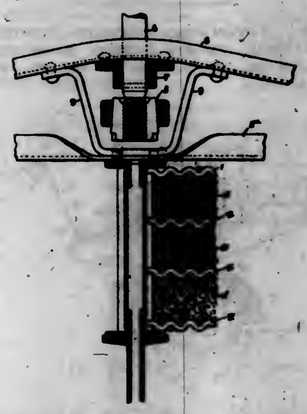
1,395,830. AUTOMATIC TENSION-CONTROLLING MECHANISM. Thomas J. Jones, Jersey City, N. J. Filed Feb. 26, 1920. Serial No. 361,424. 9 Claims. (Cl. 242—75.)



7. In a device of the kind described, a rotatable web roll supporting spindle having a brake wheel, a pivoted

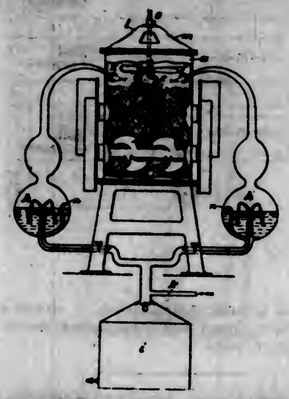
oscillatable tension compensator mechanism under which the running web extending from said web roll is engaged, a cam-member operated by the movement of said compensator mechanism, a brake mechanism coöperating with said brake wheel, means for operating said brake mechanism automatically controlled by said cam-member, and means for checking violent and unsteady movement of said compensator mechanism when returning to normal initial position after operation.

1,395,831. CEREAL FOOD AND PROCESS OF PREPARING THE SAME. MARTHA R. KELLY, Laredo, Tex. Filed Mar. 7, 1919. Serial No. 281,224. 3 Claims. (Cl. 99—10.)



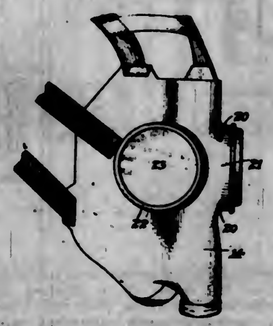
1. A process of making a cereal food which comprises grinding an uncooked grain to produce a meal composed of relatively fine granules, such product being in a condition substantially coarser than ordinary flour, and then roasting and baking this meal while stirring, at a temperature sufficient to form a product composed essentially of well defined small granules of a golden brown color, the granules being easily friable.

1,395,832. AUTOMATIC SAFETY TRAIN-STOP MECHANISM. ARTHUR R. KILBURN, Whitehall, Wash. Filed Mar. 1, 1921. Serial No. 448,762. 3 Claims. (Cl. 246—182.)



1. An automatic safety train stop mechanism having a roadside apparatus consisting of a signal operated trip arm, and a cab mechanism consisting of a pivotal arm carried by and in communication with the train pipe and provided with an angle cock having a lever normally held in engaging relation with the trip arm.

1,395,833. FILTERING-MAT. FRED H. KLING, Youngstown, and LUTHER B. WEIDLEIN, Cleveland, Ohio. Filed Mar. 11, 1920. Serial No. 364,966. 5 Claims. (Cl. 183—45.)



1. In apparatus for cleaning gases, a composite gas filter comprising a frame and a plurality of metallic wool mats in said frame, said mats being supported in intimate relation with each other and the mat adjacent the gas inlet being of the least density, and additional supports extending through all of the mats and arranged to transmit vibrations thereto.

1,395,834. PROCESS FOR MAKING HORNY BODIES. ALFRED KOSTERS, Berlin, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Nov. 10, 1916. Serial No. 130,676. 5 Claims. (Cl. 106—38.)

1. An improvement in the manufacture of horny bodies from powdered albuminous substances which comprises agitating the powdered albuminous mass introducing vaporous water, scraping the upper layer of the agitated mass, and whirling said upper layer above the main body of the substance until a determined content of moisture is evenly distributed in the mass.

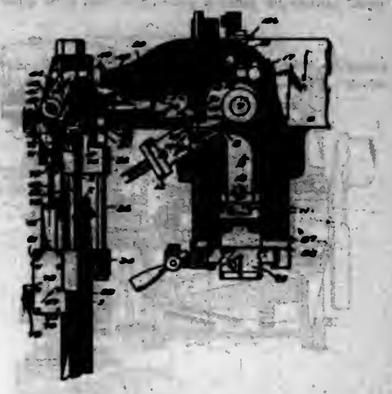
1,395,835. GAS-MASK. WALDEMAR KOPS, New York, N. Y. Filed Apr. 24, 1919. Serial No. 292,266. 5 Claims. (Cl. 128—141.)

1. In a gas mask, a hood of flexible material having an eye opening therein of predetermined configuration, and an eye piece having a flange of a configuration differing from that of the eye piece opening in the hood and adapted to be inserted in said opening so that the edge portions of the hood defining the opening are placed under different tensions when the eye piece is inserted in the opening, whereby those portions of the hood adjacent the eye piece are caused to automatically stand outwardly from the hood when the eye piece is secured in position therein.

1,395,836. GAS-MASK. WALDEMAR KOPS, New York, N. Y. Filed Apr. 24, 1919. Serial No. 292,267. 3 Claims. (Cl. 128—141.)

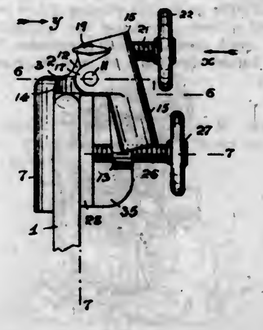
1. In a gas mask, a hood made from a unitary blank of flexible material by uniting symmetrically shaped oppositely disposed portions of the lower edge of the blank by a single joint.

1,395,837. GAS-MASK. WALDEMAR KOPS, New York, N. Y. Filed Apr. 25, 1919. Serial No. 292,646. 3 Claims. (Cl. 128—141.)



1. A gas mask made of blanks of flexible material, superimposed to reinforce the body of the hood of the mask and thereby prevent the entire front section of the hood from collapsing when in use and also to provide a border section which is sufficiently yielding to permit a gas tight fit to be made between the same and the head of the wearer, the said blanks being provided with symmetrically placed incisions in the edges thereof which are connected by a suitable joint to completely form the hood of the mask.

1,395,838. HEEL-NAILING MACHINE. JOHN T. LANCASTER, Haverhill, Mass., assignor to Hamel Shoe Machinery Company, a Corporation of Massachusetts. Filed May 6, 1918. Serial No. 232,689. 24 Claims. (Cl. 1—35.)

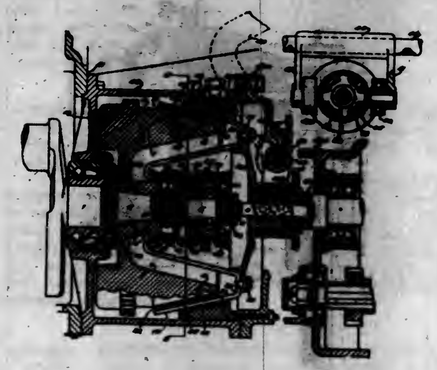


1. In a heel nailing machine, in combination, an oscillatable turret, mechanism constructed and arranged automatically to swing said turret from one operative position to another, and means under control of the operator for intermitting the operation of said mechanism while the machine is in operation.

9. In a heel nailing machine having a reciprocable screw head and a turret mounted thereon, means for turning said

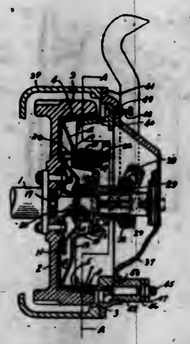
turret comprising a slidable rod, and a retractable bolt normally projected across the path of said rod for limiting the sliding movement thereof.

1,395,839. ADJUSTABLE CLAMP. FRANK LANTIERI and GABRIEL LANTIERI, Jersey City, N. Y. Filed Apr. 28, 1921. Serial No. 465,154. 13 Claims. (Cl. 155—177.)



1. An adjustable clamp comprising a pair of clamping members, a carrier-means pivotally connected with one of said clamping members, and mechanism carried by and coöperating with said carrier-means for moving said carrier-means with relation to said clamping members, said means also coöperating with said clamping members for bringing them into a fixed clamping relation with an object.

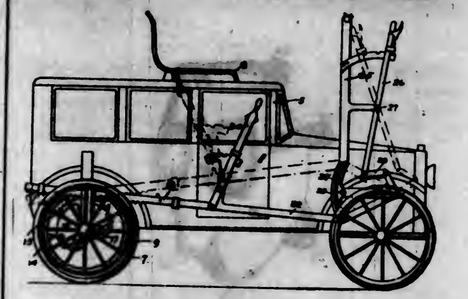
1,395,840. CLUTCH AND BRAKE MECHANISM. ALPHONSE JOSEPH LAVOIE, Montreal, Quebec, Canada. Filed Aug. 14, 1919. Serial No. 317,627. 3 Claims. (Cl. 192—18.)



1. In a gasolene engine, a clutch and brake mechanism comprising an engine shaft and a flywheel mounted thereon, and extending from its hub in projections, walling in an annular spring recess and forming clutch surfaces, a transmission shaft, a cupped brake and clutch member encircling said hub and spring-held to its engagement and

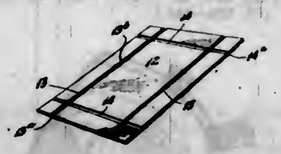
finally supported from said transmission shaft and forming a receptacle for said projection between the clutch and

brake shoe portion and recess wall, a brake ring encircling the brake shoe portion and means for operating said brake and clutch member.



1,395,841. CLUTCH AND BRAKE MECHANISM. ALPHONSE JOSEPH LAVOIE, Montreal, Quebec, Canada. Filed Nov. 29, 1919. Serial No. 341,537. 9 Claims. (Cl. 192—18.)

1. In a clutch and brake mechanism, a driving shaft, a wheel mounted thereon having a projecting rim, a driven shaft, a brake member in proximity to the inner surface of said projecting rim and rigidly and adjustably secured, an operating sleeve keyed to said driven shaft, a clutch member spring-held to engagement with the inner surface of said rim, and a lever operatively connected with said sleeve for releasing said clutch member and applying it to said brake member.



1,395,842. TOY VEHICLE. HORACE JOHN LEACH, Mount Carmel, Ill. Filed Feb. 9, 1921. Serial No. 443,669. 4 Claims. (Cl. 206—37.)

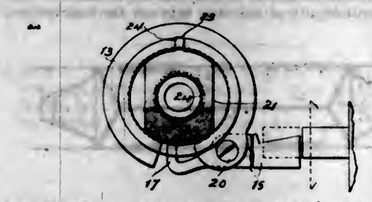
1. A toy vehicle, including an axle, an annular ratchet secured to said axle, a pair of segmental members rotatably secured to said axle, pawls carried by one of said members, means carried by the second of said members for effecting a disengagement of either of said pawls from

said ratchet, said segmental members being formed with teeth, and bars also formed with a serrated portion adapted to engage said teeth.

1,395,843. METHOD OF MAKING CIGAR-BOXES. HENRY LEIMAN, Tampa, Fla. Filed Jan. 14, 1920. Serial No. 351,293. 6 Claims. (Cl. 217—2.)

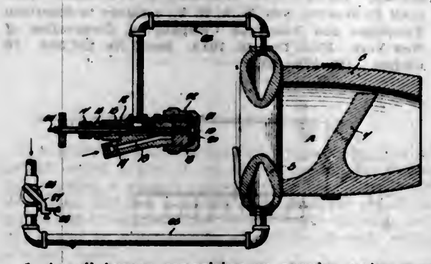
1. The method of making a lined box which consists in cementing a lining material to a slab, cutting crossing grooves through the lining material and in the slab from edge to edge, severing the corner pieces lying within the angles formed by end portions of the crossing grooves, bending the blank thus formed along the grooves until the end edges of the side walls meet and securing the side walls together.

1,395,844. DIAL-LOCK. ROLLIN C. LEWIS, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Mar. 25, 1921. Serial No. 455,465. 4 Claims. (Cl. 70—53.)



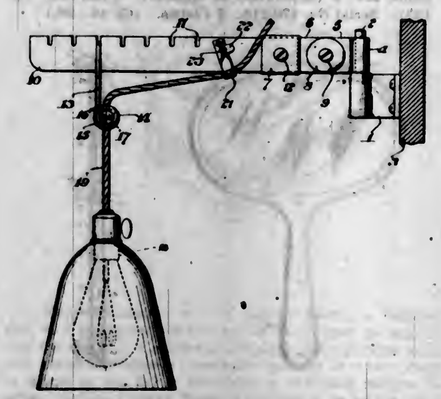
1. In a dial lock, the combination of a spindle, tumblers and a driving cam for the tumblers, the spindle and cam having interlocking connections whereby the cam will be rotated by the spindle, but will be disconnected therefrom when the spindle is forced inwardly.

1,395,845. DIAL-LOCK. ROLLIN C. LEWIS, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Apr. 5, 1921. Serial No. 458,690. 6 Claims. (Cl. 70—53.)



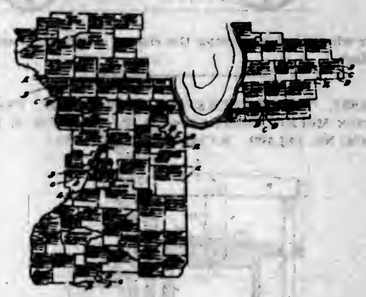
1. In a lock, the combination of a spindle, a tumbler actuated by the same, a fence coöperating with the tumbler

to dog and to release the bolt and means normally held out of the path of movement of the fence, but adapted to



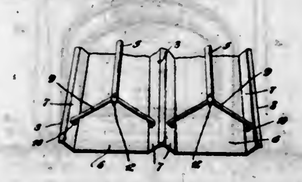
be positively moved into position to obstruct the unlocking movement of the fence if the tumbler be moved from its normal position with relation to the fence.

1,395,846. LIQUID-FUEL BURNER. JOHN D. LORD, Winthrop, Mass. Filed Sept. 16, 1919. Serial No. 324,107. 7 Claims. (Cl. 158—75.)



1. An oil burner comprising an annular water vapor generating chamber, means for supplying water thereto, a cylindrical combustion chamber at one side of said generating chamber, and a nozzle at the other side of the generating chamber, in communication with said generating chamber and having a fuel inlet port whereby said fuel and water vapor are mixed together, said nozzle being so disposed as to discharge said mixture through the space inclosed by said annular generating chamber into the combustion chamber.

1,395,847. ADJUSTABLE LAMP-SUPPORT. WILLIAM LORRY, Philadelphia, Pa. Filed May 25, 1920. Serial No. 384,193. 2 Claims. (Cl. 248—8.)

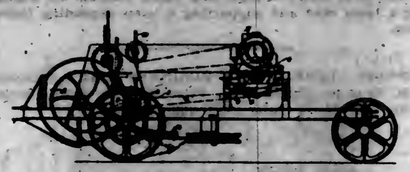


1. A lamp support comprising an arm having transverse axes about which it is adjustable, a hanger adapted to be supported by said arm in adjustable relation thereto, said hanger having bearings, and a clamp having trunnions journaled in said bearings, said clamp adapted for engaging a lamp cord and supporting a lamp depending therefrom.

1,395,848. TERRITORIAL BUSINESS-CHART. GEORGE M. LUDLOW, Chicago, Ill. Filed Mar. 10, 1920. Serial No. 364,624. 1 Claim. (Cl. 283—1.)

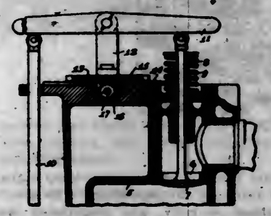
A territorial business chart, comprising a graphic representation of territory corresponding to an allotted general field of business activity, and comprising spaces corresponding to subdivisions of such territory; said chart having within each subdivision space data indicative of business possibilities within the subdivision of territory represented by such space, and data indicative of business actually done in said subdivision; the last-named data being in terms which permits pro-rating with the data of business possibilities and being expressed in two factors, one of which represents total business done, while the other represents business of a present limited period of time.

1,395,849. CHICKEN-ROOST. JAMES W. MCCOY, Detroit, Mich. Filed Apr. 10, 1920. Serial No. 372,774. 2 Claims. (Cl. 119—22.)



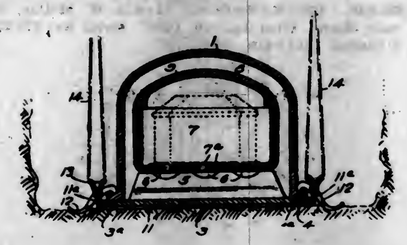
1. A device of the character described, comprising a substantially trough-shaped tray having angular sides and open at opposite ends, a perch above said tray, arched brackets detachably secured to the sides of the tray and also detachably secured to the ends of the perch to support the latter elevated from the tray and intermediate of the sides thereof, the tray being of greater length than the perch, and flanges formed at the free longitudinal edges of the sides of the tray to permit the overlapping of adjacent trays.

1,395,850. CABLE-RECIPROCATING APPARATUS. HENRY MCLAREN, Leeds, England, assignor of one-half to J. & H. McLaren, Limited, Leeds, England. Filed May 10, 1920. Serial No. 380,800. 3 Claims. (Cl. 254—147.)



1. The combination, with cultivating apparatus having

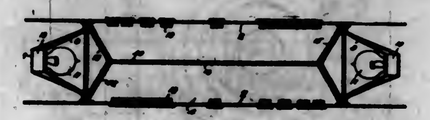
a pair of spaced motor-windlasses each driven by an independent motor, of means actuated by the engine of one



motor-windlass for starting the engine of the other motor-windlass.

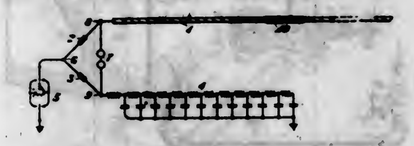
1,395,851. VALVE-OPERATING MECHANISM. FRANCIS BYRON MCLEAN, Ocean Grove, N. J. Filed Feb. 8, 1921. Serial No. 442,409. 6 Claims. (Cl. 123—90.)

2. A valve operating mechanism, including a cylinder having ports, valves for controlling said ports, and tappets, of a plate transversely movable mounted upon said cylinder and rocker arms secured to said plate and extending between said tappet and valve.



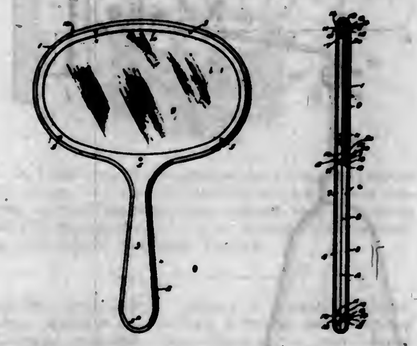
1,395,862. MAUSOLEUM. WILLIAM MCMEANS, West Liberty, Iowa. Filed Apr. 13, 1920. Serial No. 373,468. 2 Claims. (Cl. 72—7.)

1. A device of the type described, including an outer inclosure, a bottom member having a recess therein adapted to receive the lower edge of said outer inclosure, a plate or bar having upwardly extending terminals having apertures, and levers pivoted to said terminals, said levers having eye-ended terminals to receive together with the apertures of the terminals of said bar cables for lowering the outer inclosure in position, a terminal of said levers adapted to bear upon the surface of the ground as the outer inclosure is lowered into position upon the inner inclosure.



1,395,863. SIGN. HARRY H. MARRIOTT, Okmulgee, Okla. Filed Jan. 30, 1919. Serial No. 273,976. 1 Claim. (Cl. 40—133.)

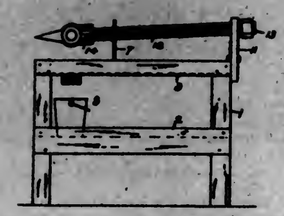
In a device of the class described, a case provided on its sides with openings defining inscriptions; inwardly bulged transparent diffusion members extended across the case adjacent to the ends thereof; lamps disposed outwardly of the diffusion members; and a foraminous partition disposed longitudinally of the case, between the inscriptions,



and extended inwardly from the crown of one diffusion member to the crown of the other diffusion member, the partition serving to distribute and diffuse the light, but preventing the inscription on either side of the case from being visible at the other ede of the case.

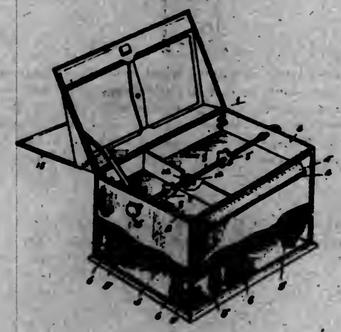
1,395,854. BALANCING SIGNALING SYSTEMS. WILLIAM H. MARTIN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 19, 1918. Serial No. 267,516. 10 Claims. (Cl. 178—63.)

1. The method of overcoming the effects of cable irregularities on the balance of a circuit involving the use of a balancing line which consists in determining the location of the irregularities in the cable, as well as their character and magnitude, and introducing irregularities of like character and magnitude into the balancing line at points therein whose electrical distances from the end at which the balance is to be produced, represent the distances of the respective irregularities from the same end of the cable.



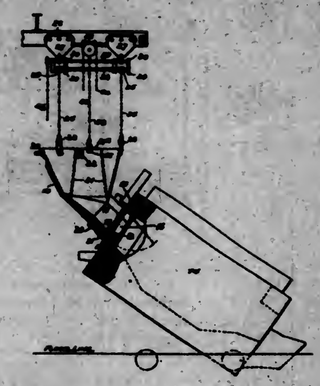
1,395,855. MIRROR-HOLDER. RUDOLPH MARTINI, St. Louis, Mo., assignor to Kahn Mirror Plate Company, St. Louis, Mo., a Corporation of Missouri. Filed May 16, 1921. Serial No. 470,216. 7 Claims. (Cl. 45—98.)

1. The combination of front and back members, each having a flange projecting toward the other and forming



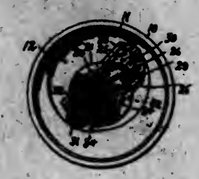
a joint and a plurality of rivets attaching the said members together, the said rivets each having an intermediate head and a stud on each side of the said head adapted to be upset to unite the said two members together.

1,395,856. BENCH FOR HANDLING OIL-BURNERS. WILLIAM A. MASON, Boston, Mass. Filed Mar. 19, 1920. Serial No. 367,290. Renewed Sept. 12, 1921. Serial No. 500,267. 2 Claims. (Cl. 29—80.)



1. A bench for manipulating oil burners of the class described having a jaw at one end to prevent the burner from turning, a support near the other end of the bench lower than said jaw to allow the oil to drain out of the burner and a tray positioned to receive the drainage, said tray having an outlet opening adapted to cooperate with a receiving vessel.

1,395,857. DELIVERY-CABINET. THOMAS A. MATTHEWS, Nashville, Tenn. Filed June 1, 1921. Serial No. 474,076. 6 Claims. (Cl. 211—8.)



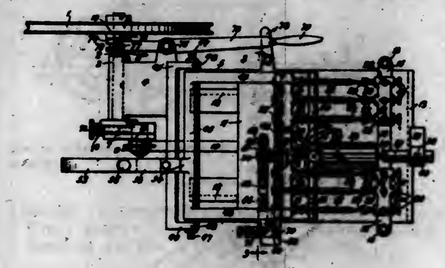
1. The combination with a cabinet having a delivery slot, of a spring-pressed follower in the cabinet to support and lift the pile, a sectional operating shaft parallel with and above the follower; the inner member of which shaft is hinged at one end to the outer or operating member to swing vertically away from the follower to admit of a pile of sheets or the like being placed thereon, and a feed roll on said swinging member.

1,395,858. COMBINED HOIST AND HOPPER. MAXWELL C. MAXWELL, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Feb. 17, 1921. Serial No. 445,614. 8 Claims. (Cl. 214—36.)

1. The combination of a hopper and hoist mechanism for the same, a hollow truncated cone open at both ends and adapted to rest within the hopper and hoist means for lifting the cone independently of the hopper.

1,395,859. TOOL-HOLDER. HENRY V. MORIN, Poughkeepsie, N. Y. Filed Dec. 2, 1920. Serial No. 427,795. 5 Claims. (Cl. 279—6.)

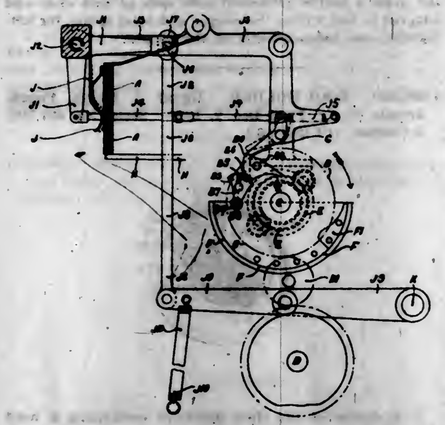
1. A device of the class described comprising a head having a concentric bore and with a recess eccentric to the bore and communicating therewith, a shank rotatively engaging the bore and extending into the recess, and a tool holder supported movably by the shank within the recess and movably engaged by the walls of the same.



1,395,860. INSECTICIDE. JAMES FREDERICK MOSELEY, Manchester, England. Filed May 18, 1918. Serial No. 235,296. 4 Claims. (Cl. 167—6.)

1. An insecticide comprising tetrachlorethane incorporated with an alkali salt of a fatty acid, and a solvent alkali salt to increase the divisibility of the antiseptic products.

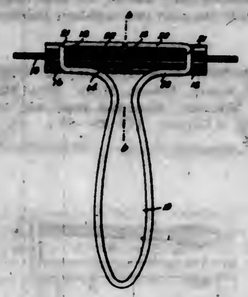
1,395,861. ENGRAVING-MACHINE. LUCIFER J. MOST, New York, N. Y. Filed Sept. 22, 1920. Serial No. 412,036. 25 Claims. (Cl. 33—21.)



1. An engraving machine having the combination of means for rotatably mounting a plurality of cylinders, an

engraved master roll, means for rotatably mounting said roll, a graver for each of said cylinders, a tracer for said roll, a common carrier for said gravers and tracer, means to reciprocate said cylinders and roll longitudinally, means

to impart intermittent equiangular rotation to said cylinders and roll, and said roll guiding said tracer to cause said gravers to cut the surfaces of said cylinders in correspondence with its periphery during reciprocation of the cylinders and roll.

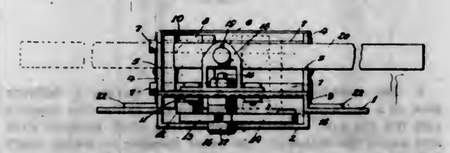


1,395,862. AUTOMATIC STACK-FEED. JOHN MURRAY, London, England. Filed Dec. 27, 1920. Serial No. 433,523. 11 Claims. (Cl. 271—62.)

1. An automatic stack feed, comprising means for advancing the stack on each withdrawal therefrom, but at a rate normally below that required to maintain delivery, a member bearing against the face of the stack and means controlled by the position of said member for increasing the rate of feed of the stack.

1,395,863. SQUEEGEE. JOHN F. NELSON, New York, N. Y. Filed Apr. 28, 1921. Serial No. 465,211. 1 Claim. (Cl. 15—59.)

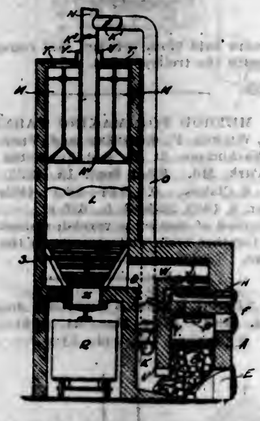
As an article of manufacture, a squeegee comprising a flexible elastic strip of rectangular formation, a pair of rectangular clamping plates of reduced area with respect thereto, said clamping plates having longitudinally extending centrally bulged portions having a centrally longitudinally extending depression and a handle having means carried thereby for attaching the same to the strip and effecting the clamping of the plates to the opposite sides thereof, said means consisting of a pair of arms bent into substantially U-form in which the parallel side portions of said arms respectively lie within the depression



of the plates and the connecting portion of the side portions extend through the plates in the strip adjacent the opposite ends thereof.

1,395,864. EAR-APPLIANCE MOUNTING. HERMAN G. PAPE, New York, N. Y. Filed Aug. 24, 1918. Serial No. 251,247. 7 Claims. (Cl. 179—156.)

2. A relatively thin and curved metallic earpiece mounting or headband, said mounting being provided with an embossment which decreases gradually toward the ends of the mounting, said embossment producing the curvature of said mounting and an increased stiffness therein toward the middle section thereof which sits on top of a user's head.



1,395,865. SWITCH-STAND. CHARLES PARTINGTON, Cincinnati, Ohio, assignor to The Cincinnati Frog & Switch Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 20, 1921. Serial No. 486,154. 4 Claims. (Cl. 246—411.)

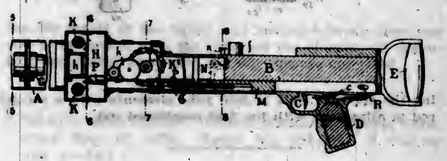
1. A switch stand comprising a base plate, a housing on the base plate, a guiding rod disposed longitudinally within the housing, a slide mounted upon said rod, a lever

supported upon the base plate, means at the end of the lever to engage said slide and actuate the same, an angle lever supported by and below the base plate and provided at one end with means for engaging the lower end of the slide and receiving motion therefrom, and a switch-connecting bar pivotally attached to the opposite end of the angle lever.

1,395,866. PROCESS AND APPARATUS FOR PRODUCING CHARCOAL AND LIKE MATERIALS. JOHN STUART PEARCE, Vancouver, British Columbia, Canada. Filed Mar. 31, 1919. Serial No. 286,549. 6 Claims. (Cl. 202—3.)

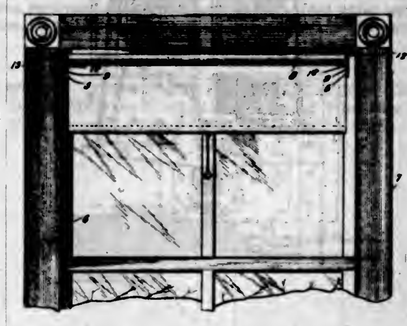
1. A method of destructive distillation which comprises bringing gaseous products of combustion into intimate contact with a mass of independently heated refractory material, designed to act as a catalyst, and then through a mass of wood waste; substantially as described.

1,395,867. WOOD DISTILLATION. JOHN STUART PEARCE, Vancouver, British Columbia, Canada. Filed May 4, 1920. Serial No. 378,842. 2 Claims. (Cl. 202—2.)



2. As a new product a tough, compact, non-crumbling variety of charcoal whose surfaces are of uniform consistency, existing in a semi-vitrified condition with surface strains uniformly distributed; substantially as described.

1,395,868. MUD-HOOK. WILLIAM G. PFEIFFER, St. Louis, Mo. Filed Dec. 4, 1920. Serial No. 428,259. 3 Claims. (Cl. 152—14.)



1. In a mudhook, the combination of a main body, attaching hangers, the said hangers being in the form of slotted straps, and a bolt adapted to pass through the said slots and to fasten the device, and the said hangers having thereon racks and the said bolt a tooth adapted to bite in one of the said racks.

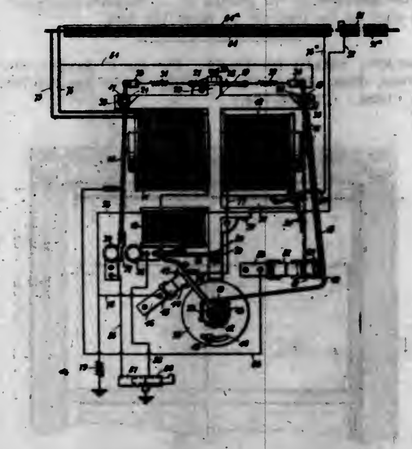
1,395,869. PHOTOGRAPHIC CAMERA. ARTHUR GRAY PICKARD and FRANK SLINGER, Altrincham, England, assignors to Thornton-Pickard Manufacturing Company, Limited, Altrincham, Chester, England. Filed July 16, 1918. Serial No. 245,180. 2 Claims. (Cl. 95—31.)

1. A photographic camera having an exterior contour similar to that of a machine gun and embodying a receiver for a part representing the magazine of a machine gun, a barrel, a lens and shutter contained in the barrel, a spring motor to operate the film, a slide-bolt to wind the motor and to operate the shutter, a trigger and cooperative catch to hold and release the slide-bolt, and a device operative by the placing of the magazine-representing part on its receiver, to mark the film.

1,395,870. SHADE-BRACKET. EDWARD C. PIXLEY, Sullivan, Ohio. Filed May 31, 1919. Serial No. 300,798. 1 Claim. (Cl. 156—24.)

A window shade bracket comprising a body having means at one end to receive a shade roller, a plate formed on the body and extending at right angles thereto and adapted to engage a window frame, said plate having a bayonet slot at its upper end and a slot adjacent its lower end and said last slot opening outwardly through the edge of the plate and having angularly related portions, and fasteners extending through the slots and secured to the window frame, said slots adapted to permit the plate to pivot on one of the fasteners and allow the other fastener to become disconnected from the plate by moving outwardly of the other slot by said movement.

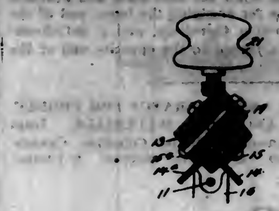
1,395,871. RESILIENT YOKE CONNECTION. RICHARD H. RANDALL and ALBERT LEIGHTON, Brockton, Mass. Filed June 15, 1920. Serial No. 389,128. 8 Claims. (Cl. 287—100.)



7. In a device of the class described, a plurality of yoke elements, a sleeve, means for mounting one end of said

yoke elements on said sleeve, said sleeve being adapted to be secured upon the end of a rod, and means for connect-

ing the opposite ends of said yoke elements with a second rod in alinement with the first mentioned rod.

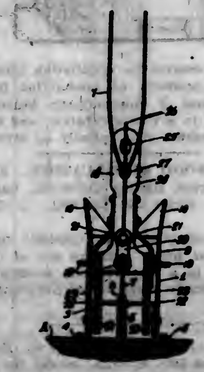


1,395,872. AUTOMATIC ELECTRICALLY-CONTROLLED TRACK-SWITCH. RICHARD R. SCOGGAN, Jeffersonville, Ind., assignor to Kentucky Switch & Signal Co., Inc., St. Matthews, Ky., a Corporation of Kentucky. Filed Aug. 4, 1920. Serial No. 401,152. 13 Claims. (Cl. 246—228.)

12. In a switch operating mechanism, the combination of contactors adapted to be electrically connected by the trolley wheel, one of said contactors being electrically connected to the trolley wire, an electrically operated switch throwing device, and means for maintaining the operating current to said switch throwing device for a uniform length of time after the initial connection of said contactors by the trolley wheel, regardless of the car speed and lengths of the trolley contactors.

1,395,873. TROLLEY-WIRE CONTACTOR. RICHARD R. SCOGGAN, Jeffersonville, Ind., assignor to Kentucky Switch & Signal Co., Inc., St. Matthews, Ky., a Corporation of Kentucky. Original application filed Aug. 4, 1920, Serial No. 401,152. Divided and this application filed Jan. 7, 1921. Serial No. 435,667. 7 Claims. (Cl. 191—39.)

2. A trolley wire contactor or trolley pan including a supporting block placed cornerwise, runways for the trolley wheel angularly disposed on adjacent faces of said block, and means for supporting the trolley wire without

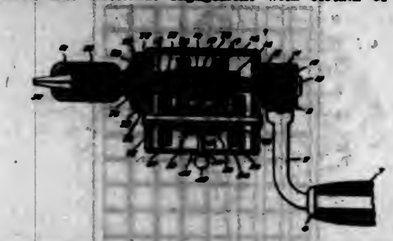


deflection below said block between said runways and out of contact with the trolley wheel.

1,395,874. METHOD FOR MAKING VARNISH MATERIALS. WILBUR F. STERLING and VICTOR E. GROTLISCH, Washington, D. C., and FLETCHER P. VEITCH, College Park, Md. Filed Sept. 15, 1921. Serial No. 500,984. 6 Claims. (Cl. 134—26.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

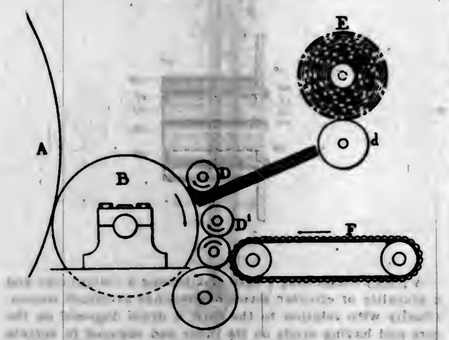
1. The method of making a varnish material consisting in heating together rosin and glycerin in the presence of metallic zinc.

1,395,875. VESSEL-RAISING DEVICE. JOSEPH SZALAY, Vicksburg, Miss. Filed Mar. 21, 1921. Serial No. 454,070. 2 Claims. (Cl. 114—51.)



1. A device of the class described comprising a float support, means for connecting the same to a ship, guiding means at the upper end of the float support, a float adapted to rest in the support and to engage a part of the guiding means, a cable connecting the lower end of the float with a part of the support and coiled in said support, a lifting member adapted to engage a part of the support, means for guiding the said member to the support by means of the cable, a cable connected with said lifting member and a part on said lifting member for engaging the guiding means of the support.

1,395,876. BRACE. WILLIAM N. TIENCKEN, Savannah, Ga. Filed Feb. 28, 1921. Serial No. 447,193. 3 Claims. (Cl. 145—68.)

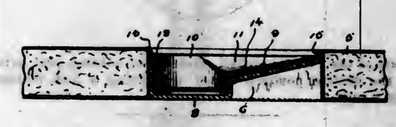


3. In a breast drill, a spindle section connected to and revoluble with the sweep of the drill, said spindle section having peripheral wheels of different diameters, a second hollow chuck carrying spindle section arranged on the first mentioned section, anti-frictional bearing means be-

tween the sections, said chuck carrying section having peripheral wheels of different diameters, a sleeve journaled for slidable and rotary movement adjacent to and in parallelism with the spindle sections, said sleeve having peripheral wheels of different diameters, means for moving the sleeve longitudinally to bring certain of the wheels thereof into frictional engagement with certain of the

wheels on the respective spindle sections, whereby the sleeve will be revolved by the turning of the first mentioned spindle section with the sweep and impart varying speed revolutions to the chuck carrying spindle section, a casing inclosing the wheeled portions of the spindles and the sleeve, and anti-frictional means between the sleeve, sweep and chuck.

1,395,877. CARDING-ENGINE. EDWARD TILLOTSON, Rochdale, England, assignor to Potter's Asbestos Company Limited, Rochdale, England. Filed Dec. 20, 1918. Serial No. 267,561. 1 Claim. (Cl. 19—3.)



In an apparatus for mixing and carding fibrous materials, the combination of a carding cylinder, a licker-in roller operatively associated with said carding cylinder, sets of feed rollers arranged at different points adjacent the periphery of said licker-in roller, means for passing a lap to one set of feed rollers, mechanism for passing loose fibers of different material from said lap to another set of said feed rollers, whereby said lap and fibrous material are fed simultaneously to different points on the periphery of said licker-in roller and the mixed material is taken from the licker-in roller on to the carding cylinder at a single point on the periphery thereof.

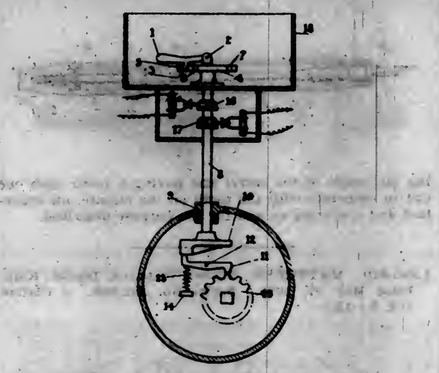
1,395,878. FOUNTAIN-PEN. HENRY J. UPTON, West Medford, Mass., assignor to Vaughn-Upton Company, Boston, Mass., a Corporation of Massachusetts. Filed May 4, 1921. Serial No. 466,716. 2 Claims. (Cl. 120—47.)

1. In a fountain pen, a fountain barrel; an axial rod extending through the closure at the rear end of the barrel and carrying a conical boss adjacent the pen-end of the rod; that closure, having a tooth upon its inner end; a piston loosely mounted upon the rod frictionally engaging the inside of the barrel and having a tooth upon one end to coöperate with the tooth on the closure, all organized and operating as and for the purpose described.

1,395,879. MATTRESS. TIRSAH WALLACE, Topeka, Kans. Filed May 17, 1920. Serial No. 381,983. 3 Claims. (Cl. 5—13.)

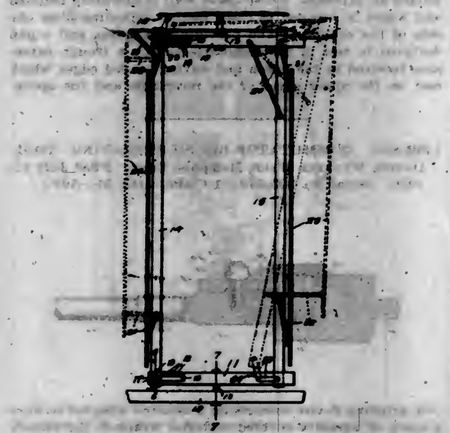
1. The combination, a removably supported receptacle having an extension whose lower wall is upwardly inclined and which is rounded in cross section extending from one side of the receptacle and providing an apron, and a pan designed to rest in the receptacle having a trough extension received in the apron and having beaded edges which rest on the upper edges of the receptacle and the apron.

1,395,880. COMMUTATOR-BRUSH-RESEATING TOOL. DANIEL WEBSTER WARD, Memphis, Tenn. Filed July 12, 1920. Serial No. 395,656. 1 Claim. (Cl. 51—194.)



A grinding device comprising a mandrel adapted to have a sheet of abrasive covered material wrapped thereabout, and means for holding said sheet in position comprising a threaded stud projecting from one side of the mandrel, a bracket arm engaged upon said stud and adapted to engage against the rolled sheet of abrasive material, a plurality of pins extending from said bracket arm for penetrating the overlapping edges of the sheet of abrasive material, the mandrel being formed with recesses receiving said pins, and a clamping nut formed upon said stud engaging said bracket arm for holding the latter firmly in engagement with the sheet of abrasive material.

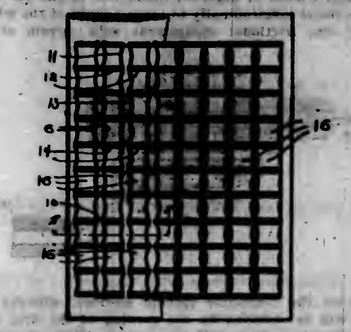
1,395,881. AUTOMOBILE-LOCKING APPARATUS. ACHILLE LÉON FRANÇOIS WATTEL, Sevres, France. Filed July 31, 1920. Serial No. 400,557. 2 Claims. (Cl. 70—127.)



1. An apparatus for immobilising an automobile, comprising a handle, a shaft adapted to be rotated by said

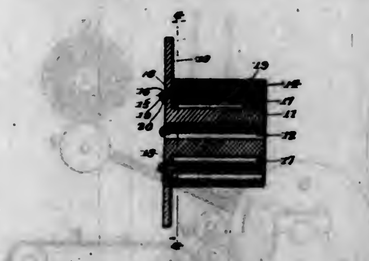
handle, circuit-making and breaking means upon said shaft, means carried by said shaft for locking the transmission

shaft of the car, a notched segment for holding said handle in the desired position and a box having a lock inclosing said handle.



1,395,882. SELF-CLOSING STANCHION. FRED E. WEBB, Syracuse, N. Y. Filed Apr. 16, 1920. Serial No. 374,464. 4 Claims. (Cl. 119—149.)

1. A stanchion having upper and lower cross heads and spaced side bars or uprights one of which is movable relative to the other, a hanger connecting the movable side bar with the upper cross head at a point disposed inwardly of the plane of said bar, and a trip arm connecting the lower end of the said movable bar with the lower cross head for limited inward movement.

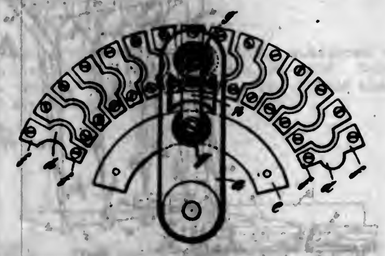


1,395,883. RADIATOR. OSCAR E. WESNEKE, St. Paul, Minn. Filed June 7, 1916. Serial No. 102,254. 1 Claim. (Cl. 257—180.)

A radiator of the class specified comprising pairs of plates disposed to form water channels, the plates of each pair being similarly formed and comprising regularly spaced outwardly extending aligned crimps, and having the portions intermediate the crimps outwardly bulged, the longitudinal edge portion of the plates of each pair being brought together and sealed, and the ends being open, and other pairs of plates intermediate the first mentioned pairs of plates, and having corrugations between which are

placed the folded edges of the said crimps, the said corrugations extending into the spaces between adjacent crimps, the longitudinal edges of the pairs of corrugated plates being brought together and sealed.

1,395,884. ADJUSTABLE PULLEY. FRANK A. WEST, Newburg, Mo. Filed Oct. 4, 1920. Serial No. 414,584. 1 Claim. (Cl. 64—17.)



A pulley comprising a base disk having a central core and a plurality of circular series of openings arranged concentrically with relation to the core, a drum disposed on the core and having studs on its inner end engaged in certain of said openings and inwardly extending lugs on its outer end engaging with the outer face of the core to space the drum therefrom, and a second drum engaged on the first drum and having studs on its inner end engaged in other openings of the disk and lugs on its outer end engaged with the outer face of the first drum.

1,395,885. WATERPROOFING COMPOSITION AND METHOD OF MAKING SAME. WILLIAM GEORGE ABBOTT, Jr., Wilton, N. H. Filed Sept. 28, 1918. Serial No. 255,299. 10 Claims. (Cl. 134—15.)

1. The method of treating glycerids to produce a viscous water resistant composition, which consists in adding lead acetate to the substance to be treated, at temperatures in excess of 100° C.

1,395,886. ELECTRIC-CIRCUIT CONTROLLER. RICHARD AMBERTON, London, England. Filed Mar. 3, 1920. Serial No. 363,948. 7 Claims. (Cl. 200—11.)

1. In an electric circuit controller the combination comprising a plurality of contact plates each of said contact plates being formed with sides, one of which is outwardly curved and the other inwardly curved, the curvature of both sides being approximately circular, said contact plates being placed side by side so that the outwardly curved side

of one contact plate fits into the inwardly curved side of the next contact plate but without contacting therewith, and a circular brush, the circumferential outline of the brush being of similar curvature to the outwardly curved side of the contact plates.

1,395,887. HAND-TOOL. JOSEPH RENÉ AYOTTE, Chicago, Ill. Filed Oct. 31, 1919. Serial No. 334,715. 3 Claims. (Cl. 81—177.)

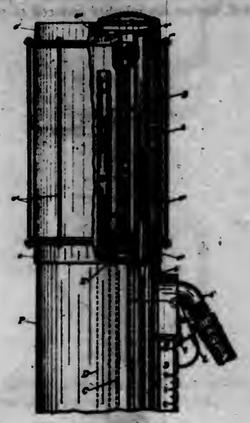
1. In a tool of the kind described, the combination of a bent casing within which is located at one end a tool member, and driving means within the tube for imparting rotation to the member, including a sleeve having a universal and non-rotatable connection therewith, a tube non-rotatably connected with the sleeve, two heads in end to end relation arranged at the sleeve end, one fixed and the other rotatable relative thereto, clutch elements carried by said heads in coöperating relation such that both heads may be rotated in unison in either direction, tension means for normally maintaining said heads in clutching relation, a handle pin slidably arranged crosswise of the one head and freely adjustable thereon, and a friction button arranged within the same head in coöperating relation to the handle pin for maintaining the same in any desired position of longitudinal adjustment, substantially as described.

1,395,888. HAND-TOOL. JOSEPH RENÉ AYOTTE, Chicago, Ill. Filed Mar. 15, 1920. Serial No. 366,059. 5 Claims. (Cl. 81—177.)

1. A tool of the kind described having, in combination, a body, a sleeve rotatably mounted therewithin, a holder carried at one end of the sleeve, a tool socket fitted within the holder, and means extensible longitudinally of the tool for rotating the sleeve comprising a tube adapted to telescope therewithin and having thereon a plurality of annular grooves, means detachably secured to the sleeve with-

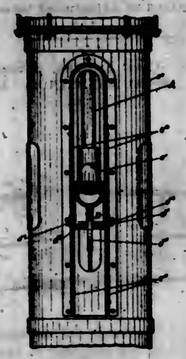
in which is formed a seat, a split ring arranged within the seat and adapted to engage frictionally within any one of the annular grooves in the tube for maintaining the latter in a definite position longitudinally of the sleeve, and a driving connection between the tube and sleeve operative in all relative positions of adjustment between these parts.

1,395,889. BOAT. CARL J. BABB, Riverside, Ill. Filed Sept. 29, 1919. Serial No. 327,102. 15 Claims. (Cl. 114—77.)



1. The combination with two connected boats having a water space therebetween, of means carried by one boat and slidable longitudinally thereof to a position engaging the sides and bottom of the other boat, whereby the space between said boats is inclosed at the sides and bottom.

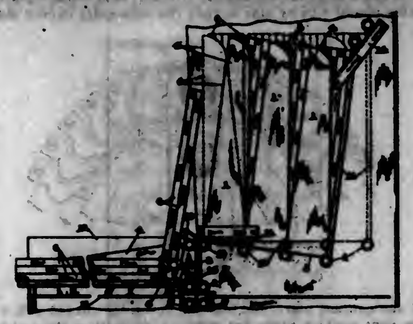
1,395,890. AUTOMATIC DRAIN-BACK FOR ELEVATED LIQUID-CONTAINERS. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Oil Tank and Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Dec. 16, 1919. Serial No. 345,416. 4 Claims. (Cl. 221—99.)



1. In a liquid dispensing apparatus having an elevated liquid container, the combination of a valve to drain the

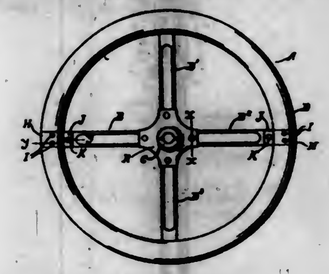
contents of the container back to the storage tank, a moving element within the container, and means connected

with the valve and engageable by the moving element, to open the valve when placing the apparatus in position for temporary disuse.



1,395,891. SETTING-LATCH. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Oil Tank and Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Feb. 9, 1920. Serial No. 357,232. 5 Claims. (Cl. 221—100.)

1. A liquid vending apparatus comprising a casing, an elevated container supported by the casing, an adjustable discharge pipe vertically movable within the container, a fixed scale carried by the casing, a setting latch carried by the discharge pipe and means for normally holding the setting latch against the scale.



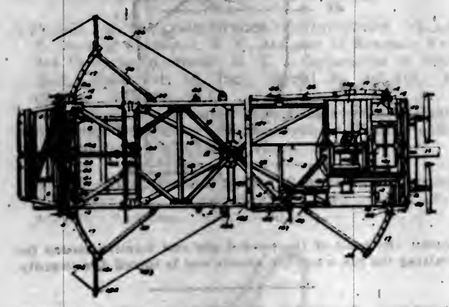
1,395,892. ACCOUNT-FILE. WILSON BARR, Trenton, Ontario, Canada. Filed Mar. 29, 1920. Serial No. 369,742. 6 Claims. (Cl. 45—2.)

1. In an account file the combination of a plurality of carriers one behind another, each mounted so that it may be turned from an upright to a substantially horizontal position and vice versa; and a plurality of account holding leaves mounted on each carrier one behind another,

each adapted to be turned from an upright to a substantially horizontal position and vice versa.

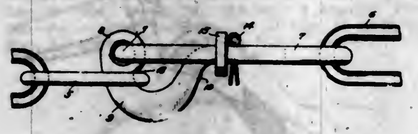
1,395,893. STEERING-WHEEL AND METHOD OF FORMING SAME. CHARLES W. BECK, Detroit, Mich., assignor to The Beck-Frost Corporation, a Corporation of Michigan. Filed May 20, 1914. Serial No. 839,687. 25 Claims. (Cl. 74—83.)

1. A steering wheel rim, comprising a rim proper having a joint, a fastening member at the joint and an outer covering of heat-insulating material substantially flush with the fastening member.



1,395,894. FENCE-STAPLE. CHARLES A. BECKWITH, Shullsburg, Wis. Filed Oct. 29, 1920. Serial No. 420,516. 1 Claim. (Cl. 256—49.)

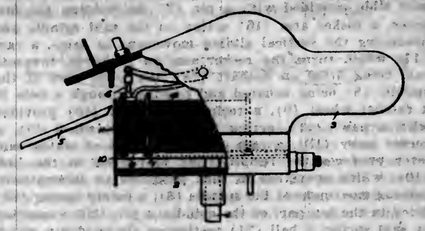
In a fence construction, a post including longitudinal flanges, said post having relatively large openings formed in one of the flanges, securing links, each of said securing links having hooks formed at the ends thereof, the intermediate portion of each link being spaced from the post associated therewith, one of said hooks adapted to embrace a portion of one of the flanges, the opposite hook adapted to pass through the opening associated therewith



and grip a wire, said link adapted to be bent intermediate its ends to cause the hook members to grip the articles connected therewith, and one of said hook members adapted to be moved within the confines of the opening in which the same is disposed.

1,395,895. PILE-DRIVING MACHINE. ALEXANDER M. BELLONY, U. S. Army. Filed Apr. 26, 1919. Serial No. 293,031. 10 Claims. (Cl. 61—73.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. In a pile driving machine, an upper and a lower frame, pivoted together whereby the former may be moved relative to the latter, stationary tracks carried by the lower frame on which said upper frame moves, and auxiliary tracks hinged to said lower frame and movable into and out of alinement with said stationary tracks.

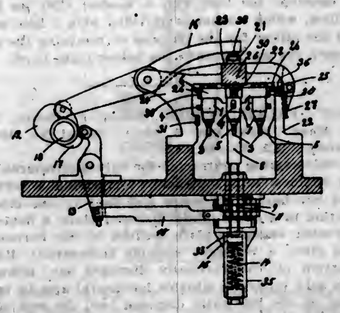


1,395,896. CHAIN-FASTENER. SHEFFIELD D. BELLOWS, Kelly Corners, N. Y. Filed Feb. 15, 1921. Serial No. 445,196. 1 Claim. (Cl. 24—68.)

A chain lock comprising a hook or clevis having a straight shank and provided with an attaching eye and a link engaging recess below said eye, an enlarged link connected to the attaching eye of the clevis, a transverse, closed link slidably carried by the elongated link for retaining the shank of the clevis within and between the arms of said enlarged link in the same plane with the attaching eye, and a cotter pin passing through the shank for preventing relative movement of the slidable member and shank when the hook is in its operative, locking position.

1,395,897. FEED-TABLE FOR PRINTING-PRESSES. ISIDOR BERKOWITZ, New York, N. Y. Filed Feb. 2, 1921. Serial No. 441,882. 2 Claims. (Cl. 271—61.)

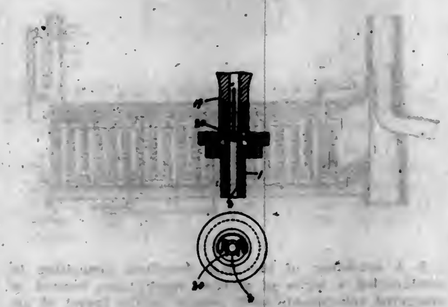
1. A feed table comprising a main plate having a plurality of slots therein, an auxiliary plate disposed over the main plate and having slots of smaller width disposed in alinement with the slots in the main plate, a nut disposed in each of the main slots, and a guiding rod vertically disposed with respect to the main plate and having a lower threaded portion extending into said slots and into engagement with said nut, said rod adapted to be threaded into said nut to engage the bottom of the slots



in the main plate and to jam the nuts against the under face of the auxiliary plate whereby the rods may be rigidly positioned on the main plate.

1,395,898. CONDENSER. JAMES A. BISHOP, Chicago, Ill. Filed May 26, 1919. Serial No. 299,826. 7 Claims. (Cl. 257—87.)

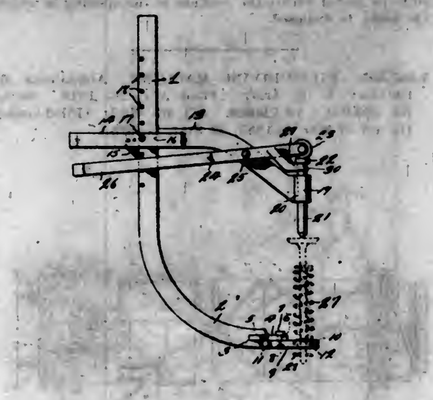
5. A condenser of the class described comprising in combination a series of vertical vapor tubes located in staggered relationship with respect to the travel of air between them horizontally, brick walls adjacent to said pipes and against which said air is deflected in its travel, and means for spraying water onto the upper portions of said walls, substantially as described.



1,395,899. MACHINE FOR PRODUCING SPRING DRESS-FASTENERS. KLAS GUSTAV BLOMBERG, Södertälje, and BENGT AUGUST PETTERSSON, Lidköping, Sweden. Filed Oct. 17, 1919. Serial No. 331,511. 4 Claims. (Cl. 79—8.)

1. In a transporter device, forming part of dress fastener making machine, a spindle (8) rotating in bearings and movable vertically, a cross piece with four arms (6),

the said cross being supported by the said spindle, (8), a socket (1) fitted to each arm of the cross piece, said socket containing a slide (2) acted on by a spring, and the said slide provided with a pin (3) for holding the fastener, a rocker arm (16) acting on the said spindle and producing the vertical sliding movement in same, a cam (17) which turns the rocker arm on its pivot, the said cam being fitted on a shaft (18), the lower part of the spindle (8) being squared and passing through a hole in a ratchet wheel (9), a reciprocating link (10) provided with a pawl (11), acting on the ratchet wheel (9), a rocker lever (13), a cam (12), by means of which said lever produces the reciprocating movement in the link (10), which operation in turn produces an intermittent turning movement of the spindle (8), a safety spring (19) fitted in the top part of the spindle, a pin (20) supported by said spring, a ball (21) resting on the said pin which ball serves as the contact point for the rocker arm (16).

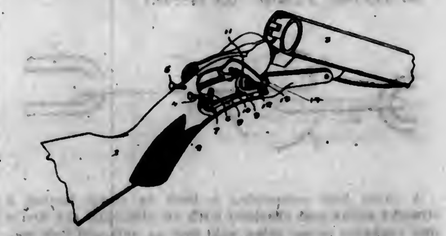


1,395,900. MACHINE FOR PRODUCING SPRING DRESS-FASTENERS. Klas Gustav Blomberg, Södertälje, and Bengt August Pettersson, Lidköping, Sweden. Filed Oct. 17, 1919. Serial No. 331,514. 3 Claims. (Cl. 79—8.)

1. In a device for forming and introducing the spring of dress fasteners into their holders in a machine employed for making such fasteners, a slide (11) with reciprocating movement and provided with a recess (3) for bending the wire, a tube (1) around which the wire is shaped and pincers (4) with reciprocating movement which perform such shaping a pillow die (27) which said pillow envelops the tube (1), a washer (28) on top of said pillow, which washer is provided with a hole smaller than in the pillow for the purpose of retaining the spring underneath the washer until the holder picks it off.

1,395,901. VALVE-LIFTER. Homer A. Booth, Pittsfield, Mass. Filed Nov. 5, 1920. Serial No. 421,897. 2 Claims. (Cl. 29—64.2.)

1. A valve spring contractor for valves of internal combustion engines, said contractor comprising a vertically disposed bar having its lower end bent to one side and terminating in a horizontally disposed plate, a detachable valve washer engaging plate secured to the horizontally disposed plate, a vertically slidable horizontally disposed arm carried by the vertically disposed bar, means for securing said vertically slidable horizontal arm in various positions on the vertically disposed bar, the end of said horizontally disposed bar having slidably mounted in a vertical bearing thereof a valve engaging pin, said valve engaging pin being provided with a head at its upper end, a pivoted lever pivoted to the horizontal bar and having its end provided with a roller for engaging the headed end of the pin and arms carried by the pivoted lever adjacent the roller and extending downwardly and engaging

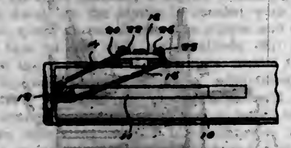


under the head of the headed pin and forming means for raising the pin when the handle end is forced downwardly.

1,395,902. WASHING, CLEANSING, AND LUBRICATING MEDIUM. Max Buchner, Heidelberg, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed July 29, 1916. Serial No. 112,146. 9 Claims. (Cl. 87—5.)

1. A washing, cleansing and lubricating medium consisting of a hydrated inorganic hydroxid of a jelly-like consistence and rich in water.

1,395,903. FIREARM. Olof Buhl, Newell, Iowa. Filed Dec. 31, 1920. Serial No. 434,330. 1 Claim. (Cl. 42—41.)

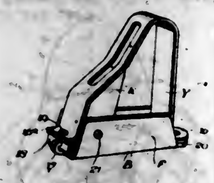


A fire arm comprising a stock, a swinging firing hammer having a rear abutment and also having a transverse shaft and means on the shaft and at the side of the stock for the retraction of the hammer, a spring about the transverse shaft to impel the firing hammer forwardly; said spring being tensioned by the retraction of the firing hammer and the attendant racking of the shaft, a longitudinally-arranged sear pivoted in the stock and having a forwardly-reaching hammer-engaging arm and also having a rear upstanding arm, and a pin guided in the stock and opposed at its inner and forward end to the rear side of the upstanding arm of the sear; said pin being designed to be pressed inwardly and forwardly by the user of the fire arm.

1,395,904. LOOM ATTACHMENT. Charles E. Chambers, Asheville, N. C. Filed July 7, 1919. Serial No. 308,955. 4 Claims. (Cl. 139—22.)

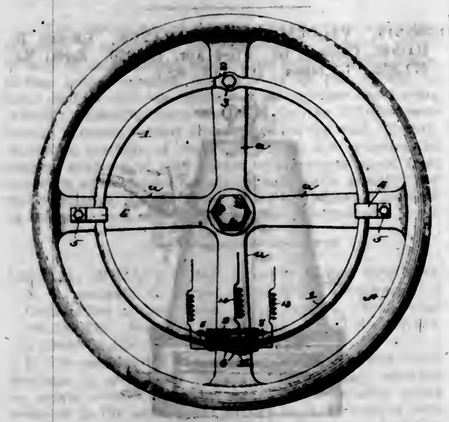
1. A picker check for looms comprising a flexible loop

extending around the picker stick, a plate adjustably secured to one side of the lay and means for securing the



loop to the plate, whereby a side pull will be exerted upon the picker stick at the end of its stroke.

1,395,905. CELLULOSE-ETHER COMPOSITION. Hans T. Clarke, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 16, 1921. Serial No. 445,418. 9 Claims. (Cl. 134—79.)

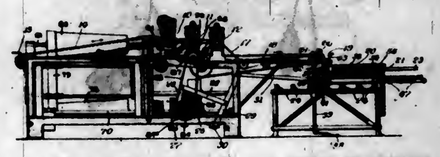


1. A composition of matter comprising a cellulose ether and a salicylic acid ester of a monohydroxy aliphatic alcohol having from 4 to 5 carbon atoms.

1,395,906. AUTOMOBILE-LOCK. Samuel Bun Clayton, Greensboro, N. C. Filed Sept. 22, 1920. Serial No. 412,006. 5 Claims. (Cl. 70—30.)

2. An automobile lock of the character described comprising, a yoke, a base plate spanning the ends of the yoke and universally connected thereto, and a block associated with the yoke and base plate to increase or decrease the internal area of the yoke for the purpose described.

1,395,907. DIMMING MECHANISM FOR AUTOMOBILE-LIGHTS. Albert N. Coulson, Baltimore, Md. Filed Apr. 7, 1919. Serial No. 288,400. 4 Claims. (Cl. 200—59.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

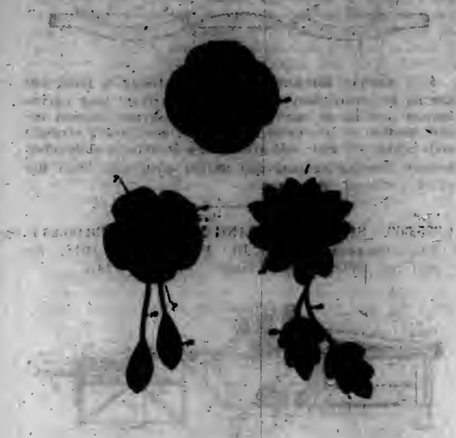


1. In a switch or controller, pivoted ring sections and switch contacts carried by said sections, said contacts operating to control a circuit by movement of said ring sections about their pivoted connections.

1,395,908. BUMPER. William G. Cox, Cleveland, Ohio, assignor to Cox Brass Manufacturing Company, Albany, N. Y., a Corporation of New York. Filed June 18, 1921. Serial No. 478,537. 4 Claims. (Cl. 293—55.)

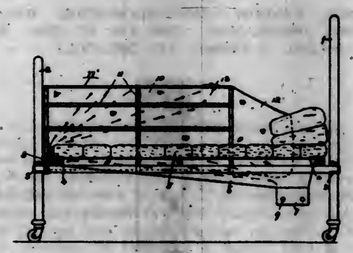
4. A bumper for automobiles, comprising a front bar having reversely bent arms and a relatively long curved impact portion at each end and a reversely curved impact portion at its center, and a rear bar having straight ends connected with said arms and a straight middle offset portion bearing against and united with said front bar at each side of its center.

1,395,909. SHEET-HANDLING MACHINE. Charles E. Dellenbarger, Chicago, Ill. Filed Dec. 14, 1918. Serial No. 266,681. 17 Claims. (Cl. 226—14.)



1. In a machine for cutting and stacking sheets from a length of moving material, in combination, sheet severing mechanism acting on the moving material, a receiver for the sheets cut off thereby, and means for reciprocating the receiver at a rate of speed proportioned to the rate of travel of the moving material whereby the sheets coming from the severing mechanism are stacked on said receiver.

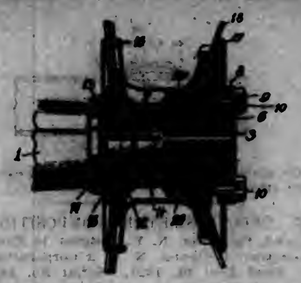
1,395,910. WINDOW VENTILATING-STOP. Basil W. Dennis, Detroit, Mich. Filed Feb. 27, 1920. Serial No. 361,780. 3 Claims. (Cl. 292—305.)



1. A device of the type described comprising a rail having an angular portion supported in a plane other than that of said rail, spaced stop shoulders on said rail, and a stop slidable on said rail and the angular portion thereof and adapted to have a latch engagement with the shoulders when moved in one direction and ride free of the shoulders when moved in the opposite direction.

1,395,911. METHOD OF MANUFACTURING ORNAMENTATIONS AND FINISHED ARTICLE DERIVED THEREFROM. Gustave J. Kroll, New York, N. Y. Filed Dec. 14, 1920. Serial No. 430,779. 6 Claims. (Cl. 41—18.)

1. An article of manufacture, including a substantially flat base portion, a plurality of medallions affixed to said base portion, said medallions simulating the petals of a flower.

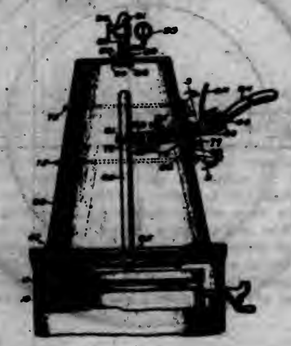


1,395,912. HEATED BED. Rudolph Ferentzi, Newark, N. J. Filed Jan. 28, 1918. Serial No. 214,152. 1 Claim. (Cl. 126—205.)

The combination of a bed frame, air heating means consisting of a heating pan secured to the bottom of the bed having a tapering bottom wall and having a compartment adapted to house a suitable heater, a spring and mattress above said pan, the said tapering wall having a portion extending beyond the end of the spring and mattress forming an outlet for directing heat above the mattress and a removable superstructure for confining the heat above the mattress and a vent for regulating the amount of heat within the superstructure.

1,395,913. HUB CONSTRUCTION. Henry Ford, Dearborn, Mich. Filed Apr. 15, 1918. Serial No. 228,588. 2 Claims. (Cl. 287—53.)

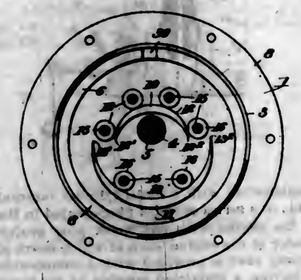
1. The combination with a wheel hub, and axle, a bushing between said axle and said hub and having a driving relation to said axle, a flange on said bushing exteriorly of said hub and confronting the outer face of said hub, and means extending through the flange of said bushing connecting said bushing to said wheel hub and adapted to



be repositioned in the flange of said bushing for forcing said bushing from said axle independent of said wheel hub.

1,395,914. SWIMMING DEVICE. Otto William Graundmann, Jersey City, N. J. Filed Aug. 1, 1921. Serial No. 488,898. 3 Claims. (Cl. 9—21.)

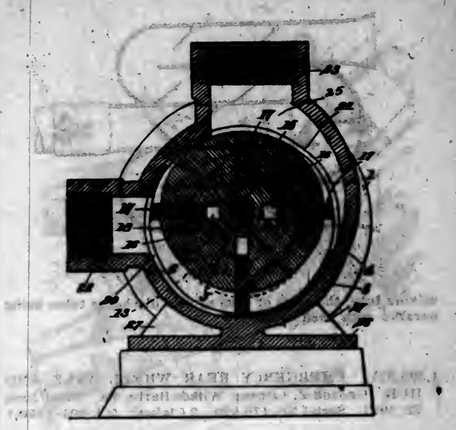
1. In a swimming device, a plate of rigid material shaped to conform with the natural outline of a hand and divided transversely near the knuckle part into two sections pivoted to one another, the adjoining edges of said plate being cut out to leave a free space around the knuckles, a piece of flexible material covering said space and means for the attachment of said device to the hand.



1,395,915. VACUUMIZING APPARATUS. George B. Haines, Chicago, Ill. Filed Apr. 7, 1920. Serial No. 371,835. 7 Claims. (Cl. 113—82.)

1. An apparatus for vacuumizing and sealing cans and the like comprising, in combination a glass jar having an opening in its side wall, a flexible disk extending over

said opening, means for clamping the peripheral portion of said disk against the outside face of the jar around the opening in air-tight manner, a nipple extending through the disk, a flange on the nipple in contact with one face of the disk, a nut threaded onto the nipple and engaging the other face of the disk, an electrode clip pivotally mounted on the inner end of the nipple, means for securing said clip in a given position of adjustment, means for adjustably securing an electrode to said clip, an electrical connection to the nipple at a point outside of the jar, an insulating handle in conjunction with the nipple at a point outside of the jar, a vacuumizing connection to the jar, a valve in said connection, a gage in said connection between the valve and jar, there being an air passage through the nipple having its inner end in communication with the space within the jar, a valve controlling communication of the outer end of said passage with the atmosphere outside of the jar, and a gasket of resilient material surrounding the lower edge of the jar and adapted for contact with the surface of a can or the like, substantially as described.



1,395,916. ROTARY PUMP. Albert Hayes, New York, N. Y., assignor to Carnot Development Corporation, a Corporation of New York. Filed Sept. 5, 1917, Serial No. 189,723. Renewed Apr. 1, 1921. Serial No. 457,706. 7 Claims. (Cl. 103—44.)

1. The combination of a cylinder having inlet and outlet openings, a cylindrical carrier mounted to rotate eccentrically in said cylinder said carrier being slotted radially, sliding gates mounted in the slots of the carrier to make contact with the interior of the cylinder and having laterally extending portions, heads for the cylinder each having a recess formed therein, guides for said laterally extending portions of the gates within the recesses, the guiding surfaces of said guides being spaced apart from the walls of the recess a distance sufficiently greater than the diametrical extent of the laterally extending portions of the gates to permit of free passage of sediment.

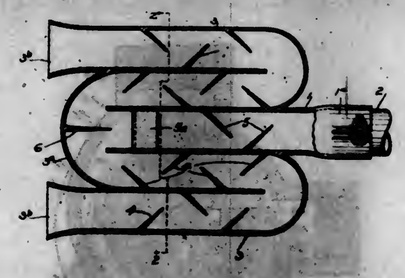
1,395,917. ROTARY PUMP. Albert Hayes, New York, N. Y., assignor to Carnot Development Corporation, a Corporation of New York. Filed Sept. 5, 1917, Serial No. 189,724. Renewed Apr. 1, 1921. Serial No. 457,707. 3 Claims. (Cl. 103—44.)

3. The combination of a cylinder having inlet and outlet openings, a cylindrical radially slotted carrier mounted to rotate eccentrically in said cylinder sliding gates mounted in the slots of the carrier to make contact with the interior of the cylinder and having laterally extending portions, heads for the cylinder each having a circular recess formed therein adapted to receive the laterally extending portions of the gates and a ring bearing against the periphery of the recess and movable therein, adapted to receive within its inner periphery the laterally extend-

ing portions of the gates, said ring having antifriction bearing in the periphery of the recess.

1,395,918. PACKAGE OF X-RAY FILMS. John G. Jones, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 27, 1919. Serial No. 320,283. 13 Claims. (Cl. 250—84.)

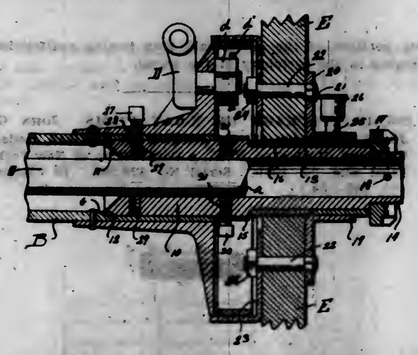
9. A package comprising a sheet of sensitised material, sheets of foldable material one on each side of said sensitised sheet, the edges of the last named sheets being interfolded together on one face of the package thus formed, one of said last named sheets being folded at least twice in the interfolding.



1,395,919. INSECTICIDE FOR BOLL-WEEVILS. Philipp Koenig, Cuero, Tex. Filed Sept. 8, 1920. Serial No. 408,809. 1 Claim. (Cl. 167—6.)

An insecticide compound for killing boll weevils as a result of their inhalation of the compound, consisting of a solution of arsenic and baking soda in water said solution being boiled until the ingredients are dissolved in the water, in combination with a large quantity of wood ashes with which the poisoned solution is thoroughly mingled and then dried in accordance with the steps hereinbefore specified and for the purpose described.

1,395,920. MUFFLER. Rudolf Liebeschek, Pittsburgh, Pa., assignor of one-third to Slavk Lovrencic, Bellevue, Pa., and one-third to Paul Radocaj, Pittsburgh, Pa. Filed Feb. 6, 1920. Serial No. 356,580. 6 Claims. (Cl. 137—160.)



1. In a muffler, a central exhaust receiving tube, and

lateral discharge tubes of substantially elongated U-shape communicating at their outer ends with said exhaust re-

ceiving tube, the arms of each of said discharge tubes being parallel with each other.

1,395,921. EMERGENCY REAR WHEEL AXLE AND HUB. GEORGE E. LUTSEY, Wilkes-Barre, Pa. Filed June 22, 1921. Serial No. 479,629. 2 Claims. (Cl. 301—130.)

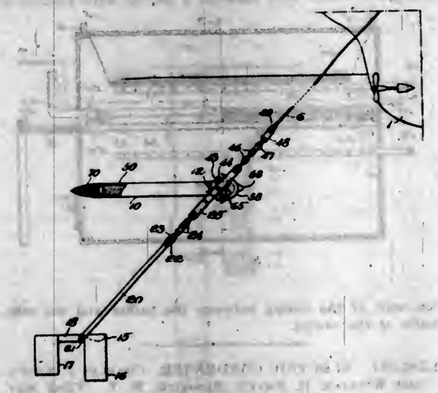
1. An emergency repair attachment for automobile axles comprising a tubular auxiliary axle adapted to fit the broken axle and fit within the axle housing and being formed intermediate its ends with an outwardly projecting shoulder adapted to bear against the extremity of the axle housing, that portion of the auxiliary axle forward of the shoulder being reduced in diameter and the extremity of the tubular axle having a reduced screw-threaded portion, a bushing surrounding the reduced portion of the tubular axle and being rotatable thereon and having a hub flange disposed adjacent the forward end of the bushing, a nut engaging the screw-threads on the terminal end of the auxiliary axle and holding the bushing in place, bolts passing through the hub flange and adapted to engage the spokes of a wheel and the brake drum thereof, said tubular axle having screw-threaded perforations between the shoulder and the inner end of the tubular axle through which set screws may be passed to hold the auxiliary axle in engagement with the housing and the broken axle.

1,395,922. DENTAL EXPANSION-ARCH. WILLIAM A. MCCARRAN, Topeka, Kans. Filed Apr. 2, 1921. Serial No. 458,980. 4 Claims. (Cl. 32—19.)

1. A device of the character described comprising a member adapted to be secured to a fixed anchorage upon a tooth, an arch band, an extensible element engageable with an end of said arch band, a casing carrying said extensible element and interengaging members upon said casing and

the first named member engageable with each other, when said casing is moved laterally and then longitudinally with respect to said member.

1,395,923. SPARK-PLUG. MARION M. MCCOY, Dawson, N. Mex., assignor of one-half to G. A. Will, St. Louis, Mo. Filed Dec. 7, 1916. Serial No. 135,604. 1 Claim. (Cl. 123—169.)



The combination with a multi-cylinder internal combustion engine, of a series of spark plugs seated in the cylinder block of the engine with one spark plug projecting into each cylinder of the engine, each of which spark plugs comprises a body that is provided with a comparatively large chamber having a restricted opening at its lower end, an electrode fixed to the body of the spark plug and projecting into said restricted opening, a second electrode extending through the body of the spark plug and insulated therefrom, the lower end of which second electrode terminates within the restricted opening adjacent to the end of the first mentioned electrode, and there being a threaded aperture formed through the side wall of the plug, which aperture communicates with the chamber, of a tubular member one end of which is threaded and screw seated in the aperture in the plug, the outer end of said tubular member being turned upwardly and formed into a cup which is open to atmosphere, a valve mounted for rotation within said tubular member and passing diametrically therethrough, said valve being provided with an aperture which is adapted to register with the passageway through the tubular member, an operating handle carried by each valve, a pull rod pivotally connected to the outer ends of all of said handles, and a retractile spring for moving said pull rod in one direction.

1,395,924. TOWING SUBMERGED OBJECTS, SUCH AS SUBMARINE TORPEDOES. FRANCIS PEABODY MAGOUN, Cambridge, Mass. Filed Feb. 28, 1918. Serial No. 219,617. 27 Claims. (Cl. 114—235.)

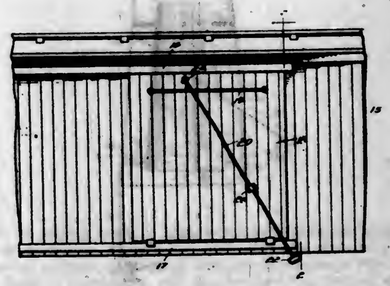
1. Means for towing a submerged object at a substantially predetermined depth comprising a tow line, directing means having surfaces capable of assuming new positions in respect to the object in response to variable forces acting upon said means, and means for attaching the

directing means to the tow line with freedom of motion to perform its movements of correction, whereby to main-

tain the object submerged at a predetermined depth with substantial freedom from vertical and lateral oscillation.

1,395,925. AUTOMOBILE-BUFFER. JACOB F. MARTIN, Bellevue, Ohio. Filed Oct. 29, 1920. Serial No. 420,501. 4 Claims. (Cl. 293—55.)

2. An automobile buffer, comprising a buffer-bar, buffer-bar supporting members attached to the ends thereof and comprising supplemental spring members conformed to and attached to the depending scroll portions of the upper vehicle springs and terminating in loop-eyes engaging the sleeves of the springs between the shackle link members thereof, and clamping members connecting said supplemental and main springs whereby said buffer-bar will be supported and cushioned by said upper vehicle springs.

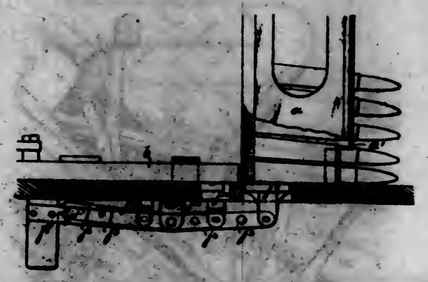


1,395,926. MECHANICAL STARTER FOR EXPLOSIVE-ENGINES. JOSEPH M. MICHAELSON, Minneapolis, Minn. Filed Apr. 20, 1917. Serial No. 163,413. 1 Claim. (Cl. 74—54.)

In a motor propelled vehicle having side frame members and an intermediate cross member connecting the same, a transmission shaft and a clutch for connecting the same to the motor, an engine starter comprising a beveled pinion on said transmission shaft connected thereto by a one-way clutch arranged to cause said pinion to drive said shaft but permitting said shaft to run ahead of said pinion, a flat gear segment disposed in a plane parallel to the transmission shaft having lateral teeth thereon and located forwardly of said pinion and above the same, a hand lever extending forwardly from said segment and forming the forward radial arm thereof, said segment being pivotally mounted on a short shaft on said cross member of the frame, one edge of said cross member serving as a stop member, a bracket having a buffer thereon carried by said lever and adapted to contact with said

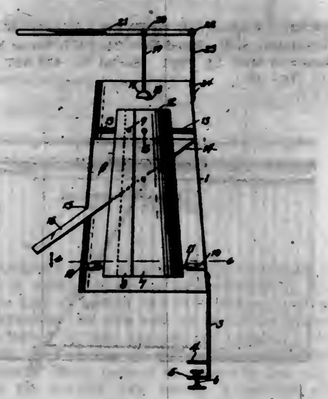
stop member, and a spring tending to maintain said lever in its forward position.

1,395,927. CAR-DOOR OPENER. DANIEL W. MILLSAPS, Greenville, S. C. Filed Nov. 24, 1917. Serial No. 203,810. Renewed Mar. 24, 1921. Serial No. 455,827. 5 Claims. (Cl. 16—10.)



1. The combination with a horizontally sliding door, of a rod secured across said door in a substantially horizontal position near the top, a pole having an eye engaging the rod, said pole having its upper end extended above the rod and provided with a spindle, and an anti-friction roller journaled on the spindle and engaging the door.

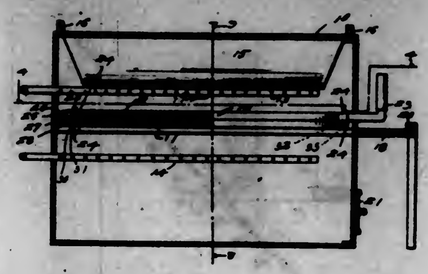
1,395,928. MACHINE FOR FILLING CARTRIDGE-MAGAZINES, CARTRIDGE-BELTS, STRIP-CHARGERS, AND THE LIKE. HARRY ROBERT NORTHOVER, Winnipeg, Manitoba, Canada. Filed Mar. 5, 1918. Serial No. 220,667. 8 Claims. (Cl. 86—45.)



1. In an automatic stop mechanism for cartridge-feeding machines, the combination with a cartridge-feed device, and a hopper or guide down which the cartridges are fed by gravity into the range of action of said device, of a

system of counterweighted levers normally restrained by the cartridges, and a member controlled by said levers and

locking the feed device in the event of a cartridge failing to position itself before said feed device.



1,395,929. CORN-CUTTING DEVICE. DAVID EVERETT RYDER, Newburgh, N. Y. Filed July 23, 1920. Serial No. 398,343. 3 Claims. (Cl. 130—9.)

1. A corn cutter comprising an expansible tubular sleeve having overlapping edges with its side walls converging upwardly to a cutting annulus, a housing surrounding the sleeve, and means to force a cob longitudinally through the sleeve.

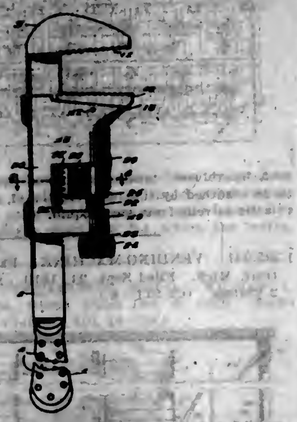
1,395,930. WAFFLE-MACHINE. FRANK A. SELL, Portland, Oreg. Filed Oct. 29, 1920. Serial No. 420,457. 1 Claim. (Cl. 53—10.)

A waffle machine comprising a casing having an opening in its side wall, a waffle iron slidably mounted in the casing and capable of being moved out of said casing by way of the opening, heating means arranged above and below the waffle iron, downwardly converging baffles carried by the top wall of the casing and terminating adjacent the uppermost heating means, and vent means arranged in the

top wall of the casing between the baffles and the side walls of the casing.

1,395,931. ELECTRIC CONDENSER. CHARLES F. SMITH and WILLIAM H. SMITH, Brooklyn, N. Y. Filed May 17, 1920. Serial No. 382,090. 3 Claims. (Cl. 250—41.)

1. An electric condenser unit comprising a base or body of thin fiber board and a wrapping of dielectric and metal foil encircling said base or body, the sheets of metal foil being smaller in size than the sheets or plies of dielectric, said sheets of metal foil having leads which are folded around the ends of the fiber base or body, and means for securing the wrapping of dielectric and metal foil in place about said base or body.

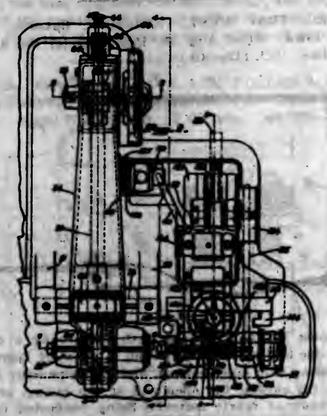


1,395,932. GAS-ENGINE GOVERNOR. EDWIN G. STAUDE, Minneapolis, Minn. Filed May 19, 1919. Serial No. 298,246. 5 Claims. (Cl. 251—145.)

1. A governor for internal combustion engines comprising a pipe having a passage for air and fuel to the engine, a helical spring arranged in said passage and having openings for the passage of air and fuel between its coils, the coils of said spring being adapted for compression in line with its axis to close said openings, the suction of the engine compressing said coils and closing said openings to reduce the area thereof and the flow of air and fuel to the engine.

1,395,933. WRENCH. CHARLES L. STIDHAM, Gravois Mills, Mo., assignor of one-half to William Well, Versailles, Mo. Filed Sept. 20, 1920. Serial No. 411,486. 1 Claim. (Cl. 81—156.)

A wrench including a toothed stationary jaw having a toothed shank, a movable jaw having a carriage slidable on the shank, a spring influenced toothed auxiliary jaw arranged for limiting movement on the active faces of the movable jaw, a headed screw carried by the carriage, a toothed block having a threaded bore which is engaged



by the screw and the teeth of the said block designed to engage with the teeth of the shank, and spring means engaging the block for holding the same in engagement with the teeth of the shank, said block being susceptible to a swinging movement on the screw.

1,395,934. FOOD PRODUCT. FRANK WEBB STOCKTON, Pittsburgh, Pa. Filed Mar. 17, 1921. Serial No. 453,009. 9 Claims. (Cl. 99—11.)

1. The method herein described of preparing nut butter in order to prevent gravitational separation of the ingredients thereof which consists in mixing with the nut kernels a normally solid fat and grinding the mixture to a homogeneous pasty mass.

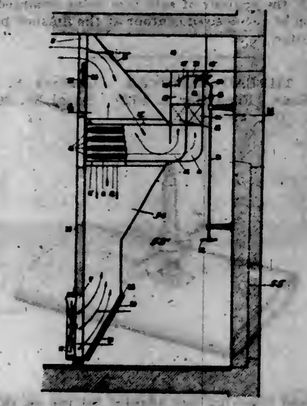
1,395,935. FORMING-MACHINE. FRANK L. WALTER, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Nov. 21, 1918. Serial No. 263,462. 27 Claims. (Cl. 29—51.)

1. In a forming machine, the combination with a tool holder and a rotatable work holder; of means for producing a predetermined series of movements of the axis of the work holder relatively to the tool holder, said means including a cam rotating in synchronism with the work holder, the contour of said cam being enlarged scale reproduction of the desired contour of the finished product of the machine.

1,395,936. THREAD-REMOVER. GLENIER F. YORK, Salina, Kans. Filed Mar. 9, 1920. Serial No. 364,462. 1 Claim. (Cl. 10—113.)

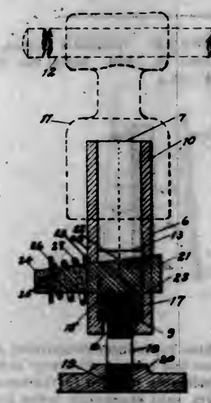
In a thread removing tool adapted for use on valves of automobile tires, the combination of a block, means for rotating the block, the block having a threaded opening therethrough, opposite cutting blades having cutting edges projecting inwardly to but not beyond the apex of the threads, the block having opposite grooves in which said cutters are affixed to the block, the cutters being shaped to leave slots for the escape of chips, the entire device being of suitable shape and size for operation on the valve stem of an automobile tire when same is mounted on the wheel.

1,395,937. REPRODUCER. ABRAHAM ATLAS, Philadelphia, Pa. Filed June 19, 1920. Serial No. 390,241. 2 Claims. (Cl. 274—25.)



1. A talking machine reproducer comprising an integral body of circular shape and formed relatively thick with its central portion considerably reduced in thickness whereby to define a diaphragm, said diaphragm being formed with a central hole, and a socket member formed at a point in the periphery of said body and adapted to hold a stylus.

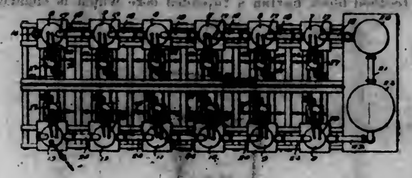
1,395,938. ARRANGEMENT FOR CHANGING AND HEATING AIR IN ROOMS AND CHAMBERS OF ANY KIND. PILADE BARDUCCI, Naples, Italy. Filed Jan. 19, 1920. Serial No. 352,267. 10 Claims. (Cl. 98—27.)



10. An apparatus for changing air in rooms of any kind, comprising a casing having orifices opening into the room, reversible propelling means at one of said orifices for producing an air current through said casing and orifices, two sets of boxes in said casing, said boxes being spaced apart from each other and having mouths opening into the casing toward one of its orifices, all said boxes leading to passages communicating with the outside, controlling means in said passages, the boxes of one set exhausting air to the outside, and the boxes of the other

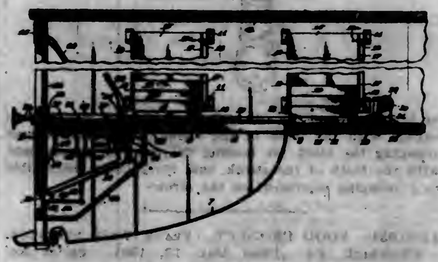
set drawing air from the outside into said casing, and heating means in said casing intermediate said boxes,

sand casing having ports provided at points beyond the space between the boxes and leading to the outside, and also having valves controlling said ports.



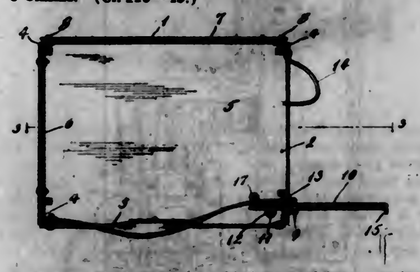
1,395,939. STUD-DRIVER. FRED A. BARNES and EDWARD G. HURLBUT, Indianapolis, Ind. Filed Apr. 4, 1921. Serial No. 458,620. 4 Claims. (Cl. 81—53.)

1. A stud driver comprising a body portion, a bore and a counterbore within said body portion, said counterbore entering said body portion at its opposite end from said bore, a plurality of interchangeable collets to fit within said counterbore, said collets being wholly within said counterbore, a key transversely positioned through said body portion, means for retaining said key in adjusted position, and an operating handle removably engaging the counterbored end of said body portion.



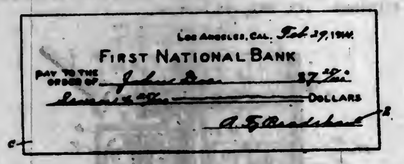
1,395,940. PROCESS OF RECOVERING VOLATILE SOLVENTS. HARRY P. BASSETT, Cynthiana, Ky., and SAMUEL S. SADTLER, Springfield township, Montgomery county, Pa. Filed Sept. 17, 1920. Serial No. 410,948. 6 Claims. (Cl. 202.)

1. The herein described process of recovering a volatile solvent whose vapors are relatively insoluble in water and soluble to dilute alcohol, which comprises adding to water enough alcohol to make approximately from 40 to 70 per



cent. by volume, causing vapors of such volatile solvent to be absorbed by the resulting liquid, and separating the volatile solvent from such liquid.

1,395,941. VENDING-MACHINE. FRANK BEATTIE, Detroit, Mich. Filed Sept. 24, 1919. Serial No. 325,843. 2 Claims. (Cl. 211—8.)

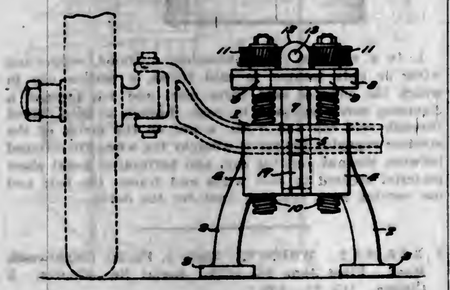


1. The combination with a vending machine, of package holders therefor, each holder comprising a slotted stationary partition, a slotted bar, longitudinal apertured partitions between said bar and said stationary partition, and stud bolts carried by said partitions and adjustably held in the slots of said bar and stationary partition, and adjustable partitions between said longitudinal partitions, and stud bolts carried by said adjustable partitions and engaging in the apertures of said longitudinal partitions, so that the area of said holder may be increased and decreased.

1,395,942. TRAP-NEST. SAMUEL C. BELDING, Mason City, Iowa. Filed Aug. 19, 1920. Serial No. 404,506. 5 Claims. (Cl. 119—49.)

1. A nest of the type set forth comprising a casing, open at one end and at its bottom, a piece of fabric material closing said open bottom, and a downwardly swinging door for closing the open end of the casing, one end of said piece of fabric material being connected to said door, whereby the latter will be moved to closed position when said piece of material is depressed by the weight of a hen in the nest.

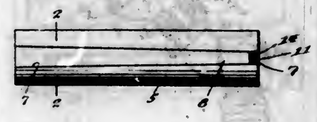
1,395,943. CHECK-PROTECTING METHOD. ARTHUR FRANKLIN BRADSHAW, Bieber, Calif. Filed Jan. 2, 1920. Serial No. 349,005. 3 Claims. (Cl. 283—9.)



1. An instrument of monetary value, when executed by the drawer, having a multiplicity of the drawer's signatures arranged in an arbitrary manner with respect to each other to signify a maximum for which the instrument is negotiable.

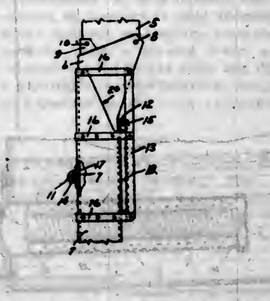
1,395,944. TIRE-VULCANIZING MOLD. WILLIAM A. BRUBAKER, Akron, Ohio. Filed Dec. 8, 1920. Serial No. 429,142. 7 Claims. (Cl. 18—38.)

1. In tire vulcanizing molds the combination with the side mold plates and the means for holding the same together; a base ring, means for leading compressed air through the base ring into the mold cavity, and means assisted by the pressure of the air within the mold for sealing the ring and mold plates against escape of air.



1,395,945. COMBINED JACK AND PULLER. ARTHUR E. CLEMENTS, South Jacksonville, Fla. Filed Dec. 4, 1920. Serial No. 428,320. 2 Claims. (Cl. 254—98.)

1. In a device for the purpose set forth, a body having depending legs at the outer corners thereof, screw mem-



bers having oppositely pitched threads vertically movable through threaded openings in the body, a shank having an outstanding lug thereon guided through the body, a head on the shank having openings receiving the non-threaded upper ends of the screws, worm wheels secured to said ends and resting on said head, a shaft journaled in the head and having a worm engaging the worm wheels, and an operating handle for the shaft.

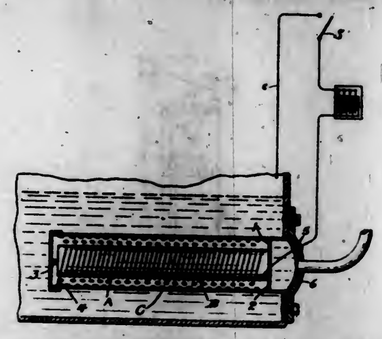
1,395,946. WRIST-PIN. CHARLES HENRY CLEMONS, Weldon, Ill. Filed May 11, 1921. Serial No. 468,776. 5 Claims. (Cl. 74—17.)

1. A wrist pin comprising a tubular body having a side slot extending throughout its entire length, whereby the body is split longitudinally to permit expansion, said slot being tapered in the direction of one of its ends, a core slidably mounted in said body and having a wedge-shaped rib seating in the slot, and adjusting means for said core.

1,395,947. DISTRIBUTING-SPOUT. FRED W. COOLEY, Minneapolis, Minn., assignor to James J. Gerber, Minneapolis, Minn. Filed Feb. 24, 1920. Serial No. 360,779. 8 Claims. (Cl. 193—40.)

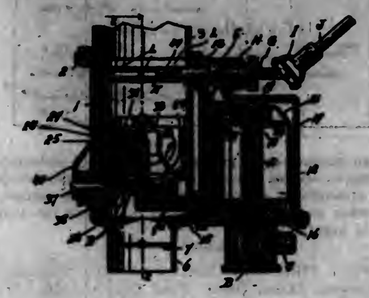
1. The combination with a distributing spout composed of telescoping sections, of leverage compensating devices including movable supporting members for said sections under a variable leverage which advantageously increases against the buckling strain on telescoped ends of said sections in proportion to the extent of their outward separating telescopic movement, substantially as described.

1,395,948. HELMET AND MASK FOR USE WITH RESPIRATORY APPARATUS. ALEXANDER BERNHARD DRÄGER, Lübeck, Germany. Filed June 9, 1921. Serial No. 476,286. 4 Claims. (Cl. 128—142.)



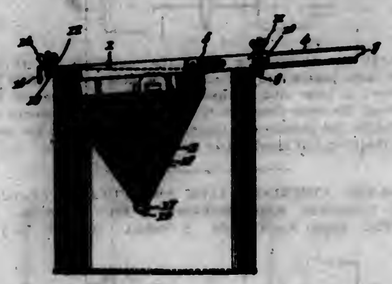
1. In a helmet or mask for use with respiratory apparatus, the combination of a rigid face covering having an inlet opening, a breathing mouth-piece movably mounted in said inlet opening and extending into said face covering, said mouthpiece being capable of movement relatively to said rigid face covering within the same to an operative position in registry with the mouth of the wearer and to an inoperative position out of registry therewith when

the apparatus is in use, and a breathing device connected with the said mouthpiece and suspended thereby without



strain upon the face covering when said mouthpiece is in its operative position.

1,395,949. ELECTRICALLY-HEATED OIL-STRAINER. WALTER HERBERT ECKMAN, Mankato, Minn. Filed Apr. 28, 1920. Serial No. 376,176. 1 Claim. (Cl. 219—38.)



In combination with a crank case of an internal combustion engine, a cylindrical strainer arranged in said crank case at one end thereof curved outwardly and formed with a constricted outlet port, a bracket plate having a concave-convex portion formed therein for receiving and supporting said curved end of the strainer thereupon, said bracket plate having an outlet port corresponding to the port in the strainer, the remaining end of the strainer being closed, an elongated insulating support arranged within said strainer having a marginal flange formed on one of its ends for maintaining the body of the support in spaced relation from the walls of the strainer, an insulating piece engaging the opposite end of the support and the corresponding end wall of the strainer for maintaining the adjacent portion of the support spaced from the wall of said strainer but to permit of engagement with the support upon removal of the adjacent end closure of the strainer, and a resistance unit arranged upon the insulating support.

1,395,950. VACUUM-CARBURETER. WILLIAM J. BELL, Monte Vista, Colo., assignor to The Vacuum Carbureter Company, Monte Vista, Colo., a Corporation of Colorado. Filed Mar. 28, 1917. Serial No. 158,077. 4 Claims. (Cl. 261—48.)

4. A carbureter comprising a casing having an air passage, a fuel reservoir, a fuel nozzle communicating with the fuel reservoir and with the air passage, means for varying the air pressure on the fuel in the reservoir in accordance with the requirement of a motor, said means comprising a tubular member, one end of which projects into the air passage and the other end of which is in communication with the upper part of the fuel reservoir, the portion of said tube extending into the air passage being provided with one or more openings in one side thereof, and means for rotating said tubular member so as to change the direction of said openings with respect to the air currents in said passage whereby the relationship between the air currents and the pressure on said fuel may be varied at will.

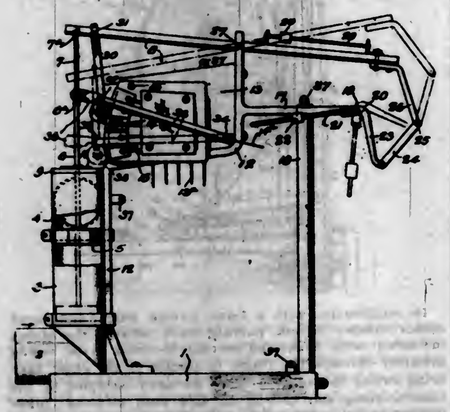
1,395,951. CONICAL STRAINING DEVICE. GUY W. FREDON, Crosskill, N. J. Filed Dec. 10, 1919. Serial No. 343,704. 12 Claims. (Cl. 210—149.)

1. In a strainer, in combination, a frame, supporting wires or rods secured to said frame, a bottom cap in which the ends of said wires meet and are secured, a clamping screw adapted to pass through a hole drilled through said cap and wires, a nut on the inside of the strainer engaging the screw whereby the wires are clamped between the nut and the cap, and perforated metal sheet material secured to said wires and frame, the bolt and nut serving as a knocking knob for the device.

1,395,952. WRENCH. JOHN J. FRABO, Brightwood, Mass. Filed June 18, 1921. Serial No. 478,614. 2 Claims. (Cl. 81—168.)

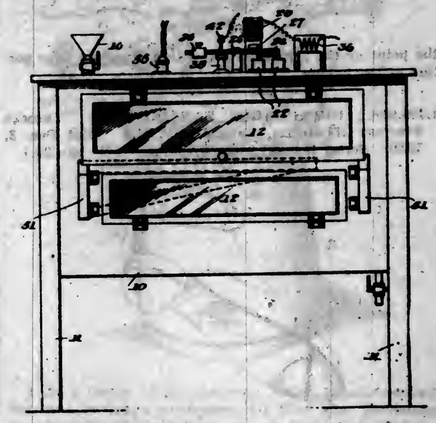
1. A wrench comprising a frame including spaced parallel arms and a handle extending from said arms, a

transverse member connecting said arms, a shank slidable in said member between the arms, oppositely extending jaws carried by the shank, a jaw carried by one of the



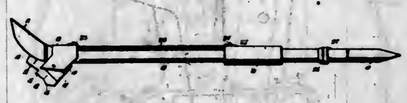
arms and coöperating with one of the shank-carried jaws, a pivotally movable jaw secured to the other arm and operating within the transverse member, and means for operating the shank to adjust the jaws.

1,395,953. TELEGRAPHIC SYSTEM. ENRICO FRATTOLA, VITALE EGISTO CASTELLI, and ROMUALDO RENONI, Rome, Italy. Filed Jan. 25, 1919. Serial No. 273,142. 1 Claim. (Cl. 178—69.)



A system adapted to telegraphic lines for receiving purposes where such lines use alternating currents of relatively high frequency and are exposed to perturbation currents from electric traction lines and the like, said system comprising in substantial resonance with the line, a polarized relay of great inductance and a condenser of low capacity in series with said relay, whereby there is presented a strong obstruction to perturbation currents.

1,395,954. VENTILATING SIGNAL APPLIANCE FOR MINES. JAMES F. GAMILL, Fredericktown, Pa. Filed July 19, 1919. Serial No. 312,009. 6 Claims. (Cl. 200—82.)

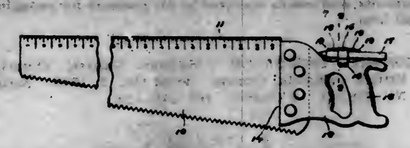


4. The combination of contact segments having a pair of stop posts mounted adjacent thereto, a pivoted arm limited in its movements by the posts, a counterbalanced wheel carried by said arm and movable over the contact segments, and means operated by air pressure for swinging said arm.

1,395,955. INCUBATOR. HERMAN GENTIS, Victoria, British Columbia, Canada. Filed Oct. 3, 1919. Serial No. 328,321. 2 Claims. (Cl. 219—20.)

1. In an incubator, an electric heater, a thermometer, an adjustable contact disposed within the bore of said thermometer and adapted to be contacted with by the column of mercury therein, said heater being included in a circuit with a source of current, and an electro-magnetically controlled switch interposed in said circuit and connected with the column of mercury in said thermometer and with said contact member, said switch comprising a pair of spaced mercury cups, a pivoted lever, an inverted U-shaped member carried by the lever and dipping into said cups, an adjustable counter-balancing weight on said lever, and an armature on the lever attractable by said magnet.

1,395,956. SPIKE-PULLER. JAMES B. GILLIS, ROY J. RHODES, and HOLLIS J. LOWE, Salisbury, Md. Filed Feb. 21, 1920. Serial No. 360,377. Renewed July 23, 1921. Serial No. 487,131. 3 Claims. (Cl. 254—25.)

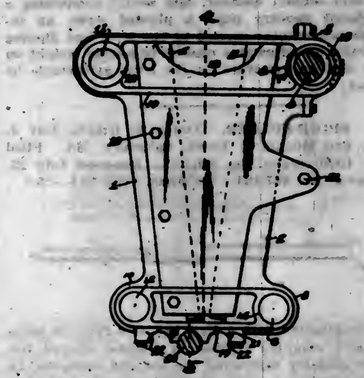


1. The combination with a claw bar, of a fulcrum member adjustably mounted thereon, a channel shaped fulcrum holder slidably embracing the bar and connected to the fulcrum member, a sleeve slidably mounted on the bar and connected to the fulcrum holder and means carried by and surrounding the bar for holding the sleeve against movement.

1,395,957. SAW. EDGAR L. GRIFFIN, Lubec, Me. Filed Apr. 4, 1919. Serial No. 287,488. 1 Claim. (Cl. 145—108.)

The combination with a tool handle having curved and rounded edge portions and flat sides, of a U member including outwardly extending end portions conforming to the edge portions of the handle, said U member forming a pencil holding device, and a spring passing through the U member in a transverse direction and positioned for engaging the pencil in a longitudinal direction and hold-

ing the latter in contact with the edge portion of the handle not engaged by the hand when the tool is in use,



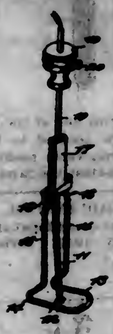
the point of the pencil resting within a curved edge portion of the handle.

1,395,958. DETACHABLE DANCING-SOLE. THOMAS STEWART HAMILTON, Kansas City, Mo. Filed Dec. 3, 1920. Serial No. 427,970. 6 Claims. (Cl. 36—25.)

1. A detachable sole for shoes comprising a body portion having an anti-frictional surface, and means on the other surface for securing the sole to a shoe.

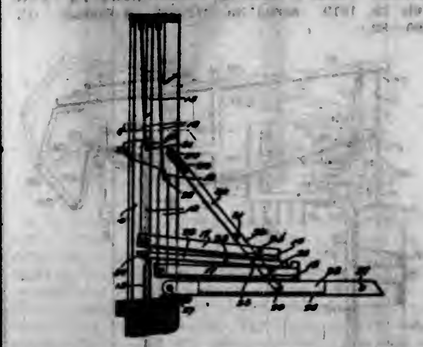
1,395,959. ORE-CRUSHER. JOHN HERMAN, Los Angeles, Calif. Filed May 27, 1920. Serial No. 384,699. 1 Claim. (Cl. 83—53.)

A crusher comprising jaws movable relative to one another and arranged respectively for oscillatory movement and for combined oscillatory and reciprocatory movement, a driving connection at one end of said jaws, a connecting loop at the opposite end of said jaws, and means for pivotally mounting said connecting loop intermediate of its ends.



1,395,960. TACK OR NAIL. CHARLES K. HILL, Cleveland, Ohio, assignor to The H. C. Tack Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 3, 1916. Serial No. 112,866. 1 Claim. (Cl. 85—36.)

As a new article of manufacture, a tack or nail comprising a shank, a head of generally rounded external form and hollowed out on its under side so as to leave a relatively thin shell, and radial ribs on the under side of said head, said ribs sloping downwardly and outwardly and lying entirely within said head, the peripheral edge



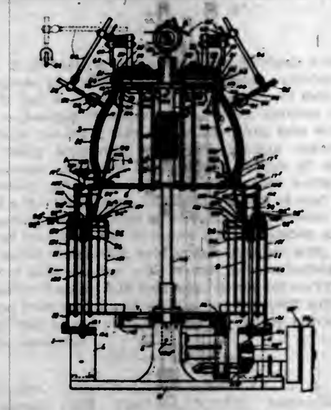
of the latter being turned inwardly, and said head and ribs being fashioned from the material of said shank and remaining integral therewith, substantially as described.

1,395,961. EMBROIDERY-MACHINE. JAMES EDWARD HODGSON, New York, N. Y. Filed Dec. 4, 1920. Serial No. 428,316. 2 Claims. (Cl. 112—80.)

1. In a device of the class described, the combination of a tubular needle having an angularly bent lower portion, a length of wire bent to form a foot and an offset portion and a pair of legs lying parallel with said needle, a guide member securing the legs of said wire together and forming a guideway for said needle, and a guide member secured to said needle between the first guide member and said foot and embracing said legs.

1,395,962. WINDOW CONSTRUCTION. JOHN H. HOLMES, Enterprise, Oreg. Filed Dec. 4, 1918. Serial No. 266,908. 1 Claim. (Cl. 20—42.)

In combination with a frame having weight influenced sashes slidable therein, parting beads between the sashes including each, a pivoted section designed to be swung inwardly through the frame to permit of the outer sash being swung through the space normally occupied by the bead sections and to rest on said bead sections; inner pivoted beads on the sides of the frame normally contacting with the inner sashes and having pockets in the sides thereof, pivotally connected links one of them being pivoted in the pocket of each of the beads and the other

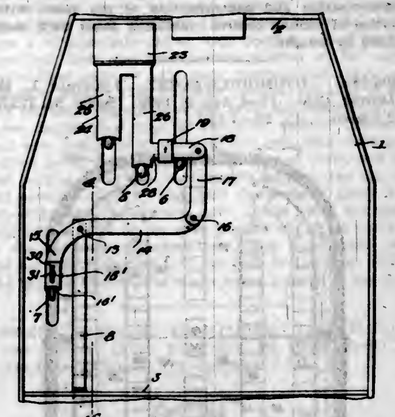


having an elongated slot receiving a pivot therethrough that enters the sides of the frame, said links when extended to parallelism designed to support the beads in horizontal position for sustaining the sashes thereon when the latter are swung outwardly, and the links when folded designed to enter the pockets of the beads when the latter are swung inward of the frame to return the sashes to their upright positions, and means for locking the beads on the sides of the frame.

1,395,963. METHOD OF AND APPARATUS FOR FORMING GLASS TUBES. KARL KÜPFMÜLLER, Aachen, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed May 19, 1919. Serial No. 298,309. 4 Claims. (Cl. 49—86.)

1. A process for the production of reinforced glass tubes which comprises placing a skeleton body upon a suitable mandrel, then placing a glass tube upon said skeleton body and said mandrel, closing one end of said glass tube, evacuating said tube, sealing the other end of said tube, and heating said tube by means of a suitably heated ring-shaped member with relative movement of said tube in order to heat its entire surface whereby the glass passes through the interstices of said skeleton body and conforms to the shape of said mandrel.

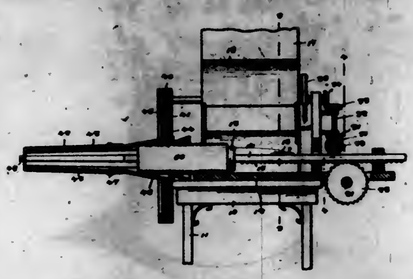
1,395,964. REED-WEAVING MACHINE. MARSHALL B. LLOYD, Menominee, Mich., assignor, by mesne assignments, to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 9, 1918. Serial No. 257,462. 19 Claims. (Cl. 139—2.)



1. An apparatus for weaving reed fabric and the like embodying therein fabric templet members swingably mounted for movement to an outer operative position and to an inner inoperative position, means formed to receive and hold stakes in weaving relation thereto, and means for effecting the placement of a filler strand upon the outer side of some stakes and upon the inner side of others whereby a fabric can be formed as a separate unit apart from the fabric templet members.

1,395,965. ATOMIZING AND SPRAYING DEVICE. EDWARD J. MCLEAN, San Francisco, and STEPHEN W. MCGAVRAN, Burlingame, Calif. Filed Aug. 13, 1919. Serial No. 317,124. 2 Claims. (Cl. 299—95.)

1. In a device of the character stated, a paint-containing tank having a compressed air inlet pipe discharging in proximity to its bottom, an air and paint discharge pipe having its inlet end in proximity to the discharge end of the compressed air inlet pipe and having its outlet end adapted for connection with a discharge hose, a valve controlled bypass between said pipes, and a removable cover for said tank, said pipes and by-pass being mounted on and supported by said cover.

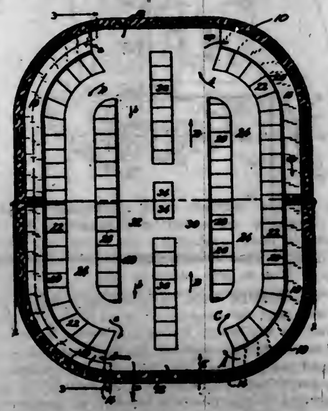


1,395,966. PEDAL-LOCK. JOSEPH C. MCMANUS, Jacksonville, Fla. Filed Sept. 13, 1920. Serial No. 409,866. 3 Claims. (Cl. 70—126.)

1. In combination with an automobile having control pedal levers and an emergency brake lever; of obstructing means for the clutch levers and brake lever, comprising a plate hingedly secured to the foot board of the machine adjacent to the front seat thereof, an arm pivoted to the plate having an angle end designed when the said arm is swung to one position to offer an obstruction for the emergency brake lever, hinged sections one of which being fixed to the foot board adjacent to the dash of the machine, and including arms designed, when the members

are spread to be arranged in the path of contact with two of the control levers, means carried by the first mentioned arm and one of the last mentioned arms for locking the same together, and said means also providing an obstructing element for the remaining clutch levers.

1,395,967. MACHINE FOR STUFFING MEAT AND LIKE PROVISIONS. CARLO MESLI and GIUSEPPE BERTOLINI, New York, N. Y.; said Bertolini assignor of his entire right to Victor Kleinberg, Salvatore Mangiapane, and Frank Fumo, New York, N. Y. Filed Sept. 4, 1920. Serial No. 408,207. 3 Claims. (Cl. 17—6.)



1. In a meat stuffing machine, a base, a casting mounted upon the base and designed to receive the meat, means for feeding the meat to said casting, a plunger arranged to reciprocate through the casting, means for reciprocating said plunger, and a skin holder arranged in advance of the casing and in which the meat is forced by means of of said plunger.

1,395,968. METHOD OF PREPARING RESIN. STUART P. MILLER, Philadelphia, Pa., assignor to The Barrett Company, a Corporation of New Jersey. Filed Dec. 24, 1920. Serial No. 432,968. 4 Claims. (Cl. 134—26.)

1. In the process of producing resin from naphtha, the step which consists in washing said naphtha, after polymerization and neutralization of the same, with a solution of sodium chlorid containing about 20% sodium chlorid by weight.

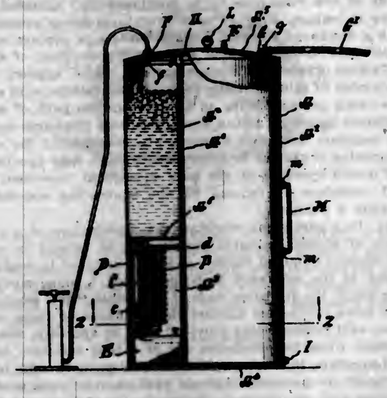
1,395,969. AUTOMOBILE-HOTEL. LEONIDAS L. MOE, Denver, Colo. Filed Apr. 9, 1920. Serial No. 372,596. 2 Claims. (Cl. 20—1.13.)

1. An automobile hotel comprising a plurality of floors, a series of inclined drives on one side of the building connecting the floors for the use of incoming cars, a separate series of inclined drives on the other side of the building connecting the floors for the use of outgoing cars, the two series being duplicates, and all of the drives of each being inclined in the same direction, and drives provided on the several floors connecting the ends of the inclined drives of the respective series.

1,395,970. AUTOMOBILE-LOCKING DEVICE. JOSEPH O. NIEDERMAIER, War, W. Va. Filed Aug. 20, 1920. Serial No. 404,733. 2 Claims. (Cl. 70—30.)

1. A locking device comprising a casing provided at opposite sides with extensions, one extension being formed with a threaded hole and the other being formed with a slot, a hook having a shank screwed into said threaded hole, a second hook having a shank slidable through said slot, and locking means carried by said casing for holding said second named hook against movement.

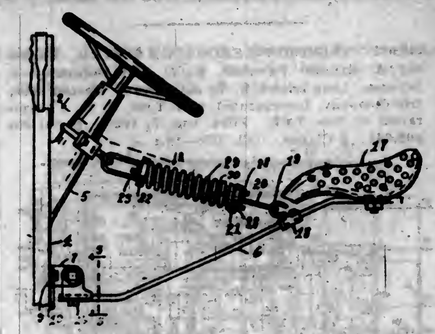
1,395,971. PITMAN CONSTRUCTION. JAMES H. OKELL, Los Angeles, Calif., assignor to Okell Well Machinery Company, a Copartnership consisting of Cora M. Lane and George H. Okell, Los Angeles, Calif. Filed Mar. 30, 1920. Serial No. 367,329. 1 Claim. (Cl. 74—48.)



A pitman comprising a pair of slidably mounted telescoping lineal members, a compression spring interposed between said members, and a spacing member adapted to be inserted between said lineal members, whereby said spring may be rendered inoperative.

1,395,972. STYLUS-BAR MOUNTING FOR SOUND-BOXES. HAROLD Y. PRENDERGAST, New York, N. Y. Filed Mar. 26, 1920. Serial No. 368,835. 11 Claims. (Cl. 274—35.)

1. A sound box, a stylus bar movably engaging said box, and means arranged wholly within said box to exert a tension on said bar.

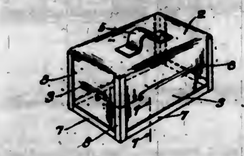


1,395,973. PORTABLE STEAM-GENERATOR. WALTER E. PROSSER, Louisville, Ky., and ALBERT B. HIGGINS, Buffalo, N. Y. Filed July 19, 1920. Serial No. 397,221. 6 Claims. (Cl. 122—35.)

1. A portable steam generator comprising a cylindrical container provided with a longitudinal partition separating it into a steam chamber on one side of said partition and a heating chamber and a water chamber above the same on the other side of said partition, said water chamber being separated from said heating chamber by a transverse partition forming the bottom of said water chamber and the said heating chamber being provided with a lateral opening through the shell of said container, a heating coil mounted in said heating chamber and opening at its upper end into said steam chamber, a feed pipe for water connecting said water chamber with the lower end of said heating coil, means for controlling the flow of water through said feed pipe, means for carrying off the steam from said steam chamber, and a check valve opening from said steam chamber into the upper portion of said water chamber.

1,395,974. SHOCK-ABSORBER. WILLIS B. REDFIELD, Downey, Calif. Filed May 3, 1920. Serial No. 378,437. 2 Claims. (Cl. 155—51.)

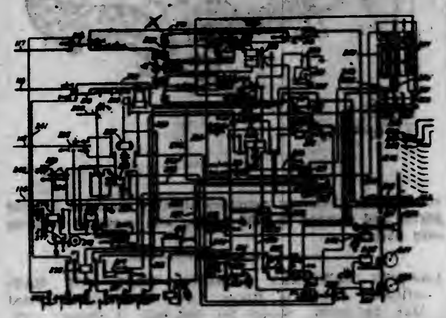
1. In a tractor having a steering column; in combination, a base hinge mounted on the steering column, said hinge comprising an upper leaf having a pair of ears and being adapted to be secured to the dashboard of the machine, and having a lower leaf pivotally secured to the upper leaf; a seat bar secured to said lower leaf; a seat on said bar; an adjustable clamp on said bar; a hook secured to said clamp; an adjustable clamp on the steering column; a hook secured to said last clamp; a pair of



end plates; U-shaped members slidably mounted in said plates and secured in said hooks; and a spring between said plates.

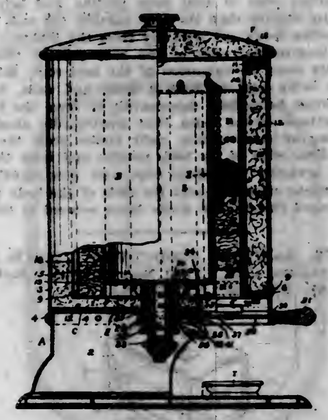
1,395,975. SANITARY VENDING-TRAY FOR EATABLES. JAMES W. RILEY, Los Angeles, Calif. Filed Mar. 16, 1920. Serial No. 366,335. 1 Claim. (Cl. 45—71.)

A sanitary cover for street venders' trays, comprising a single sheet of pliant transparent material, cut to form a substantially oblong body portion, a leaf portion extending from the intermediate portion of the upper longitudinal edge of said body portion and being substantially shorter than the body portion, the ends of said leaf portion being cut inwardly from the juncture of the upper longitudinal edge of the body portion therewith, said cuts being an extension of the said edge, said body portion being bent to form a front and ends, and the leaf portion being bent downwardly to form the top, the end portions thereof being bent downwardly along lines extending at substantially right angles from the upper longitudinal edge of the body portion and from the ends of the inwardly extending cuts, said downwardly bent end portions extending over the ends of the body portion and secured thereto, the whole being secured to the tray.



1,395,976. SANITARY FOOD-COVER. JAMES W. RILEY, Los Angeles, Calif. Filed Nov. 16, 1920. Serial No. 424,481. 2 Claims. (Cl. 65—16.)

1. A sanitary cover formed of a blank having the adjacent edge portions thereof overlapped to form side walls



for the top of said cover, and a reinforcing clip received around the lower edges of said overlapping portions for retaining the same in position to form side walls.

1,395,977. TELEPHONE-EXCHANGE SYSTEM. FRANKLIN A. STEARN, Paterson, N. J., and FREDERICK J. SCUDDER, Long Island, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 7, 1920. Serial No. 402,041. 9 Claims. (Cl. 179—18.)

1. In a telephone system a calling subscriber's line, selector switches for extending a talking circuit from said line to a distant point over a trunk circuit, means for controlling the setting of said switches comprising a plurality of registers and a plurality of locking relays, said relays being controlled by said registers, a repeating coil in the talking circuit, and means controlled by said relays for altering the characteristics of said coil in accordance with the nature of the trunk circuit over which the talking circuit is extended.

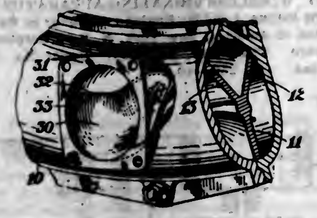
1,395,978. PORTIONING MECHANISM. JOHN F. WINELAND, Crafton, Pa. Filed Nov. 25, 1919. Serial No. 340,500. 24 Claims. (Cl. 31—65.)

1. In a portioning machine, the combination of a dispensing container adapted to contain a quantity of the substance to be portioned and provided with a discharge opening, a surface adapted to seal said discharge opening against the protrusion of said substance, said surface being interrupted, means for providing relative movement between said container and said surface, means whereby when said surface is out of contact with said opening the contents of said container will be protruded from said container beyond the plane of said surface, and means, actuated by the next subsequent relative movement, for slicing off the protruding substance to form a portion.

6. In a portioning machine, the combination of a dispensing container adapted to contain a quantity of the substance to be portioned and provided with a discharge opening, a surface adapted to seal said opening against the protrusion of said substance, said container being movable in relation to said surface and said surface being provided with an aperture in the path of said discharge opening, means whereby when said opening registers with said aperture the contents of said container will be protruded from said container beyond the plane of said surface, means for limiting the extent of such protrusion, and means operated by the next subsequent movement of said container for slicing off the protruding substance to form a portion.

13. In a portioning machine, the combination of a plurality of dispensing containers adapted to contain quantities of the substance to be portioned and mounted to move in unison, each of said containers being provided with a discharge opening, a plane surface in contact with which said openings travel during the movement of said containers whereby said openings are sealed against the protrusion of said substance from said containers, said surface being provided with an aperture in the path of said discharge openings, means whereby when a discharge opening registers with said aperture the contents of the corresponding container is protruded through said aperture, and means operated by the next subsequent movement of said container for slicing off the protruding substance to form a portion.

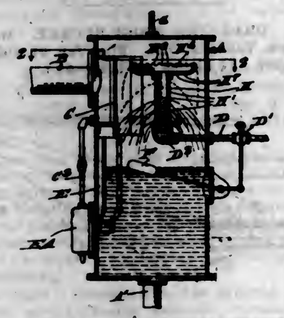
24. In a portioning machine, the combination of a plurality of dispensing tubes mounted to be rotated in unison about a common center, and each adapted to contain a slab of the substance to be portioned, a plane surface over which the discharge ends of said tubes travel whereby said tubes are sealed against the discharge of their contents, said surface being provided with an aperture, means whereby when the discharge end of a tube registers with said aperture the end of the slab contained in said tube is caused to protrude through said aperture, means for limiting said protrusion to determine the thickness of the portion, and a knife edge in the plane of said surface intercepting the path of the protruding end whereby the next subsequent movement of the tube causes the protruding end of the slab to be sliced off to form the portion.



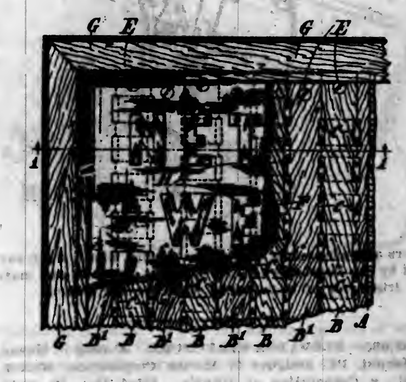
32. In a portioning machine, the combination of a plurality of dispensing containers, each adapted to contain a quantity of the substance to be portioned and each provided with a discharge opening, a plane surface, means for moving said containers in unison in contact with said plane surface whereby said discharge openings are sealed against the protrusion of the contents of said containers, said surface being provided with an aperture, means whereby when one of said discharge openings registers with said aperture the contents of said container is protruded through said aperture, means for limiting such protrusion, and a knife edge intercepting the path of said protruding substance whereby the next subsequent movement of said container causes said protruding substance to be sliced off to form a portion while the container resumes contact with said plane surface to hold the remainder of its contents retracted within said container.

1,395,979. GAS-SAVING ATTACHMENT FOR BURNERS. ALBERT ACKRON, Pittsburgh, Pa. Filed Mar. 3, 1921. Serial No. 449,302. 10 Claims. (Cl. 158—113.)

1. A fuel saving attachment for gas burners adapted to be superimposed on the burner and comprising a central downwardly extending cylindrical throat, an annular horizontal portion surrounding the upper end of said throat, an annular raised portion surrounding said annular horizontal portion, and provided with gas openings, and a downwardly and outwardly inclined perimetral apron surrounding said raised portion.



1,395,980. INDUCTION-PIPE FOR RADIAL OR ROTARY INTERNAL-COMBUSTION ENGINES. ALFRED HUBERT ROY FEDDEN and LEONARD FREDERICK GEORGE BUTLER, Bristol, England, assignors to The Bristol Aeroplane Company Limited, Bristol, Gloucester, England. Filed Nov. 30, 1920. Serial No. 427,385. 6 Claims. (Cl. 123—52.)



1. An induction pipe comprising in combination a plurality of endless conduits each arranged to supply a group of cylinders, means in each conduit situated between the inlet and one of the nearest outlets of the conduit so as to permit flow from the inlet in one direction only along the conduit.

1,395,981. WATER-HEATER. JOSEPH W. GAMBLE, Philadelphia, Pa., assignor, by mesne assignments, to H. S. B. W.-Cochrane Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 20, 1918. Serial No 254,863. 3 Claims. (Cl. 261—118.)

1. In an open water heater, the combination with a heating chamber having a steam inlet opening into its upper portion and the water outlet opening from its lower portion, of water supply means comprising a conduit having a vertical portion which is located in said chamber and receives the water to be heated at its lower end, said vertical conduit portion having restricted outlet orifices formed in it at different levels, and of an aggregate discharge capacity greater than the water supplied to the conduit.

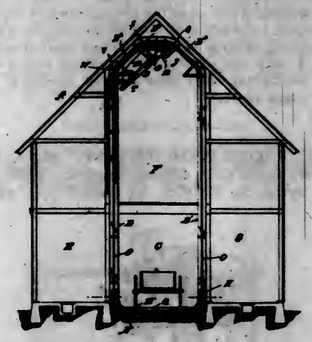
1,395,982. DISPLAY DEVICE. FREDERICK SAMUEL GEE, London, England. Filed Mar. 7, 1921. Serial No. 450,362. 3 Claims. (Cl. 40—142.)

1. In a display device of the type described, in combination, a support comprising a non-magnetic base member adapted to receive a plurality of horseshoe magnets with their yokes abutting said base member, and a series of parallel spacing strips abutting the outsides of the magnet shanks and so recessed as to engage said shanks and locate the magnets in parallel rows and in any desired space relationship in each row, said strips extending across the base member and having their ends secured thereto at or near opposite edges thereof.

1,395,983. CALCULATING-MACHINE. FRANK EDWARD GUY, New South Gate, London, England. Filed Jan. 17, 1921. Serial No. 437,892. 12 Claims. (Cl. 235—63.)

1. In a calculating machine having a laterally movable totalizer-carriage, means for retaining said carriage in relation to the machine, means for disengaging said retaining means, and a slidable member restricted in movement to correspond with one step of said carriage in either direction, said slidable member being engaged with said carriage simultaneously with the disengagement of said retaining means by a lateral motion of an operating device in the direction of the desired travel of the carriage.

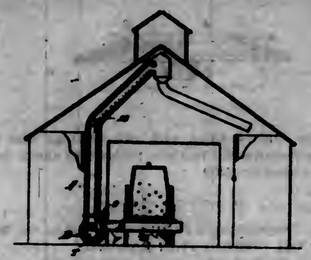
1,395,984. DOLL. AUBREY D. MCCROSKY, Oakland, Calif., assignor of one-half to Bynum B. McCrosky, Oakland, Calif. Filed July 19, 1920. Serial No. 397,480. 2 Claims. (Cl. 46—40.)



1. In combination with a hollow doll head, of eyeballs fixed together and pivotally mounted and having irises to register with the sockets, a cam extending rearwardly of the eyes, two weighted levers pivotally mounted to

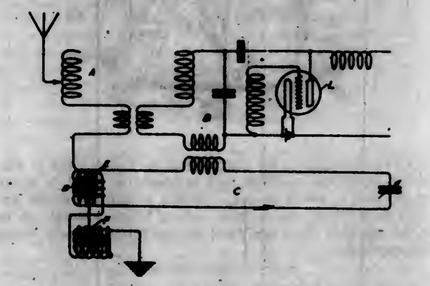
swing in horizontal planes at right angles to each other, a knurled wheel, a pawl pivoted to each of the weighted

levers and adapted to engage the knurled wheel, a pin carried by the knurled wheel for engaging the cam, and move the irises out of engagement with the eye sockets.



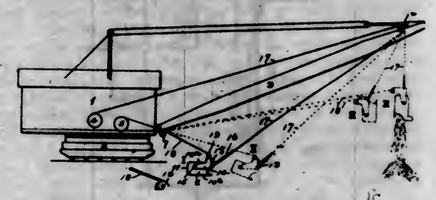
1,395,985. ELEVATOR STRUCTURE. ALFRED F. MEYER, Morton, Ill., assignor to Morton Corporation, Morton, Ill., a Corporation of Illinois. Filed Dec. 19, 1919. Serial No. 346,058. 22 Claims. (Cl. 193—20.)

1. An elevator structure of the class described, including in its construction a single conveyer-portion comprising a trough open at its top, and a leg erected at each end of and connected into the said portion, said legs being spaced to leave a driveway space between them, the said conveyer-portion and the legs including a continuous guideway at each side, an elevating element within the guideways, and rollers arranged to travel in the guideways, supporting the element, the conveyer-portion being unobstructed by other internal mechanism.



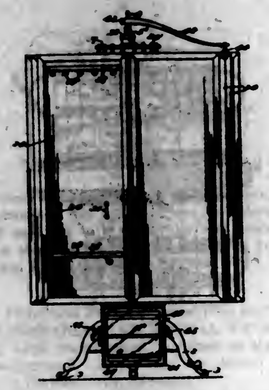
1,395,986. ELEVATOR. ALFRED F. MEYER, Morton, Ill., assignor to Morton Corporation, Morton, Ill., a Corporation of Illinois. Filed Dec. 14, 1917, Serial No. 207,047. Renewed Mar. 31, 1921. Serial No. 457,421. 22 Claims. (Cl. 193—5.)

1. An elevator boot including in its construction an abutment at each of two of its facing sides, a flexible member arranged to travel upon each of the same including elevating devices common to both, one of said sides having an



unobstructed opening therein inward from the abutment of said side, the interior of the boot being entirely unobstructed.

1,395,987. WIRELESS SIGNALING APPARATUS. HENRY JOSEPH ROUND, London, England, assignor to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Mar. 24, 1921. Serial No. 455,252. 7 Claims. (Cl. 250—40.)



1. The combination with an aerial and a closed circuit of a rotating field motor comprising two windings, one in the aerial circuit and the other in the closed circuit and means actuated by the motor for keeping the period of the aerial constant.

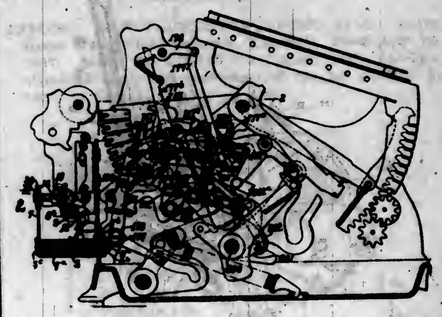
1,395,988. DRAG-LINE SCOOP-BUCKET. HOWARD M. SHERWOOD, Vandalia, Ohio. Filed Jan. 27, 1920. Serial No. 354,508. 14 Claims. (Cl. 37—54.)

1. In a drag line excavator, a scoop bucket, a forwardly extending drag line operatively attached adjacent to the rear of said bucket, by which the bucket is actuated in its operative movement, and a retrieving line attached adjacent to the forward portion of the bucket and a guide upon the drag line connection for said retrieving line, the oscillatory movement of the bucket about its connection with the drag line being controlled by the retrieving line.

1,395,989. RACK. ADAM GORDON BUTTERWORTH, Clarksburg, W. Va. Filed Feb. 18, 1921. Serial No. 446,102. 3 Claims. (Cl. 211—32.)

1. A display member including a supporting pedestal equipped with a plurality of pivotally mounted display panels, means carried by the top of the pedestal and having a portion thereof extended to lie in the path of movement of the panels for rotating the latter on their axes, and means carried by the bottom of the pedestal and in connection with the lower ends of the panels to rotate the latter on their axes in a direction counter to that caused by the first said means.

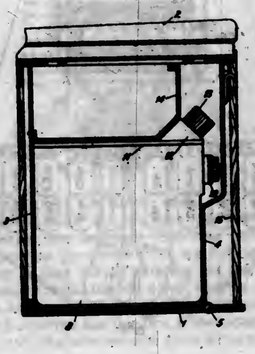
1,395,990. MANUFACTURE OF BRICKS. WALTER WILLIAM CRAWFORD, Kew Gardens, Surrey, England. Filed Jan. 5, 1921. Serial No. 435,241. 3 Claims. (Cl. 18—47.5.)



1. The method of manufacturing bricks and the like, which comprises burning a suitable gangue in an oxidising atmosphere, then mixing the burned material with a relatively small quantity of dehydrated cement, then moistening the mixture and pressing the same into form, then immersing said pressed form in cold water, and finally drying the pressed bricks at a low temperature.

1,395,991. ADDING-MACHINE. MALCOLM F. GASCON, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 7, 1919. Serial No. 275,538. 9 Claims. (Cl. 235—60.)

1. In a machine of the class described, the combination of printing mechanism subdivided for multi-column work, a laterally shiftable paper carriage, means for separately preventing printing operations in the different subdivisions of the printing mechanism, and means variably set by the paper carriage, in its different column positions to determine the extent of imprint-elimination according to said subdivisions.

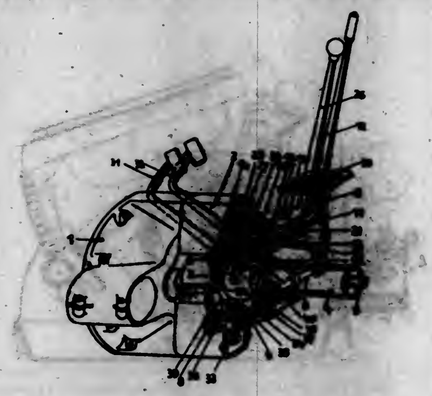


2. The claim 1 combination, the printing mechanism comprising spring-actuated hammers, retracting means and restraining devices, together with connections for tripping certain of said devices, and means controlled by the paper carriage for bringing said connections into action to cause early release of hammers and thereby deprive them of percussive effect.

9. In a machine of the class described the combination of hammers, latches, pitmen connected to certain latches and having catches, a bail to act on said catches, a rotary rod with projections for setting the catches, a rack to rotate the rod, a pawl to lock the rack, a reciprocating machine element, a system of levers and links connected

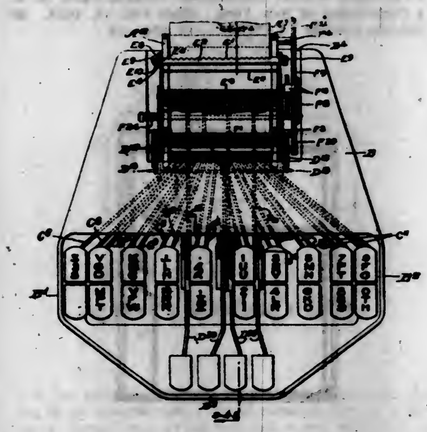
therewith and with the said bail and one member of which operates upon said pawl, a laterally shiftable carriage, and means controlled thereby for setting the rack bar.

1,395,992. STORAGE-BATTERY CONSTRUCTION. WARREN P. LOUDON, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Feb. 13, 1918. Serial No. 216,989. 7 Claims. (Cl. 204—53.)



1. A storage battery cell having terminal posts extending from one of the side walls thereof, said cell having a filling and inspection aperture adjacent to said side wall.

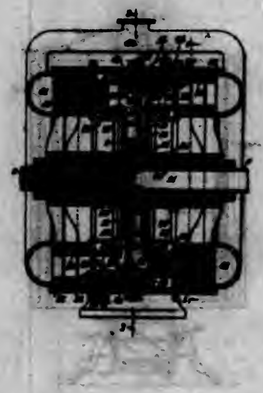
1,395,993. OPERATING MECHANISM FOR POWER-DRIVEN VEHICLES. ARNOLD ZOLLER, Berlin, Germany, assignor to Argus-Motoren-Gesellschaft M. B. H., Berlin-Reinickendorf-Ost, Germany. Filed Apr. 29, 1921. Serial No. 465,505. 4 Claims. (Cl. 74—39.)



1. In mechanism of the kind described in combination, a speed gear casing, an operating gear casing connected with said speed gear casing and two pairs of shafts, each

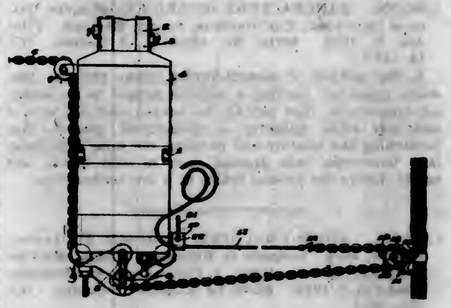
pair composed of a solid shaft and a hollow shaft surrounding said solid one, mounted symmetrically on said

operating gear casing, said pairs of shafts serving for operating the speed gear, clutch and brakes, respectively, of said vehicle.



1,395,994. MULTIPLE-IMPRESSION TYPEWRITER. PAUL P. BOURQUIN, Philadelphia, Pa. Filed Jan. 27, 1919. Serial No. 273,226. 34 Claims. (Cl. 197—9.)

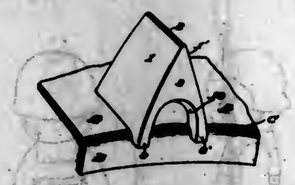
1. In a typewriting machine, two sets of printing keys, a universal bar common to both sets, ribbon and paper feed mechanisms operated by said bar, a second universal bar operated from the first universal bar, and separate type bar shifting mechanisms for the two sets of keys both operated by the second universal bar.



1,395,995. ROTARY INTERNAL-COMBUSTION ENGINE. JOHN WILLIAM GEORGE, Stroud Green, England. Filed Jan. 26, 1920. Serial No. 354,238. 7 Claims. (Cl. 60—41.)

1. A rotary internal combustion engine comprising an outer casing, a drum mounted for rotation within the casing, induction and compression chambers formed in the casing at the ends of the drum, combustion chambers communicating with said induction and compression cham-

bers, and vanes movable in the drum and operable by the wall of the compression and induction chambers, said vanes moving parallel to the axis of the drum.

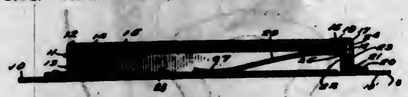


1,395,996. MINING-MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 23, 1918, Serial No. 236,225. Renewed Mar. 30, 1921. Serial No. 457,028. 15 Claims. (Cl. 262—30.)

1. In a mining machine, a frame having a cutter bar projecting therefrom, feeding mechanism therefor including a flexible feeding member disposed in front and rear thereof, a fixed guiding member around which the rear end of said feeding member is directed back toward said frame, and an adjustable clamp on the rear end of said frame controlling the movement of said feeding member.

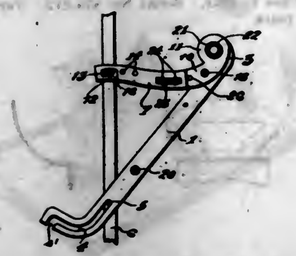
3. In a mining machine, a frame having a cutter bar projecting therefrom, flexible feeding means therefor including a member having a portion extending rearward and back toward the rear end of said frame, means on said frame for varying the length of said portion, guiding means around which said portion extends, and automatically acting controlling means controlling the movement of said portion relative to said guiding means.

1,395,997. TRACTIVE LUG. DAVID R. RICHIE, Lansdowne, Pa., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed July 15, 1920. Serial No. 396,367. 5 Claims. (Cl. 301—44.)



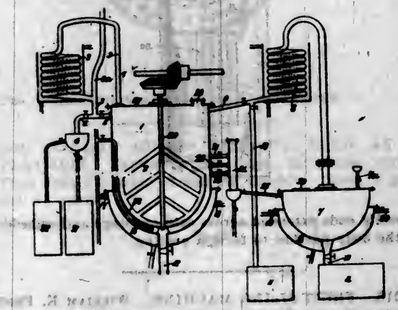
4. A tractive lug comprising a body portion, a pair of spaced overhanging lips adjacent one end thereof, means for securing said lug to a wheel rim and spaced surfaces adjacent the sides of said body adapted to rest on said rim when said lug is positioned thereon.

1,395,998. PROCESS FOR SEPARATING FATTY ACIDS FROM VEGETABLE AND ANIMAL FATS. LUDWIG SCHMIDT, Arth, Switzerland, assignor to Mario Arbini, Basel, Switzerland. Filed Mar. 20, 1920. Serial No. 367,374. 3 Claims. (Cl. 87—12.)



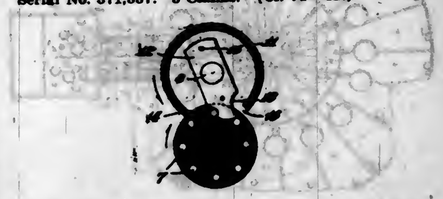
1. A process for separating fatty acids from vegetable or animal fats, in order to obtain at the same time a neutral fat free from soap and a dry alkali soap ready for use, consisting in treating the fats with an alkali compound free of water, with exclusion of water, and removing the water produced by the reaction and separating the soap from the fat by means of a dry solvent dissolving only the neutral fat.

1,395,999. DISPLAY-CASE FOR LICENSE-CERTIFICATES. SAMUEL R. SEMES, Vanderbilt, Pa., assignor to Harmon M. Kephart, Connellsville, Pa. Filed Jan. 20, 1921. Serial No. 438,707. 2 Claims. (Cl. 40—17.)



1. In a display case for certificates and the like, a casing comprising rigid sides and a bottom rigidly secured thereto said casing having a transparent top, one of said sides being provided with a narrow opening positioned above said bottom for the insertion of a certificate, and a spring within the casing adapted to hold the certificate against the bottom of the casing.

1,396,000. FOOTREST. ERNEST H. COBLE, Jackson, Mich. Filed Apr. 2, 1921. Serial No. 457,955. 3 Claims. (Cl. 155—168.)



1. In a foot rest attachment for radiators, upper brace arms each comprising a pair of adjustably connected sections, said arms provided with bayonet slots in their attaching ends, downwardly inclining braces one associated with each of said upper arms and provided with arcuate bayonet slots in their lower ends, and a foot rest rod carried by said arms and braces.

1,396,001. MANUFACTURE OF PICRIC ACID. DAVID BAIRD MACDONALD, Leicester, England. Filed July 10, 1917. Serial No. 179,775. 2 Claims. (Cl. 23—24.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

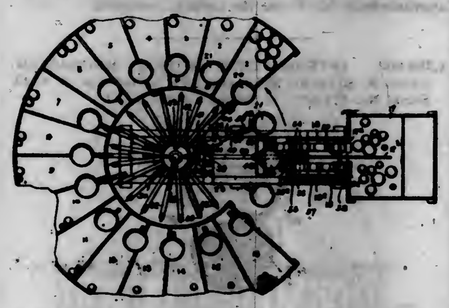
1. In the process of producing picric acid wherein mercury and nitric acid are treated with benzol, carrying out the reaction during nitration at a low temperature of approximately 35° C. for the purpose described.

1,396,002. INTERMITTENT-MOTION MECHANISM. CARLO E. BIANCHI, Montpelier, Vt. Filed Apr. 5, 1920. Serial No. 371,337. 3 Claims. (Cl. 74—41.)

1. An intermittent movement mechanism comprising a rotating member, lugs on the rotating member, an annular member, a cam having a cam face and a cut-away portion adapted to operate through an opening in the annular member so that the lug entering the annular member is in engagement with the cut-away portion and the lug leaving the annular member is in engagement with the cam until the entering lug lies in a plane common with the axes of the rotating member and annular member.

REISSUES.

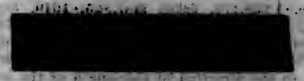
15,217. VENTILATED GRAIN-CRIB STAVE. WARREN A. CALDWELL, Oskaloosa, Iowa, assignor to Caldwell Silo Company, Inc., Oskaloosa, Iowa, a Corporation of Iowa. Filed Mar. 21, 1921. Serial No. 454,230. Original No. 1,298,174, dated Mar. 25, 1919, Serial No. 233,518, filed May 8, 1918. 7 Claims. (Cl. 72—6.)



1. A ventilated grain crib stave including an elongated body portion having spaced openings formed therein and extending in the direction of the length of the stave and opening through the opposite side faces thereof, said openings defining an intermediate connecting web, and a plu-

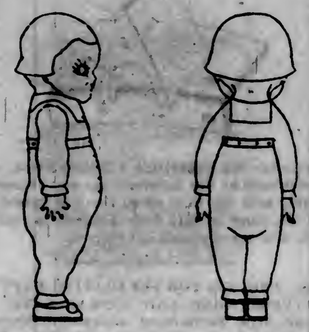
rality of rigid reinforcing bars having their intermediate portions extending through the connecting web and their

opposite ends extended across said openings and embedded in the body portion to form a grating.



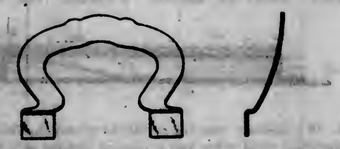
15,218. FRUIT-SIZING MACHINE. WILLIAM K. PRICE, Selah, Wash. Filed Sept. 13, 1921. Serial No. 500,421. Original No. 1,246,463, dated Nov. 13, 1917, Serial No. 80,991, filed Feb. 28, 1916. 19 Claims. (Cl. 130—32.)

1. A machine for sizing fruit or other articles, the combination of a rotatable frame, a receptacle for weighing the fruit, a spring from which said receptacle is suspended, means for changing the tension on said spring during the rotation of said frame, and means brought into operation by the change in tension of said spring to discharge the fruit from said receptacle.



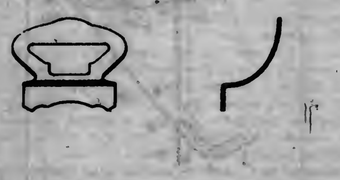
DESIGNS.

59,532. BRAID. LOUIS ADLMAN, New York, N. Y., assignor to Pioneer Braid Manufacturing Co., Inc., New York, N. Y., a Corporation of New York. Filed July 16, 1921. Serial No. 485,304. Term of patent 14 years.



The ornamental design for braid as shown.

59,533. DOLL. EDNA BAIRD and CANNIE MAY ALAS, Des Moines, Iowa. Filed Oct. 28, 1919. Serial No. 334,683. Term of patent 3½ years.



The ornamental design for a doll, as shown.

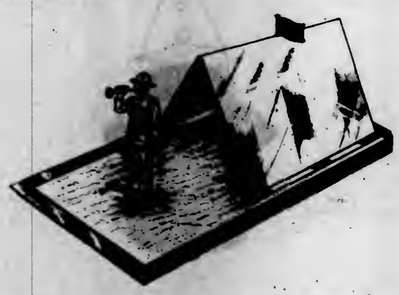
59,534. HANDLE FOR TRAYS OR SOME SIMILAR ARTICLES. ABRAHAM BARCHOWY, New York, N. Y. Filed June 1, 1921. Serial No. 474,271. Term of patent 7 years.

The ornamental design for a handle for trays or some similar articles as shown.

59,535. HANDLE FOR TRAYS OR SOME SIMILAR ARTICLES. ABRAHAM BARCHOWY, New York, N. Y. Filed June 1, 1921. Serial No. 474,272. Term of patent 7 years.

The ornamental design for a handle for trays or some similar articles as shown.

59,536. HOLSTER FOR TOY PISTOLS. ALEXANDER BARON, Brooklyn, N. Y. Filed Dec. 17, 1920. Serial No. 431,494. Term of patent 7 years.



The ornamental design for a holster for toy pistols, as shown.

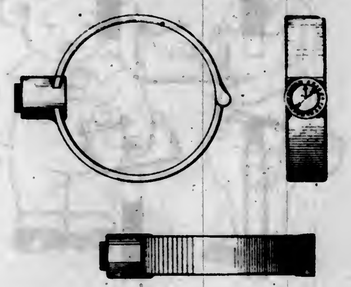
59,537. CORSET. ABRAHAM S. BECKER, Baltimore, Md. Filed June 2, 1920. Serial No. 386,070. Term of patent 3½ years.

The ornamental design for a corset, as shown.

59,538. TOY. CHARLES W. BRIGGS, Brooklyn, N. Y. Filed Dec. 11, 1918. Serial No. 266,345. Term of patent 3½ years.

The ornamental design for a toy substantially as shown.

59,539. BUTTON. PAUL CASPARY, Chicago, Ill. Filed Mar. 31, 1920. Serial No. 370,354. Term of patent 3½ years.



The ornamental design for a button as shown.

59,540. CHILD'S OUTER GARMENT, SUCH AS A PLAY-SUIT. ELIZABETH M. COOK, Belvedere, Calif. Filed June 22, 1921. Serial No. 479,661. Term of patent 3½ years.

The ornamental design for a child's outer garment, such as a play-suit, as shown.

59,541. LOCK. EDGAR A. DE LUE, San Francisco, and CLARENCE E. ANABLE, Sacramento, Calif. Filed June 21, 1921. Serial No. 479,395. Term of patent 14 years.

The ornamental design for a lock, as shown.

59,542. RUBBER BALL OR SIMILAR ARTICLE. FRANK W. DOGGE, New Haven, Conn., assignor to The Seamless Rubber Company, Inc., New Haven, Conn., a Corporation of Massachusetts. Filed July 14, 1921. Serial No. 484,773. Term of patent 14 years.

The ornamental design for a rubber ball or similar article, substantially as shown.

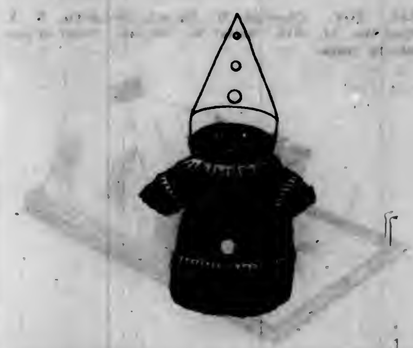
59,543. SPEAKING-TUBE FOR PHONOGRAPHS. NELSON C. DURAND, Newark, N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed July 27, 1921. Serial No. 488,017. Term of patent 7 years.

The ornamental design for a speaking tube for phonographs, as shown.

59,544. SAFETY-RAZOR. CARL ELSENER, Ibach-Schwyz, Switzerland. Filed Feb. 5, 1920. Serial No. 356,408. Term of patent 3½ years.

The ornamental design for a safety-razor as shown.

59,545. TEXTILE FABRIC. THOMAS W. EDENS, Jr., Brooklyn, N. Y. Filed Aug. 24, 1921. Serial No. 495,107. Term of patent 3½ years.



The ornamental design for a textile fabric, as shown.

59,546. STOCKING. MANNY FARKAS, New York, N. Y. Filed June 20, 1921. Serial No. 479,141. Term of patent 14 years.

The ornamental design for a stocking, as shown.

59,547. SPONGE DOLL. CHARLES F. FLEMMING, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 29, 1921. Serial No. 481,404. Term of patent 7 years.

The ornamental design for a sponge doll, as shown.

59,548. SPONGE DOLL. CHARLES F. FLEMMING, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 29, 1921. Serial No. 481,405. Term of patent 7 years.

The ornamental design for a sponge doll, as shown.

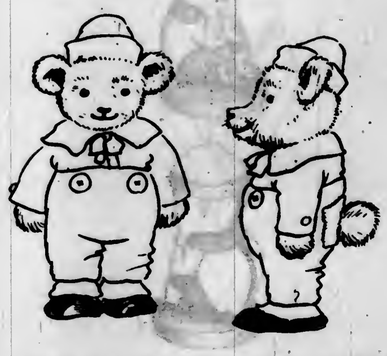
59,549. SPONGE DOLL. CHARLES F. FLEMMING, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 29, 1921. Serial No. 481,406. Term of patent 7 years.

The ornamental design for a sponge doll, as shown.

59,550. SPONGE DOLL. CHARLES F. FLEMMING, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 29, 1921. Serial No. 481,407. Term of patent 7 years.

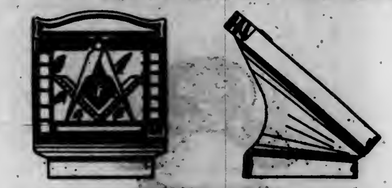
The ornamental design for a sponge doll, as shown.

59,551. SPONGE DOLL. CHARLES F. FLEMMING, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 29, 1921. Serial No. 481,408. Term of patent 7 years.



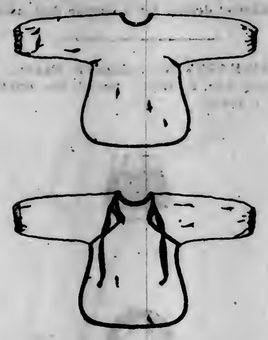
The ornamental design for a sponge doll, as shown.

59,552. STONE-SETTING. ADOLPH FRANK, New York, N. Y. Filed Apr. 9, 1921. Serial No. 460,074. Term of patent 7 years.



The ornamental design for a stone setting, as shown.

59,553. TOY ANIMAL. JOHN B. GRUELLE, Norwalk, Conn. Filed Apr. 27, 1921. Serial No. 465,001. Term of patent 14 years.

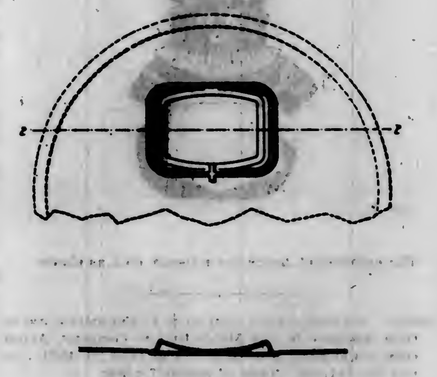


The ornamental design for a toy animal as shown.

59,554. DISPLAY-STAND. DAVID J. JACOBS, Chicago, Ill. Filed Jan. 14, 1921. Serial No. 437,361. Term of patent 3½ years.

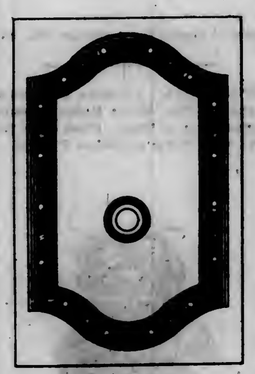
The ornamental design for a display stand, as shown.

59,555. CHILD'S GARMENT. AMBER LADD, Sunnyvale, Calif. Filed May 7, 1921. Serial No. 467,583. Term of patent 14 years.



The ornamental design for a child's garment, as shown.

59,556. INCENSE-BURNER. GLADYS I. LAY, Los Angeles, Calif. Filed June 21, 1921. Serial No. 479,390. Term of patent 3½ years.



The ornamental design for an incense burner, substantially as shown and described.

59,557. WINDOW OF AN INSTRUMENT-DIAL. THOMAS L. LEE, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed May 12, 1921. Serial No. 469,057. Term of patent 14 years.

The ornamental design for a window of an instrument dial, as shown.

Colactol

Particular description of goods.—Remedy Against Gall-Stones, Liver Complaint, Intestinal Diseases, and Vomiting During Pregnancy.
Claims use since August, 1920.

Ser. No. 147,725. (CLASS 11. INKS AND INKING MATERIALS.) JIFFY PEN COMPANY, Sioux City, Iowa. Filed May 14, 1921.

JIFFY

Particular description of goods.—Writing Inks.
Claims use since Jan. 1, 1917.

Ser. No. 147,863. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) JOHN LOUIS DUNCAN, Manchester, England. Filed May 16, 1921.

Zoie

Particular description of goods.—Tobacco-Pipes and Cigar and Cigarette Tubes Not of Precious Metal or of Imitation Precious Metal.
Claims use since January, 1912.

Ser. No. 147,937. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MANUFACTURING COMPANY OF AMERICA, Philadelphia, Pa. Filed May 19, 1921.

Atlantic

Particular description of goods.—Candy.
Claims use since about Aug. 8, 1906.

Ser. No. 147,999. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) CHAS. P. SCHAEFFER, Reading, Pa. Filed May 20, 1921.

SCHAEFFER

Chas P Schaeffer

The name "Chas. P. Schaeffer" is a facsimile of the signature of the applicant.
Particular description of goods.—Braids, Shoe-Laces, and Corset-Laces.
Claims use since 1906.

Ser. No. 148,048. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ALLEN-BRADLEY COMPANY, Milwaukee, Wis. Filed May 23, 1921.

Bradleystat

Particular description of goods.—Electrical Controlling Devices of the Carbon-Pile Rheostat Type.
Claims use since August, 1920.

Ser. No. 148,051. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) BART O. M. BOMBRAKE, Chicago, Ill. Filed May 23, 1921.

GIMME

Particular description of goods.—A Game of Chance Played with Polygonal Indicia Bearing Numbers.
Claims use since Mar. 5, 1921.

Ser. No. 148,153. (CLASS 37. PAPER AND STATIONERY.) FRANK LEVY, New York, N. Y. Filed May 24, 1921.

FRANKLEE

Consisting of the word "Franklee."
Particular description of goods.—Paper—viz., Flat and Print Paper, Typewriting-Paper, Mailing and Correspondence Envelops, Blotters, Cardboard, Wrapping-Paper, Bristol-Board, Tissue-Paper, Wax-Paper, Toilet-Paper, Index Bristol-Board, Shelf-Paper; Composition Book, Pad, and Tablet Paper; Ledger, Journal, and Blank-Book Paper; Parchment, and Drawing-Paper.
Claims use since February, 1921.

Ser. No. 148,443. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) H. A. METZ LABORATORIES, INC., New York, N. Y. Filed May 31, 1921.

· ORTHO · TROCHES

No claim is made to the right of exclusive use of the word "Troches" apart from the word "Ortho."
Particular description of goods.—Anesthetics and Preparations for Alleviating Irritation and Pain.
Claims use since about Mar. 28, 1921.

Ser. No. 148,449. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) H. A. METZ LABORATORIES, INC., New York, N. Y. Filed May 31, 1921.

· PARA · TROCHES

No claim is made to the right of exclusive use of the word "Troches" apart from the word "Para."
Particular description of goods.—Anesthetics and Preparations for Alleviating Irritation and Pain.
Claims use since about Mar. 28, 1921.

Ser. No. 148,471. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CLARA WIGGINS, Tampa, Fla. Filed May 31, 1921.

PALM-ARRAGON HAIR GROWER

No claim being made to the words "Hair Grower" as shown upon the drawing.
Particular description of goods.—Hair-Grower.
Claims use since January, 1919.

Ser. No. 148,611. (CLASS 32. FURNITURE AND UPHOLSTERY.) FLOYD H. NEWMAKER, Warren, Pa. Filed June 3, 1921.

Phoenix

Particular description of goods.—Dressers, Chifferettes, Dressing-Tables, Beds, Vanity-Dressers, Night-Tables, Bed-Room Benches, and Chairs.

Here Dwells Youth

Particular description of goods.—Face-Creams, Cleaning-Creams, Vanishing Creams, Face-Lotions, Face-Astringents, Rouges, Face-Powders, Talcum Powders, Lip-Sticks, Hair-Tonics, Hair-Lotions, Hair-Shampoos, Hair-Depilatories, Preparations for Stiffening Eyelashes, Eyebrow-Pencils, Eye-Lotions, Perfumes, Toilet Waters, Nail-Polishes, Nail-Creams, and Chemicals Suitable for Cuticle-Removers.
Claims use since May 2, 1921.

Ser. No. 149,335. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE LOWELL COMPANY, Lowell, Mass., and New York, N. Y. Filed June 18, 1921.

Particular description of goods.—Face-Creams, Cleansing-Creams, Vanishing Creams, Face-Lotions, Face-Astringents, Rouges, Face-Powders, Talcum Powders, Lip-Sticks, Hair-Tonics, Hair-Lotions, Hair-Shampoos, Hair-Depilatories, Preparations for Stiffening Eyelashes, Eyebrow-Pencils, Eye-Lotions, Perfumes, Toilet Waters, Nail-Polishes, Nail-Creams, and Chemicals Suitable for Cuticle-Removers.
Claims use since May 2, 1921.

Ser. No. 149,353. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) PITTSBURGH ELECTRIC FURNACE CORPORATION, Pittsburgh, Pa. Filed June 18, 1921.

'LECTROMELT

Particular description of goods.—Electrometallurgical Furnaces.
Claims use since May 1, 1920.

Ser. No. 149,377. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JEANETTE G. BROWN, Chicago, Ill. Filed June 20, 1921.

NU-CHARM
B

Particular description of goods.—Liquid Face-Powder.
Claims use since June 2, 1921.

Ser. No. 149,393. (CLASS 32. FURNITURE AND UPHOLSTERY.) HAROLD L. DE LISLE, Chicago, Ill. Filed June 20, 1921.

CALUMET

Particular description of goods.—Filing-Cabinets.
Claims use since Feb. 15, 1921.

Ser. No. 149,464. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MCDOUGALL & YALDING, LTD., Yalding, England. Filed June 21, 1921.

DERRISOL

Particular description of goods.—Fungicides, Insecticides, Vermicides, and Similar Compositions for Destroying Life Deleterious to Plants, Trees, Fruits, &c.
Claims use since May 11, 1921.

Ser. No. 149,466. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MCDOUGALL & YALDING, LTD., Yalding, England. Filed June 21, 1921.

DERRISINE

Particular description of goods.—Fungicides, Insecticides, Vermicides, and Similar Compositions for Destroying Life Deleterious to Plants, Trees, Fruits, &c.
Claims use since May 11, 1921.

Ser. No. 149,489. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JEAN SENEGAS, New York, N. Y. Filed June 21, 1921.

The feminine head represented in the mark is fanciful.
Particular description of goods.—Nail-Polish.
Claims use since July 14, 1920.

Ser. No. 149,536. (CLASS 32. FURNITURE AND UPHOLSTERY.) EASTMAN A. BURROWS, Chicago, Ill. Filed June 23, 1921.

ISETOP

Particular description of goods.—Display and Dispensing Counter for Stores.
Claims use since Feb. 1, 1921.

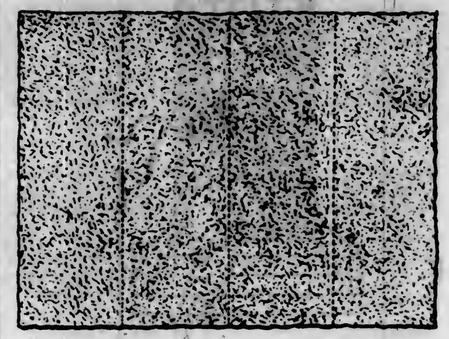
Ser. No. 149,572. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ATKINSON DAVE CO., Atkinson, Ill. Filed June 24, 1921.

BLACKSEAL

Particular description of goods.—Compound for Sealing Leaks in Radiators of Gas-Engines.
Claims use since on or about Nov. 1, 1920.

Ser. No. 149,582. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) RODOLFO FLORES, Sedalia, Mo. Filed June 24, 1921.

Sana Balm



The word "Balm" is disclaimed apart from the mark as shown in the drawing.
Particular description of goods.—Sana-Cutis Jelly, a Thin Ointment Antiseptic Healing Agent for Cuts, Insect-Bites, &c., Affections of the Skin, and General Household Use.
Claims use since Jan. 1, 1920.

Ser. No. 149,615. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WAUCHULA CHEMICAL COMPANY, Wauchula, Fla. Filed June 24, 1921.

NEEDMORE

Particular description of goods.—Hair-Tonics.
Claims use since Apr. 9, 1921.

Ser. No. 149,616. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) WOOLMBO MANUFACTURING COMPANY, Bath, Me. Filed June 24, 1921.

Particular description of goods.—Camel's-Hair Cloth in the Piece.
Claims use since June 6, 1921.

Ser. No. 149,627. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CUPID BEAUTY COMPANY, New York, N. Y. Filed June 25, 1921.

Particular description of goods.—Bleach-Creams, Beauty-Creams, Cold-Creams, Cleansing-Creams, Face-Powders, Compact Face-Powders, Liquid Face-Powders, Compact-Rouges, Liquid Rouges, Talcum Powders, Eyebrow and Eyelash Growers, Eyebrow-Pencils, Eye-Drops, Face-Bleaches, Hair-Salves, Shampoos, Skin-Lotions, Hand-Lotions, Lip-Sticks, Bath-Salts, Witch-Hazel Salves, a Chemical Preparation Suitable for Cuticle-Removers, Nail-Polishes, Nail-Bleaches, Toilet Waters, and Perfumes.

DECISIONS
OF THE
COMMISSIONER OF PATENTS
AND OF
UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

EX PARTE ENGMAN.

Decided October 29, 1921.

1. APPLICATION—OFFICE ACTION NOT RECEIVED—ABANDONMENT.

Where the application was filed April 10, 1919, a preliminary amendment filed June 10, 1919, and an Office action thereon mailed the attorney at his proper address on January 19, 1920, which action is alleged not to have been received by the attorney, and the attorney waited until July 2, 1921, before inquiring of the Office concerning the status of the application, and where the attorney states it to be his practice, after filing an application, to place the file away and not take it out for examination until an action has been had from the Office, *Held* that the application was abandoned for failure to prosecute.

2. SAME—TIMELY ACTION BY ATTORNEY.

Where the attorney's record shows an Office action to be due on an application and the work of the Office is in arrears, proper care of the client's interests demands that the attorney make inquiry of the Office as to the status of the application with reasonable promptness after the expiration of the period of time the Office work is known to be in arrears.

ON PETITION.

CANDLE-LATHES.

Mr. Howard P. Denison for the applicant.

ROBERTSON, *Commissioner:*

The record of this application shows that the same was filed April 10, 1919, that a preliminary amendment was filed June 10, 1919, and that the case was acted on by the Examiner on Jan. 19, 1920, the attorney's copy being mailed to the address given on the reverse side of the oath. No response followed until the filing of this petition August 2, 1921.

The affidavit of the attorney states that the files of the applications in his office are filed away and not taken out for examination until an action has been had from the Patent Office and that he made inquiry of the Patent Office concerning this case on July 2, 1921. The affidavit further states that no action was received at his office upon said application other than the customary filing receipt.

It appears from the above that the attorney, after receiving the filing receipt and making the preliminary amendment of June 10, 1919, placed the file away and waited over two years before making inquiry of the Patent Office as to why no action had been given. It cannot be considered that this long wait exhibits that measure of care of the client's interest which each and every attorney should give. This Office at no time has been over one year in arrearages of work, and where the attorney's record failed to show response by the Office within a year it appears that inquiry should be made with at least reasonable promptness after the expiration of said year.

The showing is held insufficient to establish that the delay in the prosecution was unavoidable, and the petition is denied.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—Sixth Circuit.

SANDUSKY FOUNDRY & MACHINE CO. *v.* DE LAVAUD *et al.*

Decided July 23, 1921.

[274 Fed. Rep., 607.]

1. PATENTS—FACTS HELD SUFFICIENT TO SHOW THAT COMMERCIAL SUCCESS WHICH IS EVIDENCE OF INVENTION.

Somewhat vague and general proof of commercial success is sufficient, in the absence of dispute.

2. SAME—DEVICE MAY BE OPERATIVE, THOUGH NOT COMMERCIALLY SUCCESSFUL, UNTIL SLIGHTLY CHANGED.

A device which, in the precise form shown by the Patent Office drawings, requires partial disassembling after each operation is not thereby made so inoperative as to be unpatentable.

3. SAME—SLIDABILITY ADAPTED TO A NEW UTILITY MAY BE INVENTION.

When the addition of a particular slidability of a part brings about a new method of use, it may involve a patentable difference over the older device.

4. SAME—MANUFACTURE AND SALE OF DEVICE CAPABLE OF USE INFRINGING PATENT IS HELD INFRINGED.

Where defendants manufactured a device capable of an infringing use and sold it with the intent that it shall be so used, they infringe a patent, even though their device is capable of a non-infringing use, and even though they go through the form of instructing that it shall be used in a non-infringing way.

5. SAME—1,058,250, CLAIMS 1, 2, AND 4, FOR CASTING IRON PIPES, HELD INFRINGED.

The Millspaugh patent, No. 1,058,250, claims 1, 2, and 4, for the casting of iron pipes in a whirling mold, *Held* infringed by Kneass patent, No. 538,835.

6. SAME—1,047,972, CLAIM 1, FOR CASTING IRON PIPES, HELD INVALID.

The Millspaugh patent, No. 1,047,972, claim 1, for casting iron pipes, *Held* invalid, as not being an invention.

7. SAME—ACCOUNTING NOT ORDERED IN ALL CASES.

An accounting will not be ordered, if a preliminary inquiry shows no probability of substantial damages or profits.

APPEAL from the District Court of the United States for the Eastern Division of the Northern District of Ohio; D. C. Westenhaver, judge.

Suit by the Sandusky Foundry & Machine Company against D. Sensaud De Lavaud and others. From a judgment for defendants, plaintiff appeals. Reversed in part; affirmed in part.

See, also, 251 Fed. 631; 258 Fed., 640.

Mr. Livingston Gifford and *Mr. H. W. Marshall* (*Messrs Squire, Sanders & Dempsey* on the brief) for the appellant.

Mr. Frank J. Kent, (*Mr. Albert Lynn Lawrence* on the brief) for the appellees.

Before KNAPPEN, DENISON, and DONAHUE, Circuit Judges.

DENISON, *Cir. J.*:

The appellant (hereinafter called plaintiff) brought in the court below the usual infringement suit, based upon Patents No. 1,058,250, issued April 8, 1913, on an application filed in 1911, and No. 1,047,972, issued December 24, 1912, on an application filed in 1912; both granted to Millspaugh and both pertaining to centrifugal casting. As to No. 1,058,250, which we shall call the first patent, infringement is alleged of claims 1, 2, and 4. Under the second patent, claim 1 is the only claim involved. The district judge thought the first patent not infringed, and the second patent invalid.

Claim 1 of the first patent is sufficiently typical. It reads:

A hollow rotary member having an internal surface of definite shape surrounding the axis of rotation, a driving mechanism therefor, a filling trough, arranged to hold a predetermined amount of material, rotatably and slidably supported, projecting into said member, and means for moving said trough.

The common method of casting pipe was to provide a vertical mold for the outside and a core for the inside, and to pour the molten metal into the intermediate space. This process involved danger of imperfections, such as greater density at the bottom, imprisoned air bubbles, etc. It has long been known, at least in theory, that, if the molten metal were introduced into the center of a rapidly-revolving hollow cylinder, centrifugal force would distribute the material around the interior wall of the cylinder, which would serve as a mold, and the centrifugal impetus would supply the place of the core. This would give, in theory, a tube or pipe of great perfection, with walls of the same thickness or density in all parts, and with a very regular exterior surface, since impurities are commonly lighter than the metal to be cast, and would hence remain upon the inside of the tube. The record indicates that a product thus produced was commercially unknown, and that very likely the difficulty of introducing the molten material into the inside of the revolving cylinder at all parts of its length at the same time was the reason why the idea had not been commercially practised.

Millspaugh's first invention was directed to the meeting of this difficulty. After mounting his cylindrical shell or mold horisontally, so that it could be rotated by means in contact with the outside, he provided a trough located in the axis of the shell and capable of being held at each end in axial position. It was also adapted to slide longitudinally part way out of the shell and to be rotated at least half a turn independently of the shell. In operation, the shell was put in revolution and the trough withdrawn longitudinally so that it projected slightly from the shell at one end, the trough-opening being on the upper side, and both ends of the trough being closed. Thereupon the molten metal was poured into the trough at the projecting end, and distributed itself evenly along the trough, which was then caused to slide back into the shell until it was entirely inside and axially held in position. It was then turned upside down. This distributed the material in an even body over the interior of the shell and for the length of the trough.

[1] We cannot doubt that this device was commercially successful and became practically the foundation of a new art. Upon this subject plaintiff contented itself with rather vague and general testimony to the effect that large amounts had been expended in development; that the plaintiff was a manufacturer of paper-mill machinery; that tubes made according to this centrifugal process are used in such machinery and have been very largely adopted; that the plaintiff's ability to make this perfect pipe is chiefly what has developed plaintiff's business, and that several licenses have been granted. There was no cross-examination on this subject, nor was there testimony to dispute what was claimed in this regard. We think plaintiff was justified in assuming that there was sufficient proof of the commercial utility of the device to serve the customary purposes of such evidence.

[2] Neither can we think that there was anything inoperative about the machine as disclosed in the patent. The only serious criticism made along this line is that, if the machine were built and mounted precisely as shown in the Patent Office drawing, the tube, after casting, could not be removed from the mold without disturbing the assembly. That is true, because the standards which support the trough axis would be in the way of withdrawing the tube horisontally from the mold, excepting to the same distance which it is contemplated the trough may be withdrawn. It is a familiar rule that the Patent Office drawings are more or less conventional and are not to be considered as working drawings, and hence no defect is fatal which could be remedied by any mechanic by obvious means. The standards in this drawing are shown held to the floor by bolts and nuts. It would apparently take only a moment to remove these nuts and take the standard and the trough-shaft out of the way, and the placing and replacing of this standard would not be a serious matter in such a machine as this. It would also be plain that one or the other part could be mounted on a carriage so as to permit separation if desired. With this view of the unsubstantial character of the

defect, it is not important whether plaintiff's successful operation was with a machine of the precise form shown in the drawing or was with a machine embodying obvious modifications.

[3] It is necessary to refer to only one of the patents relied upon in defense, as that is the closest approximation to Millspaugh shown in the record. It is the patent to Kneass, No. 538,835, of May 7, 1895. It is sufficient to say that one figure of this patent, given as a suggestion of an alternate form, though awkward and probably impractical in some details, discloses Millspaugh's claimed construction with one exception.[1] Kneass has a trough which extends the full length of the shell and also projects endwise beyond. The metal is poured into the projecting open end, and it is Kneass's theory that it will flow along into the inside portion of the trough and be dumped wholly inside instead of partially outside. His device might or might not accomplish this result, but he did not contemplate or show a trough which was slidable in the Millspaugh sense. His drawings indicate that the trough-supporting standard is on a carriage intended for longitudinal travel, and this or its equivalent would be a necessary means for getting the trough out of the way when the casting was to be withdrawn; but there could have been no intention to withdraw the trough partially, or for filling, for he has so carefully provided for ability to fill without withdrawal. By Millspaugh's slidability—sliding out and sliding in—he insures that the trough can be filled from the outside, but that, before dumping, the metal-carrying portion shall be entirely inside. This has clear advantages, and we think it a patentable difference as compared with Kneass. It follows that, while the Millspaugh first patent is valid, it must be confined to such a slidable support for the trough as contemplates its partial withdrawal for filling and then its sliding return to effective dumping position wholly within the shell, and from this point of view, we must treat the question of infringement.

[4, 5] Defendants' device responds without question to the claims in suit in every particular, unless with regard to this characteristic sliding function. Defendants have a rotatable and slidable support for the trough, but this sliding is perhaps necessary, as it was with Kneass, to get the trough supports out of the way for withdrawing the casting. They mount a hopper upon their trough axis or continuation of the trough outside the shell, and provide a longitudinal conduit within the axis which will conduct the flowing metal from the hopper into the trough within the shell. There is thus in theory no occasion to slide the trough out for the purpose of filling just before dumping; and we conclude that the method of operation for which the defendants' device is thus apparently intended would not be an infringing use. But that is not the end of the question. Where defendants manufacture a device capable of an infringing use and sell it with the intent that it shall be so used, they infringe the patent, even though their device is capable of a non-infringing use, and even though they go through the form of instructing that it shall be used in a non-infringing way. (*Weed Co.* v. *Cleveland Co.*, (D. C.,) 196 Fed., 213; *Parsons Co.* v. *Asch*, (D. C.,) 196 Fed., 215.)

It seems natural that, if defendants' device is operated strictly according to their theory, some melted metal will remain in the hopper, and that when it is upset this metal will be spilled outside, and that the portion in the conduit may run back into the hopper, instead of inwardly into the trough, or that with slight use the conduit will become obstructed by the metal which cools and adheres, or that the hopper will become partially clogged in the same way. If those things occur, the device then could be used, and probably would be used, in the characteristic Millspaugh manner. It seems, therefore, that at least occasional use of this character must have been contemplated by the maker. This inference is confirmed by the fact that the axial spindle on the inner end of the trough is prolonged in a manner which was seemingly intended to facilitate this partial withdrawal while maintaining perfect axial position. The proof as to actual use also confirms this inference. There is no evidence as to the use of defendants' machine, excepting as to a more or less experimental use at the factory where it was manufactured for them. The witness who did this manufacturing and who was apparently disinterested is somewhat confused, but seems to intend to say that in the operation which he witnessed these suggested troubles did occur and that most of the work was done by sliding out the trough in the Millspaugh manner and filling it on the outside. We find also that an advertising "write-up" of defendants' machine—seemingly their authorized statement—distinctly describes withdrawal for filling as being the intended method of operation.

When we consider the advertisement and this testimony as to what was actually done, and observe the probability of a common necessity for resorting to Millspaugh's function, and that the defendants' form responds literally to the claim, we do not think that the charge of infringement can be escaped just because the device is capable of use in a manner which the patent cannot rightly reach. It may be that the situation presents complications which make an assessment of damages impracticable; but this record does not raise that question; an injunction, at least, is appropriate.

The case would be more difficult of decision were it not that the defendants can apparently, if they wish, so modify their device that it can not be used according to Millspaugh's theory. Doubtless there are expedients among which a satisfactory selection could be made, if the capacity of withdrawal for filling is, in truth, not important.

[6] As to the second patent, we agree with the court below that it does not involve any invention,

[1] The limiting clause, "arranged to hold a predetermined amount of material," does not effectively distinguish from Kneass, and while the quick dumping of the patent in suit, as contrasted with the slow tilting of Kneass, might distinguish, this feature of quick dumping is not found in the claims in suit.

so far as concerns the claim in suit. This is distinguished from the first patent only by providing that the trough-opening shall be shorter than the shell, when the trough is fully inserted. The stated object is to prevent the metal being spilled against the ends of the shell. If there was trouble from this cause, it seems clear to us that to shorten the trough-opening, either by making the trough shorter or by covering over the portion near the end, was a mere expedient not involving any invention.

[7] The decree as to the first patent must be reversed, and the case remanded, for the usual interlocutory decree for an injunction on the claims in suit. The court below will determine, upon such preliminary inquiry as seems fitting, whether the recovery of any substantial damages or profits is so improbable as to justify declining to make the usual order for an accounting. (*Merriner v. Saalfeld*, (C. C. A., 6,) 196 Fed. 369, 371, 372; 117 C. C. A., 245, and cases cited.) As to the second patent, the decree is affirmed. The appellant will recover costs of this court.

ADJUDICATED PATENTS.

(U. S. D. C. N. Y.) The Cline design patent, No. 49,204, for an insulator, *Held* valid. *Cline v. Horton*, 274 Fed. Rep., 728.

(U. S. D. C. N. Y.) The Cesnor patent, No. 992,965, for one-piece bifocal lens, *Held* valid and infringed. *One-Piece Bifocal Lens Co. v. Stead*, 274 Fed. Rep., 667.

(U. S. C. C. A. Ohio.) The Eckard and Smith patent, No. 1,117,816, for reversible truck, claims 6, 7, and 8, *Held* invalid, claim 9 held valid and not infringed. *Troy Wagon Works Co. v. Ohio Trailer Co.*, 274 Fed. Rep., 612.

(U. S. C. C. A. Me.) The Bibel patent, No. 845,222, for impregnement in Fourdrinier machines, *Held* invalid and not infringed. *Minnesota & Ontario Paper Co. v. Bibel Process Co.*, 274 Fed. Rep., 540.

(U. S. C. C. A. Ohio.) The Hudson patent, No. 1,214,087, for improvement in steering mechanism adapted to trailer-trucks, *Held* void for lack of invention. *Troy Wagon Works Co. v. Ohio Trailer Co.*, 274 Fed. Rep., 612.

(U. S. D. C. Pa.) The Charles F. Johnston patent, No. 1,063,935, for a spark-plug, *Held* void for lack of invention. *Holt Co. v. Stowe Co.*, 274 Fed. Rep., 662.

(U. S. D. C. N. Y.) The Knee patent, No. 1,231,882, for felt soles for gloves, *Held* valid and infringed. *Knee v. Kerwin*, 274 Fed. Rep., 720.

(U. S. D. C. N. Y.) The Meinecke & Co. patent, No. 926,468, for improvements in bed and douche pans, *Held* void for lack of invention. *Meinecke & Co. v. Lish Mfg. Co.*, 274 Fed. Rep., 747.

(U. S. C. C. A. Ohio.) The Millspaugh patent, No. 1,047,972, for casting iron pipes, claim 1 *Held* invalid. *Sandusky Foundry & Machine Co. v. De Lavaud*, 274 Fed. Rep., 607.

(U. S. C. C. A. Ohio.) The Millspaugh patent, No. 1,058,250, for casting iron pipes, claims 1, 2 and 4 *Held* infringed. *Sandusky Foundry & Machine Co. v. De Lavaud*, 274 Fed. Rep., 697.

Interference Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., October 31, 1921.

Golden Laxative Coffee Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Goode & Dunkle, 19 and 21 Pike street, Covington, Ky., and Charles I. Cook, 501 Main street, Menominee, Mich., for registrations of trade-marks and trade-mark registered March 8, 1886, No. 27,893, to Golden Laxative Coffee Co., Ayer, Mass., and a notice of such declaration sent by registered mail to said Golden Laxative Coffee Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Golden Laxative Coffee Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

PATENT No. 1,297,328.

On October 5, 1921, a decision was rendered that Marc Darrin was not the first inventor of the subject-matter covered by claim 11 of his Patent No. 1,297,328, subject, "Resin and process for manufacturing the same from crude solvent naphtha," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,309,300.

On October 5, 1921, a decision was rendered that Charles P. Klorer was not the first inventor of the subject-matter covered by claim 3 of his Patent No. 1,309,300, subject, "Joint for combined spotlight and trouble lamps," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,320,025.

On October 3, 1921, a decision was rendered that Theron R. Palmer was not the first inventor of the subject-matter covered by claims 1 of his Patent No. 1,320,025, subject, "Pedal-rubber for bicycle-pedals," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,346,329.

On October 4, 1921, a decision was rendered that Lewis F. Stafford was not the first inventor of the subject-matter covered by claims 1, 2, 6, 7, 8, 11, 12, 14, and 15 of his Patent No. 1,346,329, subject, "Bumper for vehicles," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,346,879.

On October 4, 1921, a decision was rendered that Ronald B. Jester was not the first inventor of the subject-matter covered by claims 1, 2, 4, 5, 6, and 7 of his Patent No. 1,346,879, subject, "Jack," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,355,010.

On October 7, 1921, a decision was rendered that Herman L. Strongson was not the first inventor of the subject-matter covered by claim 2 of his Patent No. 1,355,010, subject, "Pouring-spout," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,362,668.

On October 7, 1921, a decision was rendered that Robert Bobins was not the first inventor of the subject-matter covered by claims 8, 9, 10, 11, and 12 of his Patent No. 1,362,668, subject, "Buckles," and no appeal having been taken such decision has become final.

Notice—Photostat Copies.

Owing to difficulties encountered in obtaining the services of competent typists notice is hereby given that in order to avoid delays the Patent Office reserves the right to furnish photostat copies in lieu of type-written copies, in filling orders for copies of its records, unless otherwise specifically directed.

Drawings.

Attention is called to paragraphs *g* and *i* of Rule 52 of the Rules of Practice of the Patent Office, and inventors and attorneys are directed to omit from the space outside of the marginal line of the drawings any marks of identification, inasmuch as the space referred to is reserved for the use of the Patent Office. Such identifying-marks should be placed upon the back of the drawings.

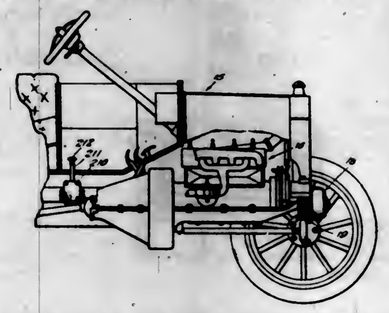
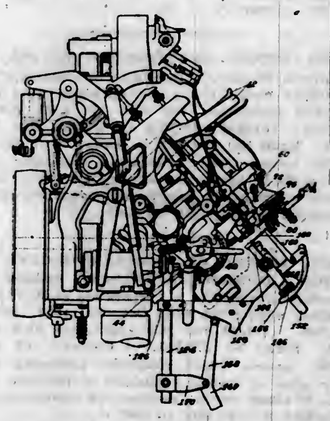
PATENTS



GRANTED NOVEMBER 8, 1921.

1,396,003. PROCESS OF TREATING COAL-TAR AND THE LIKE. WILLIAM ANDERSON, Helensburgh, Scotland. Filed Apr. 7, 1920. Serial No. 371,890. 1 Claim. (Cl. 196—25.)

The process of treating coal tar consisting in effecting vaporization of the tar by injecting the tar into and through a tubular heater by means of steam in excess of that required to supply the heat necessary to effect complete vaporization of the tar while controlling the temperature of the steam, so that the interaction of steam and vapor is effected at a temperature between approximately 450° and 600° C., depositing the carbon formed so as to effect practically complete separation of carbon, and condensing the vapors to obtain a resinous solid and a liquid product entirely free from naphthalene.

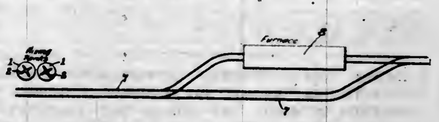


1,396,004. STARTING AND LIGHTING APPARATUS. VINCENT G. APPLE, Dayton, Ohio. Filed Apr. 23, 1917. Serial No. 163,803. 10 Claims. (Cl. 180—64.)

1. In combination with an automobile chassis having an engine and an engine shaft, of a dynamo electric machine having its shaft coaxially arranged with the engine shaft and having its frame connected to and supported on the chassis by lugs extending from the back of the dynamo frame and a flexible driving coupling inseparably connecting the two shafts to permit initial rotation of the driving shaft before the driven shaft is rotated.

1,396,005. PULLING-OVER MACHINE. ORRELL ASHTON, deceased, Swampscott, Mass., by Hannah Ashton, executrix, Wollaston, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 2, 1916. Serial No. 129,214. 164 Claims. (Cl. 12—4.)

1. A machine of the class described having, in combination, side grippers movable to pull an upper over a last and movable also lengthwise of the last, and means automatically operative to present said grippers normally in



an upper receiving position relatively near the toe end of the last and to move them toward the heel end of the last after the upper pulling operation.

1,396,006. METHOD OF TREATING DISTILLERY WASTE. ARTHUR A. BACKHAUS and CARL HANER, Jr., Baltimore, Md., assignors to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Oct. 22, 1917, Serial No. 197,885. Renewed July 19, 1919. Serial No. 312,030. 3 Claims. (Cl. 23—24.)

1. The process of treating distillery slop comprising concentrating it, adding caustic soda, heating at a temperature from 175 to 250° C., adding lime to form calcium oxalate, filtering, evaporating the filtrate to dryness, and distilling with sulfuric acid to recover volatile acids.

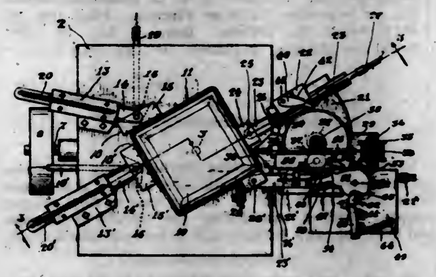
1,396,007. PROCESS OF TREATING DISTILLERY WASTE. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Oct. 22, 1917. Serial No. 197,884. 5 Claims. (Cl. 23—24.)

1. The process of treating distillery waste comprising heating with caustic alkali at a temperature of about 175 to 250 degrees C. for a few hours, dissolving the

product in water and precipitating the oxalates as calcium oxalate, filtering off the latter, separating the alkali from the filtrate, distilling the remainder with a non-volatile acid to recover the organic acids.

1,396,008. PROCESS OF PRODUCING ORGANIC ACIDS. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Oct. 22, 1917. Serial No. 197,886. 1 Claim. (Cl. 23—24.)

The process which comprises producing salts of organic acids by heating a mixture of distillery slop and a caustic alkali in the presence of ferric oxid, at a temperature of from 160° to 250° C.

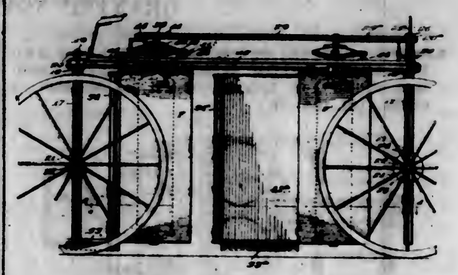


1,396,009. METHOD OF PRODUCING ORGANIC ACIDS. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Original application filed Oct. 22, 1917, Serial No. 197,886. Divided and this application filed Jan. 29, 1919. Serial No. 273,780. 4 Claims. (Cl. 23—24.)

1. The process which comprises producing salts of organic acids by heating a mixture of distillery slop and a caustic alkali in the presence of manganese dioxid, at a temperature of from 160° to 250° C.

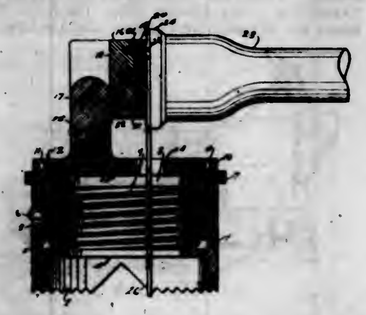
1,396,010. METHOD OF PRODUCING ORGANIC ACIDS. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Original application filed Oct. 22, 1917, Serial No. 197,886. Divided and this application filed Jan. 29, 1919. Serial No. 273,781. 4 Claims. (Cl. 23—24.)

1. The process which comprises producing salts of organic acids by heating a mixture of distillery slop and a caustic alkali in the presence of cerium oxid, at a temperature of from 160° to 250° C.



1,396,011. CAN-SOLDERING MACHINE. ANTONIO ALVAREZ, Berkeley, Calif., assignor to American Can Company, San Francisco, Calif., a Corporation of New Jersey. Filed Dec. 28, 1916. Serial No. 139,240. 34 Claims. (Cl. 113—71.)

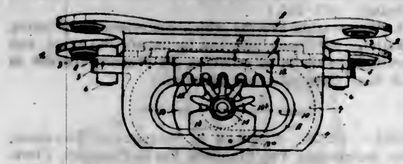
1. In a can soldering machine, means for receiving and holding a can having a seam to be soldered, means for fusing solder upon said seam, devices for automatically feeding a definite predetermined amount of solder thereto, and means corresponding with the shape of the can for actuating said feeding devices.



1,396,012. COTTON-PICKING APPARATUS. ALLEYNE D. ALVIN, San Antonio, Tex., assignor of one-half to Frederick M. Mueller, San Antonio, Tex. Filed July 9, 1920. Serial No. 395,091. 7 Claims. (Cl. 56—48.)

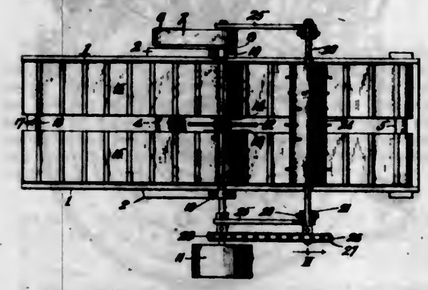
1. A cotton picking apparatus comprising, wheels, a chassis supported by said wheels and vertically adjustable thereon, frames supported for swinging movement on the chassis, said frames being arranged one in advance of the other and having alined slots formed therein, picking rollers journaled in said frames and extending into said slots, cleaning rollers journaled in said frames and associated with said picking rollers for effecting a removal of the cotton therefrom, guard plates partially surrounding

all of said rollers, guide fingers arranged in advance of said frames for guiding the plants into said slots, guide plates above said guide fingers and in advance of said picking rollers, pneumatic conveying means associated with said cleaning rollers, and means operable by said wheels for actuating all of said rollers and said conveying means.



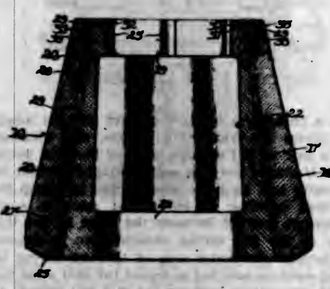
1,396,013. WIRE-TWISTING DEVICE. HENNING ANDERSON, Chicago, Ill. Filed June 26, 1920. Serial No. 391,917. 4 Claims. (Cl. 140—119.)

1. In a wire twister, a shell body, a jacket slidably secured to said shell body, means for yieldingly urging said shell and jacket out of mutual engagement, means for limiting the relative movement of said shell body and jacket, a rotary cap carried by said jacket, a stem for said cap, and adjustable wire-engaging members carried by said stem.



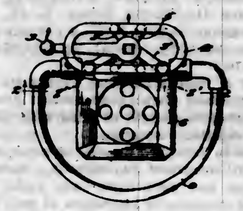
1,396,014. ROLLER SIDE BEARING. FRANKLIN L. BARBER, Chicago, Ill., assignor to Standard Car Truck Company, Chicago, Ill., a Corporation of New Jersey. Filed Nov. 22, 1920. Serial No. 425,600. 4 Claims. (Cl. 64—64.)

1. A side bearing adapted to be carried by the body bolster of a car having in combination means adapted to engage said bolster and to be secured thereto, a housing depending from said means, a bearing roller disposed in said housing and carrying an axle member projecting at either side of said housing, counterweight members mounted on said axle members on each side of the housing, and means on said housing above said axle member for engaging



said counterweight member whereby when the roller is moved longitudinally the counterweight will be swung out of its normal position.

1,396,015. SELF-FEEDER FOR HUSKERS, SHREDDERS, AND CUTTERS. AUGUST BERKEMEYER, Bladen, Nebr. Filed Aug. 14, 1919. Serial No. 317,460. 1 Claim. (Cl. 130—38.)



A feeder comprising a framework having sides and a bottom extending from one end to a point intermediate the length of the sides, a driven conveyer running over and under the bottom lengthwise thereof, a driven toothed drum extending across the framework between the sides over the conveyer and adapted for up and down play, a pair of kickers over the bottomless part of the framework and the rear end of the conveyer, a rotary band cutter and divider between the front end of the kickers and means for operating the kickers and divider to cooperate with the drum and conveyer in advancing bundles of grain through the machine toward the bottomless end thereof.

1,396,016. ROCK-CRUSHER. JAMES F. BETCHKAW, Berlin, Wis., assignor to The Frog Switch & Manufacturing Company, Carlisle, Pa., a Corporation of Pennsylvania. Filed May 22, 1919. Serial No. 298,990. 5 Claims. (Cl. 83—10.)

1. In combination, a central member of conical formation, a conical mantle engaging over said central member, said conical mantle being adapted to be withdrawn endwise off the end of said central member, a locking surface on said central member disposed at an angle to the line of separation of said mantle and said central member, a cooperating locking surface on said conical mantle also disposed at an angle to the line of separation of said mantle and said central member, a locking filler between said central member and said mantle and engaging with both of said surfaces, said surfaces being arranged whereby the engagement of the filler therewith positively locks the conical mantle against endwise withdrawal, one of said surfaces being accessibly disposed to permit the releasing of said locking filler therefrom.

1,396,017. SAFETY DEVICE. FRANK J. BOHN, Baltimore, Md. Filed Mar. 28, 1921. Serial No. 456,149. 5 Claims. (Cl. 105—341.)

2. An attachment for trolley cars comprising a substantially semi-circular guard or railing, the ends of said railing being offset, a split sleeve carried by each of said offset ends, and means for securing said sleeve to a support.

1,396,018. PRODUCTION OF CARBON. CHARLES S. BRADLEY, New York, N. Y. Filed Aug. 30, 1917. Serial No. 188,947. 5 Claims. (Cl. 134—60.)

1. The method of producing carbon, which comprises treating a carbon compound with substances which react endothermically and exothermically to set free the carbon and regulating the ratio of endothermically acting to exothermically acting substances to maintain the temperature within the proper range, while at the same time maintaining a gaseous carbon compound present to restrain oxidation of the freed carbon.

1,396,019. CLASP. SAMUEL BUCHSBAUM, Chicago, Ill. Filed Dec. 1, 1919. Serial No. 341,718. 4 Claims. (Cl. 24—170.)

1. In a clamping device the combination of a base plate, a pair of suitably mounted oppositely extending similar clamping elements, each of said clamping elements having a gripping edge and a clamping lever, the lever of one clamping element extending toward and overlapping the lever of the other clamping element, said overlapping levers extending substantially parallel to each other and one of said levers clamping the other lever between the same and said base plate to hold said second lever in clamping position.

1,396,020. BELT-BUCKLE. SAMUEL BUCHBAUM, Chicago, Ill. Filed Oct. 14, 1920. Serial No. 416,932. 3 Claims. (Cl. 24—101.)

3. In a device of the character described, a gripping element comprising side members, and a single serrated gripping member connecting said side members, each of said side members being provided with pivot openings at opposite sides of said gripping member.

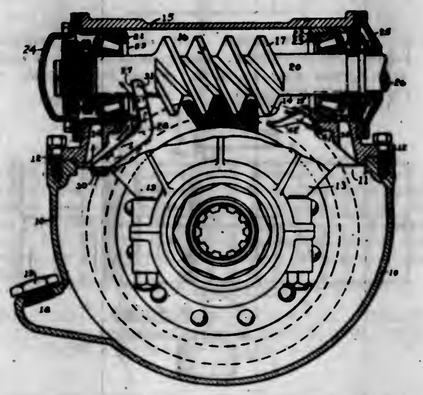
1,396,021. WATERPROOF FIBER TUBE AND PROCESS OF MAKING THE SAME. FOSTER A. BURNINGHAM, GEORGE A. RICHTER, WALLACE B. VAN ARSDEL, and DONALD H. WHITE, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Jan. 20, 1920. Serial No. 352,874. 7 Claims. (Cl. 91—70.)

1. A body of fibrous material having its fibers coated with a polymerized phenol-condensation product, and its pores or interstices plugged or filled with minute crystals of a water-repellent material.

7. The herein described process of water-proofing paper tubes, which comprises impregnating such tubes with molten sulfur and permitting such sulfur to cool and crystallise in the pores or interstices of such tubes, and impregnating the tubes with a solution of a phenol-condensation product, drying the tubes to evaporate the solvent, and baking such tubes to polymerise the phenol-condensation product remaining in the tubes.

1,396,022. CHUCK. DONALD EMBRY CARRIERE, Capreol, Ontario, Canada. Filed Sept. 27, 1920. Serial No. 413,065. 8 Claims. (Cl. 279—60.)

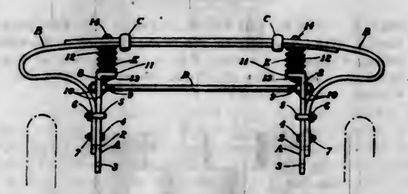
1. In a chuck, the combination with the movable jaws, of extensible jaw members carried by said jaws and adapted to support the tool gripped between the said movable jaws at a point beyond their length.



1,396,023. MATERIAL OR THE PROCESS OF PRODUCING MATERIALS FOR COATING SUBSTANCES TO PROTECT THEM OR RENDER THEM NON-POROUS. CHARLES ANGUS CLEGHORN, Woburn Sands, England. Filed Dec. 30, 1919. Serial No. 348,473. 17 Claims. (Cl. 134—26.)

2. A process of treating "Turkish birdlime" to bring it into working condition which consists in drying the birdlime in a vacuum at a temperature not exceeding 180° F. and then pulverising it.

1,396,024. REFRIGERATION PROCESS. ALBERT G. CRAWFORD, Chicago, Ill., assignor to Halleck W. Seaman, Clinton, Iowa. Filed May 27, 1918. Serial No. 236,870. 2 Claims. (Cl. 252.)



1. A refrigerating process which comprises compressing substantially pure propylene gas to liquefy the same, and evaporating the liquid by relieving the pressure thereon to extract heat from adjacent material.

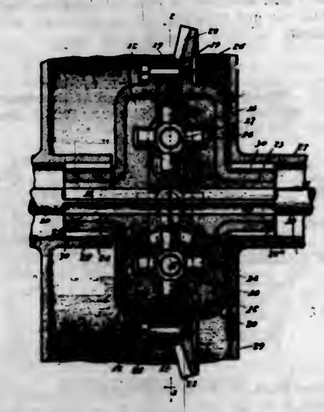
1,396,025. AXLE. CHARLES S. DAHLQUIST, Cleveland, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 2, 1920. Serial No. 414,306. 9 Claims. (Cl. 184—11.)

1. In mechanism of the class described, the combination of a housing, a gear therein, a shaft above said gear, a bearing for said shaft, and a plate extending into proximity with said gear for deflecting oil from said gear to the bearing.

1,396,026. AUTOMOBILE-BUMPER. ERNEST G. DAVISON, Elyria, Ohio, assignor of one-half to Joseph H. Brown, Elyria, Ohio. Filed Sept. 20, 1920. Serial No. 411,637. 4 Claims. (Cl. 293—55.)

2. In a bumper, a bumper contact element adapted to extend across the front of a vehicle, said element comprising a pair of flat springs, each of the said flat-springs having a U-shaped portion, said U-shaped portion containing an outer and an inner arm, means to clamp the said flat springs together in superposed relation, a pair of coiled springs secured between the arms of the U-shaped portions of the flat spring elements, an interconnecting tie-rod between the outer arm of the two spring element U-shaped portions adapted to secure the said arms together, and rigid connections between the said coil springs and the said arms, and means to secure the assembled bumper to a vehicle, said means including said rigid connections.

1,396,027. DISPLAY-STAND. GEORGE W. DAY, Glenellyn, Ill. Filed Mar. 31, 1921. Serial No. 457,323. 2 Claims. (Cl. 211—24.)

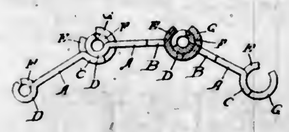


1. A display card provided with a four sided opening adapted to receive a package to be displayed, said opening having straight downwardly converging lateral margins, the greatest width of the opening being less than the diameter of the package, a base for the card whereon the container may rest, and means carried by the card adapted to prevent the upper portion of the package from slipping rearwardly out of said opening.

1,396,028. PROCESS OF RECOVERING THE SOLIDS OF WASTE PULP LIQUORS. WALTER H. DICKERSON, New York, N. Y. Filed Dec. 8, 1919. Serial No. 343,235. 7 Claims. (Cl. 195—6.)

1. The process of recovering the solids of hot waste pulp-liquors, which consists in effecting a self-evaporation of the digester liquor to thereby concentrate and cool same; freezing out a portion of the remaining water to further concentrate the liquor; and drying the liquor thus concentrated.

1,396,029. GEARING. WILLIAM F. DOYLE, Reedsburg, Wis., assignor of one-half to Florence P. Stolte, Reedsburg, Wis. Filed June 12, 1916. Serial No. 103,099. 30 Claims. (Cl. 74—99.)



1. A gear having a helical thread the core of which helix is circular and has its center in the axis of said gear, the cross section of said thread increasing with its distance from the axis of the gear.

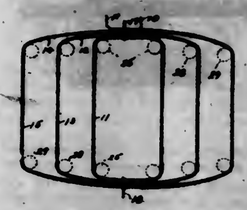
1,396,030. VARIABLE CONDENSER. WILLIAM DUBILIER, New York, N. Y. Filed July 25, 1917, Serial No. 182,796. Renewed Feb. 2, 1921. Serial No. 441,992. 11 Claims. (Cl. 250—41.)

1. In combination, a series of fixed condenser units having a common difference in capacity, a variable condenser having a maximum capacity substantially equal to said common difference, and means for inserting in circuit with any of said units any desired fraction of the capacity of said variable condenser, said variable condenser being of small capacity relative to the range of the whole condenser, and including but few relatively movable parts, whereby errors due to changes in the variable condenser are minimized.

1,396,031. LINK FOR CHAIN-BELTS. RAYMOND W. DULL, La Grange, Ill., assignor to Link Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 22, 1920. Serial No. 367,655. 8 Claims. (Cl. 74—43.)

1. An integral single thickness sheet metal chain link comprising two side and two end bars and two substantially tubular ends, the pintle end having an external diameter approximately the same as the internal diameter of the hook end, both ends projecting above and below the body and consisting, the pintle end of one end bar and two side bars projecting beyond the end bar and a part which projects from the inner edge of the side bar bent out of line with the link body and toward each other so as to have their opposed ends on the same side of the link body.

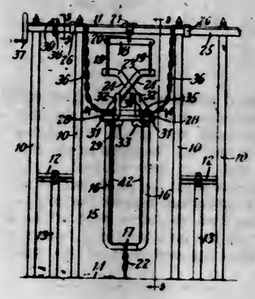
1,396,032. PROTECTING SPARKING METAL. HENRY FORCELLON, New York, N. Y., assignor to Alpha Products Company, Inc., a Corporation of New York. Filed Mar. 27, 1919. Serial No. 285,664. 7 Claims. (Cl. 91—70.)



1. The new article of manufacture comprising a sparking alloy having a dense non-metallic protecting coating on its surface, said coating not substantially affecting the sparking properties of said surface.

6. The method of protecting pieces of sparking alloy which consists in treating the pieces with a mineral oil and heat to produce a protecting coating thereon.

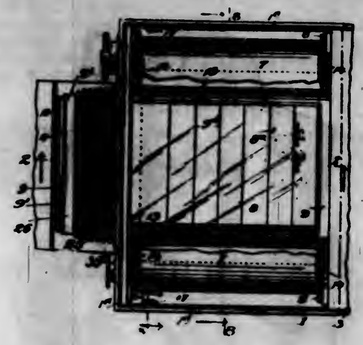
1,396,033. METHOD OF MAKING WINDINGS. CHARLES W. FRANCIS, Paterson, N. J., assignor to Gillespie Eden Corporation, Paterson, N. J., a Corporation of Delaware. Original application filed Feb. 3, 1920, Serial No. 356,027. Divided and this application filed Nov. 19, 1920. Serial No. 425,052. 5 Claims. (Cl. 140—92.2.)



1. The method of forming from a continuous piece of wire, a winding having a plurality of separate flat coils of progressively increasing area, which consists in winding a coil by a continuous relative motion between the source of

wire supply and a form; surrounding the coil thus formed, while the said relative motion between it and the supply of wire continues, with a larger form, between which and said source of wire supply the said relative motion exists; continuing the winding from the coil just formed to and

around the larger form by means of said continuing relative motion and repeating these steps with successively larger forms while maintaining the relative motion between the source of wire supply and the coils and their forms until the desired number of coils is formed.

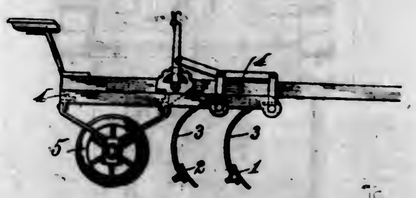


1,396,034. CATTLE-STANCHION. AXEL FAITZ, Everett, Mass. Filed Sept. 11, 1919. Serial No. 323,048. 13 Claims. (Cl. 119—148.)

1. A cattle stanchion having, in combination, a pair of side bars having converging upper ends, means to suspend said side bars, means to lock said side bars in their closed position, a rotary member, and means operatively connecting said locking means with said rotary member adapted to raise said locking means vertically upon the converging ends of said side bars during the rotation of said rotary member and thereby force said side bars open.

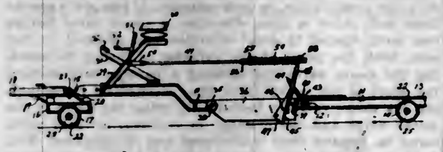
1,396,035. METHOD OF AND APPARATUS FOR DESIGNATING PHOTOGRAPHIC EXPOSURES. HENRY J. GAISMAN, New York, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 12, 1921. Serial No. 719,921. 61 Claims. (Cl. 95—1.1.)

1. The combination with a camera having an opening, means upon the camera to normally close said opening, and an expansible pocket upon and without the camera and communicating with said opening, of a holder adapted to pass through said opening and pocket, a transtucid member fitted to said holder supported adjacent the film and adapt-



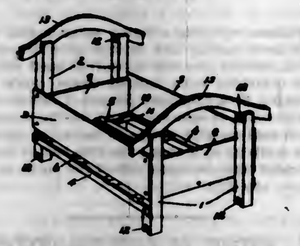
ed to receive markings to be light printed on the film, and means to admit light at will through said member.

1,396,036. EXTENSION-TABLE SLIDE. SAMUEL GALBERIN, Milwaukee, Wis. Filed May 26, 1919. Serial No. 299,932. 4 Claims. (Cl. 45—115.)



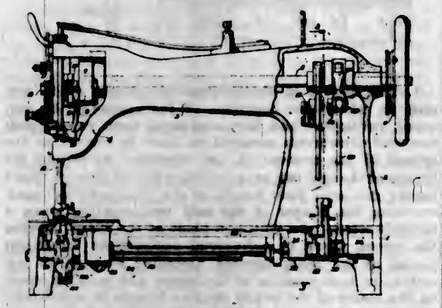
1. In an extension table the combination of a relatively fixed middle bar, floating end bars and floating intermediate bars slidably connected with one another side by side, two oppositely facing longitudinal racks fixed on the middle bar and extending in opposite directions from the central portion thereof, longitudinal racks mounted on the intermediate and end bars, a gear mounted on the middle bar and meshing on opposite sides with racks on intermediate bars, and a gear mounted on each intermediate bar next to the middle bar and meshing on opposite sides with racks on the middle bar and the next outer bar.

1,396,037. METHOD OF SOIL-TILLAGE. STEPHEN H. GARST, Moline, Ill. Filed Nov. 22, 1920. Serial No. 425,680. 5 Claims. (Cl. 55—77.)



1. The method of tilling soil which consists in forming in the surface of the soil a series of relatively narrow furrows which are separated one from the other by ridges of soil projecting above the original level of the surface of the soil, and in packing the sides of said ridges to enable them to withstand the action of the elements.

1,396,038. SCRAPER AND LEVELER. GEORGE A. GHERST, Buhl, Idaho. Filed Apr. 17, 1920. Serial No. 374,647. 7 Claims. (Cl. 37—8.)

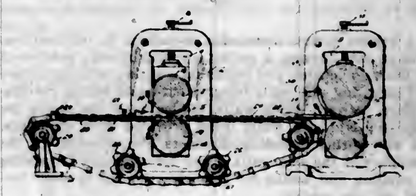


1. An earth working machine of the character described including a frame, rotatable members supporting the frame from the ground, blade supports pivoted to the frame on each side thereof for vertical movement, a blade carried by said blade supports and vertically movable therewith, means for rocking the blade supports to thereby raise or lower the blade, the blade being pivotally connected to the blade supports for independent oscillation on its own axis, and means whereby the angle of the blade may be adjusted.

1,396,039. TOY CRADLE-BED WAGON. KARL HALM, Los Angeles, Calif. Filed May 27, 1920. Serial No. 384,690. 4 Claims. (Cl. 46—35.)

1. A toy comprising a knock-down frame consisting of side members; end members removably connected to said side members; and a removable base comprising a bar extending lengthwise of said frame and removably resting upon said end members and cross bars pivoted to said bar and supported by said side members so that turning of said cross bars upon their pivots will disengage the same from said side members.

1,396,040. LOOP-TAKER-ACTUATING MECHANISM FOR SEWING-MACHINES. PARK A. HESS, Hillside, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Sept. 20, 1919. Serial No. 327,377. 10 Claims. (Cl. 112—182.)



1. In a sewing machine, the combination with an overhanging arm, a driving shaft supported thereby, a crank carried by said shaft, an oscillating shaft, a stitch-forming mechanism comprising a needle and a loop-taper adapted to take a loop of thread from the needle and distend the loop, of means connected with the said oscillating shaft for actuating said loop-taker whereby the movement thereof is retarded at a predetermined time to permit the needle to rise above the work before substantial distension of the loop begins, said means including a two-part pitman composed of pivotally connected sections of which one is connected to the crank on the main-shaft and the other to a motion converting mechanism linked to an arm carried by said oscillating shaft.

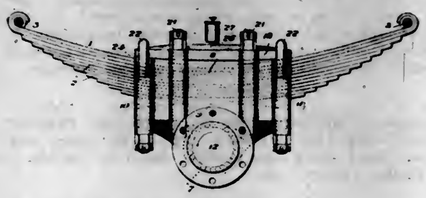
1,396,041. COLLAR-LINK. ROBERT W. JOHNSON, Chicago, Ill. Filed Feb. 4, 1921. Serial No. 442,462. 1 Claim. (Cl. 24—87.)

A device of the character described, comprising a pair of hooks having shanks which are provided at their inner ends with interlocking eyes which loosely link the shanks together, the bills of the hooks being at the outer ends of the shanks and extending rearwardly therefrom.

1,396,042. METHOD AND MACHINE FOR PRODUCING METALLIC WEDGES. PHILIP W. JONES, Newark, Ohio. Filed June 1, 1920. Serial No. 385,406. 5 Claims. (Cl. 80—26.)

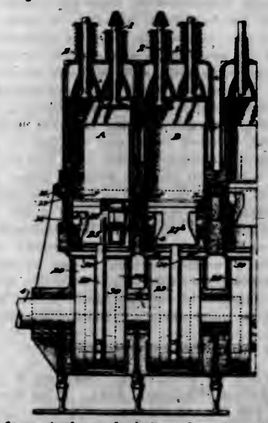
5. In a machine for producing metallic wedge members, a pair of relatively vertically arranged horizontally journaled thickening rolls, said rolls being provided with registering annular peripheral grooves, a pair of forming rolls spaced longitudinally from the thickening rolls and journaled for horizontal rotation, a guide arranged in advance of the thickening rolls, an endless conveyer coöperative with said guide and capable of passing between said thickening rolls, said conveyer serving to feed substantially trapeziform stock pieces arranged on edge within said guide and between said thickening rolls and into the grooves thereof, a guide situated between said thickening and forming rolls and capable of receiving the stock pieces discharged from said thickening rolls, said grooves serving to produce rounded edges upon said stock pieces to permit the same to lie on the sides thereof while passing along said last named guide, said conveyer serving to force the pieces longitudinally of said latter guide, and at least one of said forming rolls being provided with a wedge forming recess capable of receiving said stock pieces discharged from the latter guide and capable thereby of causing said pieces to assume substantially the shape and configuration of said recess.

1,396,043. RAIL CONNECTION. NICKLOS S. KEMP and HENRY J. KAUTH, Washburn, Iowa. Filed May 2, 1921. Serial No. 466,116. 3 Claims. (Cl. 238—243.)



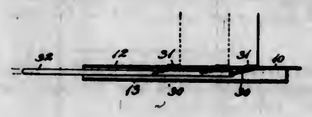
1. In a rail connection, the combination with meeting rails, of angle-plates overlying the webs and flanges of

the rails across the rail-joint, the webs of the rails having lugs, the angle-plates having elongated longitudinally-directed sockets longer than the diameter of and receiving, said lugs, clamps for holding said angle-plates upon



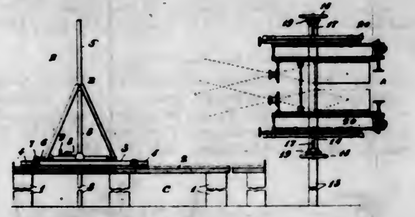
said rails, the feet of the angle-plates and the underlying parts of the rail flanges having registering slots, and wedges secured adjustingly in said slots and bearing against the abutting faces of said clamps.

1,396,044. VEHICLE-SPRING SUSPENSION. WILLIAM BELL LOWE, New York, N. Y. Filed Nov. 16, 1918. Serial No. 262,842. 1 Claim. (Cl. 267—52.)



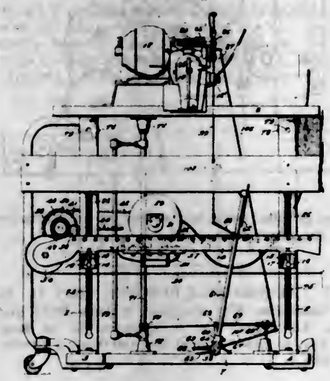
A vehicle spring suspension including, in combination, with an axle housing, a spring, a spring housing positioned on the axle housing and including a spring bearing-surface and including side walls integral with said spring bearing-surface, between which walls, the leaves of the spring are disposed, said side walls being provided with shoulders, the said spring including shoulders complemental to the shoulders in the side walls, a cap for retaining the spring in position and means for retaining the cap in close contact on the spring.

1,396,045. INTERNAL-COMBUSTION ENGINE. GRENVILLE MELLEN, Cranford, N. J. Filed Sept. 11, 1918. Serial No. 253,630. 6 Claims. (Cl. 123—60.)



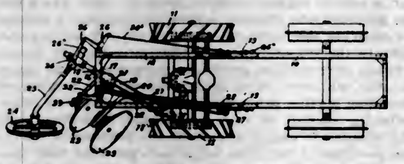
1. In a four stroke-cycle internal combustion engine of the crank-case compression type including a compression space in open communication with the end of both cylinders, a crank-shaft in the compression space, pistons connected to the crank-shaft in the same angular relation, inlet and exhaust valves in the upper portion of the cylinders, the combination, in each cylinder, of two ports spaced from each other in axial direction, a sleeve valve having two ports spaced in axial direction and adapted to register with the ports of the cylinder, a casing surrounding the sleeve valve and defining a passage intermediate the ports of the sleeve valve, gear mechanism for actuating the sleeve valve to periodically bring the ports in the sleeve valve and the cylinder in registry, all said parts being so related that compressed gas is admitted from the compression space into the cylinder when the piston is near the end of the suction stroke.

1,396,046. TOY THEATER. EDWARD S. MOORE, Brooklyn, N. Y. Filed Feb. 1, 1919. Serial No. 274,576. 1 Claim. (Cl. 46—49.)



A toy theater including a hollow stage having an opening in its back portion and formed of relatively superposed walls, objects movably supported upon one of said walls and provided with flanged bases, stock metallic clasps engaged with said base flanges, a handle shiftable between the walls of said stage and having a magnet coacting with said metallic clasps to move the objects over one of the walls of said stage, the free end of the handle being extended from the open side of the stage, as and for the purpose specified.

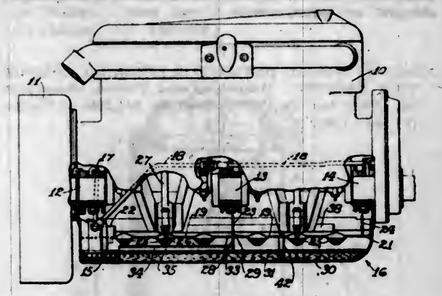
1,396,047. METHOD OF PHOTOGRAMMETRIC SURVEY AND APPARATUS THEREFOR. UMBERTO NISTRI, Rome, Italy. Filed Sept. 22, 1920. Serial No. 412,025. 4 Claims. (Cl. 88—24.)



1. The method of photogrammetric survey which consists in taking two negatives of the ground to be surveyed, developing and then arranging them in the position and orientation occupied by them in respect to the ground at the moment of the exposure; projecting the images of the said two negatives thus placed through lenses having the same focal length as the photographic lenses, receiving the images of the said two negatives upon a movable screen representing a plane of the space; moving the screen so as to correspond successively to several planes of the space selected according to a given law seeking in each position of the screen and marking thereon the places of the points the two images of which coincide, the said points being for each position of the screen the image on same of the line along which the corresponding plane of the space intersects the ground.

1,396,048. FILLED-SACK-SEWING APPARATUS. FREELAND W. OSTROM, Newark, and IRVING F. WEBB, Elizabeth, N. J., assignors to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Feb. 8, 1918. Serial No. 215,997. 14 Claims. (Cl. 112—11.)

1. In a filled sack sewing apparatus, in combination, sack-conveying mechanism, manually operated means for controlling the operation of said sack-conveying mechanism, stitch-forming mechanism, work-controlled means whereby said stitch-forming mechanism is automatically brought into and normally maintained in operation for a definite period during the operation of said sack-conveying mechanism, and an emergency mechanism adapted to be brought into action to arrest and restore the operation of said stitch-forming mechanism during the normal operation-period of the latter.

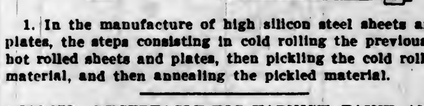


1,396,049. TRACTOR-PLOW. CHARLES OWENS, Chattanooga, Tenn. Original application filed Oct. 27, 1919, Serial No. 333,512. Divided and this application filed June 5, 1920. Serial No. 386,737. 4 Claims. (Cl. 97—30.)

1. In combination in a plow, a frame, a plow body, a furrow wheel in rear of the plow body to run in the furrow being formed, a spring for forcing said furrow wheel to its work downwardly and laterally of the furrow independently of the plow body, and means for applying tension to the said spring, said means consisting or a lever and a bell crank for stretching the spring in initially forcing the furrow wheel down, substantially as described.

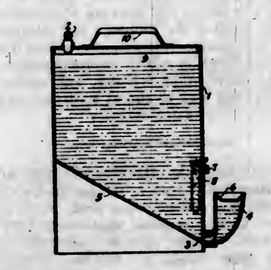
1,396,050. OIL-BASIN. HERMAN D. PALMER, Hartford, Wis., assignor to Kissel Motor Car Company, Hartford, Wis., a Corporation of Wisconsin. Filed May 14, 1919. Serial No. 297,036. 41 Claims. (Cl. 184—6.)

21. An oil basin having a bottom, a diaphragm spaced from said bottom, and forming a pocket open at one end only, a splash pan above said diaphragm, a transverse partition extending upwardly from the approximate center of said diaphragm through and above said splash pan, a central passage-way overlying said diaphragm and extending from said vertical partition longitudinally, means in the portion of said splash pan located above said passage-way for the overflow of oil adjacent the center of said partition, and means laterally spaced adjacent each



end of said partition for the overflow of oil from the other portion of said splash pan.

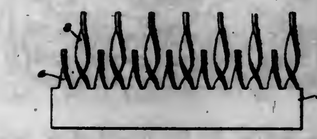
1,396,051. PROCESS OF COATING STEEL SHEETS WITH TIN. SAMUEL PEACOCK, Wheeling, W. Va., assignor, by mesne assignments, to Wheeling Steel & Iron Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Nov. 9, 1920. Serial No. 422,813. 5 Claims. (Cl. 91—70.2.)



1. The process of forming a coherent coating of tin on thin steel sheets which consists in preparing a solution of stannous chlorid mixed with an alum having an alkaline reaction adapted to restrain the ionic concentration of said stannous chlorid; immersing said sheets in a clean condition in said solution; and subjecting the latter to a steam pressure exceeding two atmospheres, substantially as described.

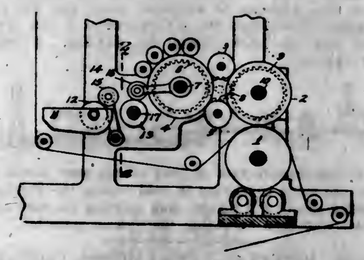
1,396,052. METHOD OF MAKING HIGH-SILICON SHEETS AND PLATES. ANDREW PINKERTON, Ben Avon, Pa., assignor to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Oct. 20, 1920. Serial No. 418,180. 3 Claims. (Cl. 148—4.)

1. In the manufacture of high silicon steel sheets and plates, the steps consisting in cold rolling the previously hot rolled sheets and plates, then pickling the cold rolled material, and then annealing the pickled material.



1,396,053. RECEPTACLE FOR VARNISH, PAINT, AND THE LIKE. FRANK WHEELER PLANE, London, England. Filed Jan. 27, 1919. Serial No. 273,217. 5 Claims. (Cl. 91—66.)

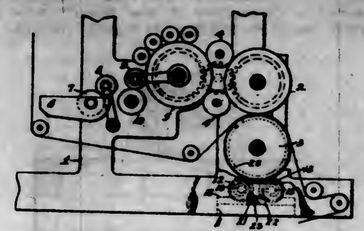
1. A receptacle for varnish, paint, and the like, comprising a storage receptacle having an exit and an inclined



bottom leading to said exit, a brush both detachably connected with said outlet and provided with internal drip flanges and a screw cap for closing said exit permanently attached to said receptacle.

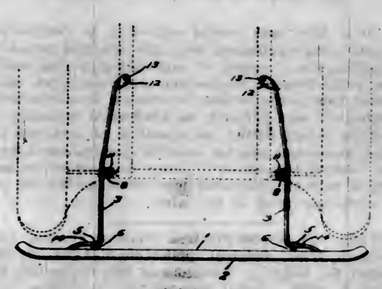
1,396,054. MIXING DEVICE FOR INTERNAL-COMBUSTION ENGINES. HAROLD CRACLE POTTER, Shreveport, La. Filed Jan. 31, 1921. Serial No. 441,299. 3 Claims. (Cl. 48—180.)

3. In a mixing device, a body portion, a plurality of relatively short fingers extending from the body portion, relatively long fingers disposed between the first mentioned fingers and supported in spaced relation therewith, the free ends of the fingers being cut at angles, and said fingers adapted to lie in close proximity with each other when the device is positioned.



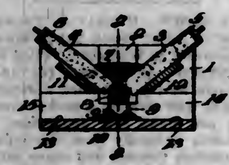
1,396,055. INKING MECHANISM FOR PRINTING-MACHINES. OTTO L. RAABE, Jersey City, N. J., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Original application filed Jan. 22, 1917, Serial No. 143,584. Divided and this application filed Jan. 2, 1920. Serial No. 349,007. 8 Claims. (Cl. 101—350.)

1. In a printing machine, the combination with a printing couple, of a distributing cylinder driven at the speed of the couple, a fountain roll running at considerably less speed than the speed of the couple, a roll intermediate the fountain roll and distributing cylinder, means for delivering ink from the fountain roll to the intermediate roll and from it to the distributing cylinder, and means whereby the intermediate roll may be run at a surface speed slower than that of the distributing cylinder.



1,396,056. IMPRESSION-ADJUSTING AND BLANKET-IRONING DEVICE. OTTO L. RAABE, Jersey City, N. J., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Original application filed Jan. 22, 1917, Serial No. 143,584. Divided and this application filed Jan. 2, 1920. Serial No. 349,009. 9 Claims. (Cl. 101—407.)

1. In a printing machine, the combination with a form and impression cylinder arranged vertically with the latter cylinder below, of a pair of rolls located below the cylinder and on opposite sides of its vertical axis and on



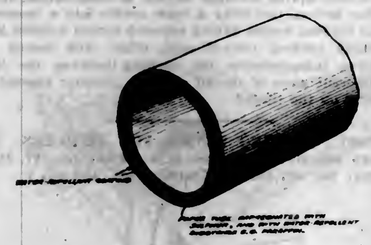
which the cylinder rests, and means for adjusting the rolls to vary the impression.

1,396,057. AUTOMOBILE-BUMPER. RAY G. RATTERMAN, Louisville, Ky., assignor to Dow Wire and Iron Works, Louisville, Ky., a Corporation of Kentucky. Filed Apr. 6, 1921. Serial No. 460,008. 1 Claim. (Cl. 293—55.)

A bumper for automobiles including a transverse bumper-bar, a pair of supporting arms, each of which has a resilient portion lying directly behind the said bar, a fastening for securing the outer end of each resilient portion of the arms to the transverse bumper-bar, a coil spring disposed between each resilient portion of the arms and the bumper-bar, the said arms being each provided with a rearwardly extending portion substantially parallel with each other, a fastening carried on each rearwardly extending portion and adapted to engage a part of the automobile, the rear end portions of the arms being each provided with means to receive a fastening, substantially as described and for the purposes set forth.

1,396,058. PROCESS FOR MAKING CARBID. JAMES HENRY REID, Pittsburgh, Pa., assignor to International Nitrogen Company, a Corporation of Delaware. Filed Sept. 21, 1917. Serial No. 192,487. 8 Claims. (Cl. 204—62.)

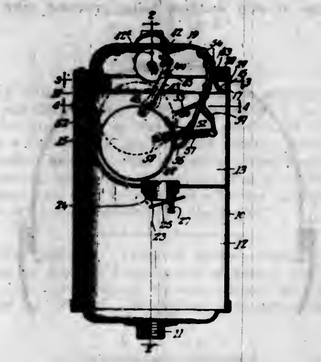
1. The continuous process of making a carbid which comprises feeding by gravity to a zone of reaction coked



material composed of carbon and a metal oxy-compound, and removing from such zone by gravity the molten carbid substantially as rapidly as produced.

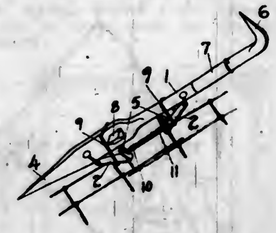
1,396,059. COLLAPSIBLE SHEET-METAL OVEN. HARVEY B. REPPETTO, Wheeling, W. Va., assignor to Whitaker-Glessner Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Nov. 19, 1920. Serial No. 425,074. 5 Claims. (Cl. 126—275.)

1. A collapsible sheet-metal oven comprising front and rear walls, end walls hinged at their opposite lateral edges to said front and rear walls, a top hinged to said rear wall and having downturned front and lateral edge flanges providing seating channels for the reception of the upper edges of the front and end walls, respectively, a bottom hinged to said front wall and having upturned rear and lateral edge flanges providing seating channels for the rear and end walls, respectively, and means for releasably attaching said top and bottom to the front and rear walls, respectively.



1,396,060. WATERPROOF FIBROUS MATERIAL AND PROCESS OF MAKING THE SAME. GEORGE A. RICHTER, WALLACE B. VAN ARSDEL, and DONALD H. WHITE, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Sept. 13, 1919. Serial No. 323,624. 10 Claims. (Cl. 91—68.)

2. The herein described process of treating fibrous material, which consists in distributing sulfur throughout the body of said material, and then impregnating said material with a water-repellent compound which is solid at ordinary temperatures.

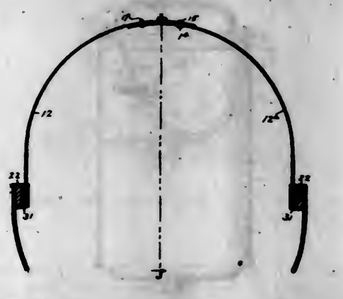


9. A rigid waterproof paper tube having distributed throughout the pores and interstices thereof both free sulfur and a waterproofing compound comprising bitumen.

1,396,061. LIQUID-SUPPLY SYSTEM. FRANK V. RESTUCCIA, Youngstown, Ohio, assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed June 1, 1920. Serial No. 385,865. 10 Claims. (Cl. 158—36.)

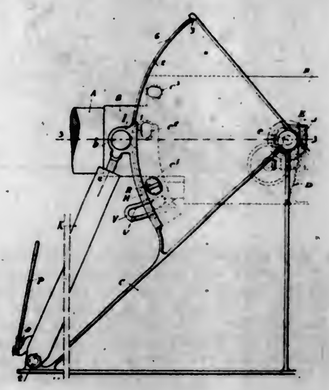
1. In a liquid supply system, the combination of a lower tank arranged with a liquid discharge, an upper chamber having a liquid inlet and provided with a suction port and a suction-relief port, valve means for alternately opening said ports, a float for actuating said valve means, said chamber discharging into said tank, a check valve adapted to close said last named discharge when a suction condition obtains in the chamber, and a spring tending to hold said check valve open, said check valve being pivotally mounted and having its pivotal-point adjacent its center of gravity.

1,396,062. WIRE-STRETCHER. AUTHER L. SANDERSON, Paluxy, Tex. Filed Mar. 16, 1921. Serial No. 452,819. 3 Claims. (Cl. 254—77.)



1. A wire stretcher, comprising a main lever bar; a plurality of spaced wire engaging hooks pivotally depending from one edge of said main lever bar, and adapted to grip the ends of the wire so as to draw same together when the lever bar is turned; and rings encircling the main lever bar and adapted to slide over the shanks of the wire hooks to hold the same in set position under the pull of the wires, so as to facilitate the splicing of said wires.

1,396,063. CANOPY-SUPPORT FOR CANOES AND OTHER BOATS. EMIL P. SCHMIDT, Boston, Mass. Filed June 24, 1920. Serial No. 391,286. 2 Claims. (Cl. 135—6.)

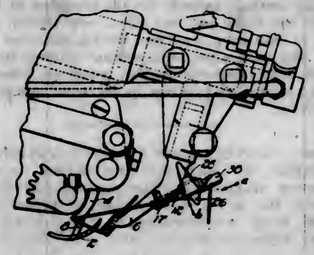


2. A canopy-supporting member for boats, comprising a resilient strip normally substantially straight, and adapted to be flexed to form a bow, the ends of which are engageable with socket on a boat, said strip being composed of a pair of normally straight resilient sections

having overlapping portions at the mid-length of the strip, and a pivot connecting said portions and located relatively near the extremity of one overlapping portion, and farther from the extremity of the other overlapping portion, said pivot permitting one section to swing relatively to the other to longitudinally contract and extend the strip, one of said sections being provided with a stud

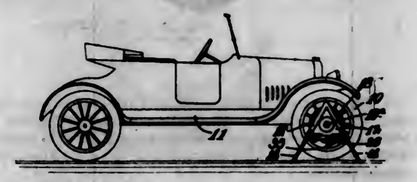
spaced from said pivot, and the other section being provided with a stud-receiving orifice, the said stud and orifice being arranged to be held in engagement with each other by the resilience of the sections, and prevent the independent swinging of either section, the form and arrangement of the sections and pivot being such that the strip is substantially straight when longitudinally contracted.

1,396,064. APPARATUS FOR INCREASING THE RANGE OF ELEVATION IN SINGLE-TRAIL GUNS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed July 21, 1920. Serial No. 397,946. 19 Claims. (Cl. 89—40.)



1. In apparatus for extending the limits of elevation of guns, a mounting for the gun and cradle including opposite cheek plates, a single member having bearings for both cradle trunnions mounted to move between the cheek plates and in sliding engagement therewith in an arc of a circle concentric with the axis of the actuating pinion of the elevating sector, and means for raising and lowering the single member to move simultaneously both trunnions to vary the elevation of the gun independently of the pinion and sector mechanism.

1,396,065. SANITARY CAN. HERBERT SCHRADER, Wheeling, W. Va. Filed Jan. 27, 1920. Serial No. 354,428. 1 Claim. (Cl. 220—42.)



In a can, a body having a head formed with an inclined part which extends downwardly from the top of the body, the lower end of the inclined part being extended downwardly and then substantially parallel to the plane of the top of the body and then upwardly to form a relatively shallow channel, and a cap having a downwardly facing channel receiving the upwardly extending part of the head and having the lower edge of the outer wall defining the channel flared outwardly to overlie the bottom of the channel of the head in spaced relation thereto and in spaced relation to the lower terminal of the inclined part so as to allow an instrument to be engaged with the inclined part of the head and with the flared part of the cap so as to enable removal of the latter.

1,396,066. THREAD GRIPPING AND CUTTING DEVICE FOR SHOE-SEWING MACHINES. THOMAS H. SEELY, Malden, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 2, 1916. Serial No. 129,093. 11 Claims. (Cl. 112—252.)

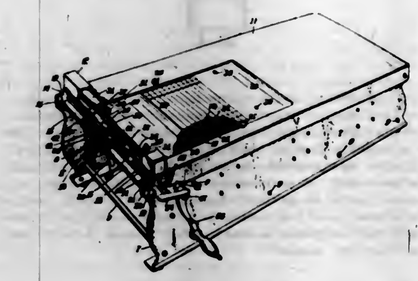
1. A shoe sewing machine, having, in combination, stitch forming devices including a hook needle and a looper, a thread holding device having opposed thread holding jaws yieldingly pressed toward each other, and means for adjusting independently the opening between the jaws for different sizes of thread and the pressure exerted by the jaws on the thread.

1,396,067. LOCKING DEVICE FOR VEHICLES. EDWARD SETKOWSKI, Clifton, N. J. Filed Jan. 17, 1921. Serial No. 437,782. 6 Claims. (Cl. 188—31.)

1. A device of the class described, comprising a member adapted for mounting on the wheel of a vehicle, a pair of

stakes adjustably carried by said member and inclining one downwardly and forwardly and the other downwardly and rearwardly, and means for locking said stakes in adjusted positions.

1,396,068. VULCANIZER-IGNITER. HARRY A. SHEETZ, Jr., New York, N. Y. Filed Nov. 16, 1920. Serial No. 424,344. 5 Claims. (Cl. 18—18.)

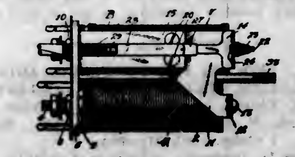


1. In a vulcanizer igniter, the combination with a fuel element, of a receptacle for the same, and means projecting from the receptacle into an opening within the fuel element for igniting the fuel element.

1,396,069. VULCANIZER. HARRY A. SHEETZ, Jr., New York, N. Y. Filed Nov. 16, 1920. Serial No. 424,345. 4 Claims. (Cl. 18—18.)

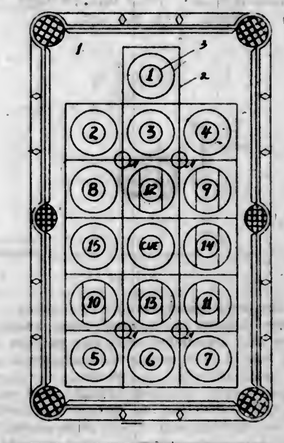
1. In a vulcanizer, the combination of a fuel element and a receptacle for said fuel element, a roughened surface on the interior of said receptacle, the said fuel element removed to provide a pocket and passageway for a match to be abraded upon said roughened surface.

1,396,070. PAPER-FEED DEVICE FOR AUTOGRAPHIC REGISTERS. WALTER C. SHOUP, Millburn township, Essex county, and WALTER E. OLIVER, Woodcliff-on-Hudson, N. J., assignors to Autographic Register Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 19, 1916, Serial No. 126,622. Renewed June 18, 1921. Serial No. 478,720. 56 Claims. (Cl. 282—21.)



1. In a device adapted to regulate the feeding of a strip of fabric through the medium of an aperture therein, means for advancing said strip comprising substantially annular means which, upon engaging said aperture, render said advancing means inoperative to continue said advancement.

1,396,071. ARTIFICIAL TOOTH. AMOS H. SIDLEY, Ship Bottom, N. J. Filed Apr. 7, 1921. Serial No. 459,353. 3 Claims. (Cl. 32—9.)



1. An artificial tooth comprising a porcelain facing and a metallic backing, said facing having a longitudinal posterior projection in the lower portion of which are formed a plurality of spaced-apart contact shoulders, the longitudinal edges of said projection being undercut and said backing being recessed and grooved to interlock with said projection and present spaced-apart portions which contact with the shoulders of the facing.

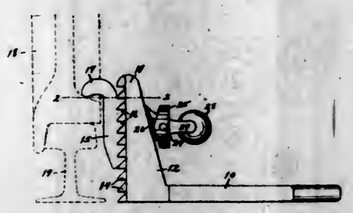
1,396,072. RELAY. CHARLES SPARKS, Chicago, Ill., assignor to Kellogg Switchboard & Supply Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1917. Serial No. 198,401. 13 Claims. (Cl. 200—102.)

1. A relay structure of the character described including a pair of electromagnets provided with cores, a connecting bridge to which one end of said cores are secured, a strip of magnetic material firmly connected to the free end of one of said cores, and an armature fulcrumed upon said magnetic strip extending across and in front of the free end of the other of said cores.

1,396,073. GAME. OCTAVE J. ST. PIERRE, Chicago, Ill. Filed Jan. 24, 1920. Serial No. 353,701. 2 Claims. (Cl. 46—59.)

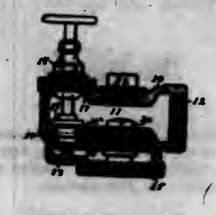
1. A game comprising a representation of a pool table having squares representing the pool balls, and projecting means for distinctively marking said table to determine an individual play.

1,396,074. MOTOR-VEHICLE DRIVING MECHANISM. JOHN A. STUMPENHORST, Wilkinsburg, Pa. Filed Aug. 14, 1920. Serial No. 403,564. 9 Claims. (Cl. 192—48.)



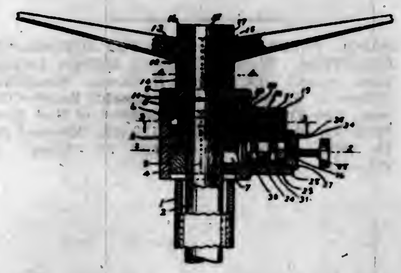
1. A power transmitting device for automotive vehicles comprising a driving means, a driven means, a plurality of shafts and gear wheels located therebetween and operatively associated therewith, a main clutch located between said driving means and one of said shafts, a multiple-jaw clutch located between said driven means and another of said shafts and embodying means on said clutch jaws for permitting the meshing thereof only when the speed of the clutch member connected to said driven means is substantially equal to, or less than, the speed of the clutch member connected to one of said shafts.

1,396,075. PROCESS FOR PRODUCING IMITATIONS OF GALALITH, CELLULOID, AND THE LIKE. HANS STEINER, Vienna, Austria, assignor to Julius Schmid, New York, N. Y. Filed Nov. 26, 1920. Serial No. 426,603. 1 Claim. (Cl. 91—68.)



A process for producing imitations of galalith, celluloid and so forth, consisting in soaking a smooth-surfaced piece of wood in glue, coating the same with any desired color which has been intimately mixed with an excess of cellulose-ester, applying any kind of design or effect to it, coating the same with cellulose-ester, smoothing and finally polishing the latter.

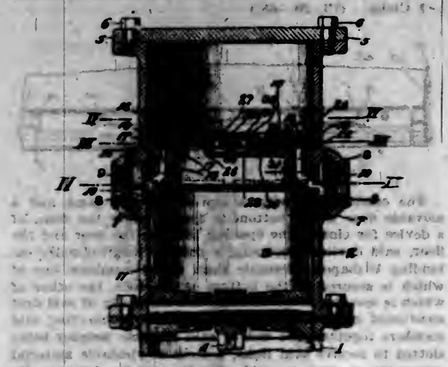
1,396,076. ADJUSTABLE WHEEL-ANCHOR. ELZA S. STOTTS, Des Moines, Iowa, assignor to The Railway Signal & Equipment Company, Des Moines, Iowa, a Corporation of Maine. Filed Mar. 10, 1921. Serial No. 451,297. 4 Claims. (Cl. 254—33.)



1. An adjustable wheel anchor, comprising a base, an arm formed thereon, a holding head adapted to be mounted on and adjustable vertically of said arm, said head being formed with means for engaging a car wheel, said head and arm being formed with overlapping openings, a headed stem extended through said openings and having its head contacting one face of said holding head, a head on the opposite end of said stem spaced from said arm, and a cam disk loosely mounted on said stem between said arm and the last named head, said cam disk having a smooth face in contact with said arm and a wedge face adapted to contact with the last named head, together with a lever formed on said cam disk and adapted for use in manually turning the same.

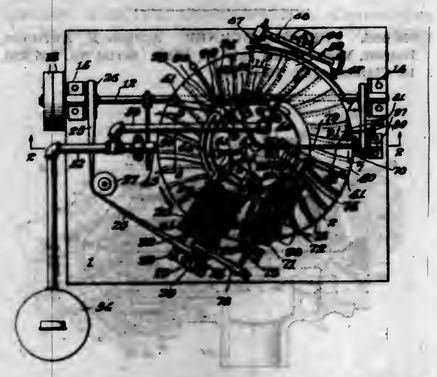
1,396,077. DRAIN-VALVE TRAP. ELZA S. STOTTS, Des Moines, Iowa, assignor to The Railway Signal & Equipment Company, Des Moines, Iowa, a Corporation of Maine. Substitute for abandoned application Serial No. 833,811, filed Mar. 31, 1914. This application filed July 30, 1921. Serial No. 488,698. 1 Claim. (Cl. 137—103.)

A self-cleaning drain-valve trap, comprising a body formed with a chamber closed at one end, an entrance opening from the exterior of the body directly to said chamber at its opposite end, an extension on said body formed with a port, an exit opening in the bottom of said port, an automatic drain valve between said chamber and port in alinement with said exit opening, an opening in said body above and in alinement with said drain valve, means for closing the latter openings, and a valve-controlled passage between said chamber and port at one side of said drain valve and adjacent the closed end of said chamber.



1,396,078. VEHICLE STEERING MECHANISM. LOUIS C. VANDERLIP, Elkhart, Ind. Filed May 24, 1920. Serial No. 383,715. Renewed Apr. 21, 1921. Serial No. 463,357. 10 Claims. (Cl. 76—120.)

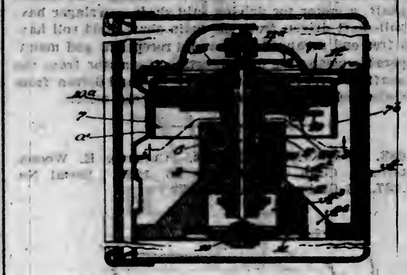
1. In a device of the class described, in combination, a steering post; a driver hub thereon; a steering element carrier rotatably encompassing said driver hub; means for releasably locking said steering element carrier to said hub; disengageable detention means to prevent endwise movement of said carrier relative to said post; releasable means to prevent disengagement of said detention means; and lock controlled means to enable access to said last mentioned means to effect release thereof from said detention means.



1,396,079. AIR-PUMP. ROBERT WARNOCK, Bloomfield, N. J., assignor to Empire Cream Separator Company, Bloomfield, N. J., a Corporation of New Jersey. Filed Nov. 17, 1916. Serial No. 131,832. 4 Claims. (Cl. 230—32.)

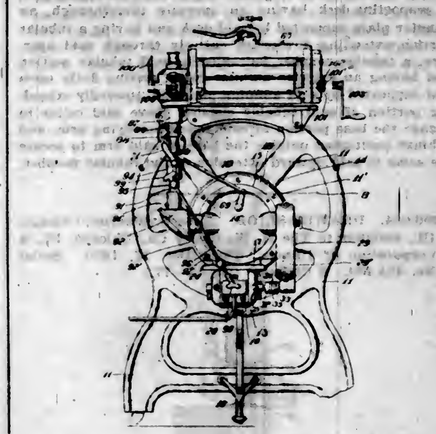
1. In apparatus of the character described, the combination of a cylinder having an inlet port in the side wall thereof between the ends of the cylinder, a piston reciprocating in said cylinder and having an elongated depression in the surface communicating at all times with said inlet port, a passage-way in said piston communicating

with said depression, an inlet valve governing the passage of fluid through said passage-way and an exhaust valve on said piston.



1,396,080. MACHINE FOR SNIPPING STRING-BEANS. ARTHUR P. WOLPE, Philadelphia, Pa. Filed Aug. 25, 1919. Serial No. 319,603. 10 Claims. (Cl. 146—11.)

1. In a machine for trimming or snipping off the ends of string beans, the combination of a traveling carrier provided with pockets upon its top side separated by ribs and arranged in a row lengthwise thereof and adapted to receive and support said beans, means for shifting the said beans transversely of said carrier into positions to have their opposite ends trimmed or snipped off, cutters for trimming or snipping off said ends, and brushes arranged at an angle to and extending transversely of said carrier, the bristles of the said brushes yielding as the ribs pass thereunder so that portions of the bristles of the brushes will occupy positions on opposite sides of the respective ribs, those on one side contacting with and holding the beans until the ends adjacent the brushes are snipped off.



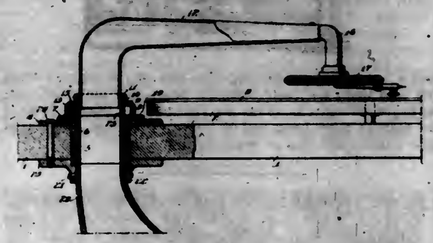
1,396,081. MAGNETIC SPEEDOMETER. ANDREW C. WOOD, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Oct. 16, 1920. Serial No. 417,450. 2 Claims. (Cl. 264—13.)

1. In a magnetic speedometer, in combination with a casing, a rotor mounted therein; a magnet device mounted on the rotor for rotation in a plane containing all the magnet poles; a field shunt member secured at one end on the rotor and extending in arcuate form around the axis of the rotor and opposite the magnet gap at one side of the zone of rotation of the magnet; a drag member mounted and biased for oscillation about the axis of rotation of the

motor in a plane at the opposite side of the magnet from the field deflector; said deflector being responsive to temperature changes to move its free end by flexure toward the magnet poles upon fall of temperature, and away from said poles upon rise of temperature.

1,396,082. POWER-DRIVE FOR WASHING-MACHINES. JAMES J. WOOD, Fort Wayne, Ind., assignor, by mesne assignments, to Hurley Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 25, 1918. Serial No. 246,647. 12 Claims. (Cl. 74—50.)

1. A washing machine main frame including an end-standard, and a power-and-gearing unit detachably mounted on said end-standard and comprising a base and a shaft to be driven, a motor and gearing for connecting the motor and the shaft to be driven, all carried by said base, and a supplemental foot secured to said standard and extending beyond the weight-center of the base-carried unit.



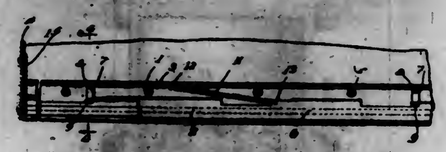
3. The combination with a cylinder washing machine having an end-standard, of a gearing base mounted on said standard, a motor mounted on the under side of said base, a drip hood overlying said motor, gearing carried by said base connected with said motor, and a shaft to be driven arranged for operation through said gearing.

4. Gearing for a cylinder washing machine including a shaft to be driven, a main shaft, connection to drive the former from the latter in either direction, reversing means including a shiftable lever 55, supporting means for

said parts, and a spring interposed between said supporting means and said lever to tend to hold the latter alternately in its extremes of position, said spring having linear limbs 61 and 62, and an interposed loop, all formed of a single piece of wire.

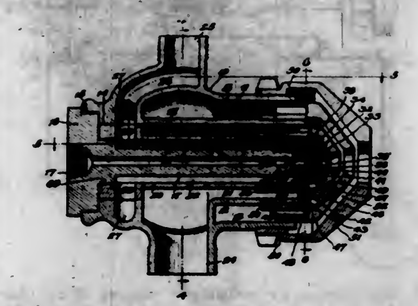
11. In a combined washing and wringing machine, a main shaft, a motor for driving said shaft, a wringer having a roll-shaft driven from the main shaft, said roll having its free end arranged for handle reception, and manually operable means for disconnecting the motor from the main shaft, whereby the latter may be hand-driven from the wringer roll-shaft without operating the motor.

1,396,083. TALKING-MACHINE. CLINTON E. WOODS, Waterbury, Conn. Filed June 26, 1920. Serial No. 392,137. 3 Claims. (Cl. 274—23.)



1. A talking-machine comprising a sound-conveying arm, a supporting-deck having an aperture therethrough, an annular plate supported by said deck and having a tubular portion extending downward entirely through said aperture, a tubular member journaled in said tubular portion and having an exterior annular collar resting flatly upon and supported by said annular plate, an upwardly-extending portion of said tubular member above said collar to engage the base portion of said sound-conveying arm, and a hinge positioned outside the bore of said arm to secure the same to said upward extension of the tubular member.

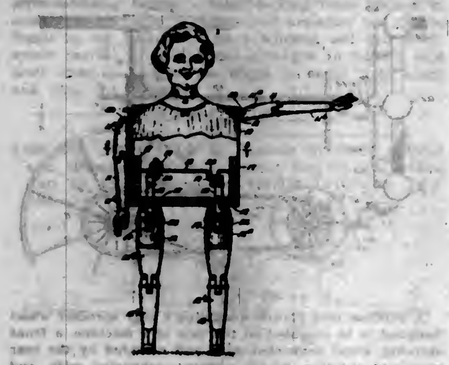
1,396,084. DRAWER-SLIDE. JOHN G. WRIGHT, Chicago, Ill., assignor to The D. W. Bosley Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1920. Serial No. 431,439. 6 Claims. (Cl. 45—77.)



6. The combination with a casing and a drawer, of a slide comprising a pair of members, one of said members having a tongue longitudinally thereof, the other of said members having a pair of spaced, upstanding parallel ribs longitudinally thereof forming a groove therebetween, one of said members being adapted to be secured to the side of the casing so that the ribs are positioned in vertical planes, the other of said members being adapted to be secured to the side wall of the drawer along the bottom edge thereof, so that said tongue is positioned in a vertical plane intermediate the vertically positioned pair of ribs of the second member, whereby the first member may ride upon and be supported by the ribs of the second member.

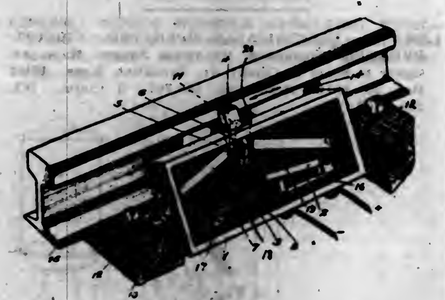
1,396,085. DOOR-STRIP. JOHN G. WRIGHT and HARRY F. BENNETT, Chicago, Ill.; said Bennett assignor to said Wright. Filed Jan. 20, 1921. Serial No. 438,616. 1 Claim. (Cl. 20—68.)

The combination with a stationary door jamb and a movable door whose bottom is spaced above the floor, of a device for closing the opening between the door and the floor, said device comprising a pair of longitudinally extending U-shaped telescopic sheet metal members, one of which is secured to the bottom of the door, the other of which is movable longitudinally and vertically of said first mentioned member, spaced links pivotally connecting said members together, the web of said movable member being slotted to receive said links, a strip of yieldable material removably secured in said movable member between its opposed inner walls and projecting there beyond, a spring connecting said members and urging said movable member to swing in an arc upwardly and longitudinally about the pivots of said links to project its end beyond said door and into the path of the door jamb, whereby said projecting portion may be engaged by the door jamb during the door closure to effect the closing of said opening.



1,396,086. FUEL-OIL BURNER. ALFRED R. ANTHONY, Detroit, Mich. Filed July 20, 1918. Serial No. 246,930. 13 Claims. (Cl. 158—76.)

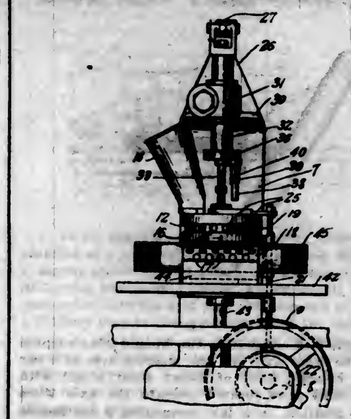
5. A burner of the character described including in combination, a fuel tube, a fluid conduit around the tube, a pair of caps on the end of the tube constructed and arranged to direct conical streams of fluid into the jet issuing from the tube and means on each cap to effect a whirling motion of the fluid.



1,396,087. WALKING TOY. ROBERT IVAN ARMBRUSTER, Philadelphia, Pa. Filed Aug. 13, 1920. Serial No. 403,264. 1 Claim. (Cl. 46—40.)

A walking doll comprising a body having a bottom portion, vertically swingable arms pivoted upon the sides thereof, either arm serving as a handle whereby to effect manipulation of the doll, the bottom portion of the body being formed with spaced slots, lever members extending through said slots and pivoted at the lower end of the body, a horizontally disposed shaft within the body formed with oppositely extending crank portions, links pivotally connected with the respective crank portions and jointed legs pivoted upon the lower ends of said lever members, said legs being provided with knee joints, the upper ends of the legs being slotted for the reception of the lower ends of said lever members, said slots defining abutment

shoulders, and the lower ends of the levers being formed with extensions engageable with said shoulders whereby to limit swinging movement of the legs.

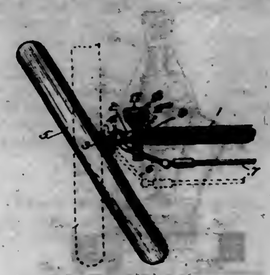


1,396,088. ELECTRIC SIGNAL-SWITCH. CHRISTOPHER C. BAGNELL, Duluth, Minn. Filed Apr. 22, 1921. Serial No. 463,717. 3 Claims. (Cl. 246—250.)

1. A railway signal switch comprising in combination with a rail, a box permanently mounted adjacent the rail, a vertically operative knife blade switch within the box, means for normally holding the blade of the switch in open position, a vertically reciprocal plunger above the switch, means for normally holding the plunger in vertical position out of engagement with the switch and means whereby when the plunger is operated by a wheel traversing the rail in one direction it will close the switch, but when engaged by a wheel traveling in the opposite direction it will fail to close the switch.

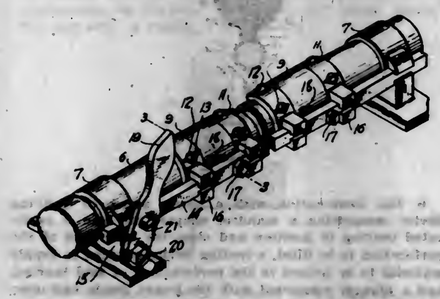
1,396,089. BEARING-FILLING MACHINE. LEONARD BARTLETT, Boston, Mass., assignor to Reliance Machine & Specialty Co., Boston, Mass., a Corporation of Massachusetts. Filed July 28, 1920. Serial No. 399,575. 12 Claims. (Cl. 18—5.)

1. A bearing filling machine comprising, means to hold a perforated bearing, a receptacle adapted to hold lubricating material, a carrier provided with pockets adapted to hold lubricating material, and means to move the pockets in said carrier from said receptacle to said bearing-holding means whereby lubricating material is conveyed from said receptacle to the perforated bearing mounted in said holding means.



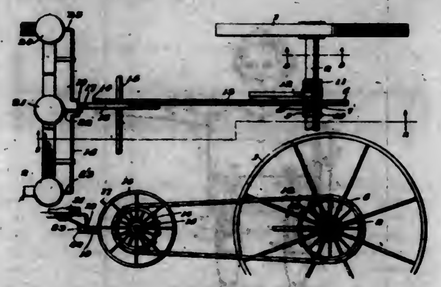
1,396,090. PUNCH-FILLER FOR BEARINGS. LEONARD BARTLETT, Boston, Mass., assignor, by direct and mesne assignments, to Reliance Machine & Specialty Co., Boston, Mass., a Corporation of Massachusetts. Filed Oct. 22, 1919, Serial No. 332,557. Renewed Jan. 17, 1921. Serial No. 437,966. 8 Claims. (Cl. 18—59.)

6. The combination with a power punch of a filling device comprising a mandrel adapted to hold a perforated bearing in position and close the inner end of the perforation to be filled, a feeding device adapted to supply material to be packed in the perforations of said bearing, and a plunger connected with the power punch and operable thereby adapted to pack the material in the perforations successively.



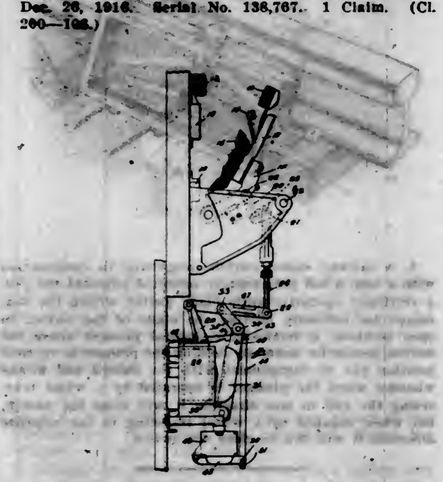
7. The combination with a power punch of a filling device comprising a mandrel adapted to hold a perforated bearing in position and close the inner end of the perforation to be filled, a hopper adapted to hold the material to be packed in the several perforations, a passageway leading from the hopper to the perforation to be filled, and a plunger connected with the power punch adapted to pack the material in said perforation, said plunger being adapted to close said passageway in its descent.

1,396,091. AUTOMOBILE-LOCK. James W. Barwick, Pinegark, Ga. Filed May 27, 1920. Serial No. 384,620. 1 Claim. (Cl. 70—90.)



An automobile lock comprising two hinged jaws adapted to surround the front axle and the steering arm of a car adjacent the knuckle joint of either front wheel with the hinge of said jaws located beneath the axle when the lock is in position, each jaw comprising a continuous bar, the front jaw being formed with an intermediate upright flat portion to bear against the front side of the axle, and upper and lower bowed portions to receive the flanges of the axle, the rear jaw having an intermediate continuous loop to engage the steering arm, the end sections of the rear jaw engaging about the flanges of the axle, the upper end of the rear jaw having an indentation to seat the knuckle member whereby the device is held rigidly on the axle and prevented from sliding movement thereon when an attempt is made to steer the automobile, and means for connecting the upper ends of said jaws above the axle, said means including a locking mechanism to prevent the separation of the jaws and consequently of the axle and steering arm whereby the steering arm is held immovable and steering of the automobile is made impossible.

1,396,092. SHOWER-PIPE. Arthur Eugene Binns, Mansfield, Mass. Filed Sept. 13, 1920. Serial No. 409,816. 8 Claims. (Cl. 239—58.)



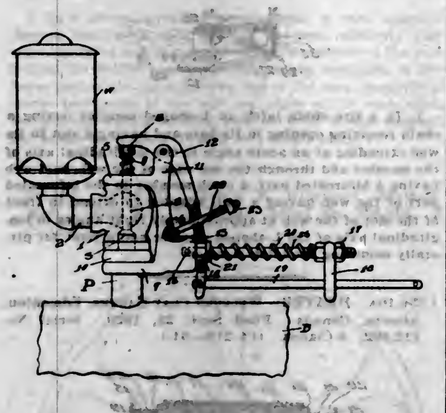
1. In a construction of the character described, a pipe, brackets for supporting said pipe, a bar longitudinally guided in said brackets, guides secured to said pipe and supporting said bar at points intermediate said brackets, a deflecting member held by two adjacent guides, said pipe having an outlet adjacent an edge of said deflecting member, and a pin and slot connection between said bar and said deflecting member whereby said deflecting member may be moved by said bar.

1,396,093. WIRELESS CORN-PLANTER. Benson Batterson, Odebolt, Iowa. Filed Apr. 6, 1921. Serial No. 459,590. 1 Claim. (Cl. 111—26.)

A wireless corn planter including a rear sprocket wheel designed to be mounted on the axle of a machine, a front sprocket wheel connected with and actuated by the rear sprocket wheel, a rotary element connected with and actuated by the front sprocket wheel and provided with a projecting tooth, feed boxes having dropping devices in the bottom thereof, a shaft or rod connected with said dropping devices, the shaft or rod being provided at a point opposite the rotary element with a loop, a lime or chalk box located between the feed boxes, a dropping device for said box having a lever extending beneath the loop of the shaft or rod and means for causing the projecting tooth of the rotary element to depress the loop and lever for operating the dropping devices.

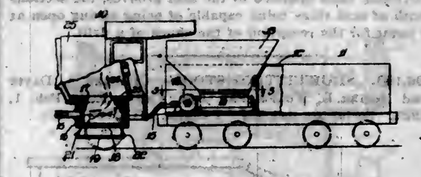
1,396,094. ELECTRICALLY-OPERATED CIRCUIT-BREAKER. George A. Burnham, Saugus, Mass., assignor to Sears B. Condit, Jr., Brookline, Mass. Filed Dec. 26, 1916. Serial No. 138,767. 1 Claim. (Cl. 200—168.)

An operating unit adapted for connection with the mechanism of an electric switch electrically to open and close it comprising a supporting frame, a closing coil carried thereby, an armature pivoted to said frame arranged in front of said coil and having a link-receiving portion at its free end, a switch-operating lever pivotally supported to said frame above said coil having an end



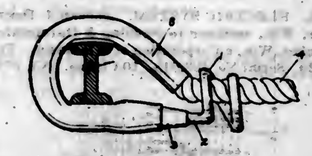
connection adapted to be connected with the switch mechanism, a link pivotally connected with said lever intermediate its ends and with the link-receiving portion of said armature, whereby to form with said armature a lever-operating toggle, a toggle-locking lever pivoted to said frame arranged to engage said armature to lock the toggle in set condition, and a tripping coil and mechanism carried by said frame arranged to remove said lever from its lock of the toggle to cause it to break and open the switch.

1,396,095. SWITCH-LOCK. Georges Aloysius Cokely and Michael David Crawford, Garrett, Pa. Filed July 29, 1921. Serial No. 488,338. 4 Claims. (Cl. 191—39.)



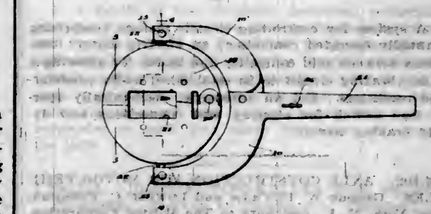
4. The combination with a switch including spaced terminals and a movable member therebetween having an opening, of a guide having a danger indicator, a slide mounted on the guide, a bolt movable therewith, supporting lugs upon the guide, spring means coöperating with the lugs and upon the slide for detachably supporting said slide in elevated position to conceal the danger indicator, said slide when released being movable downwardly to direct the bolt into the opening in the movable member of the switch.

1,396,096. STEAM-WHISTLE-OPERATING MECHANISM. Tommy J. Converse, Bellingham, Wash. Filed Mar. 13, 1920. Serial No. 365,521. 3 Claims. (Cl. 116—137.)



1. The combination with a boiler having an outlet, a valve casing connected to the outlet, and a whistle for receiving pressure from the casing, of a valve in the casing and having the stem projecting therebeyond, yielding means engaging the stem for holding the valve normally on its seat and shutting off the escape of pressure to the whistle, a lever having one end in position to actuate the stem and its other end extending toward the boiler, means connected to said lever and close to the boiler for actuating the lever to unseat the valve, a guide slidably engaged by the lever, and yielding means on the guide for holding the lever normally in a predetermined position.

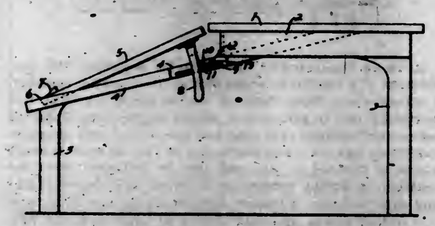
1,396,097. APPARATUS FOR UTILIZING LUMP-FUEL. Joseph H. Coorsa, Chicago, Ill. Filed July 20, 1918. Serial No. 245,808. 2 Claims. (Cl. 110—106.)



2. In an apparatus of the character described, the combination of a relatively broad and shallow mixing chamber, a screen above said chamber, means for pulverizing and delivering fuel to said screen, an air supply pipe, a flaring connection between said pipe and one end of said chamber, a delivery pipe at the opposite end of the chamber through which a mixture of air and fuel is delivered from the chamber, a flaring connection between said delivery pipe and said chamber, a blower, and means for operating said pulverizing means and said blower at predetermined relative speed ratios.

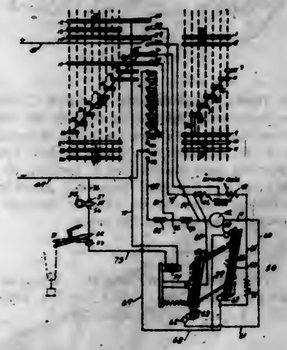
1,396,098. HOOK OR COUPLING FOR TOWLINES. O. D. Curtis, Kalamazoo, Mich., assignor of one-half to Richard H. Brignall, two-fifths to Glen E. Crane, Kalamazoo, Mich., and one-tenth to Ray Myers, Breedsville, Mich. Filed Mar. 16, 1921. Serial No. 452,647. 1 Claim. (Cl. 213—67.)

A spirally formed hook having a shank of substantial length offset from and disposed parallel to the axis of the spiral and terminating in a longitudinally disposed socket, a rope having its end secured in said socket, and a piece of hose embracing said socket and a portion of the rope adjacent the hook and coacting therewith, providing a loop portion adapted to surround an axle or the like and prevent the hook drawing against the same.



1,396,099. WELL-DRILL WRENCH. William H. Ellinger, Wichita Falls, Tex. Filed Feb. 14, 1921. Serial No. 444,773. 4 Claims. (Cl. 81—119.)

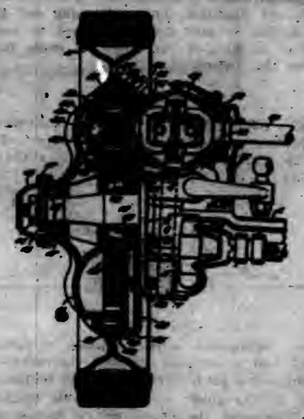
2. A well drill wrench comprising a yoke having one of its arms pivotally mounted and both arms carrying pivot members on the ends thereof, a ring consisting of a pair of sections pivotally connected together at a point adja-



cent the connection of the pivotal arm of the yoke and each section pivotally connected to an arm of the yoke, said ring having a circular groove in its upper face, a ring disposed above the first ring and grooved in its lower face, antifriction balls disposed in the said grooves, the sections of both of said rings being capable of being swung open at one point for the reception of the chuck of a drill.

1,396,100. SHOE-FITTING STOOL. CHARLES A. DAVIS and HOMER L. WOLFE, San Jose, Calif. Filed Feb. 1, 1921. Serial No. 441,584. 1 Claim. (Cl. 155—36.)

A shoe fitting stool comprising a supporting frame, a seat portion arranged thereon, a foot rest pivotally mounted on the forward portion of said frame and extending toward said seat portion, a toothed element depending from the lower surface of the free end of said foot rest and formed on an arc of which said pivotal mounting is the center, and a latch mounted to normally engage said toothed element but disengageable therefrom.



1,396,101. ELECTRIC SYSTEM. ALFRED J. DREYER, Milwaukee, Wis., assignor to Pawling & Harnischfeger Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 12, 1920. Serial No. 403,018. 10 Claims. (Cl. 172—179.)

4. A system for controlling electric motors, comprising a manually operated controller; an electric motor; connections between said controller and motor for allowing a dynamic braking circuit to be established under predetermined conditions; and an automatic, mechanically operated load switch for altering said connections and dynamic braking circuit.

1,396,102. AXLE CONSTRUCTION FOR MOTOR-VEHICLES. GEORGE W. DUNHAM and LOWELL C. FREEMAN, New York, N. Y., assignors to The Militor Corporation, New York, N. Y., a Corporation of New York. Filed June 16, 1919. Serial No. 304,666. 11 Claims. (Cl. 74—7.)

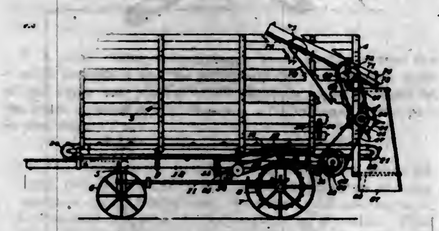
1. The combination, with an axle, of a wheel removably carried by the spindle of the axle, a gear secured to the wheel in concentric relation thereto, a shaft extending from beyond the inner side of the wheel through the plane of the gear, a pinion on the shaft for coöperation with the gear, and means supporting the shaft and including a bearing situated on the outside of the pinion, said bearing

being of a diameter greater than that of the minimum circle concentric with the bearing and touched by the teeth of the gear as they interengage with those of the pinion, said means being shiftable laterally to remove the bearing from the path of the gear when it is desired to withdraw the wheel from the spindle.

1,396,103. TIRE-CHAIN FASTENER. ALBERT W. EDMONDS, Jamestown, N. Y. Filed Feb. 28, 1920. Serial No. 361,930. 6 Claims. (Cl. 24—73.)

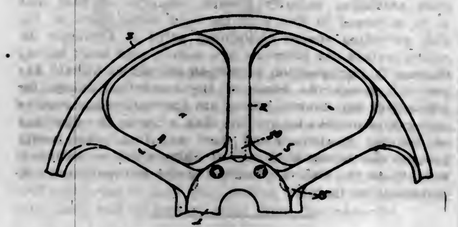
1. In a tire chain latch an L-shaped member having a chain receiving opening in its base and having a slot in its web extending at an acute angle to the longitudinal axis of the member and through the top edge of the web, said web having a bifurcated part, a latch member in the bifurcated part of the web having a wall adapted to extend in front of the slot of the web at approximately right angles to longitudinal axis of the L-shaped member and a rivet for pivotally mounting the latch member.

1,396,104. HEATER. WELDON CLAY GARNER, Edmonton, Alberta, Canada. Filed Sept. 25, 1920. Serial No. 412,802. 6 Claims. (Cl. 219—64.)



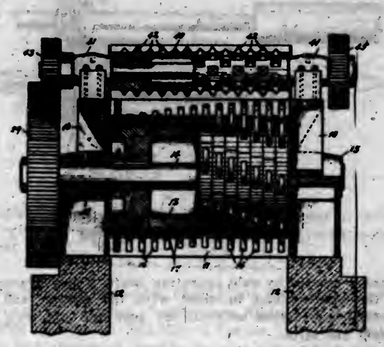
1. A heater of the character described comprising a casing having a wall intermediate of its height, a ring of heat retaining material above the wall, and a block of heat non-conducting material above the ring to thereby provide an air space at the center of the ring above the wall, and an electric heating means above the block.

1,396,105. ELECTRICAL HEATING ELEMENT. WELDON C. GARNER, Edmonton, Alberta, Canada. Filed Sept. 25, 1920. Serial No. 412,803. 1 Claim. (Cl. 219—64.)



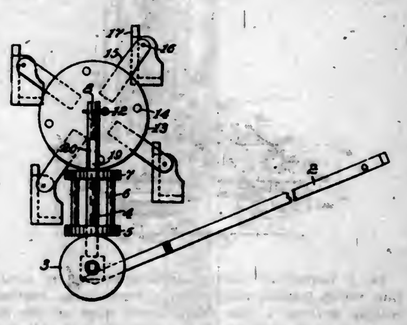
An electric heating element comprising upper and lower members of heat retaining material having parallel upper and lower surfaces and meeting on a plane parallel to said upper and lower surfaces, a resistance element located between the said members and embedded in them, a heat insulating strip extending around the periphery of the said members, a metallic band extending transversely to the line of meeting between the said upper and lower members and embracing the strip of heat insulating material and retaining it in position.

1,396,106. SPREADING DEVICE. DUDLEY GARST, Waterloo, Iowa. Filed Oct. 12, 1920. Serial No. 416,897. 5 Claims. (Cl. 275—5.)



1. In a straw spreader, running-gear, a rack mounted thereon having an open delivery end and relatively high sides, carrying-means movable along the bottom of the rack toward its delivery end, ejecting means mounted in the lower part of the open delivery end of the rack, supporting-means positioned at the rear top parts of the rack sides, and a reciprocatory rubbing body mounted in said supporting means to reciprocate only in a single plane.

1,396,107. WHEEL. MASON B. GIBERSON, Saginaw, Mich. Filed Nov. 15, 1919. Serial No. 338,215. 8 Claims. (Cl. 301—9.)

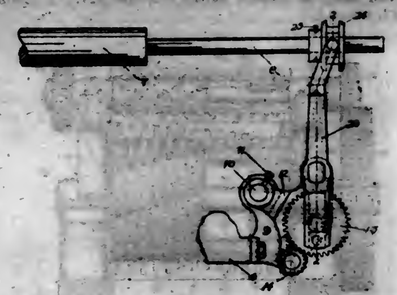


1. In a metallic vehicle wheel, the combination with a hub having a flange, of a spoke section mounted upon said hub, bolts for clamping said spoke section to said flange, and lugs upon said spoke section and embracing said flange to assist said bolts in securing said spoke section to said hub.

1,396,108. DISINTEGRATING-MACHINE. THOMAS GILMORE, Jr., Brooklyn, N. Y., assignor to General Briquetting Company, New York, N. Y., a Corporation of Maine. Filed Mar. 5, 1920. Serial No. 363,521. 1 Claim. (Cl. 83—6.)

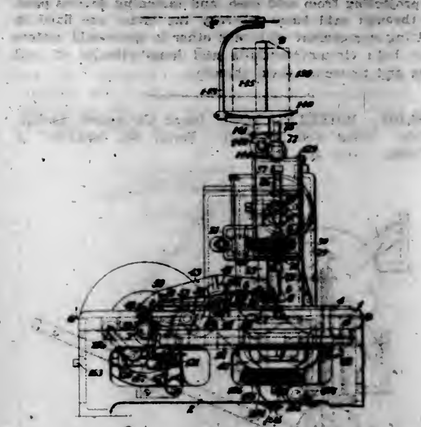
In a disintegrating machine, a rotary disintegrator comprising a drum, a plurality of individual cutters mounted upon said drum in predetermined relation to each other, said cutters each consisting of a base lying in surface engagement with said drum and an integral cutting member projecting from said base, and fastening devices passing through said bases whereby the latter are fixed in abutting engagement with each other to space said cutters apart both circumferentially and longitudinally of said drum and to secure them thereto.

1,396,109. WHEELED TOY. ISAAC GRIMSLEY, Lamar, Colo. Filed Feb. 7, 1921. Serial No. 443,134. 3 Claims. (Cl. 46—45.)



1. A device of the character described, comprising a carrying wheel, a rotatable member frictionally engaging said carrying wheel to be rotated thereby, another rotatable member frictionally engaging the first-mentioned rotatable member to be rotated thereby, a plurality of fixed arms projecting outwardly from the second-mentioned rotatable member, and a seat-shaped body pivotally suspended on each arm above the center of gravity of the body.

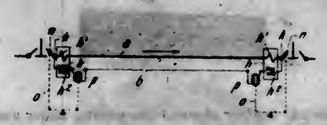
1,396,110. DISTRIBUTING-ROLLER FOR PRINTING-PRESSES. EDWARD O. HENTSCHEL, Cleveland, Ohio. Filed Mar. 1, 1921. Serial No. 448,798. 1 Claim. (Cl. 101—348.)



The combination of a distributing roller having a shaft and a grooved collar thereon, a fixed rod extending transverse to the axis of the shaft, a bracket supported on said

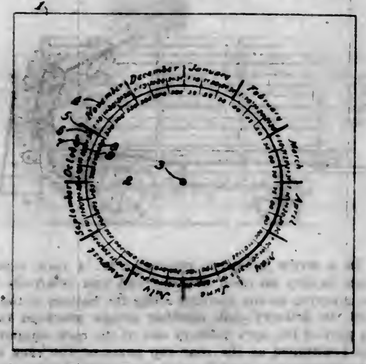
end, a lever fulcrumed on the bracket and having an operating connection with the collar, an operating shaft extending through and having a bearing in the bracket,

a pinion carried by said operating shaft, a gear journaled on the bracket and in mesh with the pinion, and an eccentric connection between the gear and the lever, to vibrate the latter.



1,396,111. BUTTONHOLE-SEWING MACHINE. GEORGE S. HALL, Strafford, N. H., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 6, 1913. Serial No. 788,201. 30 Claims. (Cl. 112—71.)

24. A buttonhole sewing machine having, in combination, stitch forming mechanism, a work clamp, buttonhole cutting devices, a cam shaft, three cams on the shaft, connections through which one cam closes the clamp, another cam gives a relative traverse to the clamp and cutting devices and another cam actuates the cutter, mechanism for driving the shaft and stopping it, mechanism thrown into operation by the cam shaft for actuating the stitch forming mechanism and work clamp to sew about a buttonhole after the cam shaft is stopped.



1,396,112. SYSTEM FOR PROTECTING ELECTRIC-CURRENT-DISTRIBUTING NETS AGAINST TEMPORARY INTERRUPTIONS. MARTIN HOCHSTADTER, Berlin, Germany, assignor to N. V. Lyn-Proctectie Maatschappij tot Exploitatie van Electro-Technische en Andere Octrooien, The Hague, Netherlands, a Dutch Corporation. Filed Oct. 20, 1914. Serial No. 867,683. 4 Claims. (Cl. 175—294.)

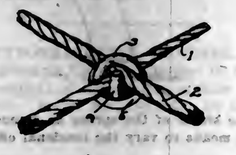
1. Method of automatically disconnecting defective branches from a network of mains, each branch comprising a main conductor and an equipotential control conductor, which consists in causing the main conductor of each branch to inductively produce during normal operation within the coöperating control conductor a potential displacement by means of which the releasing organs of

said branch are maintained in equilibrium and in causing an operation of said organs upon an alteration of the normal potential displacement owing to a defect, said operation effecting a disconnection of the defective branch from the net.

1,396,113. ADJUSTABLE TABULAR DEVICE. JENS S. HOLM, Cedar Falls, Iowa. Filed May 2, 1921. Serial No. 466,292. 1 Claim. (Cl. 40—113.)

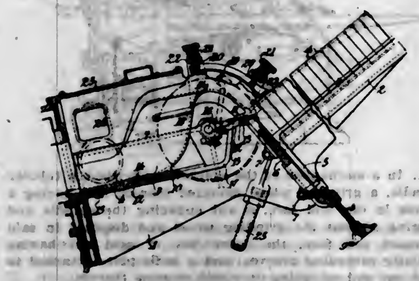
A weight determining device of the character described, comprising a disk having a plurality of marginal radial lines providing marginal spaces containing numerals in an increasing series to denote different weights, and a sheet on which said disk is positioned, said sheet having lines extending radially toward the edge of said disk to be arranged in line with the said radial lines on the disk providing spaces containing pairs of numerals denoting certain day intervals in a month, said sheet having thereon in juxtaposition to certain pluralities of said day interval spaces the name of the respective month for which said day interval spaces are appropriated in regular sequence of months around the disk, whereby the disk may be movably located on the sheet and then permanently non-movably mounted thereon to show a determination of weights on the disk relative to the day interval spaces in juxtaposition thereto.

1,396,114. RECOIL MECHANISM FOR GUNS. BRADFORD B. HOLMES, U. S. Army, assignor to Newton D. Baker, Secretary of War, United States of America, trustee. Filed Nov. 22, 1919. Serial No. 339,994. 9 Claims. (Cl. 89—43.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. In a recoil mechanism for guns, a recuperator mechanism of the hydropneumatic type comprising spaced

piston-heads, a spring compressed between said piston-heads and a valve extending through one of said piston-

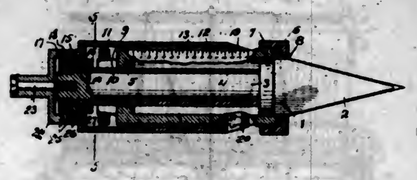


heads and adapted to be operated by contact with the other of said piston heads.

1,396,115. CABLE-CLAMP. FRED HOTCHNER, San Francisco, Calif. Filed Sept. 29, 1920. Serial No. 413,525. 4 Claims. (Cl. 24—123.)

2. A cable clamp comprising a plate having a seat for a cable thereon, a pair of projecting lugs on opposite sides of the cable seat and a U-bolt passing through holes in the plate symmetrically disposed with respect to the projecting lugs.

1,396,116. FEEDING DEVICE FOR ANNULAR BODIES. AXEL GUSTAF EMANUEL HULTGREN, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Aug. 10, 1918. Serial No. 249,368. 12 Claims. (Cl. 193—1.)

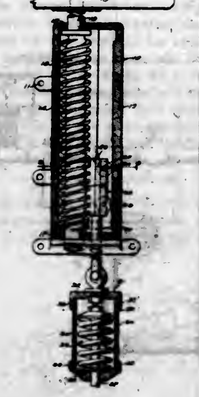


1. A device for feeding rings, comprising an inclined magazine adapted to support a stack of rings face to face at such angle that they slide to its lower end by gravity, automatic feeding means for successively pushing the lower end ring in its own plane obliquely out of the magazine, a discharging incline, and means for turning the ring from its oblique feeding plane to a vertical plane and delivering it onto such incline, so that the successive rings may roll by gravity away from the magazine.

1,396,117. PLUG-MICROMETER. LLOYD G. ILIFF, Kansas City, Mo. Filed Dec. 24, 1920. Serial No. 433,049. 8 Claims. (Cl. 33—178.)

1. In a micrometer, a member having a tapering measuring end portion, an externally threaded sleeve rotatable on said member and held from longitudinal movement thereon, an elongated member provided with a longitudinal

row of graduations and having threaded engagement with said sleeve, and a barrel member movable with said sleeve and encircling said graduated member and having a cir-

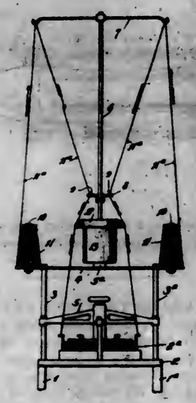


cumferentially graduated end portion arranged to coöperate with the said longitudinal graduations, substantially as set forth.

1,396,118. PROCESS OF TREATING NATURAL STONE. FRANK P. JACKSON, Youngstown, Ohio. Filed July 29, 1920. Serial No. 399,956. 2 Claims. (Cl. 91—70.)

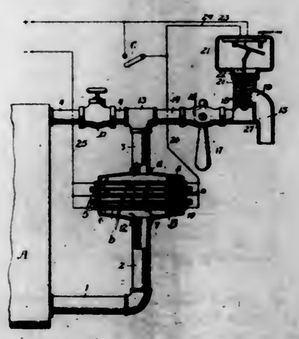
1. The process of treating natural stone which consists first in expelling the moisture therefrom by means of heat and then impregnating the whole body of the stone with a mixture of linseed oil, paraffin wax and paraffin oil in a heated state.

1,396,119. HAND-BRAKE. ROBERT EDWARD JACKSON, Princeton, W. Va. Filed May 3, 1920. Serial No. 378,590. 3 Claims. (Cl. 74—120.)



1. In a device of the character described, a casing embodying flanges, a multiple threaded worm mounted therein, said flanges being parallel to the axis of the worm, a rack block slidably mounted in said flanges and having teeth engaging said worm on one side, and an anti-friction element carried by said block on the opposite side thereof and contacting said casing.

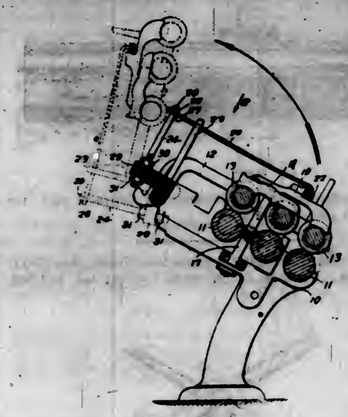
1,396,120. OILING DEVICE FOR FIBER SILK AND THE LIKE. JOSEPH JACOBS, Brooklyn, N. Y. Filed Oct. 23, 1919. Serial No. 332,693. 7 Claims. (Cl. 66—12.)



1. An oiling device for knitting machines comprising a cylindrical pot having a vertically disposed axial bore com-

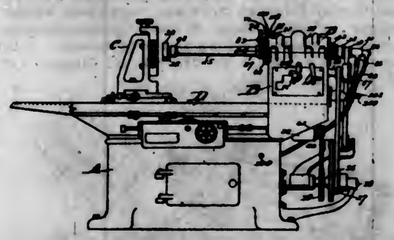
prising a cylindrical tube adapted to form a seat for the pot, a circular outwardly-extending marginal flange at the

rim thereof as and for the purpose specified, and means for feeding liquid to said flange.



1,396,121. ELECTRIC WATER-HEATER. RICHARD S. JACOBSEN, Chicago, Ill. Filed Aug. 22, 1917. Serial No. 187,512. 20 Claims. (Cl. 219—39.)

1. An electric water-heater comprising a hollow body provided with successive heating disks immersed in the water, means to connect said disks with a source of electric current, and connections whereby the water in passing through said device encounters said disks in succession.



1,396,122. DRAWING-ROLL MECHANISM FOR SPINNING-FRAMES. CHARLES H. JOHNSON, Salisbury, N. C., assignor of one-third to George O. Linn and one-third to Paul K. Dry, Landis, N. C. Filed May 28, 1921. Serial No. 473,552. 9 Claims. (Cl. 19—33.)

4. A drawing roll mechanism comprising the combination with a stand, a top bar pivoted thereto, and top rolls carried by the bar, of journals carried by the bar adapted to maintain the top rolls in journaled relation thereto, a spring carried by the bar and movable therewith, means

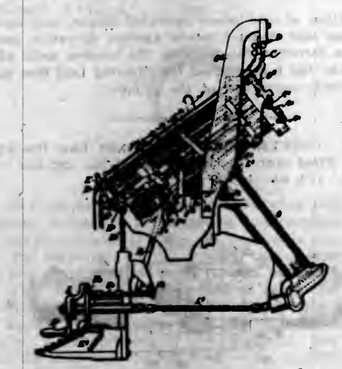
employing the stress of the spring as a tension upon the top rolls and means to vary the tensional efficiency of the spring.

1,396,123. INTERNAL-GRINDING MACHINE. HARRY F. JOSEPH, Davenport, Iowa, assignor, by mesne assignments, to B. L. Schmidt Company, a Corporation of South Dakota. Filed Aug. 7, 1920. Serial No. 401,088. 10 Claims. (Cl. 51—267.)

1. In a mechanism of the character described, a tubular spindle, a grinding wheel mounted thereon and having a recess in one end face, a nut engaging the spindle and bearing against the grinding wheel and disposed in said recessed end face, the outer face of said nut having radially extending grooves, and a baffle plate attached to said nut and extending over said recesses therein.

5. In a mechanism of the character described, a tubular rotatable spindle, bearings supporting the spindle, a fixed hollow head into which the rear end of the spindle projects and open at its opposite ends, anti-friction bearing elements disposed within the hollow head and supporting the rear end of the spindle, a plug detachably closing the rear end of the head, a nozzle carried by said plug and discharging into the bore of the spindle, and a tubular water connection operatively engaged with the nozzle.

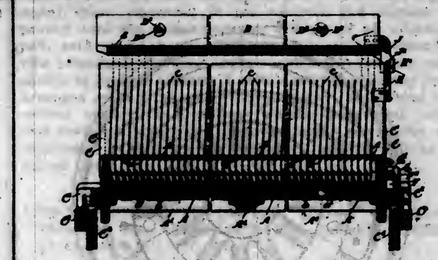
1,396,124. PROCESS OF MAKING SHOES. JOHN A. KELLY, Braintree, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 25, 1917. Serial No. 164,248. 9 Claims. (Cl. 12—142.)



1. In the art of making shoes, the improvement which consists in positioning a narrow fabric flap against one face

of an insole and next to the margin thereof, sewing the fabric flap to the insole by parallel seams extending crosswise of said insole to provide free portions of the flap at

spaced intervals, imposing the insole upon a last, lasting an upper, and stapling the marginal portion of the upper to the said free portions of the fabric flap, and thereafter attaching an outsole to the shoe.

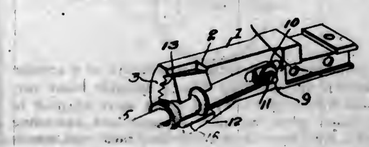


1,396,125. TYPOGRAPHICAL MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Nov. 8, 1919. Serial No. 336,582. 34 Claims. (Cl. 199—20.)

4. In a typographical machine, the combination of a channeled member, a shift-frame equipped with a plurality of channeled magazines supported therein with a capacity for relative play in a facewise direction, means for moving the shift-frame to bring one or another of the magazines into operative relation to said channeled member, and gage-devices upon which the selected magazine is caused to bank independently as it is brought into operative position and which adjust it facewise within the shift-frame to locate it in proper transverse registration with the coöperating channeled member.

1,396,126. TYPOGRAPHICAL MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Feb. 24, 1920. Serial No. 360,594. 24 Claims. (Cl. 199—39.)

4. In a typographical distributing machine, the combination of a channeled magazine, a channeled magazine-entrance movable into and out of operative relation to the magazine and relatively adjustable in an edgewise direction to locate the corresponding channels of said parts in proper lateral registration, and automatic means

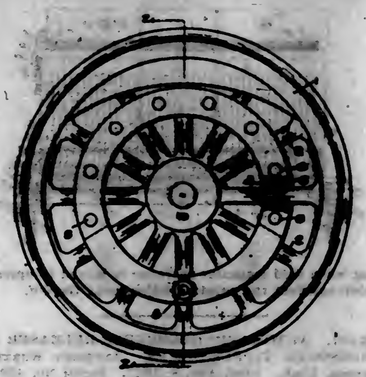


acting when said magazine-entrance is moved to operative position to effect the required adjustment thereof.

1,396,127. AUTOMATIC GOOSENECK-RELEASER FOR CROSSOVER TIPPLE-DUMPS. ANTHONY KUBITICH, Latuda, Utah. Filed Apr. 8, 1921. Serial No. 459,761. 1 Claim. (Cl. 104—252.)

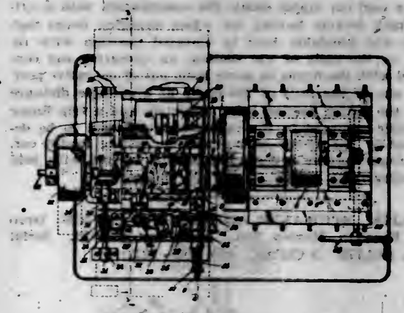
In a coal car tipple dump, the combination with a tilting track section having car wheel engaging horns normally and yieldably held in elevated position with respect to the rails of the section, an operating rod connected with the horns to move them out of operative position, one of the rails of the dump at a suitable distance from the tilting section being rabbeted, and a trip finger pivotally mounted in the rabbet and arranged to be depressed by the wheels of the next succeeding loaded car, said finger having a depending arm connected with said operating rod.

1,396,128. STUB-AXLE ADJUSTMENT DEVICE. OTTO E. KOPPLIN, Marion, Tex. Filed Feb. 3, 1921. Serial No. 442,175. 9 Claims. (Cl. 301—132.)



1. In a device of the class described, the combination of a frame provided with a vertically-extending aperture near its outer end and with a longitudinally-extending aperture intermediate its ends, a bodily movable stub-axle upon said frame, and means engaging the stub-axle and positioned in said apertures for retaining the stub-axle in adjusted positions.

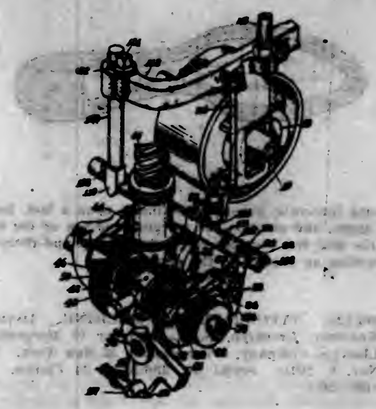
1,396,129. LOCOMOTIVE DRIVING-WHEEL. WILLIAM KYLE, Bellville, Ontario, Canada. Filed Mar. 25, 1921. Serial No. 455,682. 4 Claims. (Cl. 295—2.)



1. The combination with a locomotive drive wheel, of an attachment secured to the spokes of the wheel for part of

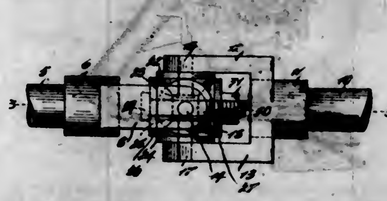
its circumference, said attachment being free of the spokes, of the remaining part of the wheel, and means

for pivotally connecting the connecting rod to the center of the free portion of the attachment.



1,396,130. **GRINDING-MACHINE.** St. Clair Lake, Poughkeepsie, N. Y., assignor to Moline Plow Company, a Corporation of New York. Filed Mar. 8, 1919. Serial No. 281,394. 27 Claims. (Cl. 51—118.)

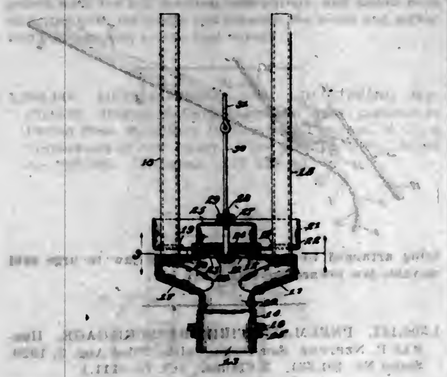
1. In a grinding machine, the combination of a grinder provided with a flat grinding face, a movable blank carrier provided with a plurality of blank seats adapted to hold the blanks with one edge exposed and extending parallel with the plane of the grinding face, and means for intermittently positioning the holder relatively to the grinder to present the blanks in succession in a plane inclined to the plane of the grinding face and with the edge of the blank impinged against said face; whereby the impinged edge will be ground down on a bevel.



1,396,131. **PULLING-OVER MACHINE.** John T. Lancaster, Haverhill, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 16, 1918, Serial No. 217,573. Renewed Apr. 14, 1920. Serial No. 373,954. 19 Claims. (Cl. 12—4.)

1. In a pulling-over machine, the combination with a gripper and means for operating the gripper to cause it to pull an upper and to cause to rest while holding the upper under tension, of power operated means for imparting subsequent movement to the gripper of variable extent as determined by the operator and in a direction to relax the tension of the upper, manual means for controlling

the operation of said power operated means, and means for locking said manual means against operative movement in a direction for relaxing the tension until after the machine has been started for effecting said first mentioned pulling movement of the gripper.

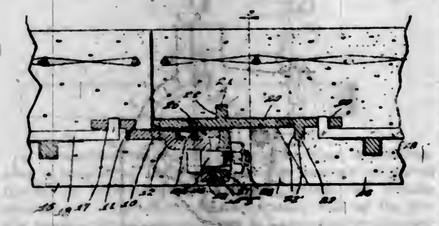


1,396,132. **UNIVERSAL JOINT.** Nixon Lee, Brooklyn, N. Y. Filed Mar. 14, 1919. Serial No. 282,554. 18 Claims. (Cl. 64—102.)

12. A universal joint comprising driving and driven members each provided with diverging jaws, two transversely projecting oppositely disposed conical blocks mounted within the jaws of each member, the respective sets of blocks sliding over each other in all positions of said members, means, comprising a pair of conical blocks rotatably carried by a bolt passing between the four conical blocks mounted on said jaws, said pair of blocks bearing against each of said four blocks along their respective conical surfaces, for holding the respective sets of said blocks in such position that their axes of alinement will intersect in all relative positions of said driving and driven members, and means for adjusting the positions of said conical blocks against said transversely projecting blocks carried by said jaws.

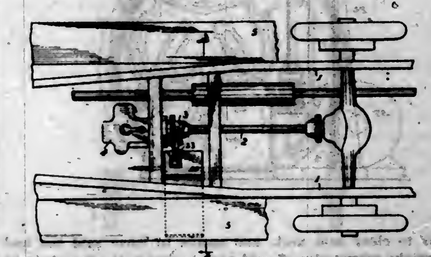
1,396,133. **VALVE FOR FLUSHING-TANKS.** Henry N. Lundy, Boston, Mass. Filed Jan. 6, 1921. Serial No. 435,439. 7 Claims. (Cl. 4—5.)

1. In a flushing valve for water closets, a hollow body portion having an inlet and outlet; two parallel overflow pipes extending upwardly from said body portion; a plate provided with openings through which said parallel



overflow pipes extend; and a packing member secured to the under side of said plate and adapted to close said inlet.

1,396,134. **DEMOUNTABLE RIM.** Walter Scott Martin, Flint, Mich. Filed Mar. 30, 1921. Serial No. 456,945. 2 Claims. (Cl. 301—22.)



1. In a device for the purpose indicated, a felly of substantially U-form in cross section and provided with a rim retaining abutment flange, an expansible ring engaged with the inner face of the opposite radial flange of the felly and adapted to be forced radially outwardly in contact with the rim, wedges mounted upon the interior cylindrical wall of the U-form felly and having means to cam against the expansible ring, for expanding the same radially, a rim telescoped over the felly, and against which the ring expands and frictionally engages, thereby frictionally retaining the rim on the felly.

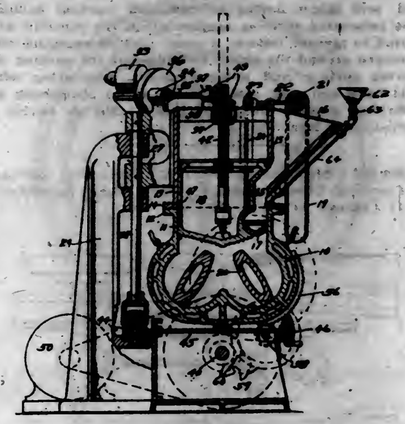
1,396,135. **METALED-END CONCRETE PIPE.** Coleman Meatwether, Indianapolis, Ind., assignor to Peter C. Reilly, Indianapolis, Ind. Filed Dec. 18, 1919. Serial No. 344,613. 13 Claims. (Cl. 72—53.)

1. In a concrete pipe, an embedded metal bell having a spigot receiving portion, an adjacent packing receiving shoulder, an end flange, an internally projecting outwardly presented shoulder against which the concrete may shrink, clamping bolts projected outwardly through said flange with their heads held against rotation by contact with the bell and embedded in the concrete, a metal spigot embedded in the concrete and formed to project into the spigot-receiving portion of an adjacent bell, said spigot having internal and external annular ribs presenting surfaces against which the concrete will shrink to prevent leakage, a metal packing engaging ring arranged around the spigot end adjacent the packing receiving surface, and pressure means cooperating with said bolts and ring, said pressure means comprising an individual pressure toe for each bolt, said toe having a curved outer face.

1,396,136. **SIGNALING DEVICE.** Donald C. Miller, Cleveland, Ohio. Filed Apr. 7, 1921. Serial No. 459,367. 11 Claims. (Cl. 116—33.)

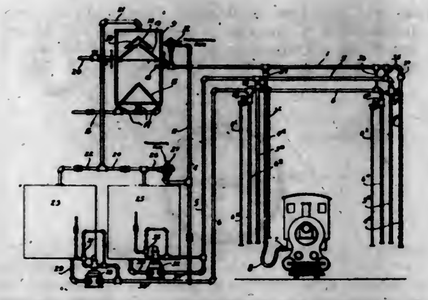
1. The combination with a vehicle of a signaling device comprising a visual annunciator and an audible annunciator, said visual annunciator having a legend indicating that the vehicle is being improperly moved, and means operative upon the movement of said vehicle for starting both annunciators.

1,396,137. **BUTTON OR BADGE.** Charles F. Mitchel, Rochester, N. Y., assignor to Bastian Bros. Co., Rochester, N. Y., a Corporation of New York. Filed Apr. 2, 1921. Serial No. 457,968. 2 Claims. (Cl. 40—1.5.)



1. A badge or button comprising a front member having an annular rearwardly extending flange and inwardly extending lugs, a circular rear member having notches corresponding to said lugs, said member also having between two of the notches spring tongues extending toward each other from opposite directions and spaced apart at their ends a distance substantially equal to the width of the lugs so that the inwardly extending lugs may ride upon either of said tongues to enter into a locked position between the ends of the tongues.

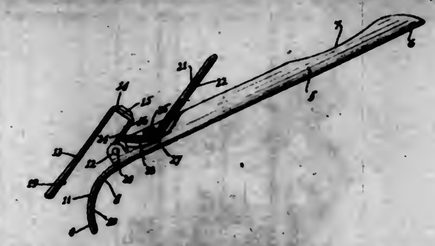
1,396,138. **MACHINE FOR TREATING RUBBER COMPOUND OR OTHER PLASTIC MATERIALS.** Clifford C. Mosher, Lima, Ohio. Filed Mar. 29, 1921. Serial No. 457,948. 30 Claims. (Cl. 18.2.)



1. In a machine of the class described, the combination of a tiltable mixing trough having an upstanding neck, a

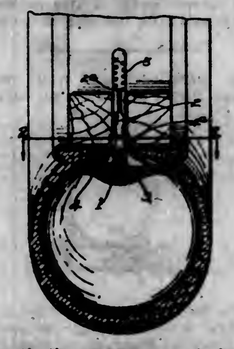
hopper-box fitting onto said neck, a weight slidable in said box and neck, means to raise said weight in said box so

as to clear said neck, and means to move said box and weight rearwardly off said neck to enable the trough to be tilted.



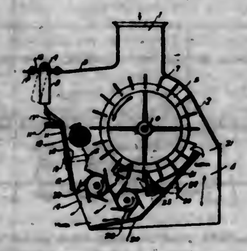
1,396,139. LOCOMOTIVE WASHOUT AND REFILLING APPARATUS. JOHN O. NEIKIRK, Lombard, Ill. Filed Mar. 24, 1920. Serial No. 368,263. 5 Claims. (Cl. 122—396.)

1. In apparatus of the character described, the combination of a line connected to receive and for conducting the entire blow-off of water and steam from a boiler, means for delivering cold water to said blow-off to reduce its temperature before the water and steam have been separated, and means to receive and store the entire tempered blow-off and means for discharging said tempered blow-off for reuse in a boiler.



1,396,140. DETACHABLE HANDLE. ARTHUR NELSON, Rock Falls, Ill. Filed July 23, 1921. Serial No. 486,994. 4 Claims. (Cl. 16—114.)

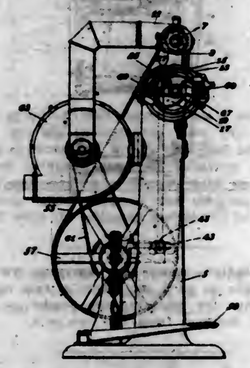
2. A handle of the character described comprising a handle member having a stationary jaw provided on one end, a movable jaw pivoted to the handle member adjacent the stationary jaw, and a cam lever pivoted to the handle between the handle and the movable jaw, said cam lever



being arranged to engage the movable jaw to urge said movable jaw toward the stationary jaw.

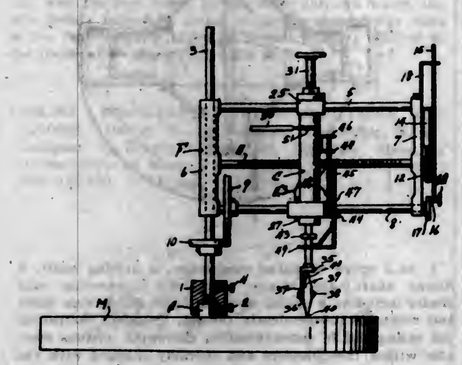
1,396,141. PNEUMATIC-TIRE PRESSURE-GAGE. HARMAN P. NEPTUNE, San Diego, Calif. Filed Aug. 5, 1920. Serial No. 401,331. 3 Claims. (Cl. 73—111.)

1. A pneumatic tire pressure gage, including a flexible flap member, a plunger member secured in the center at one side of said flap, a bell shaped support member positioned around said plunger with its mouth covered by said flap, a spring interposed between said bell shaped support member and said flap and a transparent cap secured to said support receiving the free end of said plunger and provided with indicating symbols adapted to coöperate with said plunger whereby the pressure in the tire is indicated.



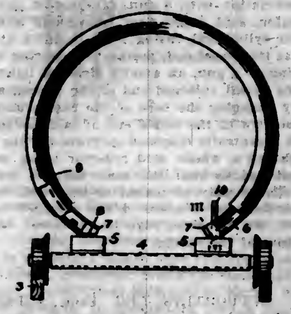
1,396,142. HULLING AND CLEANING FEEDER FOR COTTON-GINS. JAMES M. PEMBSON, Florence, Ala. Filed Mar. 19, 1920. Serial No. 367,199. 15 Claims. (Cl. 19—9.)

13. In a gin feeder and cleaner, a casing having a top cotton inlet and bottom outlets for hulls and cotton, a



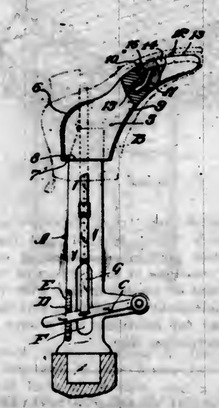
spiked feeder roll rotatable therein, a brush rotatable at side of the roll adjacent to the hull outlet, huller ribs co-acting with the roll between said outlets, and picker rolls co-acting with the feeder roll between the brush and picker ribs and adjacent to the hull outlet.

1,396,143. HEEL-GOUGING AND LIP-CUTTING MACHINE. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 13, 1918. Serial No. 262,295. 17 Claims. (Cl. 12—46.)



1. A machine of the class described, having in combination, a cutter, a holder for a heel, and power actuated means for causing the heel to be traversed by the cutter from a point near the rear of the heel to the breast thereof and acting to increase the depth of the cut at the breast end.

1,396,144. MACHINE FOR DRESSING STONE. JAMES M. RICE, Lineville, Ala. Filed May 1, 1920. Serial No. 378,196. 5 Claims. (Cl. 125—29.)

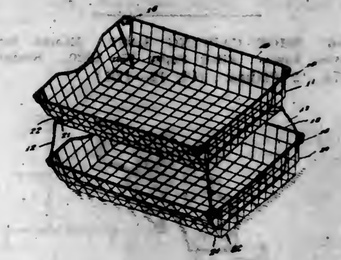


1. A machine for dressing stone comprising, in combination, a supporting structure, a tubular member supported thereby, a hollow member arranged within the tubular member for reciprocatory movement, the wall of the hollow member being provided with a longitudinally disposed slot, an outstanding lug carried by the hollow member and extending through the slot of the tubular member, a rotatable cam element arranged for contact with the lug to intermittently move the hollow member in one direction, means for rotating the cam member, means for constantly urging the hollow member in the opposite direction, a rod extending through both the tubular member and the hollow member, means for connecting the hollow member and the rod for unitary reciprocatory movement, a stone working tool carried by the rod, and means operatively engaged with the rod at a point within the hollow member for rotating said rod independently of its reciprocation.

1,396,145. MANDREL FOR MAKING INNER TUBES. FRANK M. ROESSING, Sharpsburg, Pa. Filed Mar. 28, 1921. Serial No. 456,051. 5 Claims. (Cl. 18—45.)

1. A vulcanising truck having a mandrel-supporting surface, and an arc-shaped mandrel forming approximately a circle and having the circumferential surface at its ends resting on the said surface, the said surfaces being shaped to support the mandrel in a vertical plane.

1,396,146. SHOE-CAPPING LAST. ELMER SMILEY, Moravia, Iowa. Filed Sept. 15, 1920. Serial No. 410,374. 2 Claims. (Cl. 12—123.)

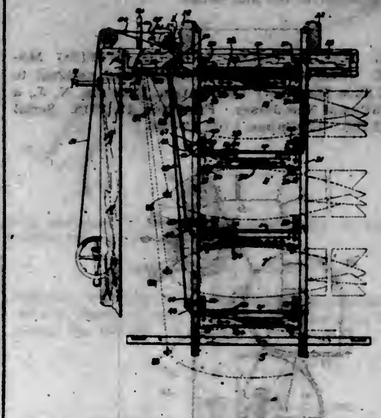


1. A shoe capping last comprising a heel block having an extension, said extension projecting beyond and obliquely with respect to the heel engaging surface of the heel block, a tongue disposed in the end face of the extension and extending toward the sole engaging surface of the extension, and a toe block having an angularly disposed socket adapted to receive the tongue, whereby pressure upon the sole engaging surface of the toe block will tend to move the toe block toward the extension.

1,396,147. GUN-SEARCHLIGHT. David T. Smith, Mead, Nebr. Filed Feb. 12, 1920. Serial No. 358,212. 1 Claim. (Cl. 240—8.4.)

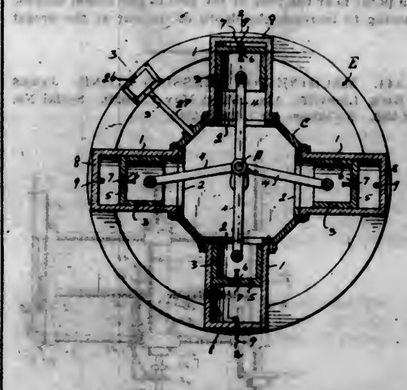
The combination with a gun, of a search light attachment therefor, said attachment comprising a cylindrical casing said cylindrical casing being smaller at its open end than at its closed end, means for securing said cylindrical casing to a gun, an axially disposed light threaded through the closed enlarged end of the casing, a reflector frictionally engaging the bore of the casing and disposed in engagement with the closed end of said casing and provided with a centrally disposed aperture for the reception of the light as a whole, said reflector being made from flexible material so that the same may be transversely flexed so that it may be placed in the small end of the casing and disposed in place in the enlarged end of the casing with its marginal edge in frictional engagement with the bore of the casing.

1,396,148. SUPPORTING-LEG FOR SUPERPOSING WIRE TRAYS. Frank M. Snyder, La Fayette, Ind., assignor to The Peerless Wire Goods Company, La Fayette, Ind., a Corporation of Indiana. Filed Apr. 25, 1921. Serial No. 464,474. 3 Claims. (Cl. 211—14.)



1. In combination, two trays, superposing legs for interconnecting such trays, each of said legs being provided with hooked portions for hooking obliquely over and under wire crossings at the corners of the upper tray and being provided at its lower end with two separated prongs, and double-socketed members attached to corners of the lower tray for receiving the prongs at the lower ends of said superposing legs.

1,396,149. TREATMENT OF PHOSPHATES. Ellis C. Soper, Chattanooga, Tenn. Filed July 6, 1918. Serial No. 242,678. 23 Claims. (Cl. 71—7.)



1. The process of treating phosphatic material to render the contained phosphoric acid citrate soluble, said process consisting in forming briquets of a compound containing an intimate mixture of finely ground phosphatic material bound with a combustible binder, and subjecting said briquets to a high temperature sufficient to burn the combustible binder and render the phosphoric acid citrate soluble.

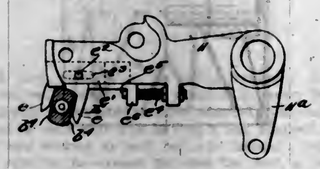
1,396,150. BOMB CARRYING AND RELEASE SYSTEM. Harry D. Wiess, U. S. Army. Filed June 7, 1919. Serial No. 302,586. 12 Claims. (Cl. 244—1.)

1. In combination, means for carrying two sets of bombs, the bombs in each set being in two vertical columns, and means for releasing the bombs so that they are alternately dropped from the two sets.

1,396,151. SPEED-CHANGING MECHANISM. William I. Wemelsfelder, Scottville, Ill. Filed Feb. 24, 1920. Serial No. 360,984. 11 Claims. (Cl. 192—60.)

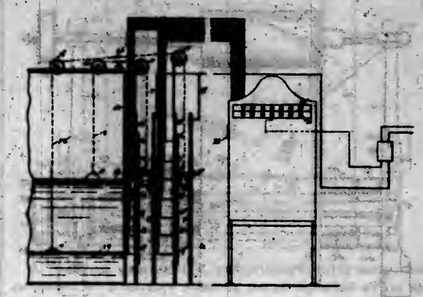
1. In a speed changing mechanism, a driving shaft, a driven shaft, and means operatively connecting said shafts including a casing mounted upon the driving shaft and rotatable independently thereof, cylinders carried by the casing and in communication therewith, pistons movable within the cylinders and operably engaged with the driving shaft, each of said pistons having a port therein affording communication within the cylinder at opposite sides of the piston, a chamber in communication with the casing at a single point and with each of the cylinders at points beyond the pistons when at the limit of their movement away from the casing, said casing, cylinders and chamber being adapted to contain a mobile medium, and centrifugally operated means for retarding the flow of the mobile medium through the communication between the chamber and the casing.

1,396,152. GRINDING-MILL. Harry F. Winslow, Brooklyn, N. Y. Filed July 24, 1920. Serial No. 398,703. 14 Claims. (Cl. 83—12.)



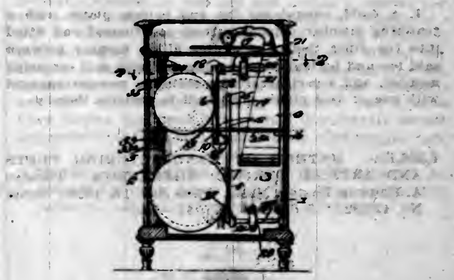
4. In a grinding mill comprising a series of rolls adapted to operate in sequence upon the material and including a delivery roll for the finished product, a pair of separated scrapers arranged adjacent said delivery roll toward opposite ends thereof, said scrapers having their scraping edges adjacent the meeting line of said delivery roll with the adjacent earlier roll of the sequence.

1,396,153. WEATHER-STRIPPING FOR VEHICLES. Frank H. Wittern, Flandreau, S. D. Filed Feb. 15, 1921. Serial No. 445,121. 4 Claims. (Cl. 74—81.)



1. In combination with the foot pedal of an automobile, and the foot board having slots through which the said pedals extend, a frame extending around the slots in the foot board, a series of flexible bristles secured to the frame and covering the said slots.

1,396,154. WEFT-REPLENISHING MECHANISM FOR LOOMS. Henry W. Youngquist, Manchester, N. H., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 21, 1919. Serial No. 318,866. 8 Claims. (Cl. 139—95.)

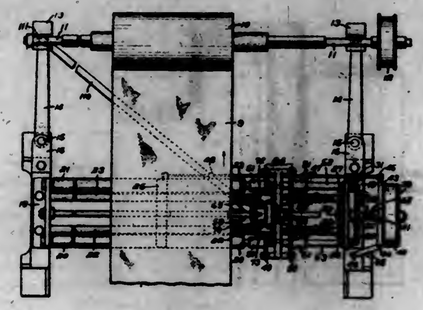


7. In a weft replenishing mechanism, a transferrer having a filling carrier controlling device comprising clamping jaws which engage opposite sides of the filling carrier between the head and the filler carrying portion and enter the shuttle beyond the jaws of the latter whereby rotation of the filling carrier during transfer is prevented.

1,396,155. ELECTRICAL TANK-GAGE. Ernest C. Bartlett and Joseph E. Allison, Houston, Tex. Filed Sept. 8, 1917. Serial No. 190,342. 1 Claim. (Cl. 177—351.)

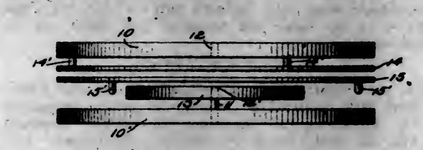
A device of the type described, including a liquid containing receptacle, floats of somewhat less specific gravity than the contained liquid and somewhat less specific gravity than the liquid settlings, respectively, fixed contact-plates, electrical conductors connected to said contact-plates, series of contact points fixed relative to each other and spaced apart, a current conductor connected to each of said points, an electrical indicator in circuit with each of said last referred to conductors, and a plurality of circuit makers and breakers controlled by said floats, in constant contact with the contact-plates and contacting successively with said contact-points as said floats are affected by the rising and falling of said liquid and the liquid-settlings.

1,396,156. COMBINATION RECORD RACK AND EJECTOR FOR CABINETS. Joseph F. Bigos, Richmond, Va. Filed Aug. 12, 1920, Serial No. 403,176. Renewed Aug. 22, 1921. Serial No. 494,367. 15 Claims. (Cl. 211—16.)



15. In a record cabinet, means in the forward part thereof to be engaged by the lower forward edges of upper and lower tiers of records, and a rack back advanceable on an axis advanceable transversely of the cabinet, to eject either tier of records or both simultaneously.

1,396,157. SHEET-GUIDING MECHANISM. Sydney Birch, Mansfield, Mass. Filed Mar. 11, 1919. Serial No. 282,024. 26 Claims. (Cl. 26—18.)



8. Sheet guiding means comprising in combination, a forked member to engage an edge of the sheet between its points of support, a carriage whereon said forked member

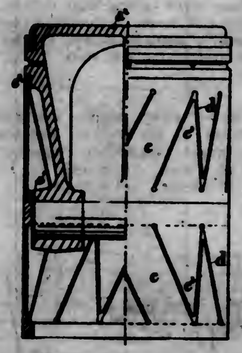
is mounted for swinging movement in the direction of travel of the sheet or in the opposite direction, and means

whereby movement of the forked member in either of said directions causes corresponding movement of said carriage.

1,396,158. MOLD. WILLIAM T. BONNER, Trenton, N. J., assignor of one-half to Max Brown and one-half to Max Brown, trustee, Boston, Mass. Filed July 17, 1919. Serial No. 311,418. 4 Claims. (Cl. 18—42.)

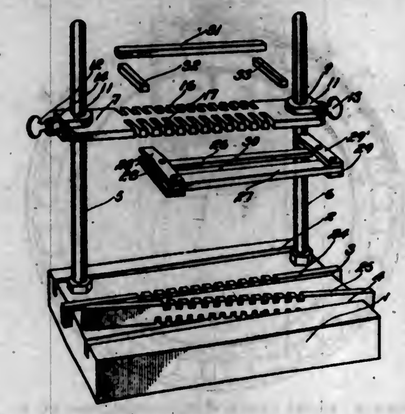
1. A mold, comprising top and bottom plates with a centering member extending from one thereof and fitted into the other thereof, a center filling member between said top and bottom members engaged with said centering member, and a peripheral ring confining member engaged with one of said plates to be held in position thereby.

1,396,159. METHOD OF MANUFACTURING TUFTS AND ARTICLE DERIVED THEREFROM. THOMAS A. BOWERS, Boston, Mass. Filed Nov. 13, 1920. Serial No. 423,921. 3 Claims. (Cl. 41—10.)



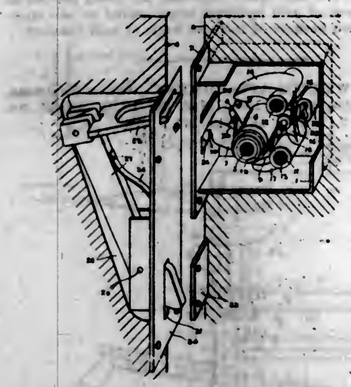
1. A method of manufacture, consisting in arranging a plurality of strands of fibrous material parallel to each other, subjecting said strands to the action of a contracting die, whereby to crimp the same, applying binding means to said strands adjacent said point of crimping, and in subsequently cutting said strands at points between said binding means.

1,396,160. SOFTENING APPARATUS. MATTHIAS BROCK, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 4, 1918. Serial No. 232,526. 12 Claims. (Cl. 12—1.)



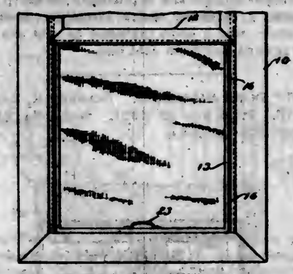
1. In an apparatus of the class described, means for supplying a softening agent to a treating locality, and means constructed and arranged to support an unlasted shoe-upper off the last so that the interior of the counter-portion will be presented to the softening agent.

1,396,161. TRUNK-PISTON. PHILIP CHALLIS, London, England. Filed Mar. 16, 1920. Serial No. 366,369. 10 Claims. (Cl. 74—108.)



4. A piston, comprising a head, a body-portion, guide-surfaces supported from said body-portion, said guide-surfaces being slotted obliquely on intersecting lines to form flexible tongues between the slots in said guide-surfaces, said tongues extending lengthwise of the piston and projecting radially beyond the unslotted portions of said guide-surfaces.

1,396,162. BATTERY-PLATE-BURNING RACK. EDGAR W. CAMPBELL and MERTON W. RAMSEY, Kansas City, Mo., assignors to Campbell Engineering Corporation, Kansas City, Mo., a Corporation of Missouri. Filed Nov. 26, 1920. Serial No. 426,670. 9 Claims. (Cl. 113—59.)

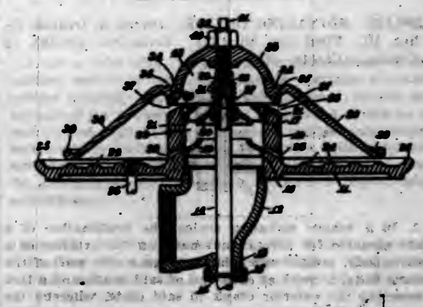


1. A plate burning rack comprising a base having plate-positioning combs, and an additional comb supported above the base and adjustable in relation thereto.

1,396,163. LOCK. JOSEPH PACY CLERAL and ROBERT ENON AWDE, Toronto, Ontario, Canada. Filed Feb. 28, 1920. Serial No. 362,107. 3 Claims. (Cl. 70—31.)

1. A lock, comprising, in casing having a slot in one side thereof, a slotted bolt adapted to enter the slot in said casing, a rotatable member adapted to be engaged and rotated by said bolt and having a lug adapted to be engaged and rotated by said bolt and having a lug adapted upon rotation to extend through the slot, a bell crank latch member adapted to engage said lug when extending through said bolt, a bell crank dog pivotally connected to said latch member, a lug projection on said rotatable member adapted to engage said dog when in its locked position, spring means for holding the pivotal connection of said latch and dog in a break joint position, and key means for breaking said joint to swing said latch and dog clear of the rotatable member to effect the release of the lock bolt.

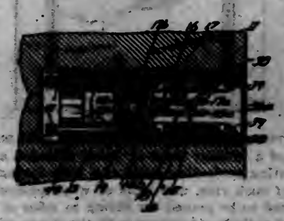
1,396,164. METAL SCREEN. WARREN W. COLE, Portland, Me. Filed Nov. 30, 1917. Serial No. 204,705. 3 Claims. (Cl. 158—14.)



2. A screen as described, comprising a solid metal frame composed of a unitary mass of metal rabbeted at its sides and presenting projecting guide ribs with springs mounted laterally of such ribs, and rails of wood presenting plain back adapted to be planed for fitting to sides of a window frame, said rails having grooves in the inner sides thereof to receive said ribs.

1,396,165. MACHINE-TOOL. MARCUS M. COEY, Fond du Lac, Wis., assignor to Giddings & Lewis Machine Tool Company, Fond du Lac, Wis., a Corporation of Wisconsin. Filed Sept. 27, 1919. Serial No. 326,870. 12 Claims. (Cl. 90—58.)

1. A machine of the class described having in combination, a longitudinally extending bed, a saddle longitudinally slidable on said bed and having a central portion and a lateral projection, said projection comprising a pair of spaced triangular trusses each having a horizontally extending top member alined with said central portion, a downwardly extending member adjacent the side of said bed, a strut joining the ends of said outwardly and said downwardly extending members, and a cross piece joining the lower ends of said downwardly extending members to unite said trusses into a rigid integral unit.



1,396,166. OIL-BURNER FOR STOVES, FURNACES, &c. JOHN T. DALCHER, Jersey City, N. J. Filed Apr. 4, 1921. Serial No. 458,438. 16 Claims. (Cl. 158—91.)

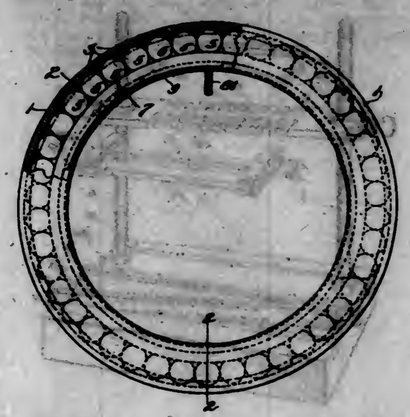
16. A tubular member surrounded by an oil pan; an air pipe communicating with the lower end thereof; an oil

supply pipe centrally disposed in said tubular member; an oil distributing member threaded to the upper end of said pipe and having a plurality of discharge outlets communicating with said pipe and a plurality of sharp peripheral projections; a threaded shank extending upwardly from said member; and a hood threaded to said shank and adjustable toward and from said pan.

1,396,167. DOOR-SILENCER. GODFREY R. DAMIANI, Chicago, Ill. Filed Feb. 25, 1921. Serial No. 447,647. 10 Claims. (Cl. 16—85.)

5. The combination with a door and door frame of a door silencer consisting of two members, the door and frame having one of the members secured to each of them, one of the members comprising a pivotally mounted lever, means for yieldingly forcing the lever against the other member when the members are being displaced relatively to each other, and means for withdrawing the lever from contact with the other member when the door is to be opened.

1,396,168. CHANGE-SPEED BELT-DRIVE. HANS HINRICH FARMSEN DANCKE, Hamburg, Germany. Filed Apr. 22, 1920. Serial No. 375,854. 5 Claims. (Cl. 64—8.)

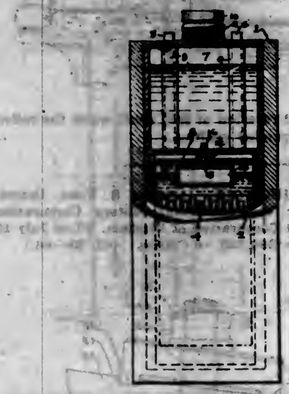


1. A change speed belt drive, comprising two pairs of conical pulleys, two shafts, on each of which one pair of the said pulleys is secured unrotatably, but axially movably, two Z-shaped rails, on which the two shafts are journaled, means to adjust the distance between the rails.

1,396,169. SIGNALING DEVICE. JULIUS A. DYELIE, Joliet, Ill. Filed Jan. 20, 1921. Serial No. 438,733. 2 Claims. (Cl. 116—52.)

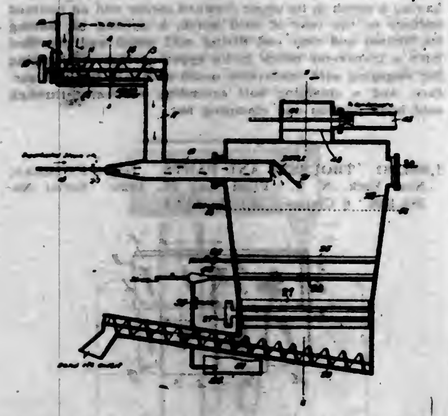
1. In a vehicle signaling device, the combination of a plate mounted for pivotal movement on the exterior of a vehicle body, a shaft extending through a side wall of the vehicle body, a crank at each end of said shaft, and a link connecting the exterior crank to said plate, whereby the plate is adapted to be swung by angular movement of the interior crank.

1,396,170. PNEUMATIC TIRE. WILLIAM H. SIMMS, Chelsea, Mass., assignor to Simplex Pneumatic Tire Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 1, 1920. Serial No. 407,468. 3 Claims. (Cl. 152—10.)



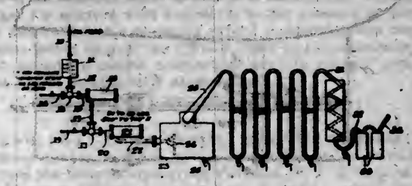
1. A pneumatic tire comprising an outer shoe made upon the inner side of its tread portion with an annular channel extending throughout the circuit thereof, the side walls of said channel each being made with a series of pockets; an inner tube within said shoe, and a plurality of separate filler members disposed in a circular series within said channel between said inner tube and the tread portion of said shoe, each of said members being seated in two oppositely disposed pockets of the side walls of said channel.

1,396,171. WRENCH ATTACHMENT. FRANK ETTINGER, Los Angeles, Calif. Filed Mar. 30, 1921. Serial No. 456,955. 2 Claims. (Cl. 81—171.)



1. In a wrench having a movable jaw, in combination with the adjusting screw of such a movable jaw, a locking member pivotally engaged with the wrench to swing in a plane parallel to the longitudinal axis of the device having means to prevent a turning of the said adjusting screw and having other means for holding the locking member in desired positions.

1,396,172. STORAGE BATTERY. RALPH G. FEAR, Oakland, Calif. Filed Feb. 7, 1920. Serial No. 356,921. 2 Claims. (Cl. 204—29.)



1. In combination with a storage battery; a reservoir for liquid; automatic means for feeding said liquid from said reservoir into said battery; according to a definite level in said battery.

1,396,173. PROCESS AND APPARATUS FOR TREATING OIL-BEARING SOLIDS. JAMES T. FENTON, Salt Lake City, Utah. Filed Dec. 13, 1920. Serial No. 430,259. 7 Claims. (Cl. 196—21.)

1. A process of treating shale and like material in a finely divided or granular condition which comprises injecting the same by superheated steam under pressure into an expansion chamber, subjecting the material, while being thus injected and while in mass in the chamber, to a further treatment with superheated steam which acts on the finely divided material while entering and through the granular mass in the chamber, continuously condensing the resulting vapors and continuously withdrawing the barren solids.

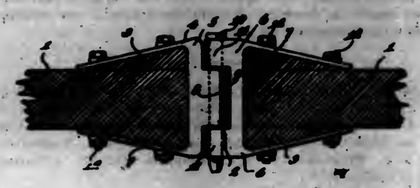
1,396,174. APPARATUS FOR CRACKING AND DISTILLING OILS. JAMES T. FENTON, Salt Lake City, Utah. Original application filed May 1, 1920, Serial No. 378,216. Divided and this application filed Jan. 21, 1921. Serial No. 438,977. 5 Claims. (Cl. 196—13.)

1. Apparatus for cracking oil comprising a source of superheated steam, a source of oil to be cracked, a cracking chamber, an injector connected with the sources of oil and steam where the oil and steam are first mixed and which delivers to the cracking chamber, a separator and expansion chamber of greater area than either cracking chamber connected with the cracking chamber, a condenser connected with the separator and expansion chamber into which the cracked constituents are forced by the pressure produced by the steam injected into the cracking chamber, and means for drawing off from the separator the remaining constituents of the oil.

1,396,175. HEADREST FOR CHAIRS. CHARLES W. FRETTS and ADAM J. MAY, Rochester, N. Y., assignors to Laura A. Brown and Adelina Ritter Shumway, trading as Ritter Dental Manufacturing Company, Rochester, N. Y. Filed Oct. 12, 1917. Serial No. 196,103. 5 Claims. (Cl. 155—177.)

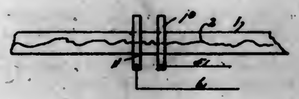
1. In a head rest for chairs, the combination of supporting means provided with spaced bearings, a rocking carrier pivotally supported in said bearings, spaced pads supported for rotary adjustment about fixed pivots on the carrier and each having a marginal outline comprising a substantially circular portion concentric with said pivot and also an eccentric portion, and spring controlled means for yieldably supporting each pad in its positions of rotary adjustment.

1,396,176. JOINT FOR AEROPLANE WINGS. ANTHONY HERMAN GERARD FOKKER, Amsterdam, Netherlands. Filed Feb. 17, 1921. Serial No. 445,732. 5 Claims. (Cl. 244—31.)



1. In an aeroplane wing, beam members arranged with their ends spaced apart and provided with longitudinal

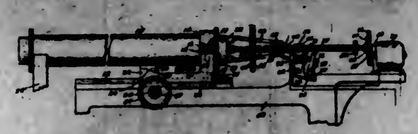
spaced slots forming laminations between said slots, and a coupling device between the ends of the beam members



and having spaced laminations arranged in the slots thereof.

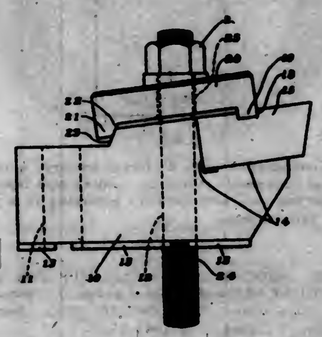
1,396,177. JOINT FOR AEROPLANE-WINGS. ANTHONY HERMAN GERARD FOKKER, Amsterdam, Netherlands. Filed Feb. 17, 1921. Serial No. 445,783. 3 Claims. (Cl. 244—31.)

1. In an aeroplane wing joint, a wooden member having wedge-shaped contiguous ends, and a metallic coupling device between said ends of said wooden member and having wedge-shaped recesses in which said ends are fitted.



1,396,178. SOUND-TRANSMITTING APPARATUS. EARL H. FOLEY, Seattle, Wash. Filed Aug. 19, 1915. Serial No. 46,235. 1 Claim. (Cl. 179—100.1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

In a device of the class described, the combination of a continuous flexible record having a current conducting graph of sound waves upon it and means for reproducing the said sound waves from the record, said means including a current conductor of minimum resistance and one of high resistance arranged in parallel positions adjacent one side of said graph, a high resistance receiver, a source of current, connections between said conductors and source, the said source being connected in closed relation with said receiver by the current conducting graph, whereby the intensity of the current is varied by the changing position of the graph line.

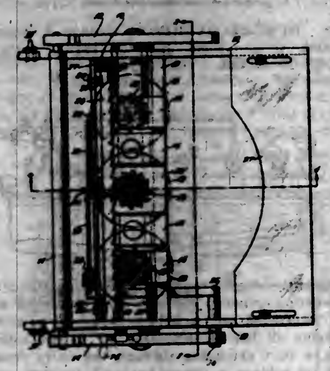


1,396,179. LINED-PIPE-FLANGE-FORMING MACHINE. PATRICK A. FOLEY, Milton, Mass. Filed Feb. 5, 1919. Serial No. 275,253. 9 Claims. (Cl. 153—81.)

3. A pipe-flange forming machine, comprising an operating shaft, a plurality of flange-forming rollers rotatable therewith having one end pivoted to said shaft and means actuated by said shaft to expand said rollers arranged to

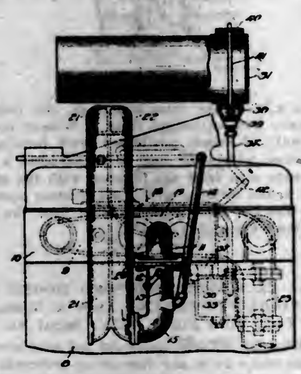
admit of continued rotation of said shaft when the rollers are in a fully expanded position.

1,396,180. CUTTING-TOOL. ARTHUR R. FOSS, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed July 15, 1920. Serial No. 396,399. 6 Claims. (Cl. 29—96.)



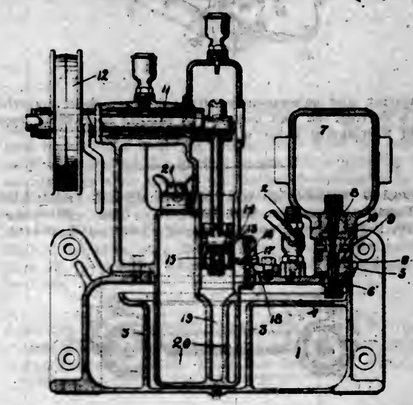
1. In a cutting tool, the combination of a body portion having a notch in its upper forward corner and an inclined surface to the rear of said notch, a cutting bit having its bottom and rear end fitting said notch and provided with a transverse notch in its upper surface, a clamping bar engaging said transverse notch and said inclined surface, and a clamping bolt extending vertically through said body portion and clamping bar.

1,396,181. TROUSERS AND PANTS. LOUIS FRIEDMAN, New York, N. Y. Filed May 25, 1920. Serial No. 384,106. 6 Claims. (Cl. 2—142.)



1. Pants or trouser construction embodying leg sections united at the back of the trousers by a seat seam passing through the leg sections at a distance from the edges thereof to provide marginal extensions folded back upon the leg sections of which they form a part, and waistband sections sewed to the leg sections and provided at the medial line of the back of the trousers with extensions folded back on the waistband sections of which they form a part and occupying a position between the waistband sections and the leg sections proper, whereby the waistband proper of the trousers conceals its extensions, as well as the upper portions of the extensions of the leg sections.

1,396,182. PRINTING-PRESS. LOUIS FRIEDMAN, New York, N. Y. Filed Dec. 29, 1920. Serial No. 433,778. 7 Claims. (Cl. 101—208.)



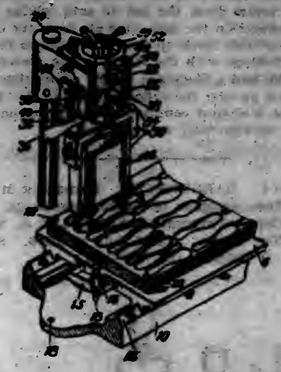
2. A printing press embodying a plurality of ink plates, a ratchet fixed with respect to each plate and associated therewith, a plurality of movable members, one of which serves as a support for each plate and on which the plates are rotatably mounted, guiding means on which the movable members are mounted for sliding movement, screws mounted for rotation in the frame of the press, but fixed against longitudinal movement, each of which screws threads into one of the movable members, whereby the rotation of the screws effects sliding movement of the movable members to adjust the plates relative to one another, and common means coöperating with the ratchets of all the plates for imparting step by step rotation thereto.

1,396,183. INTERNAL-COMBUSTION ENGINE. TRUMAN B. FUNK, Moline, and WALTER L. CARVER, Rock Island, Ill., assignors to Moline Plow Company, Moline, Ill., a Corporation of Illinois. Filed Sept. 10, 1917. Serial No. 190,552. 2 Claims. (Cl. 123—25.)

1. In a device of the class described, the combination with an internal combustion engine having an exhaust manifold on one side of the cylinder block, an exhaust delivery pipe, and a carbureter on the other side of the cylinder block, of a water pot in contact with the exhaust pipe and heated thereby for the generation of steam or vapor, means for maintaining a substantially constant level of water within such pot, a mixing jacket surrounding the exhaust manifold, there being a connection for the delivery of steam from the pot to said mixing jacket, a U-shaped connection for delivering air from the carbureter side of the cylinder block up over said block to the mixing jacket for mixture with the steam in the presence of the hot manifold, and a U-shaped return connection from the mixing jacket up over the cylinder block to the carbureter, both of said U-shaped connections being in contact with each other, substantially as described.

1,396,184. CARBURETER. FREDERICK M. FURBER, Revere, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 3, 1916. Serial No. 107,344. 9 Claims. (Cl. 261—12.)

1. In a machine of the class described, an evaporating chamber and a gas compressor located in said chamber whereby some of the heat of compression may be utilized to produce a substantial rise in temperature in the liquid in the evaporating chamber.



3. In a machine of the class described, an evaporating chamber, and a gas compressor constructed and arranged to develop pressures substantially greater than atmospheric, and having through its walls thermal communication with the evaporating chamber, whereby some of the heat developed in the compression may be utilized to heat the liquid in the evaporating chamber.

9. In a machine of the class described, a low pressure hydrocarbon chamber, a cylinder extending into said chamber, a piston in the cylinder to compress air therein, an outlet pipe from the cylinder leading into the hydrocarbon chamber, the cylinder, piston and pipe being constructed and arranged to stand pressures of several atmospheres, and a relief valve in said pipe permitting escape of air when the pressure in the chamber has reached a predetermined point.

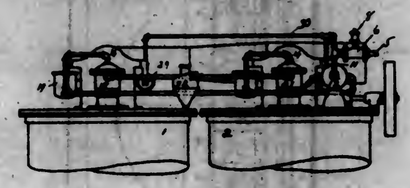
1,396,185. METHOD OF CUTTING BLANKS FROM SHEET MATERIAL. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 19, 1918. Serial No. 250,496. 15 Claims. (Cl. 164—17.)

1. That improvement in methods of cutting blanks from sheet material for shoe bottom parts which comprises positioning sheet material to serve as a cutting bed in taking the thrust of the cutter, superimposing upon said

cutting bed sheet material for a plurality of blanks performing cutting operations upon said superimposed sheet

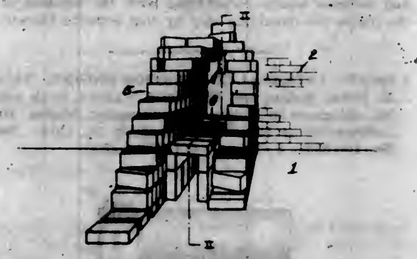
material, and subsequently utilizing other sheet material as a cutting bed and performing cutting operations upon said first-named sheet material.

1,396,186. SPEED-INDICATOR FOR MOTOR-VEHICLES. FLORINDA GARDNER, Salt Lake City, Utah. Filed Apr. 20, 1920. Serial No. 375,389. 1 Claim. (Cl. 264—1.)



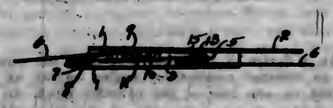
In a speed indicator for motor vehicles, the combination with a speedometer, of a housing detachably applied to and extending forwardly from said speedometer, a source of light within said housing, there being a glazed opening formed in the wall of said housing below and to one side of said source of light, a translucent dial plate arranged in the front of the housing, said speedometer including a shaft that extends through the center of the dial plate, an opaque pointer carried by the forward end of said shaft and positioned immediately in front of said dial plate, and the central portion of said dial plate being distinctively colored.

1,396,187. RIFLING-HEAD. GUSTAVUS GARROW, Watervliet, N. Y. Filed Dec. 22, 1919. Serial No. 347,050. 13 Claims. (Cl. 90—28.1.)



1. A reciprocable rifling head carrying radially movable tool-supporting slides; mechanism for progressively advancing said slides in the course of the forward travel of the head, including a cam member telescopically carried by said head, and means for arresting movement of said cam member at a predetermined point in the forward movement of said head; and means for locking said cam member to said arresting means prior to, and for a period after, the commencement of the rearward movement of the head.

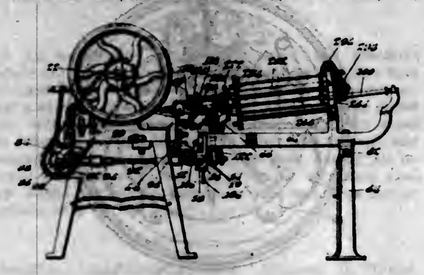
1,396,188. DUST-RECOVERING. GEORGE A. GIESELER, Cleveland, Ohio. Filed July 5, 1919. Serial No. 308,726. 10 Claims. (Cl. 183—84.)



1. In dust recovering apparatus, a plurality of filter units, operating cylinders for each unit, means for mixing oil and compressed air, a hollow tapered valve, means for supplying oil laden compressed air to the hollow of the valve, a port extending through the valve from the hollow to its surface, a casing having a tapered seat for the valve, ports in the casing each connecting with the cylinders of one unit, means for rotating the valve for causing the port in it to register with the ports in the casing in succession, and means for recovering oil from the exhaust air from the cylinders so that the air entering the filters during cleaning may be substantially free from oil.

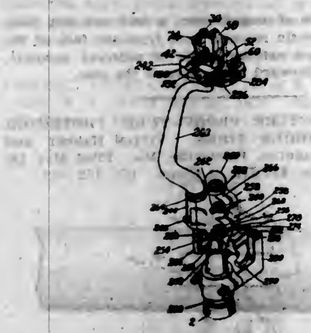
1,396,189. ARCH-PROTECTOR FOR CLAMP-KILNS. FREDERICK GLECKLER, Oak Harbor, Ohio. Filed Apr. 25, 1921. Serial No. 464,329. 5 Claims. (Cl. 25—147.)

1. In a kiln of the class described, the combination with a ware arch extending from a furnace opening in the kiln wall, of loosely positioned brick forming a sub-arch or tunnel within the ware arch, extending a distance into the ware arch from the furnace, with the spaces between the bricks forming lateral distributing openings for the flame and hot gases of combustion from the sub-arch and into the ware arch.



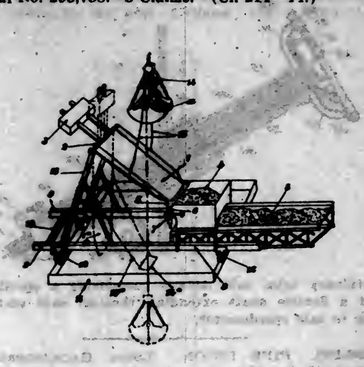
1,396,190. PACKAGE-BINDER AND HOOKS THEREFOR AND RECORD-CHECK. AMOS A. GLISSON, Fort Worth, Tex. Filed July 9, 1921. Serial No. 483,501. 6 Claims. (Cl. 24—23.)

1. A tubular locking device having means therein for securing and holding the ends of a band or strap thrust



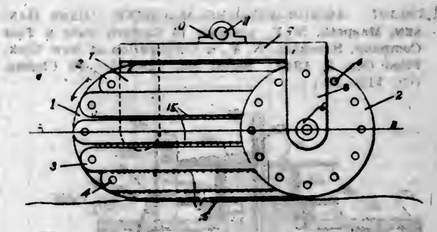
therein and spaces on the exterior for identifying numbers and letters and having a flat extension from one side and perforated at the juncture with said tubular device and having space for numbers and letters which are duplicates of the numbers and letters on said tubular device.

1,396,191. BLANK-FEEDING MECHANISM. GEORGE GOODU, Winchester, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 18, 1917. Serial No. 169,562. 102 Claims. (Cl. 10—174.)



2. In combination with cutters for severing nails from a strip movable in a single path, means for presenting the strip to the cutters at consecutive operations of the cutters with a tapered portion of the strip disposed in the field of operation of the cutters in different angular relations to the cutters, and normally inoperative mechanism rendered operative under the control of a strip in the presenting means to supply a fresh strip to the presenting means.

1,396,192. WORK-SUPPORT. GEORGE GOODU, Winchester, and FRED L. MACKENZIE, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Dec. 18, 1916, Serial No. 137,571. Divided and this application filed May 3, 1919. Serial No. 294,479. 19 Claims. (Cl. 1—41.)



1. A machine for inserting metallic fastenings, having a horn operative to support the work while the machine inserts fastenings therein and provided near its tip with a clenching cavity, a support by which the horn is rotatably carried with its axis of rotation permanently in alinement with the line of drive of the fastenings, and means for adjusting the horn with reference to its axis of rotation to bring the clenching cavity into the desired relation to the line of drive after its displacement therefrom.

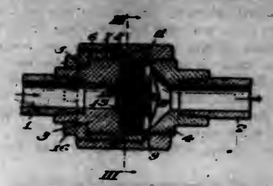
1,396,193. ELEVATOR, CONVEYER, AND CRANE. ADRIEN GODIN, Paris, France. Filed Apr. 30, 1919. Serial No. 293,758. 3 Claims. (Cl. 214—14.)

1. The combination with a hoisting apparatus embodying a vertically movable bucket and means for operating said bucket, of a conveyer located clear from the vertical path of travel of the bucket, means for supporting said conveyer so that it may be shifted horizontally in all directions, for instance for the purpose of clearing a water way, and a receiving device adapted to either receive the material dropping from the bucket and discharge the same onto the conveyer or clear the vertical path of the bucket when the latter has discharged its contents.

1,396,194. FLAT-WHEEL TRACTOR. EDWIN J. GOULD, Oakland, Calif., assignor of one-tenth to R. M. Brooks, San Francisco, Calif. Filed July 28, 1920. Serial No. 399,558. 4 Claims. (Cl. 305—11.)

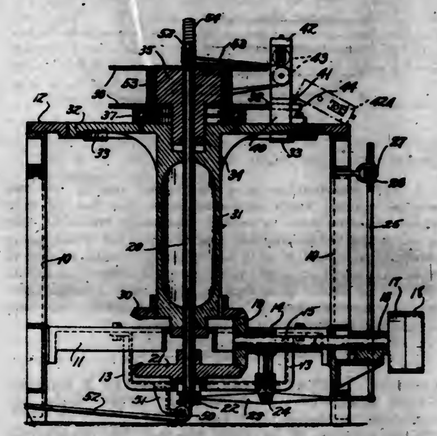
1. The combination in a flat wheel tractor, of two wheels, bearing studs extending from one face of each wheel, traction bars extending diagonally from the face of one wheel to the adjacent face of the other wheel, being pivotally attached to said bearing studs, hubs extending from the center of said wheels on their sides opposite to the bearing studs, standards in which said hubs are revolubly mounted, and a frame solidly connecting said standards, all substantially as set forth.

1,396,195. STEERING-COLUMN. BERTRAM J. GRIGSBY, Park Ridge, Ill. Filed Sept. 26, 1919. Serial No. 326,643. 3 Claims. (Cl. 180—78.)



1. In a device of the class described, the combination of a stationary tube, a rotatable tube supported by said stationary tube, said tubes being disposed in concentric relation, a steering wheel connected with the upper end

of said rotatable tube, an instrument board carrying indicating devices mounted on the upper end of said



stationary tube, said devices comprising a speedometer and a flexible shaft extending through said stationary tube to said speedometer.

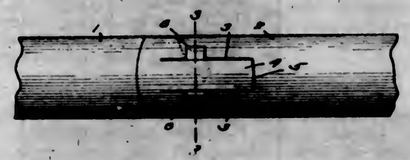
1,396,196. PIPE-UNION. LOUIS HACHENBERG, New York, N. Y. Filed Mar. 17, 1920. Serial No. 366,681. 8 Claims. (Cl. 284—11.)

5. A union for two adjacent pipe sections including a collar having a screw-threaded engagement with both pipe sections, and a valve movable with the collar to automatically close or open one of the pipe sections as the collar is unscrewed from or screwed on to the other pipe section.

1,396,197. ARMOR-WINDING MACHINE. HANS HANSEN, Maspeth, N. Y., assignor to Eastern Tube & Tool Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 3, 1919. Serial No. 328,241. 10 Claims. (Cl. 113—35.)

1. An armor winding machine comprising a rotary spindle, a rotary disk concentric with the spindle, a strip reel rotatively mounted in axial alinement with the spindle, means for driving the spindle and the disk in opposite directions, and a pair of strip crimping rolls adapted to have fixed or moving relation with said reel and mounted to travel with the disk.

1,396,198. MEANS FOR REGULATING TIMEPIECES AND THE LIKE. VIRGIL S. HARSEY, Chicago, Ill. Filed Feb. 26, 1921. Serial No. 448,527. 10 Claims. (Cl. 58—110.)



2. In combination, a driving mechanism, means for controlling the speed of said driving mechanism, an arm for manually regulating said controlling means, a thermostat interposed between the controlling means and said arm for automatically adjusting said controlling means upon a change in temperature, manual regulation of the controlling means being had through said thermostat.

1,396,199. TYPE-CABINET AND EQUIPMENT THEREFOR. MORRIS C. HARRIS, San Jose, Calif. Filed Feb. 25, 1919. Serial No. 279,213. 5 Claims. (Cl. 211—41.)

2. As an article of manufacture, a lead and slug case, compartments therein recessed back from the face of the case in pairs, and exterior walls of adjacent compartments extending forward to the face of the case.

1,396,200. PUNCTURE-PROOF-TUBE PROTECTOR FOR AUTOMOBILE-TIRES. VIVIAN HARVEY and CHARLES D. HARDING, Platteville, Mo. Filed May 18, 1921. Serial No. 470,632. 1 Claim. (Cl. 152—18.)

An annular metal tire tube protector, semi-circular in cross section and adapted to fit smoothly over the inner tube of the tire, the protector having a joint formed on interlocking ends, said joint consisting of a longitudinal tongue formed of an approximately U-shaped slot in one end of the tube protector and a short T-shaped tongue having the free ends of said tongue inserted through the slots of the other end of the tube, whereby to form an entirely smooth flexible joint free from projections to injure the inner tube and arranged substantially as shown

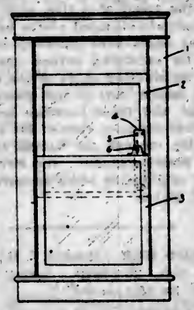
1,396,201. AUTOMOBILE-BUMPER. CHARLES H. HATHAWAY, Milwaukee, Wis., assignor to Badger Manufacturing Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Jan. 3, 1921. Serial No. 434,724. 13 Claims. (Cl. 293—55.)

6. An automobile bumper comprising two similarly formed flat vertically rigid and horizontally resilient bars arranged in spaced relation in substantially the same vertical plane and forming a broad and relatively long closed loop, each bar extending from an end of the loop along one side thereof and beyond the other end thereof, and terminating in an integrally formed loop having an inturned arm for connection to a bumper attaching arm, and means for rigidly fastening the bars together at opposite ends of the loop.

1,396,202. DRAFT-EQUALIZER. WILLIAM O. HEATH, Stafford, Kans. Filed Oct. 9, 1920. Serial No. 415,762. 2 Claims. (Cl. 278—6.)

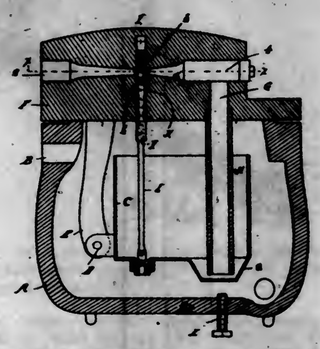
2. In a draft equalizer, a pair of main equalizing beams having offset parts, said offset parts being overlapped, each of said equalizing beams at a point remote from the offset portions adapted to be connected to a ridge breaking machine, an equalizing beam connecting the overlapping parts and having a loop, a swingle tree carried by the connecting beam, double trees carried by the remote ends of the main equalizing beams, and swingle trees carried by the double trees.

1,396,203. SPORT-COSTUME. MARY E. HEINRICH, Freeport, N. Y. Filed May 21, 1921. Serial No. 471,302. 5 Claims. (Cl. 2—139.)



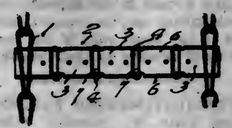
1. In a sport costume, the combination of knickerbockers, a belt adapted to be detachably secured at the top thereof and removable therefrom, and panels secured to said belt to hang down over the knickerbockers, said knickerbockers and panels having coacting means for securing the upper portions of the panels to the knickerbockers, to permit the lower portions of the panels to hang free.

1,396,204. COLLAR. JOHN W. HESS and FRANK S. HOGKINS, Kitchener, Ontario, Canada, assignors to Cluett, Peabody & Co., Inc., Troy, N. Y. Filed Feb. 10, 1920. Serial No. 357,544. 1 Claim. (Cl. 2—69.)



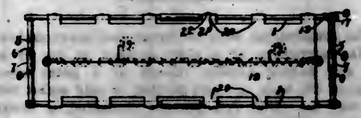
A collar having two alined button holes formed in each end of its band extending substantially parallel to and close to the lower edge of the band, a button secured to one end of the band close to the upper edge thereof, and two button holes formed in the opposite end of the band with which said button may be engaged, said button holes being inclined to the upper edge of the band and having their spacing small relative to their length.

1,396,205. VENTILATING-SASH FASTENER. SAMUEL F. HILL and JOHN W. COCHRAN, Indianapolis, Ind. Filed Jan. 20, 1921. Serial No. 438,698. 4 Claims. (Cl. 292—60.)



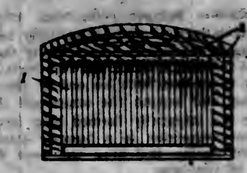
1. The combination with the upper and lower sashes of a window structure, of a plate secured to one of said sashes and having sockets therein at a point beyond the edge of the sash, one end portion of said socket being round and the other end portion elongated, a housing secured to the other sash having sockets shaped similar to the sockets in the plate, a bolt adapted to fit the round portion of said sockets, and a laterally extending lug at the free end of said bolt adapted to fit the elongated portion of the sockets, the lug being adapted to enter within said housing and hold the end of the bolt out of the path of the upper sash when the lug is turned out of registration with the socket in the housing and adapted to pass through the sockets of said plate for securing the two sashes against movement independent of each other.

1,396,206. STEAM-TRAP. HARRY J. HINCHEY, Atlanta, Ga., assignor to Wright-Austin Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 2, 1919. Serial No. 314,943. 5 Claims. (Cl. 137—103.)



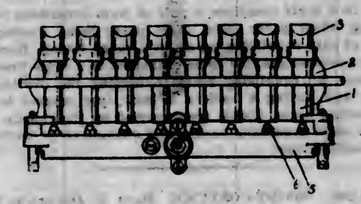
1. In a steam trap, the combination with the water chamber of a return passage therefrom, a Venturi tube in said return passage and a valve at the throat of said Venturi tube.

1,396,207. ANTISKID DEVICE. GEORGE HOAS, Union Grove, N. Y. Filed Mar. 25, 1920. Serial No. 368,804. 1 Claim. (Cl. 152—14.)



An anti-skid device comprising means to extend transversely across the tread of a tire, said means including a plurality of arcuate stamped plates having their opposite longitudinal edges bent laterally outward to form flanges, the latter extending beyond one of the ends of the plates and terminating short of the other end of the plates, the last named ends of the plates being rolled to provide bearings, and these bearings being disposed between the adjacent extended ends of the aforesaid flanges; pivot pins passing through the flanges and said bearings to connect the plates together; and circumferential side chains, links of said chains being anchored to the flanges of the endmost plates.

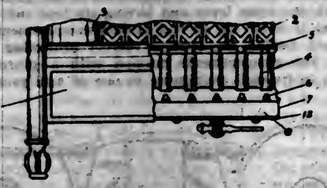
1,396,208. STRETCHER. MORRIS V. HUBBARD, San Jose, Calif. Filed Nov. 26, 1920. Serial No. 426,618. 2 Claims. (Cl. 5—70.)



1. A stretcher of the class described, comprising in combination a pair of side members, said side members each being divided longitudinally at a central point thereof, a pair of coupling members for connecting the divided ends of said side members, a pair of cross members for connecting the similar ends of said pair of side members, said cross members each being longitudinally divided at a central point thereof, coupling means for rigidly connecting the divided ends of said cross members, a pin extending from each end of the cross members, and adapted to extend through openings formed in the ends of said side members, and said pins each having an annular groove formed at its outer end, and a slotted plate slidably mounted on the side members for each pin, and adapted to engage in the annular groove thereof and hold the side members to the cross member.

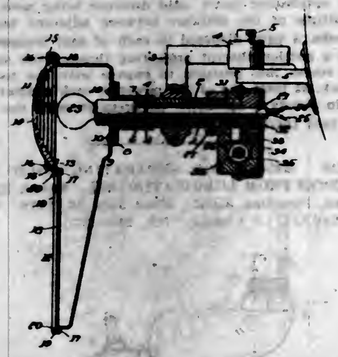
1,396,209. PROCESS OF MAKING FIREBACKS FOR GAS-STOVES. ALFRED H. HUMPHREY, New York, N. Y., assignor to General Gas Light Company, Kalamazoo, Mich. Filed May 3, 1920. Serial No. 378,587. 3 Claims. (Cl. 18—48.8.)

1. The process of making gas stove firebacks having a raised or flange-like portion, comprising molding the fireback of a plastic clay composition, superimposing on the said raised portion a plastic sheet of the same clay composition having alternate transverse strips of portions thereof colored with an oxid coloring material, the clay composition having a fine granular material adapted to be destroyed by the subsequent firing step pressing the superimposed sheet upon the plastic molded body so that the sheet becomes an integral part thereof, and firing.



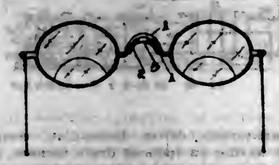
1,396,210. GAS-BURNER. ALFRED H. HUMPHREY, New York, N. Y. Filed June 12, 1920. Serial No. 388,611. 7 Claims. (Cl. 158—106.)

1. In a gas burner, the combination of a burner body comprising a plurality of burner tubes open at their lower ends and having burner tips provided with bars disposed in a uniformly spaced relation, said tubes being unobstructed from end to end, a gas delivery manifold, a valve for said manifold, and gas delivery nozzles therefor having oblong slot-like delivery orifices delivering forked streams of gas into the open ends of said burner tubes when the valve is adjusted to restrict the flow of gas through the nozzles, the space between the manifold and the burner tubes being unobstructed to permit a free circulation of air.



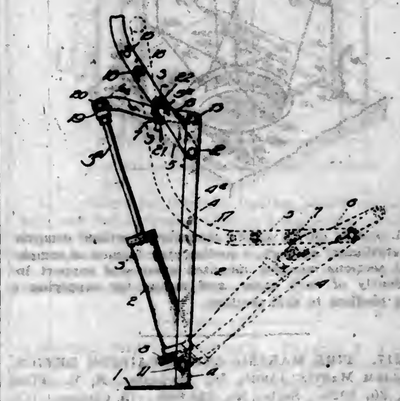
1,396,211. GAS-BURNER. HUBERT R. HUMPHREY, Kalamazoo, Mich. Filed Aug. 3, 1920. Serial No. 400,948. 10 Claims. (Cl. 158—105.)

1. The combination of a multiple burner comprising independent burner tubes and burner tips, a gas delivery manifold having nozzles delivering to said burner tubes, said manifold being provided with a longitudinally disposed zig-zag partition dividing it into chambers with alternate nozzles opening into each, a gas supply valve comprising a casing having separate ports opening into said manifold chambers and a gas supply connection at one end, and a rotary valve having a longitudinal passage communicating with said supply connection and ports adapted to simultaneously register with said casing ports,



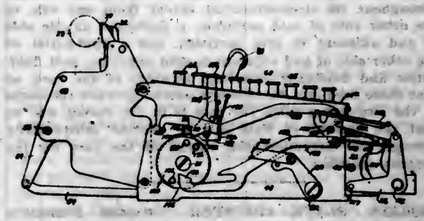
one of said valve ports being shaped so that it is fully opened before and remains fully open when the other is open.

1,396,212. VEHICLE-SIGNAL. HERBERT H. HUNT, Oakland, Calif. Filed Mar. 3, 1919. Serial No. 280,309. 3 Claims. (Cl. 116—49.)



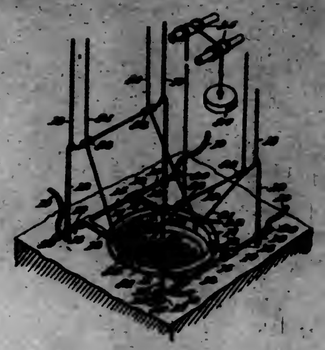
1. A vehicle signal including a bearing mounted horizontally on the rear of the vehicle, a horizontal shaft journaled in said bearing, a tail lamp secured on the rear end of said shaft, an indicator extending from said tail lamp through which indicator the light of said tail lamp projects, a swivel joint secured on the forward end of said shaft, a bevel gear on the forward end of said shaft, a vertical shaft journaled in said swivel joint, a bevel gear on the upper end of said vertical shaft meshing with the bevel gear on said first shaft, a third shaft journaled in said swivel joint, a bevel gear on the lower end of said vertical shaft, a bevel gear on the inner end of said third shaft meshing with the bevel gear on the lower end of said vertical shaft, a flexible shaft connected to the outer end of said third shaft, and means on the front of the vehicle for turning said flexible shaft to rotate said tail lamp and indicator.

1,396,213. SPECTACLE-FRAME. THOMAS B. JEBB, Orillia, Ontario, Canada. Filed Apr. 19, 1921. Serial No. 462,699. 5 Claims. (Cl. 88—43.)



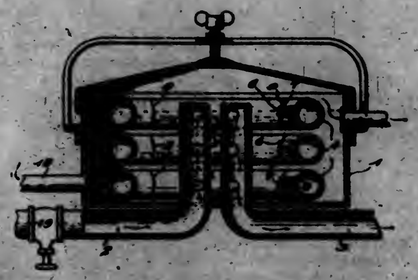
1. The combination with a spectacle frame provided with a bridge of a supplemental bridge piece having a laterally extending pivot at each of its ends, said frame bridge being provided with holes to receive said pivots, one of said bridges having a depression into which a part of the other bridge may spring to tend to retain the supplemental bridge in a lowered position relative to the frame bridge.

1,396,214. PUMP. LAWRENCE H. JENSEN, St. Charles, Ill. Filed Feb. 14, 1920. Serial No. 358,657. 10 Claims. (Cl. 230—27.)



1. In a pump comprising a cylinder having a piston therein and a rod for operating the piston, the combination of a pivotally mounted support, a lever connecting said support with said piston rod, and an arm pivotally connected with said support at a point between the pivotal connection of said lever therewith and the pivoted end of the support, and a sliding connection between said operating arm and said lever.

1,396,215. CLEAR-SIGNAL-PRINTING MECHANISM FOR LISTING-MACHINES AND THE LIKE. OLIVER D. JOHANTGEN, Chicago, Ill., assignor to Victor Adding Machine Co., Chicago, Ill., a Corporation of Illinois. Original application filed Jan. 4, 1918, Serial No. 210,301. Divided and this application filed Nov. 25, 1919. Serial No. 340,581. 9 Claims. (Cl. 235—60.)



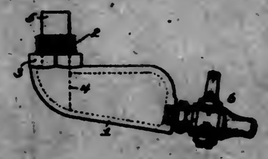
6. In a listing machine or the like, in combination, item and total printing elements, an accumulator, devices cooperating with the accumulator and controlling the item and total printing elements, and a signal printing device operable only during item printing and when the accumulator is clear and being prevented from operation at other times by the accumulator elements.

1,396,216. COOLING DEVICE FOR GLASS-DRAWING APPARATUS. Walter A. Jones, Columbus, Ohio. Filed Oct. 19, 1918. Serial No. 258,782. 18 Claims. (Cl. 49—17.)

1. A cooling device of the character described comprising a stationary support, a cooling ring formed of complemental sections movably mounted upon said support independently of each other, and means for supplying a cooling medium to said sections.

1,396,217. TIRE MAKING AND REPAIRING DEVICE. William Martin Jones, Jr., Rochester, N. Y. Filed Jan. 30, 1920. Serial No. 355,063. 15 Claims. (Cl. 18—45.)

1. A tire vulcanizing core, a tubular annulus having a partition therein and having a continuous passage throughout its circumferential extent from one side to the other side of said partition, a fluid-inlet at one side of and adjacent to said partition, and a fluid-outlet at the other side of and adjacent to said partition, said fluid-outlet and fluid-inlet extending inwardly of the core, so that those fluid carrying elements extend between the beads of the tire-casing when the core is in the casing, and so that the current of fluid can be effected substantially through the circumferential extent of the core for the purpose specified.



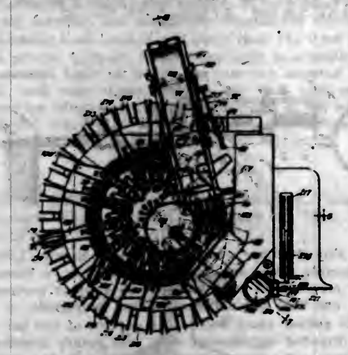
1,396,218. SLACK-ADJUSTER. Charles Frederick Kahler, Chicago, Ill. Filed Apr. 5, 1920. Serial No. 371,407. 2 Claims. (Cl. 188—200.)

1. The combination in a slack-adjuster for car brakes of two brake levers, means for operating one of said levers, a casing pivoted at one end to one of said levers, said casing being formed to provide a pair of parallel compartments, each open at its free end and each formed with an inner wall thereof serrated to provide similar racks, a bar having one end pivoted to the other of said levers and having its free end portion arranged to enter one of said compartments, the second bar having one end loosely pivoted to said second named brake lever at a predetermined distance above the point of connection of said first named bar with the same lever and having its free end portion arranged to enter the second of said compartments, said bars each having the portion thereof projecting within one of the compartments formed with a plurality of recesses in its wall contiguous to one of said racks, said

recesses having reduced openings therethrough and being spaced equidistant apart, said distance being more than the multiple of the distance between adjacent teeth in said racks, a pawl disposed in each of said recesses and having a portion thereof projecting through the opening to the recess into position to engage with the teeth of said rack, at least one of the pawls in each compartment being in constant operative engagement with the teeth of the rack therein.

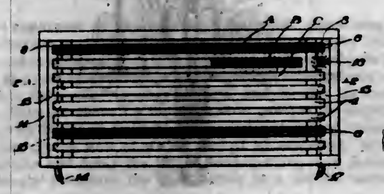
1,396,219. MEANS FOR SEPARATING SOLID SUBSTANCES FROM LUBRICATING-OIL. Frank Eugene Kehne, Pasadena, Calif. Filed July 22, 1918. Serial No. 246,811. 5 Claims. (Cl. 210—57.)

1. A device of the character described, comprising a receptacle provided near one end with an upwardly extending nipple, and a partition in said receptacle, said partition extending through said nipple and upwardly beyond the same.



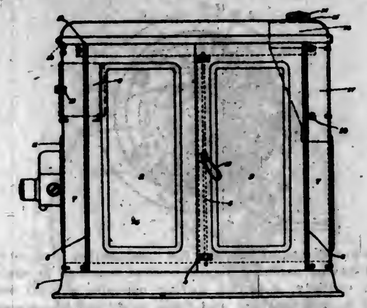
2. A device of the character described, comprising a receptacle provided near one end with an upwardly extending nipple disposed approximately at right angles to the body of the receptacle, and a partition in said end of said receptacle, said partition extending through the nipple and upwardly beyond the same.

1,396,220. STEAM-TURBINE-DRIVEN LOCOMOTIVE. Conrad Kohler, Zurich, Switzerland. Filed Sept. 28, 1920. Serial No. 413,350. 2 Claims. (Cl. 105—38.)



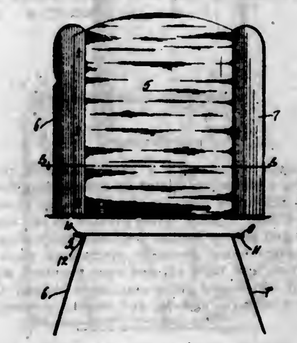
1. A steam-turbine driven locomotive, comprising a steam-boiler having an induced draft furnace, a surface condensing plant, an impulse steam-turbine arranged in the front part of the locomotive with its axis transverse to the direction of running, transmission gearing consisting of spur-gearings, an intermediate shaft and crank gear interposed between said steam-turbine and the driving wheels, a re-cooling device for cooling the water used for condensing purposes arranged behind the steam boiler, a device for effecting a rain-like distribution of the cooling water provided in said re-cooling device and shaped like a vaulted door structure the outline of which is within the railway clearance gage, a cooling channel formed by the interior of said vaulted door structure through which channel the cooling air current flows once in a longitudinal direction, and auxiliary steam driven power engines for driving the furnace blower, the boiler feed device and the pump used for condensing and re-cooling purposes, which auxiliary engines are arranged closely to the steam-boiler and for the greater part below its horizontal center plane whereby any flexible steam-conduits are avoided.

1,396,221. SORTING-MACHINE. Lester L. Ladd, Lockport, Ill., assignor to Photometric Products Corporation, Lockport, Ill., a Corporation of Delaware. Filed Oct. 27, 1920. Serial No. 419,848. 116 Claims. (Cl. 83—92.)



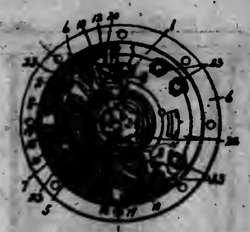
1. In a machine of the character described, a plurality of article carriers, a device for selecting the articles on said carriage and means operated by said selecting device whereby said carriers will deposit said articles at predetermined points to sort said articles in accordance with the selection of said selecting device.

1,396,222. OZONIZER. William G. Lindemann, Milwaukee, Wis., assignor to Ozone Company of America, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 25, 1919. Serial No. 292,740. 4 Claims. (Cl. 204—32.)



1. In an ozonising apparatus, an element comprising a screen conductor provided with a dielectric covering, the covering extending beyond the screen to form a dielectric border, a contact secured to the side of the element, and a conductor connecting the screen with the contact and covered by the dielectric.

1,396,223. CABINET FOR DOMESTIC LIGHTING PLANTS. Bert Arthur Linderman, Chicago, Ill. Filed May 19, 1920. Serial No. 382,515. 2 Claims. (Cl. 211—7.)



1. A cabinet for domestic lighting plants comprising a base, end frames secured thereto, a top having a hole therein, side doors, a radiator secured to the interior of the end frames and having a cap projecting through the hole in the top, a control box also attached to the interior of the frame and a lock for the doors.

1,396,224. DISPLAY-FOLDER. Francis X. List, New York, N. Y., assignor to National Card Mounting Company, New York, N. Y., a Corporation of New York. Filed Mar. 5, 1921. Serial No. 449,702. 3 Claims. (Cl. 40—146.)

1. A display easel of the character described comprising a main panel centrally disposed and having marginal portions lying in the same plane therewith, and a pair of laterally disposed side panels adapted to overlap one another at their free edges and to fold against said main panel when closed, the outer portions of said lateral panels being provided with marginal portions lying substantially in the same planes with the respective lateral panels when the same are in the closed position but extending angularly thereto when said lateral panels are opened, said lateral panels and their respective marginal portions having crease hinges formed therebetween on which the lateral panels may fold into and out of closed position with respect to the main central panel, said lateral panels when opened forming unbroken extension surfaces with the main central panel, and means passing through the marginal portions of the main panel and the marginal portions of said lateral panels for securing the same rigidly together.

1,396,225. DIFFERENTIAL GEARING. CHARLES H. LOGUE and DONALD D. ORMAN, Syracuse, N. Y. Filed Oct. 25, 1917. Serial No. 198,519. 3 Claims. (Cl. 74—99.)

1. In a differential gearing, the combination of a rotary support having radially coaxial conical bearings in spaced relation radially, a pinion having opposite conical ends engaged in said bearings, and gears meshing with opposite sides of the pinion, said gears and pinion having coöperative means for producing end thrust of the pinion when operated under unequal resistance.

1,396,226. POCKET TOBACCO-CAN. RICHARD S. LOGUE, Syracuse, N. Y. Filed Feb. 7, 1921. Serial No. 443,180. 4 Claims. (Cl. 206—41.)

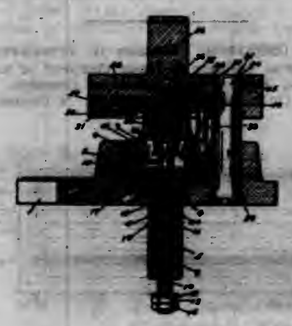
1. The combination with a pocket tobacco can, of a cover having a plane top skirted by a depending flange, the top having a pouring opening and the flange thereof having a slot, a pair of plane gates pivoted to the under side of said top and having similar portions which play in said slot, said gates being partially overlapped when in the closed position and their pivoted ends provided with slots by means of which said gates may move toward and from each other during the opening and closing movements.

1,396,227. PROCESS OF RECOVERING USED PAPER. ROBERT A. MARR, Norfolk, Va. Filed June 11, 1920. Serial No. 388,359. 6 Claims. (Cl. 92—13.)

1. A process of recovering used print paper which comprises heating the used print paper with water, soft soap and ammonia to near the boiling point until at least a substantial portion of the oleaginous matter of the ink separates on the surface of the water, removing this separated matter, pulping the mass hot in a beater, until the paper is reduced to a pulp and continuing the operation of the beater until a further substantial part of the oleaginous matter, carrying the ink pigment, separates on the surface of the liquid, and removing such separated matter.

1,396,228. DESK-RECEPTACLE. ANNA MARTIN, Cincinnati, Ohio. Filed July 28, 1920. Serial No. 399,556. 5 Claims. (Cl. 45—90.)

1. In a receptacle the combination of a top strip adapted to be attached to a desk, arms extending from the top strip, brackets attached to the arms and extending downwardly therefrom and engaging the desk, means to attach



the top strip and brackets to the desk, and a shelf adapted to lie upon the brackets and engaging the desk on one edge.

1,396,229. WIRE-STRETCHER FOR PACKING-BOXES. GEORGE NETH, New York, N. Y. Filed Sept. 24, 1919. Serial No. 325,857. 5 Claims. (Cl. 254—67.)

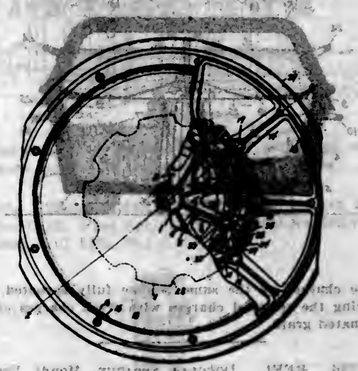
1. A wire-stretcher comprising a bar, a wire holding slide movable along one portion of said bar, a threaded member mounted to turn adjacent to another portion of the bar but held against longitudinal movement, a second slide guided along such other portion of the bar and having threaded engagement with said rotary member, a longitudinal rod connecting the two slides, and means for operating said rotary member.

1,396,230. TRIMMING-DIE. JOHN B. PATTERSON, Newark, N. J. Filed Nov. 8, 1920. Serial No. 422,860. 10 Claims. (Cl. 164—18.)

1. A trimming die comprising a member having means to support an article thereon, and a member coöperating with said first named member in shearing relation therewith having motion in two different planes, in order to effect said shearing relation.

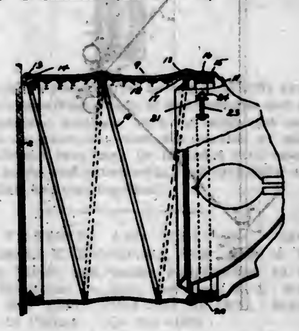
1,396,231. SEAMING MECHANISM. JOSEPH PETRAK, Mount Vernon, N. Y., assignor, by mesne assignments, to Ackermann Manufacturing Company, Wheeling, W. Va., a Corporation of West Virginia. Filed July 13, 1917, Serial No. 180,270. Renewed Feb. 5, 1921. Serial No. 442,892. 10 Claims. (Cl. 113—24.)

1. Seaming mechanism comprising: a seaming cam, a carrying member, one of said elements having a relative rotating movement with respect to the other, two seaming tools mounted diametrically opposite to each other on said carrying member, and means for successively moving the two seaming tools toward and away from the work including a pivotal support circumferentially intermediate the two seaming tools on which the carrying member swings bodily, and connections between the cam and carrying member for effecting a swinging movement of the latter on its pivotal support by the relative rotating movement of said cam and carrying member.



1,396,232. DEALCOHOLIZING APPARATUS. ROBERT H. PFLUGFELDER, Chicago, Ill. Filed Feb. 17, 1919. Serial No. 277,416. 1 Claim. (Cl. 195—12.)

An apparatus of the character described, comprising a tank having upright walls and a shelf secured at its outer edge along a helical line to the inner surface of said walls, said shelf being provided with transverse corrugations extending from edge to edge thereof, and having its inner edge disposed above its outer edge to provide in conjunction with the tank walls a substantially V-shaped channel the corrugated wall of which formed by said shelf serves to agitate and delay the liquid flowing along said channel to thereby facilitate the evaporation of a desired portion thereof.

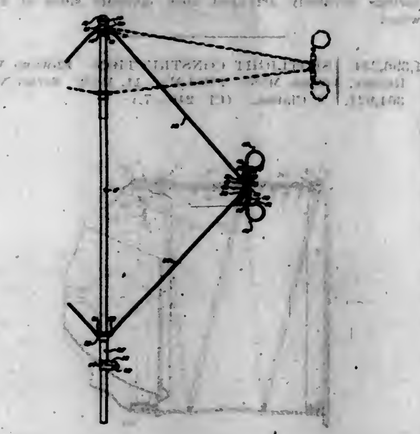


1,396,233. RESILIENT WHEEL. JOSEPH PRONOVOST, Detroit, Mich. Filed Feb. 10, 1920. Serial No. 357,571. 3 Claims. (Cl. 152—28.)

3. A resident wheel comprising a hub portion having a rim with integral spoke sections, with bosses having threaded recesses at the outer end of each spoke, bolts engaging said threaded apertures and having projecting ends, an outer rim section with integral apertured spokes, bolts passing through apertures in the rim section, clevis-shaped spring frames engaging over the projecting ends of bolts

upon the hub and rim sections and having sliding movements relative to each other and torsion springs carried by said frames and bearing against the ends thereof, said springs reversely arranged upon opposite sides of the wheel.

1,396,234. SPOTLIGHT CONSTRUCTION. EDWARD W. REIBER, Adrian, Mich. Filed Mar. 11, 1920. Serial No. 364,921. 8 Claims. (Cl. 240—7.)



8. The combination with a wind-shield, of a projector in rear of and facing said wind-shield and a guard upon said projector for preventing the reflection past the projector of the light rays striking the wind-shield.

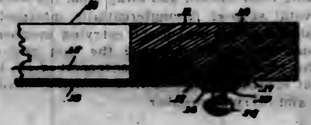
1,396,235. PROCESS FOR SPROUTING GRAIN. NILS A. RENSTROM, Omaha, Nebr.; Eros A. Renstrom administrator of said Nils A. Renstrom, deceased. Filed Nov. 9, 1917. Serial No. 201,385. 2 Claims. (Cl. 47—30.)

2. The method of producing batches of sprouted grain at successive substantially uniform time intervals, consisting in juxtaposing a series of charges of grain in uniformly different stages of germination, insulating the same against external temperature changes, periodically moistening the charges, maintaining an interspersed arrangement of the several charges whereby heat produced by

metabolism of the more advanced charges may radiate directly to the less advanced charges, removing the successive charges as the same become fully sprouted, and replacing the removed charges with fresh charges of ungerminated grain.

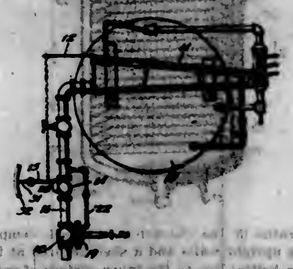
1,396,236. REEL. DOUGLAS SPRAGUE, Mount Vernon, N. Y. Filed Nov. 16, 1918, Serial No. 262,863. Renewed Feb. 7, 1921. Serial No. 443,220. 8 Claims. (Cl. 242—112.)

1. A device of the character described, comprising in combination, a carrier adapted to be attached to a primary support, holders for the material to be reeled or unreeled spaced around said carrier, and arms hingedly connected at their opposite ends to the latter and said holders, the connections on the carrier being such that the juxtaposition thereof folds the arms one within another and draws the holders toward the carrier, while their separation causes the arms with the holders to spread apart.



1,396,237. FLUID-PRESSURE SYSTEM. VINCENT V. VERSCHOOTEN, Erie, Pa. Filed Nov. 5, 1917. Serial No. 200,287. 21 Claims. (Cl. 103—91.)

19. The combination of two distinct sources of fluid pressure, a device arranged to be operated normally by both of said fluids acting simultaneously, and means for controlling the operation of said device by said fluids when

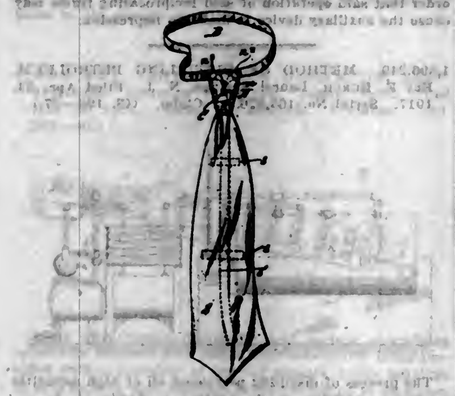


the difference between the pressures thereof reaches a predetermined amount.

1,396,238. FASTENING DEVICE. STUART G. WATT, Geraldine, Mont. Filed July 26, 1919. Serial No. 313,441. 1 Claim. (Cl. 85—41.)

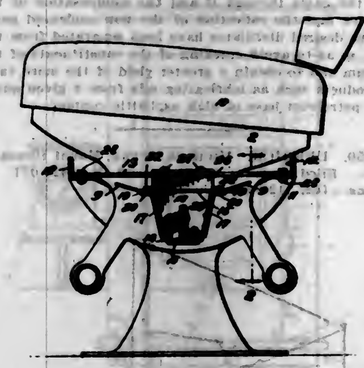
A device for securing a fabric to a support comprising a metallic eyelet, prongs extending from the eyelet for insertion through the fabric to hold the eyelet in position, a fastening device passing through the eyelet for engagement with the support and flange carried by the fastening device for contact with the eyelet.

1,396,239. WATER-FLOW DEVICE. ROGER W. ANDREWS, Erie, Pa., assignor to Northern Equipment Company, Erie, Pa., a Corporation of Pennsylvania. Filed June 28, 1917. Serial No. 177,699. 12 Claims. (Cl. 103—85.)



4. In a boiler feed-water system, a feed-water pipe, a valve in said pipe, means for varying the position of said valve depending upon the elevation of the water level in said boiler, and means for maintaining a constant excess pressure of water on one side of said valve in reference to the pressure on the other side of said valve.

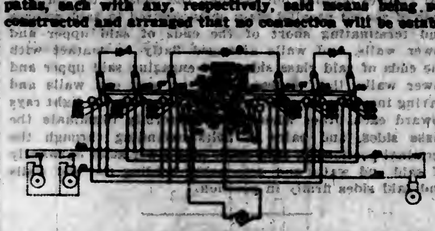
1,396,240. NECKSCARF. ABRAHAM M. BAKERMAN, New York, N. Y. Filed Nov. 16, 1920. Serial No. 424,276. 1 Claim. (Cl. 2—88.)



A neck scarf of the character designated, comprising a neck band and a noose segment consisting of a continuous tubular shell of elastic resilient material formed with an

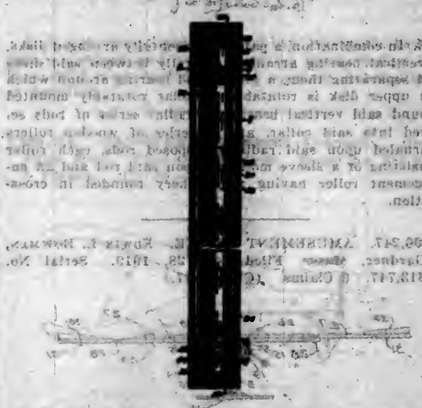
arched top having lateral inlets for the strands of said neck band, and interlocking spring clamping jaws attached to opposite internal sides of said noose segment and

adapted to receive and adjustably secure the otherwise loose strands of the said neck band, for the purpose described.



1,396,241. ELECTRIC HEATER. JOHAN R. BARSTAD, Chicago, Ill., assignor to Holden & White, Inc., Chicago, Ill., a Corporation of Illinois. Filed Oct. 7, 1920. Serial No. 415,291. 5 Claims. (Cl. 219—34.)

1. In combination, a car seat frame, cross bars extending between the front and back rails thereof and an electric heater for suspension from said cross-bars, said heater comprising a horizontally elongated perforated body casing having sides and ends which extend upwardly beyond said sides and are flanged to seat upon said cross bars, whereby the heater becomes suspended suitably below the car seat.



1,396,242. CONTROLLING SYSTEM FOR STORAGE BATTERIES. CLARENCE E. BEACH, Binghamton, N. Y. Filed Feb. 11, 1920. Serial No. 357,789. 18 Claims. (Cl. 171—314.)

8. Three secondary batteries, two discharge paths, one charge path, and means for connecting said batteries and

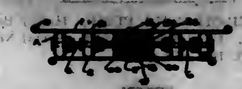
paths, each with any, respectively, said means being so constructed and arranged that no connection will be established between either of said discharge paths and said charge path incident to the operation of said means.

1,396,243. DEEP-OIL-WELL PUMP. HARRY BELOIT, Los Angeles, Calif. Filed Apr. 19, 1921. Serial No. 462,608. 6 Claims. (Cl. 103—58.)

1. In a pump, a pump barrel having internally threaded ends, a liner comprising a pair of end sections and greater more intermediate sections, each of said end sections formed with an exteriorly threaded portion of enlarged diameter, whereby they may be threaded into respective ends of said barrel and advanced toward each other to hold all intermediate sections together.

1,396,244. FILTERING AND CLEANSING COMPOSITION. HENRY R. BLOOMFIELD, New York, N. Y., assignor, by direct and mesne assignments, to Liquid Cleaning Stimulant Co., Inc., New York, N. Y., a Corporation of New York. Filed July 26, 1919. Serial No. 313,657. 12 Claims. (Cl. 210—203.)

1. A composition of the character described, comprising a fibrous substance, and pellets adapted to maintain the permeability of the composition.

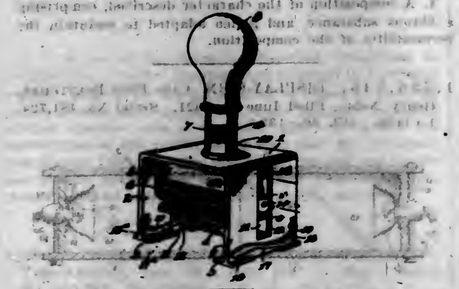


1,396,245. DISPLAY-SIGN. CARL FRED BOETTCHER, Henry, Nebr. Filed June 6, 1921. Serial No. 481,724. 1 Claim. (Cl. 40—132.)

A display sign comprising upper and lower walls having their longitudinal edge portions formed with longitudi-

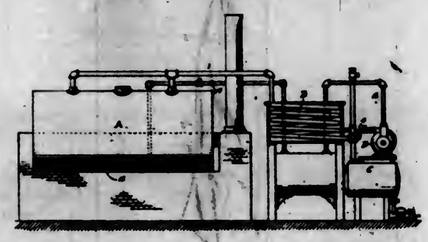
nal grooves opening out through the ends of the walls, a pair of spaced parallel glass sides secured in said grooves and terminating short of the ends of said upper and lower walls, end walls arranged flatly in contact with the ends of said glass sides and engaging said upper and lower walls, light bulbs shielded by said end walls and having inwardly directed reflectors directing the light rays toward each other whereby to uniformly illuminate the glass sides, and pairs of bolts extending through the terminal portions of said upper and lower walls outwardly of said end walls and detachably holding the end walls and said sides firmly in position.

1,396,246. SELF-SERVING TABLE. LEO P. BOUVIER, Worcester, Mass. Filed Oct. 11, 1920. Serial No. 416,274. 8 Claims. (Cl. 45—26.)



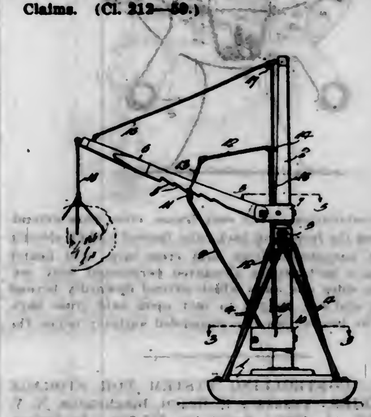
3. In combination, a pair of horizontally arranged disks, a vertical bearing arranged centrally between said disks and separating them, a pin in said bearing around which the upper disk is rotatable, a collar rotatably mounted around said vertical bearing, a radial series of rods secured into said collar, and a series of wooden rollers journaled upon said radially disposed rods, each roller consisting of a sleeve mounted upon said rod and an enlargement roller having a periphery rounded in cross-section.

1,396,247. AMUSEMENT DEVICE. EDWIN L. BOWMAN, Gardner, Mass. Filed July 28, 1919. Serial No. 313,747. 3 Claims. (Cl. 46—27.)



1. A combined saw and carousel comprising a base, a head rotatably carried by the base, a bracket having openings formed therein, means for hingedly connecting the bracket to said head, right angularly extending toster boards arranged on said bracket, the toster boards having pairs of alined openings formed therein arranged to aline with the openings in the bracket, and pins arranged to fit in said alined openings.

1,396,248. NUMBERING-MACHINE. CLAUDE H. BISCHOFF, Jr., Memphis, Tenn. Filed Apr. 14, 1920. Serial No. 373,805. 12 Claims. (Cl. 101—108.)



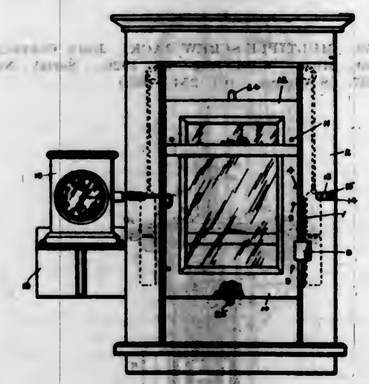
1. A printing device comprising a supporting frame adapted to rest upon a surface, a frame carrying a printing member mounted to reciprocate with respect to said supporting frame and make an impression upon a work surface, a detachable auxiliary impression device and means on said reciprocating frame adapted to engage with other means upon an auxiliary impression device in order that said operation of said reciprocating frame may cause the auxiliary device to make an impression.

1,396,249. METHOD OF DISTILLING PETROLEUM. ELI F. BUSCH, Laurel Springs, N. J. Filed Apr. 23, 1917. Serial No. 163,826. 1 Claim. (Cl. 196—27.)

The process of distilling petroleum oil of high asphaltic content comprising gently heating a charge of the petroleum in a still to vaporise only the lightest constituents, condensing the light oils out of the evolved gases at a temperature not sufficiently low to condense all of the evolved gases, collecting the gases that are not condensed at the temperature of condensation, increasing the heating of the still and passing these non-condensed gases back through the heated petroleum, and condensing the vapors evolved and collecting the non-condensed gases and repassing these non-condensed gases through the petroleum in the still, and continuing the heating of the still with a rise in temperature at each step and the passing of the gases through it and the condensation of the distillates and the collection of the non-condensed gases until the desired distillates have been separated from the charge, so as to avoid cracking of the constituents of the petroleum and to obtain a greater yield of the more valuable products such as lubricating oils from a given quantity of petroleum base of high asphaltic content.

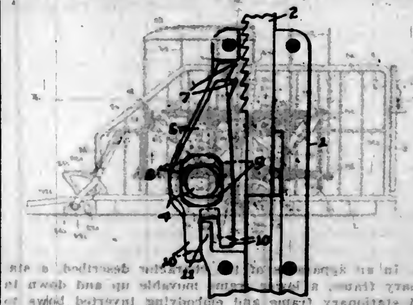
1,396,250. DERRICK. MICHAEL BURKE, Mount Pleasant, Iowa. Filed Nov. 1, 1920. Serial No. 421,071. 6 Claims. (Cl. 212—59.)

1. In a derrick, a base, a standard rising therefrom, a gravity lowered boom pivotally mounted on said standard,



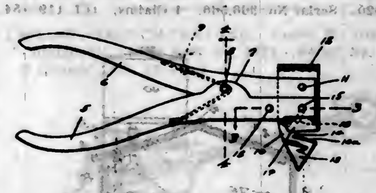
a hoisting cable for elevating said boom, and a separate and independent means for elevating the boom in step by step manner and holding it in the various positions to which it has been moved, said cable serving to disengage said boom from the means when desired to restore the boom to its normal position.

1,396,251. ANTIFRICTION DEVICE FOR LEAF-SPRINGS. CHARLES C. CLARK, Touhy, Nebr. Filed Mar. 30, 1921. Serial No. 456,216. 4 Claims. (Cl. 267—49.)



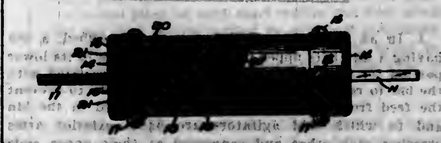
1. An anti-friction device for leaf springs comprising oppositely disposed side plates, said side plates being provided with a plurality of bearing sockets, roller bearings in said sockets, said bearings being graduated in diameter, the smaller bearing being on the inner end and the largest bearing at the outer end of said plates, and means for holding the several parts in assembled position.

1,396,252. AUTOMATIC WINDOW-CLOSING DEVICE. RICHARD G. CATON, Palmyra, N. Y., assignor of one-half to F. J. Lawler, Palmyra, N. Y. Filed Dec. 10, 1920. Serial No. 429,767. 3 Claims. (Cl. 161—1.)



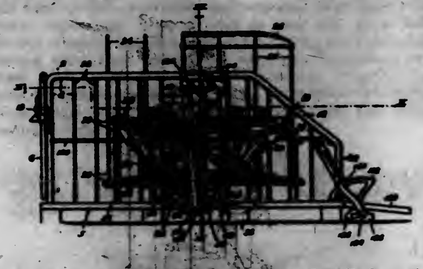
3. In an automatic window closing device, the combination of a window casing, an upper and a lower window sash mounted to slide up and down in said window casing, said upper and said lower sash being counter balanced to allow said sashes to automatically close themselves on the release thereof, pins carried on the outside of said sashes, a lever mounted to swing on said window casing, a dog operated by said lever, said dog being adapted to engage said pins on said sashes to hold said sashes open, a latch on said window casing, said latch being adapted to engage and hold said lever in a position to hold said dogs in engagement with said pins in said window sashes, means to disengage said lever from said latch to release said dogs from said pins and allow said windows to close.

1,396,253. RATCHET-JACK. ROBERT G. CLARK, Brooklyn, N. Y. Filed Nov. 17, 1920. Serial No. 424,960. 4 Claims. (Cl. 254—97.)



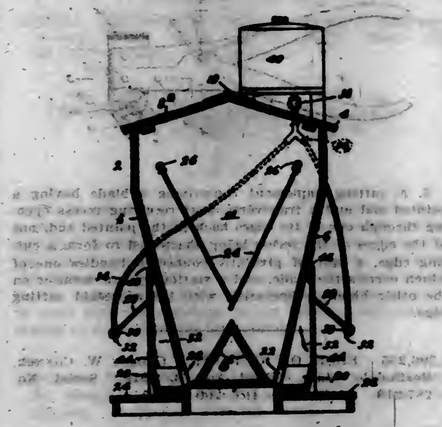
1. A jack, comprising a ratchet-bar, two pawls having square openings, and rotary operating means having two three-sided cams working in said openings, substantially as described.

1,396,254. CAN-OPENER. HENRY CONNOCHEN, Great Falls, Mont. Filed Oct. 20, 1920. Serial No. 418,226. 5 Claims. (Cl. 30—3.)



5. A cutting implement comprising a blade having a pointed end and a transverse work-receiving recess opening through one of its edges back of the pointed end, one of the edges of the recess being sharpened to form a cutting edge, a pair of pivotally connected handles one of which carries the blade, and a stationary jaw member on the other handle cooperating with the aforesaid cutting edge.

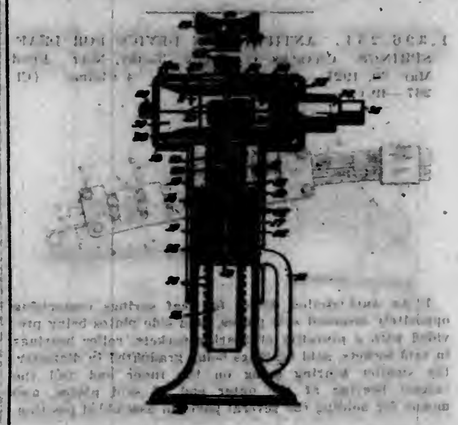
1,396,255. FUSE OR CUT-OUT. GEORGE W. CONNER, Roslindale, Mass. Filed Apr. 8, 1919. Serial No. 287,219. 11 Claims. (Cl. 200—122.)



1. In a device of the character described, a shell, a cap having side walls arranged over the end of said shell and an end wall having a slot, a blade extending through said slot and movable relatively to said cap, oppositely located members for engaging the edges of said blade for normally centering it relatively to said shell but permitting adjustment of said blade relatively thereto, means affording a clamping member extending diametrically through both sides of the wall of said cap and through the tube and blade, and oppositely located spacers separate from the elements heretofore enumerated and abutting the blade and interior surface of said shell.

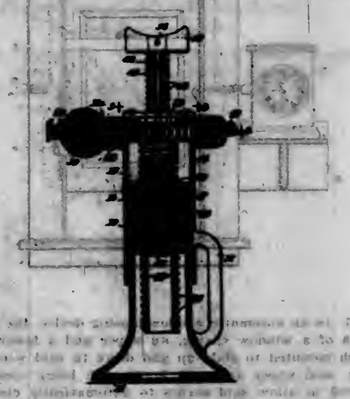
1,396,256. BREEDING-CRATE. James W. Cornerow, Fancett, Mo. Filed Mar. 17, 1920. Serial No. 366,645. 4 Claims. (Cl. 119—68.)

1. In an apparatus of the character described, a stationary frame, a lower frame movable up and down in said stationary frame and embodying inverted bows to engage the underside of an animal, an upper frame movable up and down in said stationary frame and including bows to engage the back of the animal, mechanism for adjusting the movable frames independently of each other, and an adjustable platform at one end of the stationary frame.



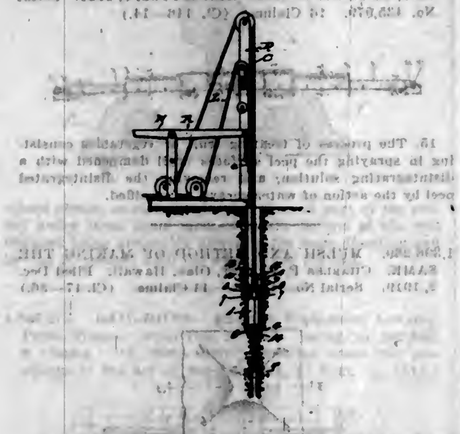
1,396,257. AUTOMATIC DOSER AND SELF-FEEDER. James W. Cornerow, Fancett, Mo. Filed Mar. 17, 1920. Serial No. 366,566. 4 Claims. (Cl. 119—54.)

1. In an apparatus of the character described, a bin having a lid at its upper portion and openings in its lower portion for the discharge of feed, troughs associated with the bin to receive the feed, agitators in the bin to prevent the feed from clogging, rock-shafts journaled in the bin and to which said agitators are fixed, exterior arms crossing each other and connected at their upper ends to said rock-shafts, keepers fixed to the ends of the bin to limit the downward movement of said arms and means connecting the lower ends of the arms in pairs and whereby animals approaching the troughs actuate the agitators by lifting said arms with their backs.



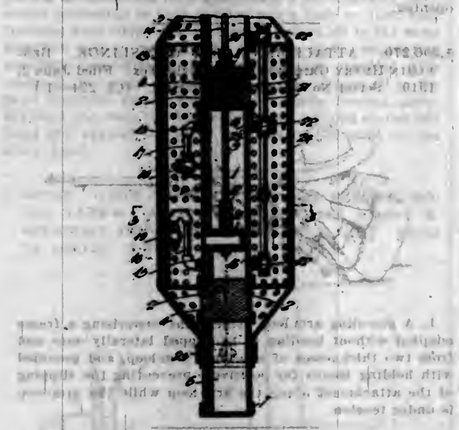
1,396,258. MULTIPLE-SCREW JACK. John Cornell, Detroit, Mich. Filed Aug. 13, 1920. Serial No. 403,236. 11 Claims. (Cl. 254—103.)

1. In mechanism of the class described, the combination of two separated non-rotatable members, one of which is a base, a pair of screws telescoping with each other and with the non-rotatable members, screw threads between said screws, other screw threads between one screw and one non-rotatable member, a spline connection between the other screw and the other non-rotatable member, and means for rotating the rotatable screw.



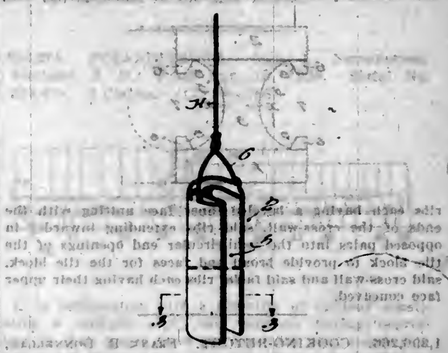
thereto and journaled in the other non-rotatable member, and means simultaneously rotating said gears in such directions that the screws travel in opposite directions longitudinally of each other and in the same direction with reference to the non-rotatable member in which one screw is threaded.

1,396,259. MULTIPLE-SCREW JACK. John Cornell, Detroit, Mich. Filed Aug. 13, 1920. Serial No. 403,237. 8 Claims. (Cl. 254—103.)



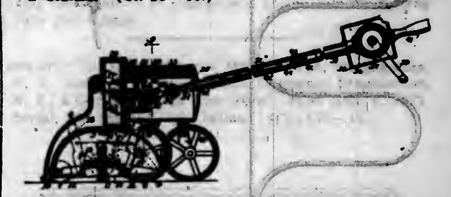
1. In mechanism of the class described, the combination of two separated non-rotatable members one of which is a base, a pair of screws telescoping with each other and with the non-rotatable members, screw threads between said screws, other screw threads between one screw and one non-rotatable member, a spline connection between the other screw and the other non-rotatable member, and means for rotating the rotatable screw, said gears in such directions that the screws travel in opposite directions longitudinally of each other and in the same direction with reference to the non-rotatable member in which one screw is threaded.

1,396,260. BIT-RECOVERING MEANS. John P. T. Davis, Elk City, Kans. Filed Sept. 15, 1919. Serial No. 323,603. 3 Claims. (Cl. 255—63.)



1. A bit of the herein described class formed of two vertical sections hinged together and having channels in their inner sides, and means for holding said sections closed around a cable.

1,396,261. PUMP. John P. T. Davis, Elk City, Kans. Filed Oct. 30, 1919. Serial No. 334,386. 2 Claims. (Cl. 103—76.)



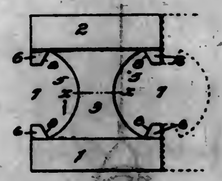
1. A well pump structure embodying a cylinder closed at its opposite ends, a piston operable in said cylinder, piping connected to the upper end of the latter and extending upwardly to the surface of the ground, valved inlets and outlets adjacent the opposite ends of the cylinder, a pipe connected to and opening up communication between said outlets, an additional valved inlet for the aforesaid piping, and a conduit communicating with the upper outlet and adjacent inlet of said piping serving to carry the liquid from the cylinder into said piping whereby the column of liquid will be supported by the closed end of the cylinder and said piston relieved of excessive weight.

1,396,262. BAILER. John P. T. Davis, Elk City, Kans. Original application filed Sept. 15, 1919, Serial No. 323,603. Divided and this application filed June 14, 1920. Serial No. 388,970. 2 Claims. (Cl. 166—18.)

1. A bailer of the class described comprising a vertically elongated hollow container having a vertical channel in one of its sides to receive the tool carrying cable as the bailer is lowered into the well, the upper end of said container having cable attaching means and the lower end thereof being provided with a valved inlet.

1,396,263. VACUUM-CLEANER. Jacob W. Diephouse, Chicago, Ill. Filed Sept. 12, 1917. Serial No. 190,893. 2 Claims. (Cl. 15—60.)

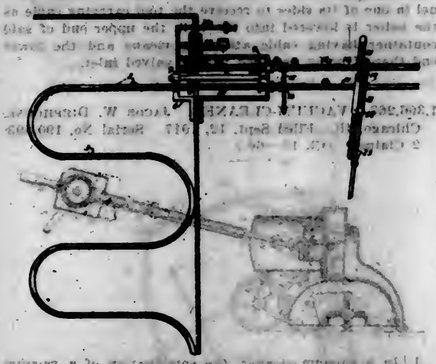
1. In a vacuum cleaner, the combination of a vacuum casing, a nozzle in proximity to the surface to be cleaned and in communication with said vacuum casing, a fan casing, a fan in said fan casing, a gear box mounted on said fan casing, gearing in said gear box for operating said fan, a tube pivotally mounted at one end on said gear box, and carrying another gear box on its outer end, a shaft engaging with said gearing to operate the same and projecting outwardly through the rear end of the first mentioned gear box and into said last mentioned gear box, a universal joint on said shaft within the first mentioned gear box, and means carried by said last mentioned gear box for operating said shaft, said shaft being in two parts and its ends being connected by a slip joint within said tube.



1,396,264. FIREPROOFING COMPOSITION. Silvio Di Filippo, Toledo, Ohio. Filed Nov. 18, 1920. Serial No. 423,905. 1 Claim. (Cl. 23—6.)

A fire proofing composition consisting of the ingredients and proportions substantially as follows: ammonium sulfate, 10 pounds; potassium bicarbonate, 3 pounds; boracic acid, 6 pounds; borax, 24 pounds; water 200 pounds.

1,396,265. TILE-BLOCK. Mathias Dochnal, St. Louis, Mo. Filed Oct. 28, 1918. Serial No. 259,963. 1 Claim. (Cl. 72—29.)



A tile block comprising an inner wall section and an outer wall section, a central cross-wall uniting said inner

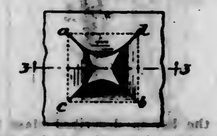
and outer wall sections, said cross-wall having concaved end faces to gradually strengthen its union with the inner and outer wall sections and provide a semi-circular opening at each end of the tile block, a facial rib formed at each extremity of the inner and outer wall section, said

ribs each having a beveled inner face uniting with the ends of the cross-wall, said ribs extending inwardly in opposed pairs into the semi-circular end openings of the tile block to provide broad end faces for the tile block, said cross-wall and said facial ribs each having their upper face concaved.

1,396,266. COOKING-RETORT. FRANK B. DONNELLAN, San Francisco, Calif. Filed June 25, 1919. Serial No. 306,529. 11 Claims. (Cl. 126—272.)

1. In combination with a cooking retort, means for introducing cans into, or withdrawing them from, said retort, comprising a chamber secured to the outside of the retort, around a hole in the retort communicating with said chamber, said chamber being closed at the outer end and with its inner end open and registering with said hole, a shaft in said chamber, open ended parallel tubes, each of sufficient size to contain the cans, and carried by said shaft, tubes also of such size extending into the chamber, a guideway for the can in the retort, and means for rotating said shaft to move one of the tubes carried thereby into registry with said guideway and another of said tubes into registry with one of the tubes extending into the chamber.

1,396,267. METHOD OF MAKING ORNAMENTAL ARTICLES. GENNARO DORSO, San Francisco, Calif. Filed Mar. 7, 1921. Serial No. 450,405. 2 Claims. (Cl. 42—14.)



2. The method of making ornamental articles representing baskets of fruit, by modeling the fruit of a composition of glue, water, sawdust and whiting, modeling the stems of the same, the stem composition being based on a suitable bent wire, making leaves of two ply of fabric pasted together with a composition of liquid glue, water and whiting, securing them to the stem and fruit imitations by inserted wires, burnishing, and coloring the designs with dry paint and dry japan, and finishing with said mixture of paint and japan diluted with turpentine.

1,396,268. APPARATUS AND PROCESS FOR PEELING FRUIT AND VEGETABLES. SAMUEL J. DUNGLEY, Oakland, Calif., assignor to Dunkley Company, Kalamazoo, Mich., a Corporation of Michigan. Filed Nov. 15, 1916, Serial No. 131,162. Renewed Jan. 8, 1921. Serial No. 435,979. 16 Claims. (Cl. 146—14.)

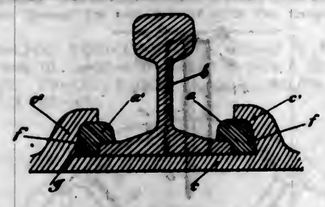
15. The process of treating fruit or vegetables consisting in spraying the peel surfaces until dampened with a disintegrating solution, and removing the disintegrated peel by the action of water sprays, as specified.

1,396,269. MULSH AND METHOD OF MAKING THE SAME. CHARLES F. RICHEY, Olaa, Hawaii. Filed Dec. 2, 1919. Serial No. 341,871. 11 Claims. (Cl. 47—36.)

4. The method of making a mulsh which consists in incompletely saturating a piece of fibrous material with a water-proofing substance and in forming opposed flaps therein which are adapted to rise to produce an opening.

6. A mulsh consisting of a piece of fibrous material incompletely saturated with a water-proofing substance and having flaps therein adapted to rise to produce a planting opening.

1,396,270. ATTACHMENT FOR GUN-SLINGS. BENJAMIN HENRY GRIMSON, Fort Davis, Tex. Filed June 2, 1919. Serial No. 301,287. 18 Claims. (Cl. 224—1.)

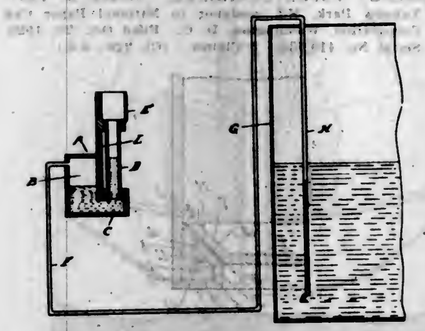


1. A gun-sling arm-loop attachment comprising a frame adapted without bending to be slipped laterally onto and from two thicknesses of a leather arm-loop, and provided with holding means for positively preventing the slipping of the attachment along the arm-loop while the arm-loop is under tension.

1,396,271. FASTENING MEANS FOR VIGNOLE RAILS. EDMOND FLORIMOND LEVAIRE, Paris, France. Filed Dec. 9, 1919. Serial No. 343,647. 6 Claims. (Cl. 238—204.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A fastening device for Vignole rails comprising the combination of a metal supporting member, two lateral opposite claws integral with the said supporting member having a substantially horizontal projecting or beak portion, the inner under side of each beak portion being situated in a plane at right angle with the web part of the rail, but slightly inclined longitudinally toward the rail flange and a body portion and two tapering keys adapted

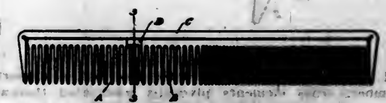
to be forcibly driven between one claw on the said supporting member and one edge of the rail flange, respectively, both keys having their upper faces in slightly inclined planes, at right angle with the web part of the rail, the under faces being inclined to the bottom of the rail chamber being preferably driven in the same direction and having no contact with the web part of the rail.



1,396,272. RAIL-JOINT. EDMOND FLORIMOND LEVAIRE, Paris, France. Filed Dec. 9, 1919. Serial No. 343,648. 6 Claims. (Cl. 238—151.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A rail joint comprising the combination of supporting members adapted to support the rail sections, respectively, two lateral opposite claws integral with each supporting member each claw comprising a substantially horizontal projecting or beak portion and a body portion, four tapering keys adapted to be forcibly driven all in the same direction each in contact with one claw on the supporting members, respectively, and two fish-plates provided with wedge surfaces and adapted to be forcibly driven all in the same direction as the keys, the fish-plates bearing under the head and upon the flange of the rail sections on the one hand and against the other members of the joint on the other hand.

1,396,273. GAGE OR INDICATOR FOR FLUID-HOLDING TANKS. ANDREW H. MILLER and ROBERT E. MCCAFFREY, Detroit, Mich. Filed Dec. 6, 1917. Serial No. 205,722. 2 Claims. (Cl. 73—54.)

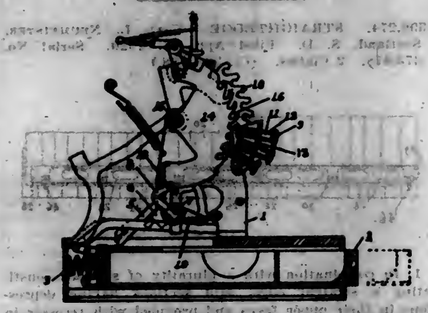


1. The combination with a liquid container, of an indicator therefor comprising a tube extending downward in said container and having its lower end open, the plane of the opening being oblique to the tube, the opposite end of said tube extending to the point where the indicator is to be located, a receptacle for indicating fluid having a sealed air chamber therein connected with said tube, and a transparent tube rising from said receptacle having its lower end immersed in the fluid therein.

1,396,274. STRAIGHTEDGE. CARL L. NEUMEISTER, Scotland, S. D. Filed Apr. 13, 1920. Serial No. 373,478. 2 Claims. (Cl. 33—183.)

1. In combination with a plurality of sections constituting a straight edge, said sections having depressions in their upper faces and provided with recesses in their lower faces, clamp frames having arms located in said recesses, bolts extending through said sections and arms, bow springs engaging centrally with the bolts and having their free ends fitted in said depressions, spring jaws carried by the under sides of said arms and having prongs extending downwardly and adapted to engage the upper face of a shingle, a plate secured beneath said clamp frame and having a tapered extension piece underlying the spring jaw and adapted to engage beneath the shingle, and a lever pivotally mounted in said clamp frame and provided with an eccentric extending downwardly and adapted to engage said spring jaw for forcing it into the shingle.

1,396,275. COMB. THOMAS MCK. NOYES, Binghamton, N. Y., assignor to Noyes Comb Company, Binghamton, N. Y., a Corporation of New York. Filed Aug. 4, 1921. Serial No. 489,761. 4 Claims. (Cl. 132—17.)



1. A comb comprising,—abutting pieces the adjacent ends of each of which pieces are toothed and the backs of which pieces are channeled to receive the edges of a metal back; in combination with a connector engaging the teeth of such adjacent ends, engaging the sides of the backs of said pieces and entering the channels formed therein; and a metal back inclosing the backs of said pieces and the ends of said connector, the edges of said back being so formed as to snugly engage the channeled portions of the backs of said pieces where not covered by said connector and to pass outside of the portions of said connector which engage said channels and thereby force said connector portions somewhat into said channels.

1,396,276. PROCESS FOR IMPROVING FERROUS METALS. ALADAR PACZ, Cleveland Heights, Ohio. Filed Apr. 16, 1920. Serial No. 374,261. 1 Claim. (Cl. 75—1.)

The method of producing an alloy of iron and aluminum which contains the steps of first preparing an alloy of aluminum containing from about ten to about forty per cent. of silicon, cooling and disintegrating the same and then adding it to a bath of molten iron.

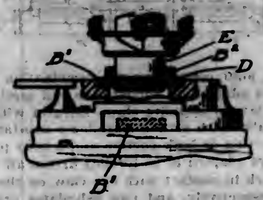
1,396,277. CASH-REGISTER. William L. Paine, Saginaw, Mich., assignor to American Cash Register Company, Saginaw, Mich., a Corporation of Michigan. Filed Oct. 28, 1918. Serial No. 259,994. 8 Claims. (Cl. 235—22.)

2. In a registering machine, a combined recording and drawer release device including a key comprising two stems, one of said stems adapted to actuate the recording device of said machine, said stems adapted to be depressed simultaneously and to return independently to their initial positions for the purposes set forth.

1,396,278. ANCHORING DEVICE. Mathew H. Paine, Glenellyn, and Winfield S. Williams, Chicago, Ill., assignors to Paine Company, a Corporation of Illinois. Filed May 18, 1917. Serial No. 169,553. 30 Claims. (Cl. 85—8.)

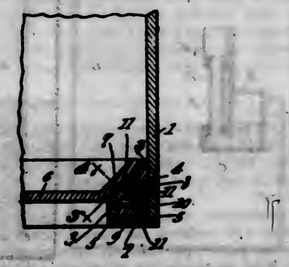
1. In a device of the character described, a supporting member, truss elements pivotally associated therewith, tension means normally tending to expand said elements laterally with respect to said supporting member, and means for yieldingly resisting such expansion.

1,396,279. ANCHORING DEVICE. Mathew H. Paine, Glenellyn, and Winfield S. Williams, Chicago, Ill., assignors to Paine Company, a Corporation of Illinois. Filed July 6, 1917. Serial No. 178,926. 17 Claims. (Cl. 85—8.)



1. In a device of the class described, the combination with a bolt, of a pair of anchoring members pivotally associated with said bolt, tension means for expanding said members into the form of a truss, the latter when fully expanded extending at substantially right angles with respect to said bolt but being capable of angular adjustment relatively thereto.

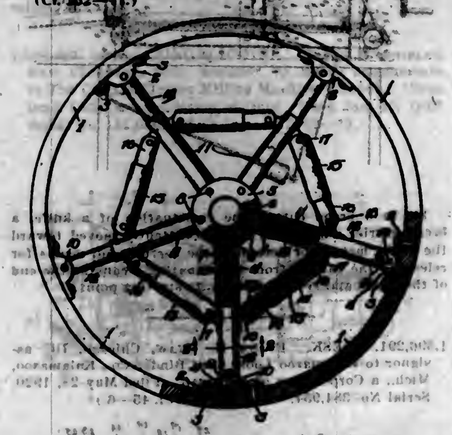
1,396,280. CONTRACTIBLE CORE. Mathew H. Paine, Glenellyn, Ill., assignor to The Paine Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 20, 1920. Serial No. 360,122. 7 Claims. (Cl. 25—128.)



4. In a device of the class described, a sheet of material bent to provide outer and inner cylindrical portions, attaching means carried by said inner portion, said outer portion being contractible around said inner portion and means for preventing displacement of said attaching means from said inner portion, said means also serving as a cover for one end of said device.

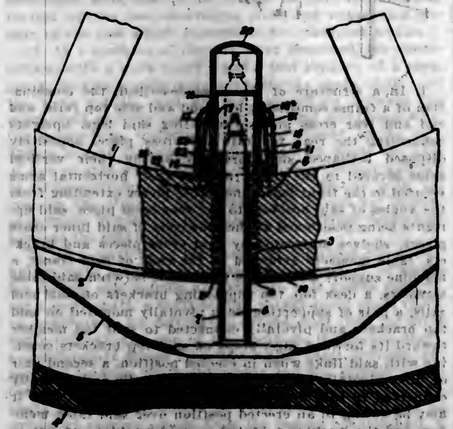
1,396,281. PROCESS OF FORMING METAL ARTICLES. Edward J. Paque, Cincinnati, Ohio, assignor to The Pollak Steel Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 17, 1919. Serial No. 338,578. 2 Claims. (Cl. 29—156.)

1. A process for forming a metal ring, which comprises first removing a slug from a longitudinally rolled billet by cutting it transversely, second, forming from the slug a disk that has a substantially greater transverse and smaller longitudinal dimensions than the slug by compressing it longitudinally, and third, forming from the disk the ring by pressing a plug from the center of the disk.



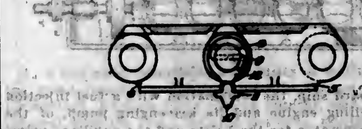
1,396,282. PAPER CONTAINER. George R. Penn, Takoma Park, Md., assignor to National Paper Can Corporation, Washington, D. C. Filed Oct. 23, 1920. Serial No. 419,035. 5 Claims. (Cl. 229—5.6.)

1. A paper container comprising a body having one end portion folded to constitute an annular rectangular base and an inclined annular flange carried by the base, and a bottom disk having an inclined annular portion seated



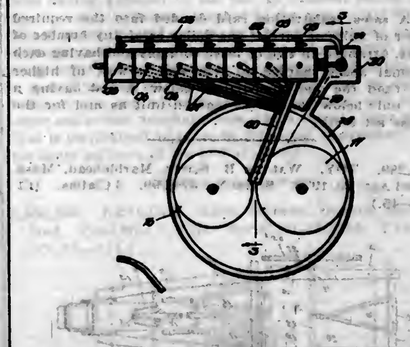
on the inclined flange and an angular peripheral portion upon the first and presenting interrupted interfitting with the rectangular base, said disk having an annular series of stiffening depressions in the inclined and marginal portions thereof for engagement with the flange.

1,396,283. VEHICLE-WHEEL. Seabal M. Perry, Roseland, Ill., assignor of one-half to John J. Reid, Chicago, Ill. Filed July 6, 1920. Serial No. 394,066. 2 Claims. (Cl. 152—17.)



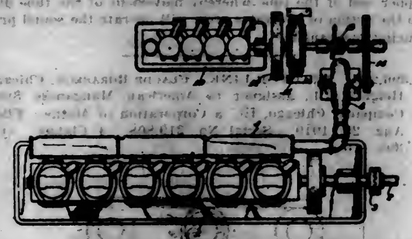
1. In a wheel, a felly, a hub, telescoping spokes, means to pivot the spokes on the felly, means to pivot the spokes on the hub, and springs fastened at their opposite ends in said spokes, so that each spring sustains both a compression and a tensile strain, and whereby the load weight is always imposed on all of the springs, telescoping connections between said spokes, and springs fastened at their opposite ends to said connections, whereby there is always a spring under compression above said hub and a spring under compression below the hub.

1,396,284. FLAT-TIRE ALARM. Karl Rinkle, West Palm Beach, Fla. Filed Feb. 23, 1920, Serial No. 365,024. Renewed Aug. 8, 1921. Serial No. 490,906. 6 Claims. (Cl. 116—34.)



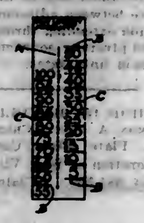
1. In a device of the character described the combination, with a pneumatic tire mounted on a wheel in the usual manner, with the valve stem extending through an aperture in the rim and felly of the wheel, of a tube having a series of alternate ribs and grooves formed at its upper end, said tube being operable in said aperture and having its lower end supported on the base of the valve stem and a sound producing mechanism coöperating with the upper end of the tube whereby movement of the tube due to the action of the valve stem will operate the sound producing mechanism.

1,396,285. TRACTOR-LINK. Claude Rosebeck, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Aug. 28, 1919. Serial No. 319,808. 4 Claims. (Cl. 305—10.)



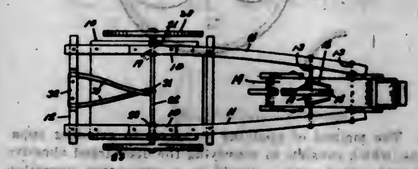
1. A track chain of the self laying type, comprising link plates having tracks upon their upper sides, said tracks projecting beyond the ends of the respective link plates and pivotally connected to the tracks of the respective adjacent link plates, adjacent ends of successive link plates being spaced to permit angular movement of said plates, and grouters at the under side of the chain, each grouter spanning the space between adjacent link plates and provided with a portion extending through the space between the link plates and pivotally connected to the pivotal connection between said link plates.

1,396,286. METHOD OF HANDLING ABRASIVE MATERIAL. Myron A. Ross, Chicago, Ill., assignor to Pressed Prism Plate Glass Company, Morgantown, W. Va., a Corporation of West Virginia. Filed May 15, 1920. Serial No. 381,565. 4 Claims. (Cl. 51—264.)



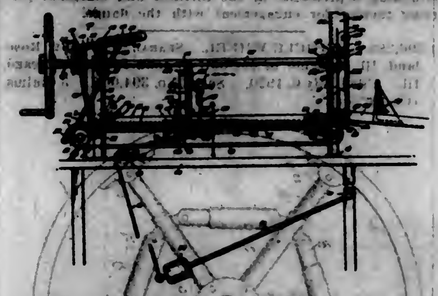
1. The method of applying abrasives to grinding apparatus, which consists in conveying the discharged abrasive material mixed with a liquid to a separation operation while the material flows continuously from the grinding operation, separating such material into different grades of fineness, withdrawing the separated grades of such material in any desired sequence independently of other grades, concurrently conveying back the discharge from the grinding apparatus and grading such discharge independently of the material being withdrawn from the separation operation, substantially as specified.

1,396,287. MARINE-POWER INSTALLATION. MAX ROSTEN, Milwaukee, Wis., assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 20, 1919. Serial No. 346,817. 4 Claims. (Cl. 290—4.)



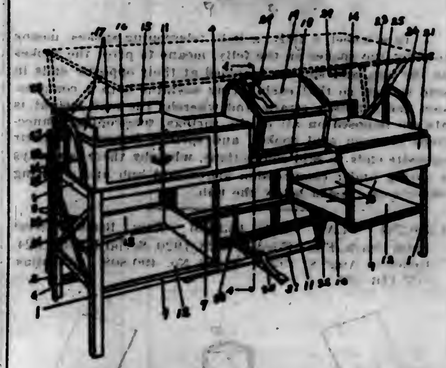
2. On board ship, the combination with a fuel injection type propelling engine and its scavenging pump, of the electrical generator for the hoists and the auxiliary prime mover for the latter, the said auxiliary prime mover being arranged to operate said scavenging pump for the propelling engine.

1,396,288. SALES-REGISTRATION CARD. WILLIAM H. ROYSTONE, New York, N. Y. Filed Sept. 23, 1920. Serial No. 412,330. 3 Claims. (Cl. 283—51.)



1. A sales registration card divided into the required number of units of part of one dollar or of any number of dollars, arranged in two or more columns and having each divisional space marked to represent a unit of higher value than the one immediately below it and having a blank unit below the lowest marked unit as and for the purpose set forth.

1,396,289. TOY. WALTER B. SCOTT, Marblehead, Mass. Filed Apr. 19, 1920. Serial No. 374,799. 8 Claims. (Cl. 46—45.)

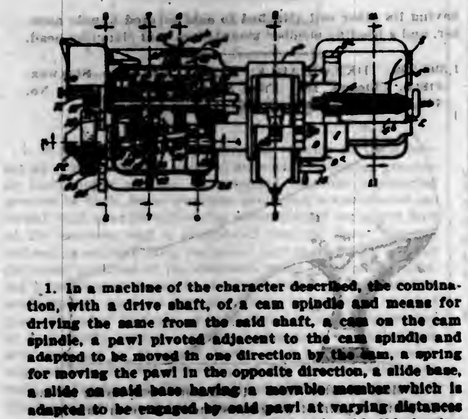


1. The combination in a toy, of a rotatably supported shaft having band-engaging means, a fixed support carried by the frame of the toy, and an endless elastic band detachably connected with said fixed support and band-engaging means, said support and band-engaging means cooperating to separate said band into two spaced strands adapted independently to wind about said shaft.

1,396,290. BREAD-SLICING MACHINE. GUSTAV [illegible], Yonkers, N. Y. Filed Feb. 28, 1920. Serial No. [illegible]. 12 Claims. (Cl. 146—12.)

12. In a bread cutter, the combination of a knife, a bread carrier adapted to be intermittently moved toward the knife, means for actuating the carrier, and means for releasing the carrier from the actuating means at the end of the latter and returning it to its starting point.

1,396,291. DESK. FRANK H. SHAW, Chicago, Ill., assignor to Kalamazoo Loose Leaf Binder Co., Kalamazoo, Mich., a Corporation of Michigan. Filed May 28, 1920. Serial No. 384,961. 12 Claims. (Cl. 45—6.)

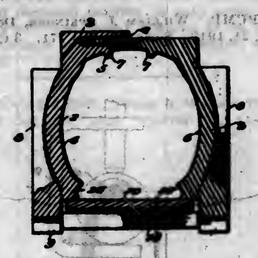


1. In a structure of the class described, the combination of a frame comprising legs, end and side top rails, and end and rear cross pieces connecting said legs, uprights connecting the rear top rail and cross piece, oppositely disposed L-shaped shelf brackets having their vertical arms secured to the front rail and their horizontal arms secured to the front legs, inner cross pieces extending from the angles of said brackets to the rear cross piece, said uprights being positioned at the rear ends of said inner cross pieces, shelves supported by said cross pieces and brackets, table members arranged at the ends of said frame, a machine support mounted on said frame between said table members, a desk top, top supporting brackets on said end rails, a pair of supporting links pivotally mounted on said top brackets and pivotally connected to said top member toward its forward edge, stops on said top brackets coacting with said links when in erected position, a second pair of links pivotally mounted on said end rails and pivotally connected to said desk top near its rear edge so that it may be swung to an erected position over said table members and the machine mounted on said machine support or collapsed at the rear of the frame, a rock shaft constituting a foot rail, hangers mounted on the inner cross pieces,

and a lever mounted on said rock shaft to engage the rear edge of the desk top when it is collapsed to assist in raising the same.

12. A structure of the class described comprising a table member, a machine support at the side of said table member, a desk top, supporting links for said top arranged so that the top may be swung to an erected position over said table member and the machine mounted on said machine support or collapsed at the rear thereof, and a lever mounted to engage said desk top when it is collapsed to assist in raising the same.

1,396,292. RELIEVING-MACHINE. FRANK S. SHIELDS, East Cleveland, Ohio, assignor, by mesne assignments, to The Clark & Mesker Milling Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 10, 1917. Serial No. 141,532. 25 Claims. (Cl. 82—19.)



1. In a machine of the character described, the combination, with a drive shaft, of a cam spindle and means for driving the same from the said shaft, a cam on the cam spindle, a pawl pivoted adjacent to the cam spindle and adapted to be moved in one direction by the cam, a spring for moving the pawl in the opposite direction, a slide base, a slide on said base having a movable member which is adapted to be engaged by said pawl at varying distances from the axis of oscillation of said pawl, said slide having spaced guideways between which the cam and the pawl operate, a carriage rotatably supporting said slide base, a second slide rotatably mounted on the first slide, a slide carried by the last mentioned slide and adjustable transversely thereof, means for clamping a tool upon the last mentioned slide, and an adjustable support for said tool carried by the last mentioned slide and supporting the part of the tool which is opposite the clamping means.

10. In a machine of the character described, the combination, with a work spindle and a tool support, of a main shaft, driving connections between the main shaft and the work spindle, and driving connections between the main shaft and the tool support, the last mentioned driving connections including a pair of spaced shafts each having a gear thereon, a frame rotatable about the axis of one of said shafts and having a gear thereon adapted to be brought into and out of driving relation with the gear on the other of said shafts, and means for locking said frame in position to establish the driving connection between the said shafts.

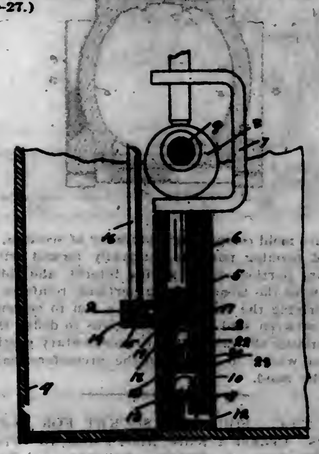
20. In a machine of the character described, the combination, with a work spindle and a tool support, of means for driving said spindle and support, said means comprising a drive shaft, a shaft having change-speed gears thereon, connections for driving the second shaft from the drive shaft through any one of the gears on the second shaft, a countershaft driven from the second shaft, driving connections between the countershaft and the spindle, a second countershaft driven from the first mentioned countershaft, a cam shaft, means whereby the cam shaft may be driven at varying speeds from the second countershaft, a cam spindle driven by the cam shaft, and connections for driving the tool support from the cam spindle.

1,396,293. THREE-PIECE MOLD. GUY A. SIVELEY, Tacoma, Wash., assignor to Dutho Rubber Company, Pierce county, Wash. Filed Feb. 4, 1921. Serial No. 442,473. 5 Claims. (Cl. 18—38.)

1. A tire mold comprising a plurality of sections, including tread forming portions integrally formed with complementary portions for a sliding interfit, and side walls integral with the tread forming portions, reinforce projections overlying the side walls, and a rim to be removably inserted between said reinforce sections to define the limit of the forming side walls, the complementary portions being formed wholly to one side of the circumferential center line of the mold.

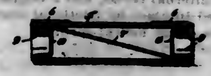
1,396,294. FOCUSING-SOCKET FOR ELECTRIC LAMPS. EUGENE A. SNOW, River Forest, Ill. Filed Mar. 22, 1920. Serial No. 367,644. 2 Claims. (Cl. 240—44.)

1. In a focusing device for electric lamps, a tubular boss having adjacent to one end an external recess, a reflector which is fixedly attached to the boss a part thereof being seated in said recess, an internal shoulder located adjacent to the end of the boss having the external recess, an internal recess adjacent to the opposite end of the boss, a helical spring maintained within the boss by engagement at one end with the internal shoulder and at the other end by the internal recess, and a tubular lamp socket that is maintained in place by frictional engagement with the inner surfaces of the helical spring.



1,396,295. BEARING. LÉON SPIERER, Geneva, Switzerland. Filed Mar. 7, 1921. Serial No. 450,156. 2 Claims. (Cl. 74—104.)

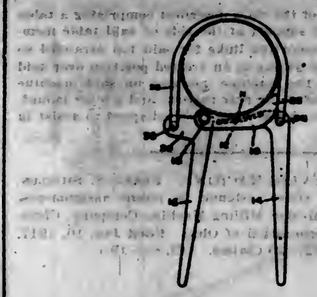
2. In a bearing, the combination of members for sustaining the load on the bearing and contacting with each other, a receptacle within which the point of contact of



said members is arranged, said mercury filled in said receptacle to such a height that said point of contact is submerged.

1,396,296. PUMP. William J. Springer, Detroit, Mich. Filed Mar. 21, 1919. Serial No. 284,171. 3 Claims. (Cl. 184—27.)

3. A pump comprising a cylinder, a coöperating pump plunger working therein, said plunger having a chamber therein near the lower end, the end of the plunger being closed, save for a small central opening communicating with said chamber, a ball check valve in said chamber coöperating with said small opening, a port extending along the side of said plunger and a port communicating with said port and the chamber in said plunger, said cylinder having a port in the side thereof with which the port in the side of the plunger coöperates.

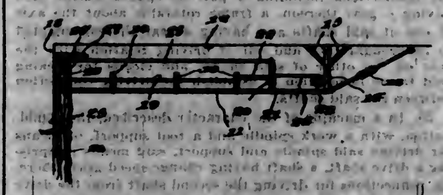


1,396,297. ELECTRIC FUSE. Archie W. Brinkle, Bloomfield, N. J., assignor to Wilford J. Hawkins, Montclair, N. J. Filed Sept. 24, 1919. Serial No. 325,862. 4 Claims. (Cl. 200—132.)

1. An electric fuse, comprising, a hollow body of insulating material, metallic ferrules at the ends of said body having inturned edges engaging the inner surface of the hollow body, a flat fuse element within said body and resilient friction caps slightly smaller in external diameter than the internal diameter of the hollow body engaging said inturned edges and firmly gripping the extremities of said fuse element in electrical contact therewith.

1,396,298. SCREW-CAP WRENCH. Arthur Stockland, Minneapolis, Minn. Filed Oct. 19, 1920. Serial No. 417,861. 3 Claims. (Cl. 81—3.1.)

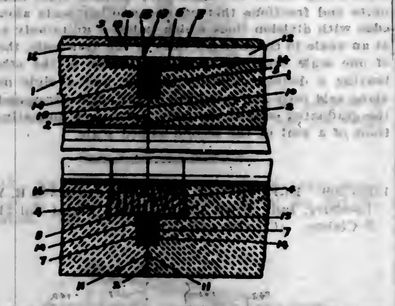
1. A screw cap wrench comprising a clamping head, a handle member rigid with and extending outwardly from said clamping head, a second handle member pivoted to said clamping head and extending outwardly therefrom, a U-shaped gripping member adapted at one of its ends to be fixedly held with relation to said clamping head and



having its other end attached to said pivoted handle member, and a beading member mounted on said clamping head.

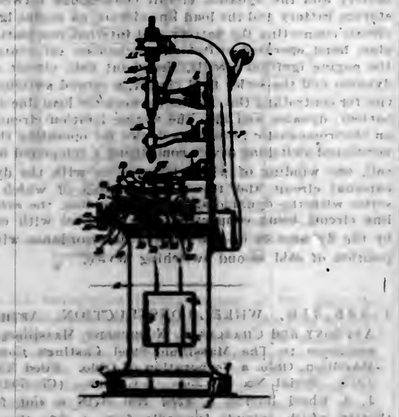
1,396,299. DETACHABLE HEEL. Bernard Summerfield, Chicago, Ill. Filed Sept. 22, 1920. Serial No. 412,122. 2 Claims. (Cl. 36—41.)

1. A demountable heel attachment comprising a metallic plate, a pair of tongues struck out from said plate and disposed at an angle with respect thereto, said tongues being arranged in longitudinal spaced relation, a heel member hollow in cross section, a pair of catches formed in the heel member and arranged in longitudinal spaced relation, said catches and tongues operative as interengaging latches upon the movement of said heel relative to the plate, means for affixing the plate to a shoe, one of said tongues being adapted to come into juxtaposition to the front of the heel and means for anchoring said heel to the juxtapositioned tongue.



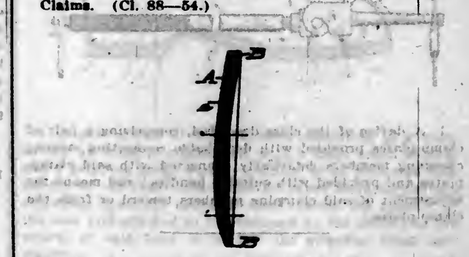
1,396,300. DISPLAY-RACK. Charles W. Thompson, Pensacola, Fla. Filed Apr. 20, 1921. Serial No. 465,423. 1 Claim. (Cl. 211—22.)

A curtain display rack including a pair of horizontal parallel supporting wires, a plurality of transverse bars each having notches in its lower edge receiving the said wires, longitudinal cords secured to and extending between the transverse bars to hold the bars in spaced relation, a transverse bar having grooved wheels running on the wires and rigidly connected with the adjacent of the first transverse bars, a ceiling support retaining the outer ends



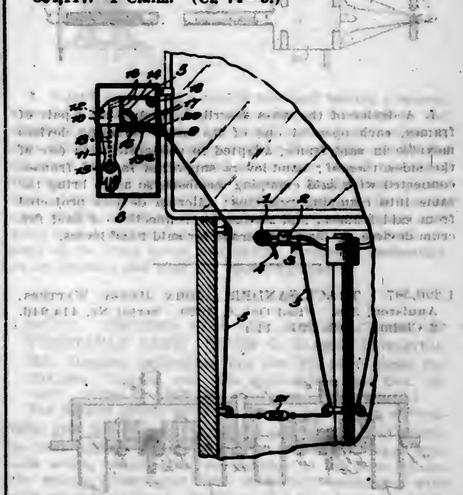
of the wires, a spring motor mounted on the support, a cable connected to the spring motor and to the grooved wheel bar, and a cable connected to the said grooved wheel bar and arranged to be pulled to move the transverse bars in one direction on the wires and the motor to move them in the opposite direction.

1,396,301. SECTIONAL CONDUIT. David D. Tracy, Jackson, Mich. Filed July 17, 1920. Serial No. 397,028. 2 Claims. (Cl. 72—58.)



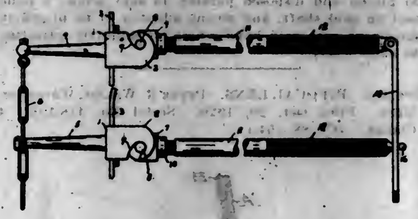
1. A sectional conduit comprising tubular sections having abutting ends with stepped external registering grooves in their upper portion and stepped internal registering grooves in their lower portions providing a shouldered external joint channel embracing substantially the upper half of the sections and a shouldered internal joint channel embracing substantially the lower half thereof, the ends of the inner portions of the channels being connected providing a continuous inner channel, coupling bars embedded in said conduit sections and projecting at the ends thereof into the outer portions of said channels and terminating in rearwardly turned coacting hooks open at their sides and disposed so that the hooks may be simultaneously engaged by a lateral movement of the sections with their ends in abutting relation, a packing of fibrous material for the inner portions of said channels, the walls of the inner portions of said channels being coated with a waterproof material, and a cement filling for the outer portions of said channels embedding the engaged hooks.

1,396,302. WORK-HOLDER. Julian W. Wagner, Detroit, Mich. Filed Aug. 18, 1919. Serial No. 318,271. 9 Claims. (Cl. 90—58.)



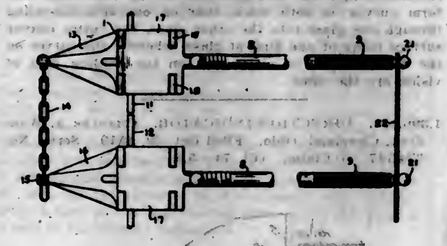
1. A work holder for a cutting machine comprising an adjustable table, movable to and from the front of the machine, a screw for adjusting said table, a support slidable on said table, a rack carried by said support, a pinion extending through said table to engage said rack for moving said support on said table, a shaft supporting said pinion and disposed parallel to said screw, a hand wheel on said shaft, and means adapted to be placed in engagement with said hand wheel for minutely adjusting said hand wheel.

1,396,303. BIFOCAL LENS. Peter R. Walsh, Worcester, Mass. Filed Oct. 20, 1920. Serial No. 418,198. 4 Claims. (Cl. 88—54.)



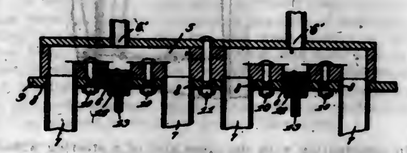
1. As an article of manufacture, a bifocal lens comprising two pieces of glass of two different indexes of refraction united together, said lens having continuous uniform curves on both sides, that on one side extending through one glass into the other glass, the entire convex surface being of one kind of glass, whereby the curves on the distance field of vision and on the reading field of vision are the same.

1,396,304. DIRECTION-INDICATOR. Charles A. Warring, Cleveland, Ohio. Filed Oct. 29, 1919. Serial No. 334,117. 1 Claim. (Cl. 74—5.)



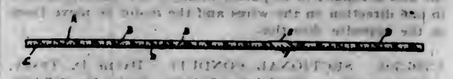
In combination with the cross arm of a steering wheel, a signal operating device comprising a clip secured on the underside of the cross arm, a roller carried by the inner end of the clip, a right angled bracket pivoted to the forward end of the clip, the outer member of said bracket normally depending and the other member normally resting within the clip and parallel to the cross arm and a cable connected to the said last mentioned member and running over said pulley.

1,396,305. BELT-STRETCHING DEVICE. WILLIAM R. WATERS, Davenport, Iowa. Filed Jan. 3, 1921. Serial No. 434,583. 8 Claims. (Cl. 254—52.)



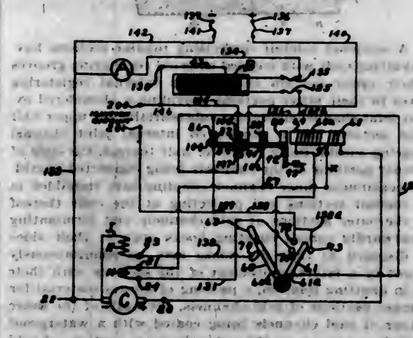
1. A device of the class described, comprising a pair of clamp-plates provided with detachable connecting means; clamping members detachably connected with said clamp-plates and provided with suitable handles; and means for adjustment of said clamping members toward or from the clamp-plates.

1,396,306. BELT-STRETCHER. WILLIAM R. WATERS, Davenport, Iowa. Filed Jan. 13, 1921. Serial No. 436,945. 8 Claims. (Cl. 254—52.)



1. A device of the class described, comprising a pair of frames, each open at one of its ends; clamping devices movable in said frame, adapted to cooperate with one of the sides thereof; hand-levers supported in said frames, connected with said clamping members, so as to bring the same into clamping relations; fulcrum devices projected from said frames; and means for connection of said fulcrum devices, to form a leverage for said hand-levers.

1,396,307. TRACK-SANDER. JOHN HENRY WATTERS, Anniston, Ala. Filed Oct. 6, 1920. Serial No. 414,946. 2 Claims. (Cl. 291—11.)



1. A sand trap including an upper section and a base, said base having openings formed therein, distributing pipes disposed within the openings, an air nozzle located between the pipes, said air nozzle adapted to split a column of sand entering the sand trap to cause the same to move laterally into the discharge pipe.

1,396,308. MEASURING DEVICE. JOHN THOMPSON WILSON, Jersey City, N. J. Filed Aug. 20, 1920. Serial No. 404,884. 2 Claims. (Cl. 33—111.)

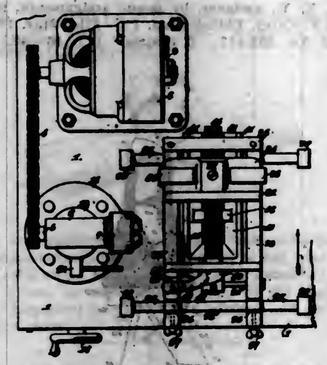
1. A measuring device consisting of a body having a scale along one of its edges with division lines indicating units and fractions thereof, and another scale along said edge with division lines which indicate units only and are at an angle to the division lines of the first scale, the units of one scale being different from those of the other yet bearing a definite relation thereto, and a slide movable along said body and provided, at the edge corresponding to the graduated edge of the body, with lines indicating fractions of a unit of the second-named scale.

1,396,309. ELECTRICAL SYSTEM. CLARENCE R. YOUNG, Leesburg, Ind. Filed Mar. 1, 1918. Serial No. 219,781. 9 Claims. (Cl. 290—35.)

1. In an electrical system the combination with an internal combustion engine, of a dynamo operatively connected with said engine, said dynamo having a shunt field winding and a series field winding, a storage battery, a load line circuit, circuit connections between the storage battery and the dynamo, circuit connections between the storage battery and the load line circuit, an engine ignition circuit connecting the battery and internal combustion engine, hand operated switching mechanism for controlling the engine ignition circuit, the shunt field circuit of the dynamo and the series field circuit, a second switching device for controlling the circuits between the load line circuit, battery, dynamo and also the engine ignition circuit, and an electromagnetic responsive device for operating the last mentioned switching device comprising a compound magnet coil, one winding of which is in series with the dynamo external circuit and the other winding of which is in series with the dynamo shunt field winding, the said load line circuit being connected to be supplied with current by the dynamo or by the battery in accordance with the position of said second switching device.

1,396,310. WHEEL CONSTRUCTION. ARTHUR H. ANTHONY and CHARLES E. NORDFELDT, Massillon, Ohio, assignors to The Massillon Steel Castings Company, Massillon, Ohio, a Corporation of Ohio. Filed Nov. 24, 1919. Serial No. 340,255. 2 Claims. (Cl. 301—22.)

1. A wheel having a fixed rim with a slot formed therein which extends inwardly from a side thereof, a demountable rim adapted to accommodate a tire with a valve stem thereon, a wedge ring for holding the rim to the fixed rim, a cover coöperating with the inner side and the outer side of the fixed rim and covering the said slot, said cover having an opening through which a valve stem



may extend and also provided with a portion adapted to extend between a surface of the fixed rim and the wedge ring.

1,396,311. SAFETY-CLASP. HARVEY V. BARLEY, Jersey City, N. J. Filed Jan. 27, 1920. Serial No. 354,391. 6 Claims. (Cl. 24—150.)

8. A clasp of the type indicated comprising a pin, a pivotal support for the pin, a post to be engaged by the pin, the pin having its end portion bent over upon itself to provide a hook, the opposite parts of which are spaced away from each other and adapted to receive the post between them, the post having a head thereon, the hook portion of the pin being of resilient material so that the opposite parts of the hook are resilient relative to each other and are thus adapted to snap over said head.

1,396,312. AUTOMOTIVE TEST UNIT. ELMER G. BEMELLER, Yuma, Colo. Filed Nov. 3, 1920. Serial No. 421,537. 9 Claims. (Cl. 73—51.)

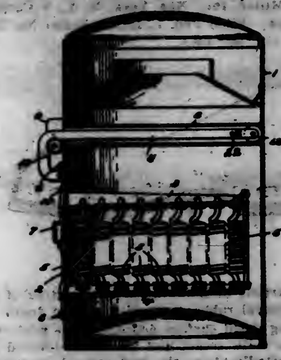
1. In an automotive testing means of the character described, a suitable base or bed, a chuck carrying support, the said support including a bearing for the chuck head carrying shaft, means for holding equipment to be tested, the said means being supported upon the base, other means for effecting adjustment of the chuck carrying support at right angles to the equipment holder and means for adjusting the said holder laterally and longitudinally relatively to the said chuck head and means for effecting rotation of the chuck.

1,396,313. RUBBER BOOT, SHOE, GALOSH, SANDAL, &c. WILSON C. BELKNAP, New York, N. Y., assignor to Robert B. Miller, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 7, 1920. Serial No. 357,047. 4 Claims. (Cl. 36—59.)

1. A new article of manufacture, consisting of a boot, having an integral rubber heel with a main tread surface and a gripping tread surface adapted to be projected outwardly of the main tread, and an inner elevated portion extending upwardly above the heel toward the interior of the boot and adapted to be depressed by the weight of the wearer of said boot to project the gripping tread outwardly.

1,396,314. LIFTING-JACK. JOSEPH BERG, Little Rock, Ark. Filed Nov. 27, 1920. Serial No. 426,677. 2 Claims. (Cl. 254—102.)

1. A jack comprising a hollow standard having a lateral arm near its upper end, an outer screw mounted in the standard, an inner screw mounted in the outer screw, a gear fitted around and supported by the upper end of the standard and connected with the outer screw to rotate the same while permitting relative longitudinal movement thereof, an operating shaft mounted on the lateral arm of the standard and operatively connected to said gear, and a restraining brace pivoted at one end to the head of the inner screw and having a slidable connection at its opposite end with the operating shaft.



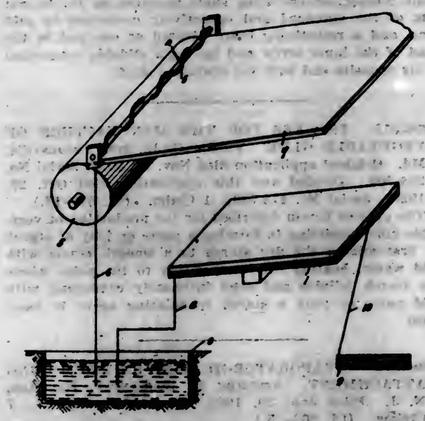
1,396,315. PROCESS FOR THE MANUFACTURE OF VEGETABLE GLUE. VICTOR G. BLOEDE, Catonsville, Md. Original application filed Nov. 27, 1917, Serial No. 204,200. Divided and this application filed Oct. 22, 1920. Serial No. 418,780. 1 Claim. (Cl. 87—17.)

The process herein described for the production of vegetable glue consisting in forming a paste or jelly of starch by first mixing the dry starch to a smooth cream with cold water, heating this composition to the point where the starch jellifies and then intimately combining with said paste or jelly a starch coagulating agent in basic form.

1,396,316. EVAPORATOR-HEATING-UNIT-REMOVING ATTACHMENT. STEPHEN B. BOSSARTT, Hampton, N. J. Filed Jan. 29, 1921. Serial No. 440,919. 7 Claims. (Cl. 202—5.)

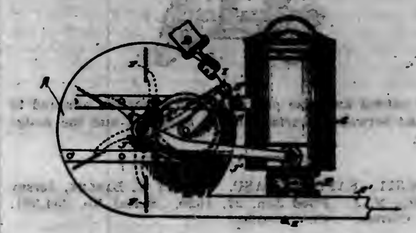
2. An evaporator comprising a shell, a removable heating unit therefor, a tube carried by the shell, means con-

nected to the heating unit and extending into the tube for supporting the heating unit when removed from the



shell, and means for locking the heating unit against movement when so removed.

1,396,317. CASING-ELEVATOR. ARTHUR J. BOYTER, Temple, Tex. Filed Sept. 15, 1920. Serial No. 410,390. 8 Claims. (Cl. 294—102.)



1. In a casing elevator a pair of pivotally connected sections combining to form an annulus, diametrically opposed jaws pivotally connected with said sections and having their opposed faces roughened, a bail pivotally connected with each of said jaws and means for securing the sections about a casing.

1,396,318. ANTISTATIC FRICTION DEVICE. AUGUST BUNGER, Hoboken, N. J. Filed July 15, 1920. Serial No. 396,408. 2 Claims. (Cl. 175—264.)

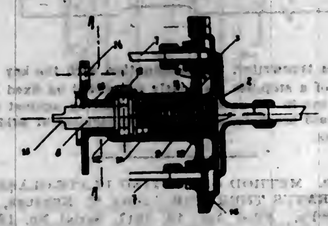
1. A mechanism to discharge static electricity from sheet material including an antenna having a supporting member, a spiniform conducting body coiled on said member and engageable with the material and means in conducting relation with the body to discharge electricity collected thereby.

1,396,319. AIR-BLAST SPRAYER. ALVIN B. CHAPLIN, Tuckahoe, N. Y., assignor of one-half to Robert McWilliam, New York, N. Y. Filed May 25, 1920. Serial No. 384,019. 5 Claims. (Cl. 48—148.)

1. The combination with a rotary fan, its casing, and a conduit leading from the latter, a downwardly discharging reservoir pivoted to the casing above the conduit to rock slightly back and forth, a flexible tube connecting the reservoir to the conduit and permitting such slight rocking, and means for simultaneously rotating the fan and rocking the reservoir on its pivotal axis.

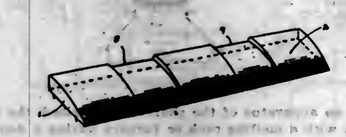
1,396,320. METHOD OF OBTAINING A SODIUM SALT FROM A HYDROCARBON MONOSULFONIC ACID. ROBERT M. COLE, Sandusky, Ohio. Filed Dec. 8, 1919. Serial No. 342,292. 2 Claims. (Cl. 23—24.)

1. The improved process of obtaining a precipitation of a sodium hydrocarbon sulfonate, which consists in the sulfonation of an aromatic hydrocarbon in the presence of an excess of hydrocarbon and then adding thereto a highly ionisable salt.



1,396,321. WALKING DOLL. HARRY H. COLEMAN, New York, N. Y., assignor, by mesne assignments, to Lawrence F. Carey, Philadelphia, Pa. Filed Mar. 18, 1919. Serial No. 283,417. 6 Claims. (Cl. 46—40.)

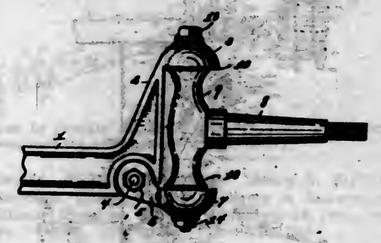
1. A walking figure toy having limbs composed of relatively movable sections provided with oppositely inclined end-faces at the knee, and self-contained spring-hinges whose leaves are connected to the respective inclined end-faces of the sections, said spring-hinge being wholly disposed between, and housed by, the adjoining inclined end-faces of the said sections.



3. A walking figure toy having a body, independently movable legs pivoted to the body, coil springs coöperating with the body and with the respective legs, respectively adapted to throw the legs independently forwardly, each leg having its upper end arranged to directly engage the body at predetermined limits of both its rearward and forward movements.

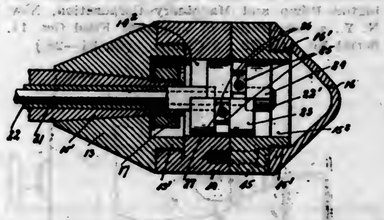
1,396,322. CARBURETED-AIR DISTRIBUTER FOR EXPLOSION-ENGINE STARTERS. EMILE PAUL DUMANOIS, Levallois-Perret, France. Filed Sept. 22, 1919. Serial No. 325,587. 3 Claims. (Cl. 123—180.)

1. A distributer of carbureted air under pressure for internal combustion engines, comprising a shaft, means operated from the engine for driving said shaft, a casing having an inlet opening and a flat seat provided with a number of outlet openings disposed on a circle concentric with the shaft, means for connecting said outlet openings to the respective cylinders of an explosion engine, in a suitable order, a valve adapted to control said outlet openings, said valve being mounted slidably on the shaft, means for driving the valve by the shaft, means for permitting a small longitudinal movement of said valve, means whereby the valve is tightly forced against its seat by the carbureted air flowing under pressure into the casing and means for normally maintaining the valve away from its seat.



1,396,323. ARCH-SUPPORT. PATRICK DUNNE, San Francisco, Calif. Filed Nov. 2, 1920. Serial No. 421,435. 2 Claims. (Cl. 248—20.)

1. An arch support for the human foot consisting of a wedge shaped rectangular block having a flat base, three vertical sides and a convex upper surface extending downwardly to form an edge with the base of the block, and channels depressed in the convex surface and extending across the block.



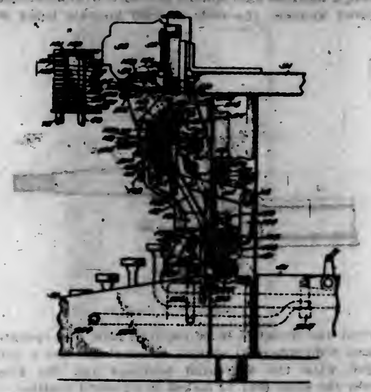
1,396,324. ADJUSTABLE KNUCKLE-JOINT FOR AUTOMOBILES. FREDERICK GIESLER, Irvington, N. J., assignor of one-half to Julius Glee, Irvington, N. J. Filed Dec. 21, 1917. Serial No. 208,226. Renewed Aug. 18, 1921. Serial No. 493,487. 1 Claim. (Cl. 280—96.1.)

In a device of the class described, an axle end provided with an upwardly extending arm terminating in an outwardly extending and apertured semi-spherical socket or bearing, an adjustable bracket provided with an outwardly extending and apertured semi-spherical socket or bearing pivotally secured to the lower portion of said axle, and a bolt engaged with the lower end of said axle and adjustable bearing whereby the same may be locked in adjusted position, a movable axle spindle provided with an elongated apertured knuckle, the ends of said knuckle being semi-

spherical and designed to be received into, and operate in, the said semi-spherical sockets or bearings, and a spindle engaged with the apertured bearings and the knuckle whereby the same may be locked in adjusted position.

1,396,325. PROPELLER-SHAFT. WALTHER GLOOR, New York, N. Y. Filed Mar. 2, 1921. Serial No. 449,175. 15 Claims. (Cl. 170—162.)

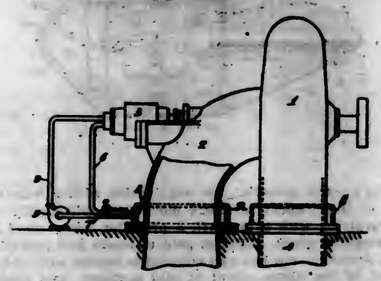
1. In a screw propeller, the combination with a propeller shaft of independent members movable longitudinally of and revolving with said shaft, a propeller hub secured to said propeller shaft, slides in said members and propeller blades borne in said hub and adapted to engage said slides, so that by the displacement of said members, said blades will be turned on their longitudinal axes to reverse the direction of propulsion.



1,396,326. CALCULATING-MACHINE. HYMAN ELI GOLDBERG, (now by judicial change of name Hyman Golber,) Chicago, Ill., assignor, by mesne assignments, to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Continuation of application Serial No. 743,139, filed Jan. 20, 1913. This application filed Mar. 18, 1918. Serial No. 223,184. 36 Claims. (Cl. 235—59.)

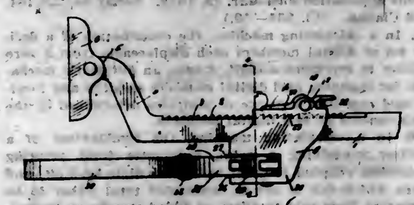
3. In a calculating machine, the combination of a decimal set of digital members each displaceable from a zero position to represent a digit, a cam, an automatic mechanism for engaging said digital members *oscistim* and locating said cam in a sequence of positions determined by the displacements of said digital members.

26. In a calculating machine, the combination of a totaliser containing a total, automatic total printing mechanism adapted to print said total digit by digit, and means which can be set to cause said total either to be subtracted from said totaliser or added thereto as an incident of the operation of said total printing mechanism.



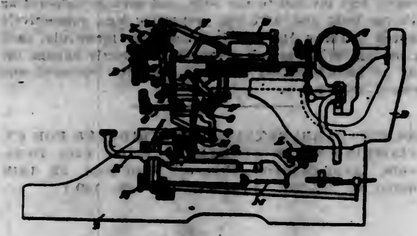
28. In a calculating machine, the combination with a totaliser and means for actuating said totaliser to register

positive and negative numbers, of automatic means for printing the digits of the true total services at a common



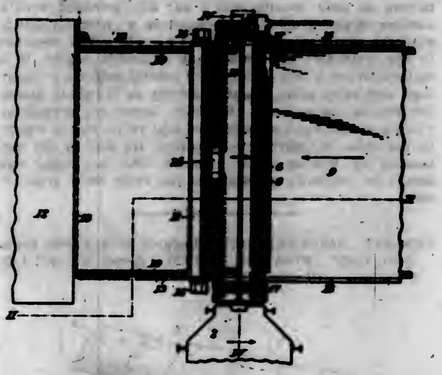
printing center, the positive total when the totalizer registers a positive number and the negative total when the totalizer registers a negative number.

1,396,327. **WATER-TURBINE AND THE LIKE.** MAX HABBERLEIN, Mountain Lakes, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Oct. 11, 1920. Serial No. 416,222. 3 Claims. (Cl. 64—28.)



1. The combination with the water conduit of a water turbine or the like, of an oil-cooling chamber located on the exterior thereof and one of the walls of which is formed by said conduit, a bearing, and oil circulating connections between the bearing and chamber.

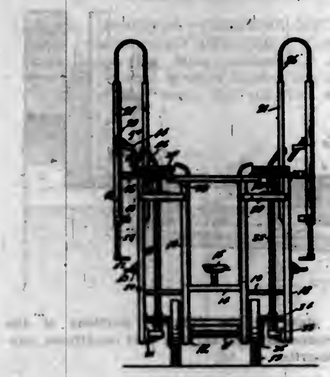
1,396,328. **RADIATOR-CARRIER.** CHARLES G. HALL, FRANCIS A. DEVERMAUX, and ALBERT E. CROSS, International Falls, Minn. Filed Apr. 12, 1920. Serial No. 373,272. 15 Claims. (Cl. 294—15.)



1. A radiator lifter consisting of a shank, tongs connected therewith, and a sliding block to which the tongs are connected.

1,396,329. **TYPEWRITER.** ANSON KIRK, Boston, Mass. Filed Jan. 14, 1920. Serial No. 351,501. 6 Claims. (Cl. 197—182.)

1. In a typewriter, the combination with the key levers thereof, of a stop-bar resiliently supported on fixed brackets, the bar in its normal position bearing against a portion of said brackets, and a cushion member at said bearing points.



1,396,330. **METHOD OF CASTING PLATE-GLASS AND APPARATUS THEREFOR.** JOHN W. KUNZLER, Pittsburgh, Pa. Filed Apr. 19, 1917. Serial No. 168,134. Renewed Mar. 25, 1921. Serial No. 455,496. 7 Claims. (Cl. 49—2.)

1. In an apparatus of the character described, the combination with a melting tank or furnace having a delivery opening, a refractory delivery spout or sleeve seated in said opening and projecting beyond the face of the wall of the furnace, the upper edge of the opening through the spout being below the normal level of the glass in the furnace, of a rotary receptacle surrounding the projecting portion of said sleeve and having a casting or delivering opening, and means for heating the glass in said receptacle other than the heat from the furnace, whereby the temperature of the molten glass therein may be controlled; substantially as described.

7. The method of casting plate glass, comprising the steps of continuously feeding molten glass into a tiltable vessel, periodically tilting said vessel to pour the molten glass therein onto a casting table across the face thereof, and during such pouring operation moving the table in a direction at right angles to the axis of the vessel to spread the glass in the form of a sheet on the table and during such movement moving the table and glass under a sheet-forming roller to roll the glass to the required thickness; substantially as described.

1,396,331. **BROOM-CORN-TABLING MACHINE.** THOMPSON K. LAND, Valley Mills, Tex. Filed Aug. 5, 1920. Serial No. 401,470. 7 Claims. (Cl. 56—82.)

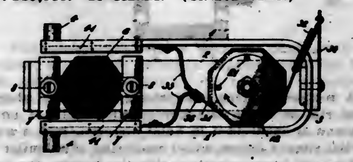
1. In a broom corn tabling machine, the combination of a wheel supported frame, a pair of gathering members mounted on the frame, bending members carried by the frame, and swinging members above the bending members and arranged to swing to bend the stalks over the bending members and deliver the same in rear of the frame.

1,396,332. **MACHINE-TOOL.** EVARTS G. LOOMIS, Newark, N. J. Filed Apr. 25, 1919. Serial No. 292,589. 21 Claims. (Cl. 10—8.)

10. In a machine of the class described, the combination of a work-table, tool-sustaining means, hydraulic means for reciprocating the work-table and for adjusting the tool-sustaining means relatively thereto, whereby the tool-sustaining means will be actuated in a direction away from the work-table as the latter is moved in one direction, and into operative position relatively to the work-table prior to the latter moving in the reverse direction, the degree of the last-named movement of the tool-sustaining means being controlled automatically.

1,396,333. **FUSE.** CLARENCE T. MCDONALD, Chicago, Ill., assignor, by mesne assignments, to Chicago Fuse Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed July 23, 1919. Serial No. 312,696. 3 Claims. (Cl. 200—132.)

3. In cartridge fuses of the type having a terminal and a gasket through which the terminal passes, a retaining member for said gasket having a slot adapted to receive said terminal, said slot being shaped to fit said terminal closely throughout a portion of its periphery and being enlarged to provide clearance space adjacent said terminal throughout the remainder of its periphery.



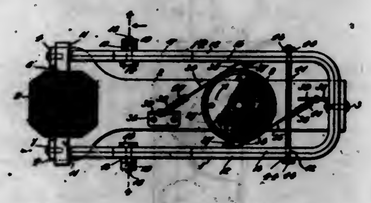
1,396,334. **ELECTRIC MOTOR.** LESLIE R. MCDONALD, Montreal, Quebec, Canada, assignor to Marguerite V. O'Leary, Montreal, Canada. Filed June 16, 1916. Serial No. 104,095. 25 Claims. (Cl. 172—126.)

1. Apparatus of the character described comprising a rotor, a belt contacting with the periphery of the rotor, and means for imparting a wave motion to the belt so as unidirectionally to rotate the rotor.

1,396,335. **CONSTANT-SPEED VIBRATING MOTOR AND METHOD.** LESLIE R. MCDONALD, Montreal, Quebec, Canada, assignor to Marguerite V. O'Leary, Montreal, Quebec, Canada. Filed Dec. 28, 1916. Serial No. 139,333. 19 Claims. (Cl. 172—126.)

19. The method of maintaining the angular velocity of a rotary member constant during variable loads comprising varying the effective leverage of the recurrent force in proportion to the amount of load whereby the driven member will continue to rotate in synchronism with the driving member.

1,396,336. **DIRECT-CURRENT VIBRATORY MOTOR.** LESLIE R. MCDONALD, Montreal, Quebec, Canada, assignor to Marguerite V. O'Leary, Montreal, Quebec, Canada. Filed Dec. 28, 1916. Serial No. 139,334. 11 Claims. (Cl. 172—126.)



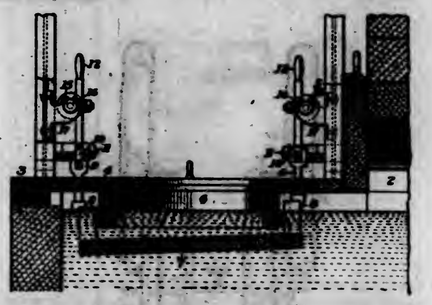
7. Motor apparatus comprising an oscillatory driving member, a circuit for supplying energy, oscillatory means independent of the oscillatory driving member for inter-

mittently closing the circuit, and an electromagnet responsive to the energy for actuating the oscillatory member and

means, the oscillatory member and means being tuned to oscillate in synchronism.

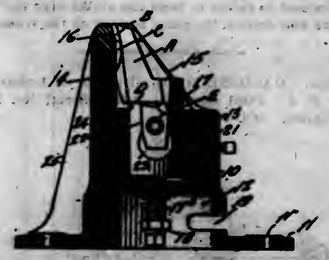
1,396,337. VARIABLE AMPLITUDE OF VIBRATION-MOTOR AND METHOD. LESLIE R. MCDONALD, Montreal, Quebec, Canada, assignor to Marguerite V. O'Leary, Montreal, Quebec, Canada. Filed Dec. 29, 1916. Serial No. 139,448. 8 Claims. (Cl. 172—126.)

2. Motor apparatus comprising a vibratory member having a magnetic portion and a portion of different magnetic properties, and means for directing a varying magnetic flux through the vibratory member in such manner as to vibrate the member.



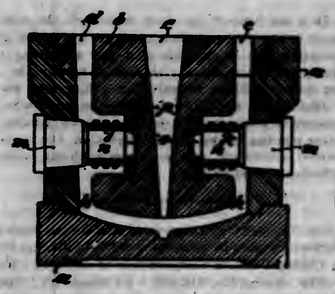
1,396,338. TOOTHED GEARING. MAX MAAG, Zurich, Switzerland. Filed Apr. 14, 1920. Serial No. 373,940. 3 Claims. (Cl. 74—41.)

1. A toothed gearing, comprising a driving wheel the toothed rim of which is provided with teeth of uniform height and is subdivided in axial direction into a number of partial rims, a driven wheel consisting of a similar number of partial rims co-acting with the former, the partial rims being provided with teeth the thickness of which varies from rim to rim in accordance with the torsional displacements of the rims against each other caused by the transmitted power.



1,396,339. METHOD OF DRAWING GLASS. WILLIAM L. MONRO, Pittsburgh, Pa., assignor to Window Glass Machine Company, Pittsburgh, Pa., a Corporation of New Jersey. Original application filed Feb. 18, 1916, Serial No. 79,059. Divided and this application filed July 17, 1916. Serial No. 109,606. 2 Claims. (Cl. 49—83.1.)

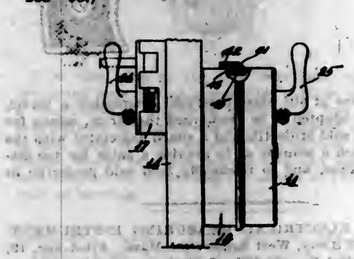
1. In the method of drawing glass articles wherein the draw is made from a portion of a molten bath which is above a submerged diaphragm, the step which consists in adjusting the level of one part of the submerged diaphragm relatively to another part thereof, to thereby vary the



depth of the glass at the different portions of the diaphragm to compensate for varying heat conditions, substantially as described.

1,396,340. DRESSING-BLOCK. GUSTAVUS A. MONTGOMERY, Dallas, Tex., assignor of one-half to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Aug. 2, 1920. Serial No. 400,607. 10 Claims. (Cl. 76—96.)

1. In a dressing block, a support, a core carried by the support and having an opening for receiving a tool to be dressed, an anvil member projecting above the core for supporting the tool, and a dressing shoulder on the anvil member.



1,396,341. CASTING AND MOLD THEREFOR. ARTHUR RAUTENBACH, Solingen, Germany. Filed July 27, 1920. Serial No. 399,342. 2 Claims. (Cl. 22—126.)

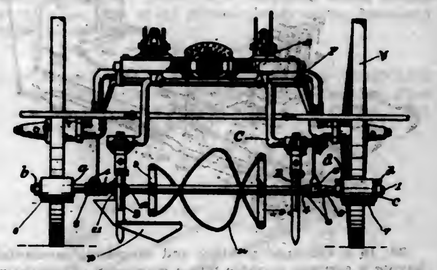
1. In a mold for the purpose described, a shell provided with coaxial borings for the insertion of bolts, and bolts

therein having at their inner ends cylindrical projections adapted to bear upon the inner projections of the journals which are to be incorporated in the casting.

1,396,342. COUNTER-OPERATING MECHANISM FOR COIN-CONTROLLED DEVICES. WARREN CHALMERS REES, Somerville, Mass., assignor to Aseptic Service Company, Boston, Mass., a Corporation of Maine. Filed Aug. 11, 1920. Serial No. 402,870. 4 Claims. (Cl. 235—98.)

1. In a coin-controlled device, the combination of a casing having a coin receiving slot, a mechanical counter provided with an oscillatory arm adjacent to said slot, and counter-operating mechanism adapted to operate the counter by oscillating the arm thereof, said mechanism including a biased counter-arm engaging member normally obstructing the slot, displaceable by force exerted through a coin inserted in the slot, and engaging the counter arm to move the latter in one direction, a coin-releasing member operable from the exterior of the casing, and an unbiased arm-engaging member, movable by force exerted through said coin-releasing member to move the counter-arm in the opposite direction, the counter-arm being formed to coöperate with the members contacting therewith, said unbiased member being movable alternately by the counter-arm and by the coin-releasing member.

1,396,343. CLUTCH. BAYARD E. RICHARDSON, Grand Rapids, Mich., assignor to Mechano Gear Shift Co., Grand Rapids, Mich., a Corporation of Michigan. Filed Nov. 13, 1918. Serial No. 262,383. 3 Claims. (Cl. 192—46.)

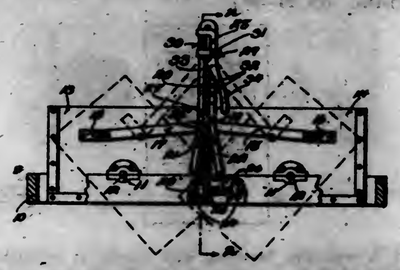


1. In combination, two shafts located in alinement, a housing fixed at one end of one of said shafts, a cylindrical head fixed to the adjacent end of the other shaft and located within the housing, said head being provided with a notch in a side thereof, plates located one at each side of the head, a key pivotally mounted on and between the plates and adapted to be wholly received within the notch in said head, the outer side of said key having the same radius of curvature as the head so as to aline therewith when in the notch, and a tongue projecting inwardly from the housing and provided with a series of notches, any one of which may partially receive the key, substantially as described.

1,396,344. FASTENING FOR ATTACHING BRACES AND FOR OTHER PURPOSES. CESARE ROMATI, Turin, Italy. Filed Jan. 10, 1921. Serial No. 436,283. 2 Claims. (Cl. 24—90.)

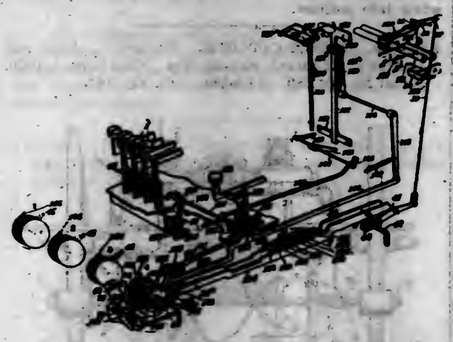
1. A removable fastening with button, to be applied more particularly to trousers for attaching braces, and for other purposes, characterised by a back plate and a front counter-plate intended to be fixed in proximity of the edge of the cloth or band of the trousers on both sides thereof, the back plate being provided with two projections passing through the cloth into suitable openings of the counter-plate, one of the said projections being screwthreaded and adapted to receive a pressing button serving for the attachment of the braces, while the other projection is ended by a mushroom-shaped head, a fixing plate slidingly mounted on the counter plate and engaging together with the latter in an annular groove of the pressing button, the said fixing plate being provided with an eye-shaped opening intended to engage below the mushroom-shaped head of the projection of the back plate for the purpose of fixing the whole into position.

1,396,345. INSECT-CATCHER. WILLIAM C. RYAN and GROVER C. RUHMANN, Kenedy, Tex. Filed Sept. 1, 1920. Serial No. 407,389. 3 Claims. (Cl. 43—142.)



1. The combination with a body and supporting wheels therefor; of hangers pivotally engaged with the body, a shaft rotatably supported by the hangers, a pulley fixed to the shaft and normally contacting with one of the supporting wheels whereby the shaft is driven from said supporting wheel, a spiral member encircling the shaft and carried thereby, and a collecting pan carried by the body below the shaft and an end of the spiral member, the hangers being vertically adjustable with respect to the body.

1,396,346. FURNITURE-POLISH. ALBERT N. SCHEIM, Philadelphia, Pa., assignor to Louis Levinson, Philadelphia, Pa. Filed Jan. 17, 1920. Serial No. 352,131. 9 Claims. (Cl. 134—24.)

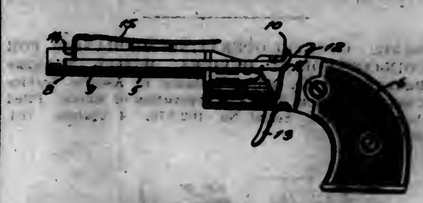


1. As a new article of manufacture, a polishing material comprising an emulsion of an oleaginous body and an aqueous acidulated solution in substantially equal proportions, in solution with a mixture comprising butter of antimony and carbon tetrachlorid in equal proportions, materially less than the amount or volume of ingredients of the emulsion.

1,396,247. CLAMSHELL-DUMPING DEVICE. Alexander Stewart, Waupaca, Wis. Filed Dec. 6, 1920. Serial No. 428,768. 7 Claims. (Cl. 296—38.)

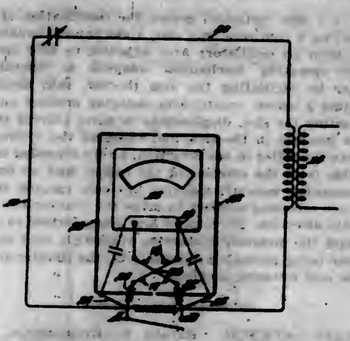
1. In a device of the character described, a dumping container composed of two complementary sections operable by gravity to dump their load, releasable locking means normally holding them against dumping, and adjustable means for limiting their dumping movement and for locking them against return movement.

1,396,248. COMBINED TYPEWRITING AND COMPUTING MACHINE. Burnham C. Stickney, Elizabeth, N. J., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Feb. 20, 1919. Serial No. 278,196. 109 Claims. (Cl. 235—60.)



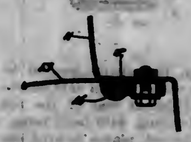
38. In a combined printing and computing mechanism having a carriage movable into a succession of computing zones, the combination with a type, of means to cause said type to print, and means connected to said printing means for disabling the computing mechanism in certain of said zones, while permitting operation of the computing mechanism in certain of the remaining zones.

53. In a combined printing and computing machine having numeral keys and a carriage, the combination with means for selectively printing on a work-sheet any one of a plurality of special characters to designate a corresponding one of a plurality of different computing zones, of means controlled by said printing means, for selectively preventing computation in any of said zones except the one so designated.



107. In combination, a computing mechanism including numeral keys, a carriage movable into a succession of computing zones relative to said computing mechanism, a numeral-key-locking device, a device for releasing said numeral-key-locking device settable to effective condition for certain predetermined zones, and means whereby the numeral-key-locking device may be rendered effective and the releasing device may be set to effective condition for a predetermined zone concomitantly.

1,396,249. GUN. Rudolf Thum, Baldwin, N. Y. Filed Mar. 5, 1921. Serial No. 449,898. 4 Claims. (Cl. 124—14.)

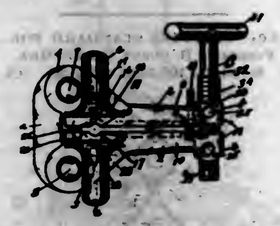


1. A device of the class described comprising a barrel, a projectile adapted to be discharged therefrom, means for discharging said projectile and a guard associated with the barrel in such a manner as to provide a guide for the discharging means, and to releasably hold said projectile in place.

1,396,250. ELECTRICAL MEASURING INSTRUMENT. Leon T. Wilson, West Somerville, Mass. Filed Apr. 19, 1920. Serial No. 374,926. 7 Claims. (Cl. 171—95.)

6. A measuring instrument for high frequency circuits comprising a galvanometer, a thermo-couple electrically connected therewith, connections between the thermo-couple and a high frequency circuit to be measured, and capacity in shunt with each half of the thermo-couple to provide a path for the flow of stray displacement currents.

1,396,251. VEHICLE-FENDER MOUNTING. Guido G. Buhn, Detroit, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed Nov. 17, 1919. Serial No. 338,598. 5 Claims. (Cl. 280—154.)

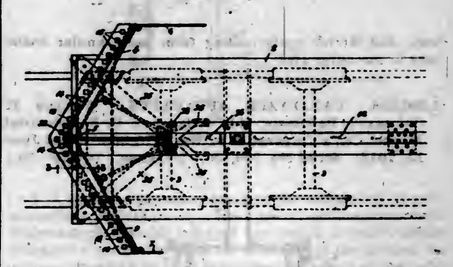


1. In combination, a sheet metal fender, a vehicle body, and a clamp mounted on the vehicle body at one side of the fender, a bolt for securing said clamp in place, said clamp extending transverse to the length of the fender and overlapping the edge of the fender and thus serving to secure the latter in place without passing the securing bolt through the fender.

1,396,252. FUSE-PLUG. Ralph C. Bronson, Chicago, Ill., assignor to Multiple Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 2, 1917. Serial No. 159,055. 6 Claims. (Cl. 200—125.)

6. A fuse plug of the type described, comprising an insulating body having a separable portion, provided with a longitudinally extending channel; a fuse arranged in said channel having an end secured between an inner face of said body and the adjacent face of said portion; and barrier means extending across said end and the end of said channel for preventing the escape of particles of said fuse on blowing.

1,396,253. CLAMP. Steve Bullum, San Luis Obispo, Calif. Filed Apr. 26, 1921. Serial No. 464,732. 7 Claims. (Cl. 24—135.)



4. A cable clamp, including a link; jaw members pivoted to said link; slips carried by the jaw members and adapted to grip the cable between them; and means for relatively adjusting the jaw members and for maintaining the same in such adjustment; said jaw members being bifurcated at their free ends, and the said means for relatively adjusting the jaw members including screw socket members received between said bifurcated ends; one of said screw socket members being swivelly mounted in the bifurcated portion of one of the jaws, the other jaw member being formed with a grooved extremity, with the screw socket member in said jaw provided with means for engaging said grooved extremity; there being an oppositely pitched screw in engagement with said screw socket members whereby the jaws may be opened or closed; said screw socket members each being provided with a perforated ear, there being a guide rod passing through said perforated ears for maintaining the screw socket members in alinement.

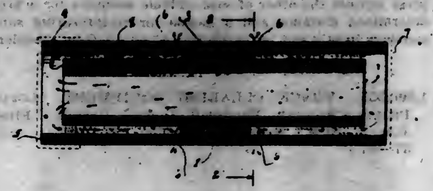
1,396,254. PEN-NIB EXTRACTOR. Ernest V. Butt, Ottawa, Ontario, Canada. Filed Oct. 12, 1920. Serial No. 416,442. 2 Claims. (Cl. 120—97.)

1. A pen nib extractor consisting of a body portion, a perpendicular slot in said body portion, slidable members in said slot, an engaging member carried by one of said slidable members, said last slidable member being tapered larger at its lower end so that said engaging member will press against the other of said slidable members for a predetermined distance and a means for reciprocating said members in said slot for extracting a pen nib from a holder.

1,396,255. TRACK-CLEARING EQUIPMENT. Louis Philip Chicoine, Vaudreuil, Quebec, Canada. Filed July 3, 1919. Serial No. 308,656. 8 Claims. (Cl. 37—57.)

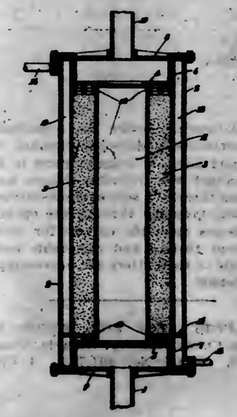
1. In a track-clearing device the combination with a carrier, of a horizontally disposed channel iron carried by the carrier and being of angular form in longitudinal section, said channel iron including flanges having a plurality of openings therein, a series of substantially vertical cutters projecting upwardly through the openings in said flanges, fixed means upon the cutters for preventing upward displacement thereof and removable means located at the upper ends of the cutters for preventing downward displacement thereof.

1,396,256. SAFETY-STOP FOR MOTOR-VEHICLES. John George Clark, Paisley, Ontario, Canada. Filed Aug. 6, 1920. Serial No. 401,714. 4 Claims. (Cl. 188—30.)



1. In a motor vehicle and in combination with the transmission shaft thereof, a clutch member fixed to the shaft, a second clutch member loosely mounted in the shaft, means for moving the second clutch member into contact with the first clutch member, and means coacting with the second clutch member to prevent the rotation of the same and the said shaft when the two clutch members are in engagement.

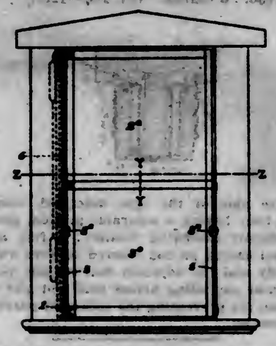
1,396,257. TUBE FOR FUSES. John G. Clemens, Buffalo, N. Y. Filed Oct. 18, 1920. Serial No. 416,704. 3 Claims. (Cl. 200—131.)



1. A casing for fuses having a central bore open at its ends and provided with annular chambers in its end portions, the wall of the casing having portions extending beyond the said annular chambers and the inner bore of the

casing to receive end caps whereby to establish communication between the said annular chambers and the said

bore, and lateral vents leading from said annular chambers to the outer air.

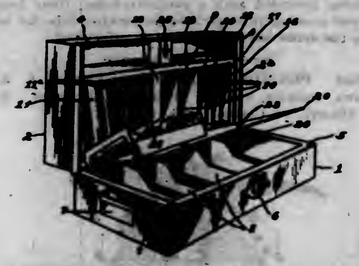


1,396,358. CATALYZER APPARATUS. WILLIAM F. COCHRANE, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 13, 1918. Serial No. 239,736. 2 Claims. (Cl. 23—24.)

1. In a catalyser apparatus for the transformation of an organic body during application of heat thereto, an outer cylindrical heating chamber, an annular catalytic chamber therein having openings near its ends and containing a pervious catalytic material, conduits respectively for the introducing of the organic body and for the withdrawal of the transformation products and connected with said openings, an inner heating chamber being formed by the inner wall of said annular catalytic chamber, pipes connecting said inner heating chamber with said outer heating chamber and inlet and outlet pipes for the introduction and withdrawal of the heating medium from said heating chamber.

1,396,359. WINDOW CONSTRUCTION. JULIA HANNAH CROOK and JOHN EDWARD CROOK, Remuera, Auckland, New Zealand. Filed Aug. 23, 1917. Serial No. 187,764. 1 Claim. (Cl. 268—4.)

In combination, upper and lower window sashes; a frame wherein said sashes are mounted for vertical movement independent of each other; screw-threaded sash-controlling rods mounted in said frame, one for each sash and extending substantially the entire length of the frame, both of said rods being mounted at the same side of the sash; screw-threaded collars pivotally carried by each sash and engaging the respective sash-controlling rods each sash being capable of being swung on its pivotal connections with the collars; a beveled gear for each rod geared thereto; a shaft rotatably and slidably mounted in said frame; a manually operated crank on said shaft; and a double

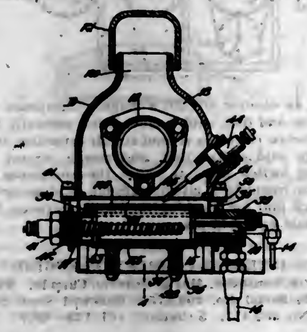


faced beveled gear mounted on said shaft and adapted to mesh with either of said beveled gears and to rotate the gear with which it meshes to move the sash associated therewith.

1,396,360. SHIPPING-STANDARD FOR AUTOMOBILES. FREDERICK H. CURRY, Detroit, Mich. Filed Aug. 23, 1920. Serial No. 405,550. 4 Claims. (Cl. 248—41.)

1. The improved shipping standard for automobiles comprising legs having an eye in which is a hub cap for engagement with a wheel of the automobile with which the standard is to be used.

1,396,361. CASH AND CURRENCY CONTAINER. JAMES L. DAVIDSON, Los Angeles, Calif. Filed July 2, 1919. Serial No. 308,087. 5 Claims. (Cl. 133—11.)

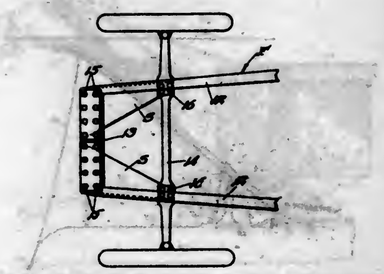


1. A coin and currency container, including a body portion, a cover hinged thereto, a coin-receiving plate arranged within the cover, a plate fitted between the body portion and cover portion, and a complemental coin plate carried by the retaining plate and arranged to occupy an opposed relation to the first mentioned coin plate.

1,396,362. FIRE-EXTINGUISHER AND METHOD OF MAKING SAME. DANA ESTES, Brookline, Mass. Filed July 3, 1919. Serial No. 308,463. 4 Claims. (Cl. 29—157.)

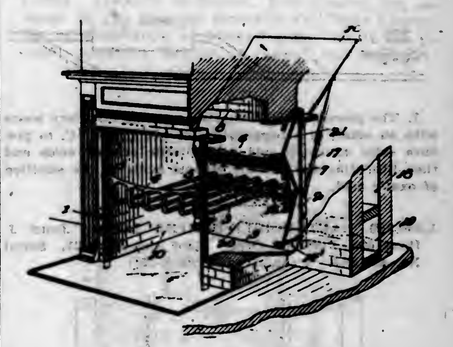
1. A method of making a curved tank outlet comprising the formation of a straight tube with its final degree of interior smoothness, followed by the bending of the tube from straight to curved formation.

1,396,363. STOVE FOR INTAKE-MANIFOLDS OF INTERNAL-COMBUSTION ENGINES. STEPHEN IVAN FERETS, Detroit, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed Nov. 5, 1920. Serial No. 421,891. 11 Claims. (Cl. 123—180.)



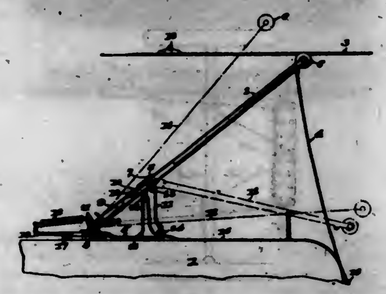
1. In combination with the intake manifold of an internal combustion engine, a burner for heating said manifold, said burner having a fuel pit, a reservoir, a pump for supplying fuel from said reservoir to said fuel pit, and pipe connections including an overflow pipe from the fuel pit to the reservoir.

1,396,364. WASHING AND RINSING MACHINE. ALEXANDER JOHN FISHER, Rochester, England. Filed Apr. 13, 1920. Serial No. 373,640. 1 Claim. (Cl. 68—37.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



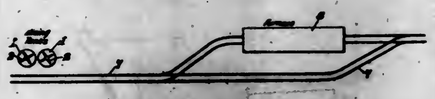
In a washing machine, the combination of a cylindrical tank, means secured to the said tank for pivotally supporting an operating lever above the said tank, a plunger hinged to said lever, a cruciform support rigidly secured to said plunger, a disk movable on the said plunger and adapted to act as a piston, and clips to connect the said disk to the said cruciform support.

1,396,365. SPRING SUSPENSION. ALBERT E. FEAY, Detroit, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed Apr. 28, 1920. Serial No. 376,117. 5 Claims. (Cl. 267—36.)



2. A spring suspension for vehicles comprising two independent springs in the same plane, each spring being composed of a single integral leaf which is substantially triangular when viewed in the direction of the flexure, the spring extending in the longitudinal direction of the vehicle, the base and the apex of each leaf constituting its attaching ends, one end being secured to the crossbar of the frame and the other end being secured to one of the axles.

1,396,366. FIREPLACE. ROBERT PRESTON GOFF, Gary, W. Va. Filed Jan. 10, 1919. Serial No. 270,561. 2 Claims. (Cl. 126—125.)



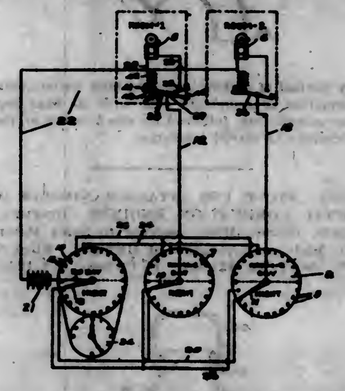
1. The combination with a fire place having openings communicating with adjoining rooms and an exhaust flue in communication with the fire place, of front and rear frames arranged within the fire place, a heat radiating fire back connected to the rear frame and disposed entirely in rear of the rear wall of the exhaust flue and having its upper portion approximately V-shaped in cross section thereby providing a forwardly extending portion rearwardly of the flue for directing the products of combustion forwardly into the flue and allowing the expansion of the fire back, a grate supported by said front frame and said fire back, a fender plate of heat insulating material horizontally hinged to said rear frame, said fender plate being arranged in spaced relation to said fire back thereby forming an air space, and means for supporting the fender plate in an inclined position.

1,396,867. TROLLEY-RETRIEVER FOR STREET-CARS. WELLESLEY R. HAMPDEN, Milwaukee, Wis., assignor of one-half to John C. Kleist and one-half to William F. Woolard, Milwaukee, Wis. Filed Aug. 28, 1918. Serial No. 251,747. 8 Claims. (Cl. 191—88.)

1. In a device of the described class, a trolley pole formed of two abutting sections hinged together, means at the hinge for retaining such sections in alinement with each other, means for automatically releasing such retaining means, and permitting the upper section of the trolley pole to drop to a position above the car, means for alining the lower section with the dropped section, and means for raising the pole when such sections are brought into alinement with each other.

1,396,868. PROCESS OF TREATING DISTILLERY WASTE. CARL HANER, Jr., Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Oct. 22, 1917. Serial No. 197,887. 10 Claims. (Cl. 23—24.)

1. The process which comprises treating distillery waste with an alkali at a temperature of 175 to 250° C. to produce salts of oxalic acid and volatile organic acids and then liberating the volatile organic acids by the addition of oxalic acid.

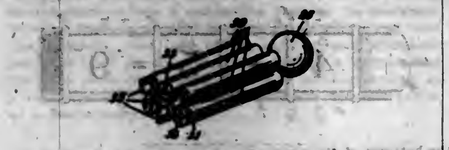


1,396,869. AUTOMOBILE-BUMPER LOCK. JOHN J. HARRISON, Portland, Oreg. Filed Aug. 16, 1921. Serial No. 492,684. 1 Claim. (Cl. 293—55.)

In combination with the bumper and front wheels of a motor vehicle, movable bars carried by the bumper, pivoted arms supported adjacent to the ends of the bumper, links connecting the movable bars and pivoted arms whereby movement of the bars produces a relative movement of the arms, and means for locking the bars against movement.

1,396,870. CLOCK-CONTROLLED ELECTRIC SIGNAL SYSTEM. JOHN F. HIELSCHER, Seattle, Wash. Filed Apr. 2, 1918. Serial No. 226,904. 1 Claim. (Cl. 161—2.)

In combination, a signaling system including indicating dials having spaced graduations forming contacts thereon to indicate the hours of a day, contact-arms pivoted to and movable over the dial, an electric circuit, an alarm for each dial, said alarms being connected to said circuit, pivoted oscillating switch arms for each dial and alarm and located in said circuit, said switch arm being normally in circuit between the indicating dials and said alarm, a circuit-closing dial located in said electric circuit and coöperating with said first-named dials and switch arms to

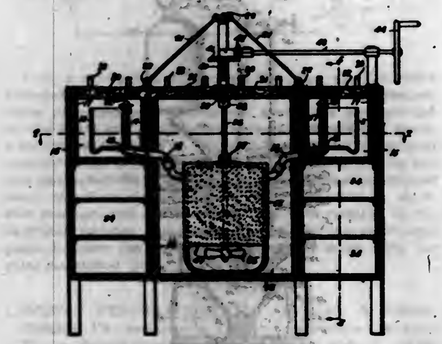


complete an electric circuit, a magnet interposed between each alarm and dial, said magnet being normally held out of said electric circuit, a second circuit extending from said magnet to said switch dial, and means carried by said oscillating switch arms to cause the energizing of said magnet to complete a circuit through said second circuit and switch dial for breaking the circuit between the indicating dials and said alarm.

1,396,871. INTERNAL-COMBUSTION ENGINE. ROBERT JOHNSON, Sault Ste. Marie, Ontario, Canada. Filed May 3, 1919, Serial No. 294,375. Renewed Sept. 26, 1921. Serial No. 503,471. 5 Claims. (Cl. 123—69.)

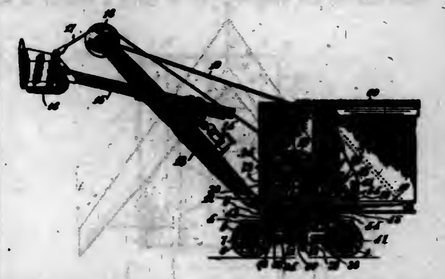
1. An internal combustion engine comprising a cylinder, a piston operable in said cylinder, said piston formed with a chamber, a member arranged in said cylinder and adapted for engagement within said piston chamber, means for drawing gas to said chamber during the power stroke of the piston, means for supplying air for admixture with the gas at the end of the working stroke of the piston, and lubricating means for the piston chamber.

1,396,872. COLLAPSIBLE CANE. FRANK KUTWICK, Montreal, Quebec, Canada. Filed Feb. 28, 1921. Serial No. 448,420. 3 Claims. (Cl. 135—45.)



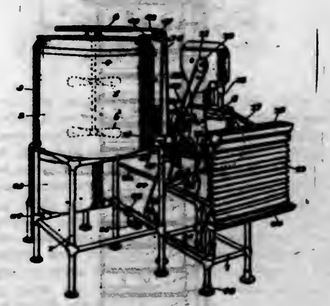
3. The combination in a collapsible cane such as described, of a pair of hinged sections, said sections having alining slots provided therein, a tongue secured in one of said slots for extension into the other, said tongue having lugs formed upon the opposite sides thereof, a lining for the slot in which the tongue is adapted for projection, said lining having depressions formed therein for receiving the projections of the tongue, and means for retaining the lining in position against displacement.

1,396,873. BOX-OPENER. EDWARD LASKOWSKI, Detroit, Mich. Filed Oct. 11, 1920. Serial No. 416,050. 5 Claims. (Cl. 226—43.)



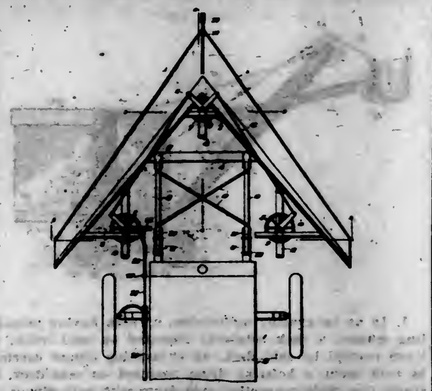
1. In a box opener, the combination with a box and a removable cover, of a rigid substantially U-shaped bracket adapted to have the legs thereof grip opposite sides of the box and having the portion of the bracket which connects said arms engaging beneath the bottom of said box and transversely spanning the same, whereby said bracket is detachably connected to said box, and means mounted on one of said legs and operable thereon for engaging beneath the cover when said bracket is mounted on said box for removing said cover.

1,396,874. ELECTRIC FURNACE. WALTER LOHREY, Bloomfield, N. J., assignor to Magna Metal Corporation, New York, N. Y., a Corporation of New Jersey. Filed May 21, 1921. Serial No. 471,368. 10 Claims. (Cl. 204—64.)



1. A furnace of the character set forth having separate independently controlled heating chambers, a mixing crucible and alloy metal crucibles in said chambers and connections for enabling flow of metal from said alloy metal crucibles to the mixing crucible.

1,396,875. POWER-SHOVEL OR EXCAVATING-MACHINE. CHARLES LOTTS, Marion, Ohio. Filed Jan. 30, 1920. Serial No. 355,089. 8 Claims. (Cl. 214—135.)



1. In an excavating mechanism, a truck having propelling wheels, a deck rotatably mounted on said truck, a boom carried by said deck, an excavating dipper carried by said boom, a hoisting drum mounted on said deck, a single line cable connecting said drum with said dipper, a gear connected with said drum, a hoisting and propelling engine mounted on said deck, a shaft for said engine, an intermediate shaft having geared connection with said engine shaft, a pinion secured to said intermediate shaft and meshing with the gear for said drum, a second pinion mounted on said intermediate shaft, a clutch to connect said second pinion with and disconnect the same from said intermediate shaft, and an operative connection between said second pinion and said propelling wheels.

1,396,876. APPARATUS FOR PRODUCING EMULSIONS. JAMES B. MCFADDEN, West Chester, Pa., assignor to The Sharples Separator Co., West Chester, Pa., a Corporation of Pennsylvania. Filed Aug. 9, 1920. Serial No. 402,268. 1 Claim. (Cl. 259—1.)

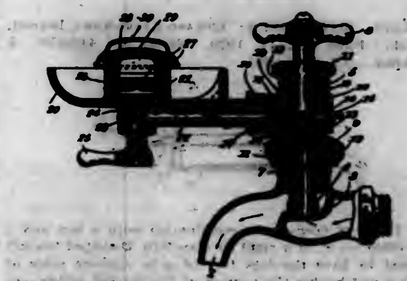
An apparatus for forming emulsions comprising a support, a mixer thereon, an emulsifier mounted on said support and having its inlet arranged below and receiving the discharge from the mixer, means for automatically controlling the flow from said mixer to said emulsifier, a cooler mounted on said support with its inlet arranged below and receiving the discharge from the emulsifier, a brine tank and pump mounted on said support and connected to said cooler, a motor on said support, and driving connections from said motor to said pump, mixer and emulsifier whereby agitated liquid automatically flows, without the use of a pump, from said mixer upwardly through said emulsifier into the top of the cooler.

1,396,377. SNOWPLOW. JACOB VICTOR MARTLAND, Virginia, Minn. Filed Mar. 18, 1920. Serial No. 366,765. 4 Claims. (Cl. 37—7.)

1. A snow plow comprising a pair of wings or shares meeting at an acute angle, and curved to smoothly deflect the snow to either side, a rigid connection between the said wings, means for connecting said plow to a motor vehicle to permit the plow to move freely vertically with respect to the vehicle, steering devices for the plow, and means for controlling said devices from the motor vehicle, said steering devices comprising shoes curved transversely and arranged with their concave faces downward, a shoe being arranged at each corner of the plow, and being connected to swing simultaneously in the same direction.

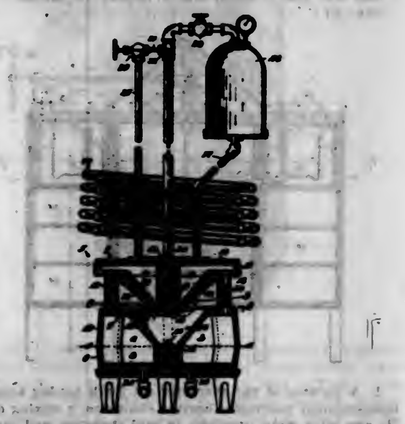
1,396,378. MUSIC-ROLL CABINET. GUIDO MERLO, Bristol, Pa. Filed Mar. 31, 1921. Serial No. 457,365. 5 Claims. (Cl. 45—7.)

1. The combination with a cabinet embodying a series of drawers, of means common to all of the drawers operative to automatically return any one of the drawers to closed position when drawn open and released.



1,396,379. EDUCATIONAL DEVICE. EDWARD LE ROY MOORE, Eureka, Calif. Filed June 8, 1916. Serial No. 102,429. 22 Claims. (Cl. 35—9.)

4. Apparatus of the character specified consisting of a plate having block receiving compartments arranged alongside of each other, blocks for the compartments, slides having guided movement longitudinally of the plate at

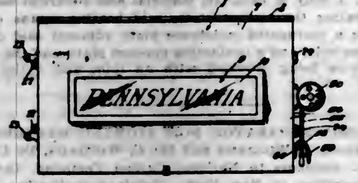


the bottoms of the compartment, the blocks and the slides having interengaging mechanism, and the arrangement of said mechanism being different in each compartment.

1,396,380. SANITARY DRINKING-FOUNTAIN. HORMIDAS MORIN and FRANK POTHIER, Sherbrooke, Quebec, Canada. Filed Feb. 24, 1919, Serial No. 278,717. Renewed Sept. 26, 1921. Serial No. 503,378. 2 Claims. (Cl. 299—9.)

1. The combination with a faucet having a valve and a valve stem therefor, of a cap for said faucet, a conical-shaped extension formed with said cap, said valve stem extending through said conical-shaped extension, a sleeve mounted upon said conical-shaped extension and communicating with said faucet, and a fountain carried by said sleeve.

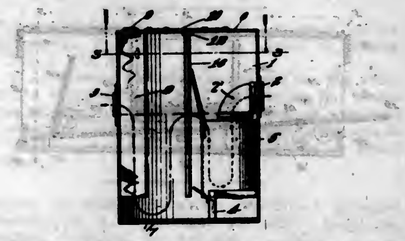
1,396,381. BURNER. ELMER PEMBERTON, Hyde Park, Calif. Filed Jan. 10, 1921. Serial No. 436,226. 8 Claims. (Cl. 158—56.)



1. A burner comprising a hollow lower portion and a hollow upper portion, both of which are divided into a pair of chambers; the chambers in the lower member being in open communication with the chambers of the upper member; said upper and lower members being spaced apart to form a combustion chamber therebetween, whereby flames generated between the members will heat the chambers; one pair of the superimposed chambers being provided for the purpose of heating a hydrocarbon fuel, the other chamber in the lower member serving as a steam generator and the superimposed chamber acting as a steam superheater.

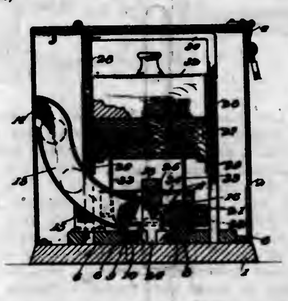
1,396,382. SANITARY BEDPAN. LOUISE PISTRAS, New York, N. Y. Filed Apr. 30, 1920. Serial No. 377,866. 3 Claims. (Cl. 4—19.)

1. A bed pan comprising a receptacle having an opening at the top and having a flat horizontal bottom and an open spout at its rear end part, and a hinged cover for said rear end part and spout, said receptacle being tapered at its forward end part and having an overhanging downwardly flanged part, and a hinged cover for the forward end of said opening, said cover having a flanged edge for engaging said flanged overhanging part, and locking means for maintaining said covers in open position.



1,396,383. INDICATOR. JAMES J. REID, South Bend, Ind. Filed May 23, 1921. Serial No. 471,772. 5 Claims. (Cl. 40—53.)

1. In a mechanism of the class described, storage spools mounted for rotation, a display band wound thereon, gears connected with the spools, a shaft, a gear carried by the shaft and meshing with the first-mentioned gears, a second gear carried by the said shaft, a shaft mounted counter to the first-mentioned shaft, means for driving the last-mentioned shaft, spaced gears upon the last mentioned shaft rotatable therewith and slidable thereon, a shiftable member, and spaced yokes fixed with relation to the shiftable member and coacting with the last-mentioned gears to shift the same into and out of mesh with the third-mentioned gear.

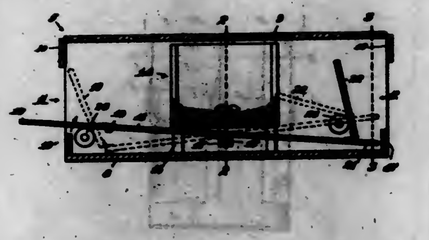


1,396,384. SEPARATING-TRAP. WILLIAM A. SHOAR, Decatur, Ill., assignor to Leader Iron Works, Decatur, Ill., a Corporation of Illinois. Filed Feb. 1, 1918. Serial No. 214,939. 3 Claims. (Cl. 210—56.)

1. A separating trap, including in combination a tank having an inlet connection and an outlet connection, a discharge compartment or passage inclosing said outlet connection and extending from the top of the tank to a point near the bottom of the tank, a removable receptacle located beneath the inlet connection adapted to receive the solid matter, a pipe connected to the top of the tank and leading to a point just above the water line and adapted to receive a pump so as to remove the oil and other

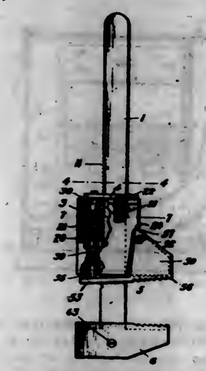
hydro-carbon therefrom, and another pipe leading from the top of the tank to a point in the same plane as the lower end of the discharge compartment or passage and adapted to receive a pump for removing the water from the tank.

1,396,385. COIN-CONTROLLED MECHANISM. FRED W. STICE, Tama, Iowa. Original application filed June 16, 1919, Serial No. 304,486. Divided and this application filed Nov. 22, 1919, Serial No. 339,876. Renewed Mar. 16, 1921. Serial No. 452,723. 1 Claim. (Cl. 194—80.)



In a vending machine, the combination of a closed casing having a coin-discharge opening in its bottom, an ejector head resting on the bottom of the casing and having an open-bottom coin seat near one end and an open-ended notch extending across said seat and in communication therewith, a coin tube disposed laterally in the casing with its inner end adjacent and above the slide, a plunger arranged above the slide and provided in one side with a recess to receive a coin from the coin tube, a lateral arm extending from the opposite side of the plunger, a guide in which said arm plays, a tongue depending from the plunger and playing in the said open-ended notch whereby to move across the coin seat when no coin is deposited or to clamp the coin in said seat and actuate the slide when a coin is deposited, and means acting on the plunger to hold the same and the slide normally retracted.

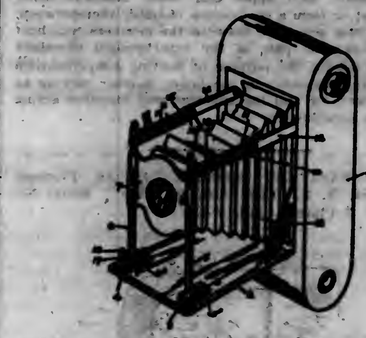
1,396,386. TRAP-NEST. OSCAR STROMBORG, Los Angeles, Calif. Filed Jan. 29, 1920. Serial No. 354,944. 4 Claims. (Cl. 119—50.)



1. In a trap-nest, an open ended frame, a nest intermediate of and spaced from the ends of said frame, a rocker panel pivoted in said frame to extend beyond the opposite sides of said nest toward the open ends of the frame, a closure panel hinged on each end of said rocker

panel to swing vertically, and means engageable with said closure panels for operating same on rocking of the

rocker panel to alternately move said closure panels to their open and closed positions.



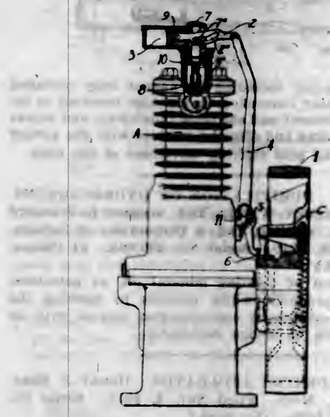
1,396,387. WRENCH. EDWARD CARLTON THOMPSON and WILLIAM HULBERT THOMPSON, Seattle, Wash., assignors of one-fourth to Robert McNair and one-fourth to Charles H. Long, Seattle, Wash. Filed May 20, 1919. Serial No. 298,512. 1 Claim. (Cl. 81—160.)

A wrench having a shank carrying an outer jaw, an inner jaw movable along the shank, means carried by said inner jaw whereby it may be locked to the shank at adjusted positions, a facing member for the inner jaw having wings embracing the working end of the jaw and having pivotal and shoulder bearing support therewith at a point well back from its working face and adjacent to the edge of the shank, said facing member having a loop passing about the shank, the inner jaw having a spring receiving recess at the back side of and extending lengthwise of the shank, a spring in said recess, and a plunger in said recess acted upon by the spring and engaging the loop of the facing member to swing it outward.

1,396,388. LENS-FRONT MOUNT. CARL VALL, Rochester, N. Y. Filed Dec. 4, 1920. Serial No. 428,235. 4 Claims. (Cl. 95—40.)

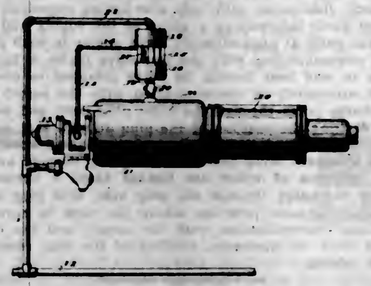
1. In a lens front mount for cameras the combination of a bed plate, a lens front, a pair of uprights adapted to support said lens front on said bed plate, a pair of bifurcated spring clips mounted on said bed plate, said uprights being adapted to engage said spring clips and be held rigidly in place on said bed plate by said spring clips.

1,396,389. CATALYZER APPARATUS. MILTON C. WHITAKER, New York, N. Y., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 28, 1918. Serial No. 242,443. 12 Claims. (Cl. 23—23.)



5. An apparatus comprising, in combination, a container, a body of catalytic material and electrical means for heating the same therein, said heating means comprising a corrugated resistance plate adjacent said catalytic material and a contacting opposed plate, and the said apparatus being provided with an inlet and outlet for fluid.

1,396,390. SEPARATOR FOR STORAGE BATTERIES. CHARLES F. WILLIAMS and IRA C. WILLIAMS, De Long, Ind., assignors to National Carbon Company, Inc., a Corporation of New York. Original application filed Feb. 21, 1917, Serial No. 154,144. Divided and this application filed Mar. 15, 1918. Serial No. 222,568. 4 Claims. (Cl. 204—29.)

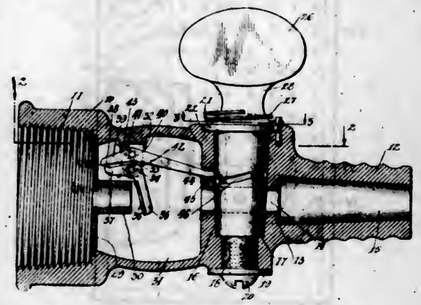


1. In electric batteries in combination with the positive and negative plates, an acid-resisting separating member secured to one of the plates and projecting laterally from both sides thereof in contact with the adjacent plates to hold them in spaced relation to the former and porous separators between the said plates having openings to receive said members.

1,396,391. POWER-OPERATED COMPRESSOR. FRANK ACKERMAN and CHARLES W. FREES, St. Louis, Mo., assignor to Curtis & Co. Mfg. Co., Wellston, Mo., a Corporation of Missouri. Filed June 21, 1920. Serial No. 390,490. 7 Claims. (Cl. 230—24.)

1. A power-operated compressor or pump provided with an unloading device or easy starting device comprising a mechanically operated mechanism which prevents one of the cylinder valves of the compressor from functioning properly during the starting of the apparatus, a variable speed device combined with the driving element of the apparatus and a means coöperating with said device for causing said mechanism to start to operate to restore the cylinder valve of the compressor to its normal operative condition when the apparatus is started, and means for retarding the action of said mechanism so as to insure the compressor remaining inactive for a certain period of time after the apparatus has been set in operation, irrespective of the speed of the driving element.

1,396,392. GRADUATED-RELEASE DEVICE FOR AIR-BRAKES. GEORGE ALUS ANDERSON, Santa Rita, N. Mex., assignor of one-eighth to Robert T. Taper, one-eighth to Victor H. Waggoner, and one-eighth to Walter M. Mercer, Santa Rita, N. Mex. Filed Mar. 16, 1920. Serial No. 366,405. 7 Claims. (Cl. 303—77.)



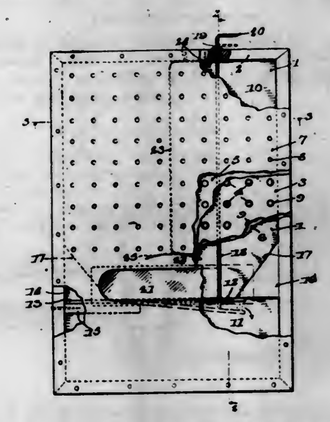
1. In a fluid pressure brake, the combination with a train pipe, triple valve, auxiliary reservoir and brake cylinder, of a casing having a pair of pressure chambers, one of which is connected to and subject to varying pressure of, the train pipe, and the other of which has a valved connection with the auxiliary reservoir, a member movable under control of the relatively varying pressures in said chambers, a pipe extending from the exhaust port of the triple valve, a controlling valve for said pipe, a spring controlling said valve, and connections between said movable member and said spring to automatically vary the effective pressure of the spring.

1,396,393. REPRODUCING DESIGN. JAMES W. ASTON, Chicago, Ill. Filed June 20, 1921. Serial No. 479,146. 2 Claims. (Cl. 41—7.)

1. The process of stamping designs and the like which comprises applying to the back of stamping leaf a thin coating of a solution of adhesive containing not more than 1% of adhesive material, drying it, applying the leaf to the face of a card and impressing the type or design thereupon.

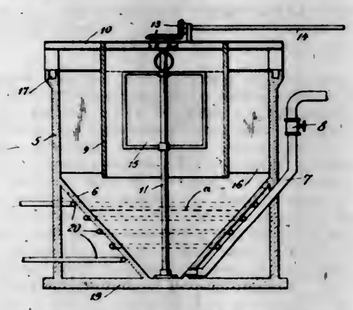
1,396,394. AUTOMATIC VALVE. MICHAEL J. BARRETT, Brooklyn, N. Y. Filed May 12, 1920. Serial No. 380,829. 2 Claims. (Cl. 67—115.)

1. An automatic release for fluid valves having a valve body and a valve therein adapted to be moved into an open or closed position, said valve having a cam slot in its surface, a pivoted lever having one end engaging the slot in the valve, a spring adapted to hold said lever in its engaged position, a pivoted pressure vane, a spring coöperating with the pressure vane and tending to close it against the pressure of the fluid, one end of the pivoted vane adapted to coöperate with one end of the pivoted valve-engaging lever when the pressure falls below a predetermined amount, whereby said lever is withdrawn from the slot in the valve, and a spring on the valve adapted to close it when it is thus released.



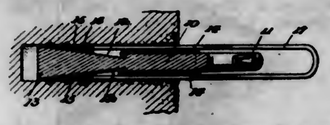
1,396,395. ATTACHMENT FOR PENCILS. ARTHUR A. BECK, Bemidji, Minn. Filed Jan. 4, 1921. Serial No. 434,921. 3 Claims. (Cl. 120—84.)

3. In a device of the character described, a sleeve adapted to be secured at one extremity to a pencil, a plu-



rality of resilient lugs projecting from its opposite extremity, a resilient split ring slidably associated with said lugs, hooks formed at the terminals of said split ring, a slidable clip carried by said sleeve having a slot therein, the edges of which are adapted to co-act with the hooks, said slot being of gradually increasing width toward one end whereby upon movements thereof in opposite directions, the relative contraction and expansion of the ring and the lugs will be effected for gripping an eraser received by said sleeve.

1,396,396. GAME APPARATUS. HENRY A. BERNBAUM, Milwaukee, Wis. Filed June 7, 1920. Serial No. 387,027. 6 Claims. (Cl. 46—56.)



1. A punch board comprising a boxlike structure, having front and rear members, the front member being composed of an indicator carrying a perforated member, a puncturable sheet superimposed upon said perforated member, and a second perforated member superimposed upon said puncturable sheet and having its perforations alined with and of a smaller size than the perforations in said first mentioned perforated member.

1,396,397. SEWAGE TREATMENT. WARREN R. BOOST, West Brighton, Staten Island, N. Y. Filed July 28, 1920. Serial No. 399,464. 22 Claims. (Cl. 210—8.)

1. The method of treating sewage which comprises subjecting a body of sewage to biological action with the aid of aerobic bacteria in the presence of free oxygen, and maintaining the presence of free oxygen throughout the entire body of said sewage by diffusion downwardly through the sewage of air introduced by agitation at or near the top surface of said body of sewage.

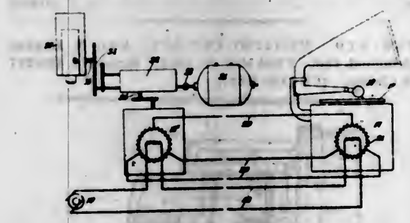
1,396,398. WALL-ANCHOR. NEWTON K. BOWMAN, North Lawrence, Ohio. Filed Dec. 3, 1919. Serial No. 342,103. 5 Claims. (Cl. 85—2.4.)

5. A wall anchor including an anchor body provided with an expanding element, gripping dogs mounted to co-act with said element and shiftable therealong, and means connecting the dogs and disposed to coact with the anchor body for limiting said shifting movement of the dogs.

1,396,399. PURIFICATION OF HYDROCARBONS. OSCAR E. BRANSKY, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Nov. 26, 1919. Serial No. 340,883. 11 Claims. (Cl. 196—29.)

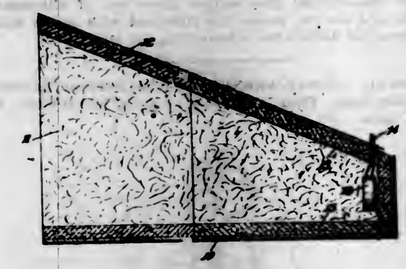
7. The method of treating mineral oil, as petroleum or petroleum products, which consists in washing the same without substantial emulsification thereof with an aqueous solution of sludge sulfonates.

1,396,400. FLUSHING APPARATUS. HENRY J. BRESSON, Detroit, Mich. Filed Nov. 4, 1918. Serial No. 261,151. 1 Claim. (Cl. 4—5.)



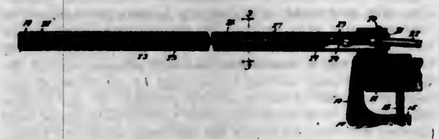
In flushing apparatus, a valve body having a port connected to a permanent supply and a port connected to a discharge, said ports extending in opposite directions from the plug cavity of the body, a pair of tanks of permanent dimensions, said body also having oppositely disposed ports intersecting a plane of the supply and discharge ports at approximately right angles to such plane and communicating with the respective tanks, a turning plug in said body having its ports arranged to place a tank alternately in communication with the supply and discharge ports through the same plug port, and means for shifting the position of the plug at will, said means including an operating handle and a weighted structure, said structure being positioned to swing through an arc the extremes of which are located above a horizontal plane extending through the plug axis, said plug being movable between positions where one tank is normally in open communication with the supply and the other tank with the discharge, shifting of the plug reversing this relation.

1,396,401. SYNCHRONIZED ENTERTAINMENT APPARATUS. WILLIAM H. BRISTOL, Waterbury, Conn., assignor to The Bristol Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 25, 1919. Serial No. 313,263. 6 Claims. (Cl. 88—16.2.)



1. Synchronized entertainment apparatus embodying rotatable entertainment mechanism, means to rotate same

and governing means to maintain a constant rotational velocity thereof, additional entertainment mechanism, and independent driving means, connections between said addi-



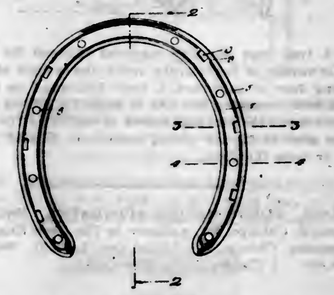
tional entertainment mechanism and independent driving means, said connections including a speed gear, and speed regulating mechanism operatively associated with said speed gear and controlled by said governing means.

1,396,402. SOUND-SELECTING APPARATUS. WILLIAM H. BRISTOL, Waterbury, Conn. Filed June 22, 1920. Serial No. 390,916. 8 Claims. (Cl. 181—27.)

1. Apparatus for use in phonographic recording, comprising a flaring receptacle open at the front and closed at the inner end, said receptacle being lined substantially throughout with material which will not reflect sound, and a telephone transmitter located at the inner end of said receptacle and acoustically independent thereof.

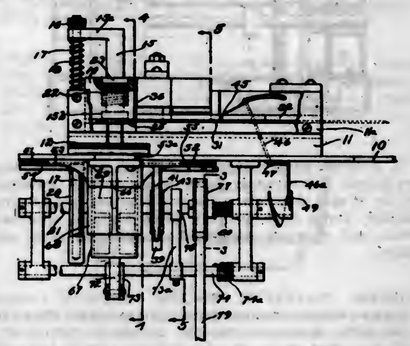
1,396,403. METHOD OF RENEWING CARBON AND SIMILAR PAPERS. HARRY H. BUCKLEY, Chicago, Ill., assignor to Associated Engineers Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 15, 1919. Serial No. 324,018. 11 Claims. (Cl. 91—70.)

7. The method of renewing impression paper which consists in progressively applying heat to the surface of used sheets of said paper.



10. The method of renewing impression paper which consists in drawing a used sheet of said paper over a surface heated to melt the binding material of said paper and cause the unused pigment to flow over the used portion of said paper, thereby to redistribute the coating carried by said paper over the same.

1,396,404. AIR-GUN. FRANK F. BURTON, Mount Carmel, and THOMAS D. JONCK, New Haven, Conn., assignors to Winchester Repeating Arms Company, New Haven, Conn., a Corporation. Filed Feb. 17, 1921. Serial No. 445,691. 80 Claims. (Cl. 124—11.)



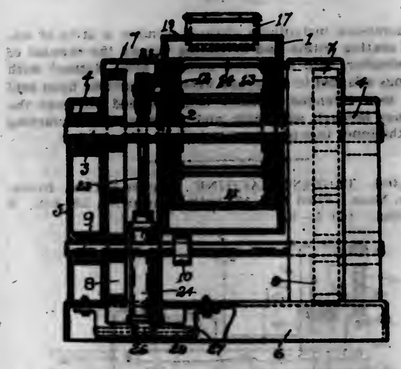
1. In a gun, a receiver, a loading lever and a cocking lever pivoted to the said receiver, and an action handle pivoted to the said levers for the operation thereof.

1,396,405. HORSESHOE. WILLIAM J. CAHILL, New Dorp, N. Y. Filed June 2, 1920. Serial No. 386,000. 1 Claim. (Cl. 168—11.)

A horseshoe including a channel member, a strip of material seating within and extending beyond the channel of said member, said strip and member being formed with openings adapted to aline, and extended portions upon said strip, said extended portions being formed adjacent the openings through said strip and member, and contacting with the inner face of the outer wall of said member.

1,396,406. TAGGING-MACHINE. VICTOR F. CARL, Brookline, Mass. Filed Nov. 13, 1919. Serial No. 337,815. 6 Claims. (Cl. 1—8.)

1. A tag affixing machine, comprising means for pressing a tag upon a material piece with the pin prongs projecting through the material, means for preliminarily crossing the pin prongs, and means for pressing the crossed pin prongs closely against the under surface of the material.

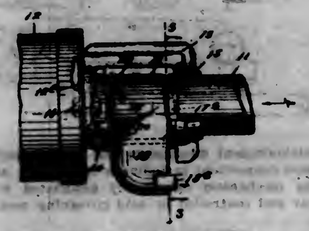


3. A tag affixing machine, comprising means for progressively bending the pin prongs of a tag to cross the same, a hollow plunger having a cross pin to engage the crossed pins and having also a presser head relatively movable with respect thereto for flattening the pin prongs and pressing them closely against the material.

1,396,407. TRAP-NEST. David H. Cowgill, West Newton, Pa. Filed Mar. 22, 1921. Serial No. 454,422. 2 Claims. (Cl. 119—47.)

1. A trap nest rockably mounted between its ends to tilt forwardly or backwardly under the weight of a hen, a swing door on said nest, a lever fulcrumed on the nest and slidably engaging the door to impart a closing or opening movement thereto, and means operative by the rocking of the nest to impart sliding movement to said lever to close or open the door.

1,396,408. DOUGH-MIXING APPARATUS. William A. Darrah, Chicago, Ill., assignor to The Ehco Engineering Company, Chicago, Ill. Filed Oct. 4, 1920. Serial No. 414,464. 8 Claims. (Cl. 259—109.)



1. A dough mixer comprising a drum, a rotating member therein, cast terminal plates to said drum, a projection on one of said terminals, a frame supporting said rotating member, and a fluid operated piston mounted upon said frame and engaging with said extension to move said drum.

1,396,409. TRANSFER PROCESS. Antonius Laurentius de Rooij, Watergraafsmeer, Netherlands. Filed Jan. 30, 1920. Serial No. 355,215. 5 Claims. (Cl. 41—33.)

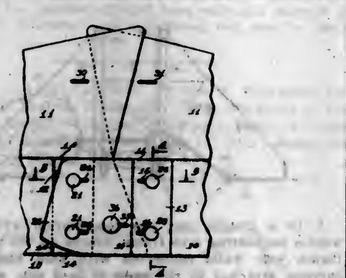
5. A method of transferring pictures and photographic prints printed in black or in colors from their original supporting backing to a support of different material, comprising the steps of coating the picture with collodion; drying the coated picture; soaking it in a water bath to loosen the backing from the collodion layer; placing it while wet face downward on a glazed surface; rolling it with a roller to remove superfluous water and air bubbles; removing the backing, leaving the collodion layer with the picture thereon adhering to the glazed surface; and finally transferring said layer from said surface to the new support.

1,396,410. EXHAUST CUT-OUT. Emil R. Draver, Richmond, Ind. Filed May 13, 1921. Serial No. 469,217. 10 Claims. (Cl. 116—138.)

7. An exhaust pipe attachment having axially spaced sleeves, and a supplemental pipe section mounted on a pivot whose axis is parallel to the axis of said sleeves, said pipe section being movable laterally into and out of alinement with said sleeves and having a deflector, which, when said supplemental pipe section moves out of alinement with said sleeves, moves into alinement with one of said sleeves and deflects the exhaust into the atmosphere.

1,396,411. STRAP-WRENCH. Walter Dufford, Bartlesville, Okla. Filed Jan. 26, 1921. Serial No. 440,032. 6 Claims. (Cl. 81—64.)

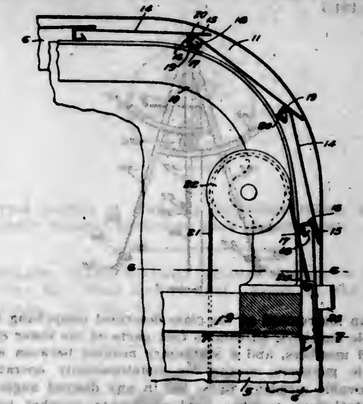
1. A strap wrench including a head having a socket at the rear end thereof, a hollow handle detachably engageable with said socket and forming a container adapted to contain rosin, the strap of the wrench extending transversely through said head directly at the adjacent end of the handle, and a closure plug for said adjacent end of the handle, said plug having an opening at the forward end thereof adapted to be closed by pressure of the closure plug against said strap when the handle is in place, said opening affording an outlet for the rosin when the handle is detached from the head.



1,396,412. PROCESS OF MAKING STYLI AND PRODUCTS THEREOF. Byron E. Eldred, New York, N. Y., assignor to The Commercial Research Company, a Corporation of New York. Filed Dec. 23, 1914. Serial No. 878,804. 16 Claims. (Cl. 274—38.)

1. The process of making talking machine styli which comprises enveloping a hard metal core of low heat conductivity and low expansion with a metal of higher heat conductivity, drawing the compound article so produced down to stylus diameter, cutting the same into stylus lengths, and exposing the core at one end of each such length.

16. A phonograph needle comprising a metal sheath filled with a wire, the two having a drawn union with each other, said needle having a record engaging point at its end.



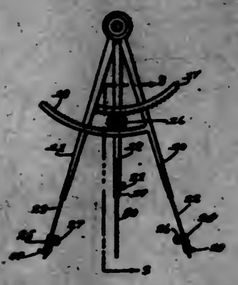
1,396,413. SOFT COLLAR. Joseph William Fischer, Brooklyn, N. Y. Filed Feb. 28, 1921. Serial No. 447,133. 3 Claims. (Cl. 2—69.)

1. In a soft turndown collar, a buttonhole member attached to the front face of one end of the neckband portion under the turndown portion of the collar, the said buttonhole member forming a pocket with the neckband portion, the pocket being open at one side, the said buttonhole member having vertically spaced buttonholes, a stiffening member fitting removably into the said pocket and having integral spaced buttons engaging the said spaced buttonholes, the other end of the neckband portion having vertically spaced buttonholes adapted to gage the said buttons.

1,396,414. FLEXIBLE DOOR. Alexander E. Foglquist, Minneapolis, Minn., assignor to Northwestern Bakers Supply Co., Minneapolis, Minn., a Corporation. Filed Jan. 21, 1918. Serial No. 212,956. 2 Claims. (Cl. 45—93.)

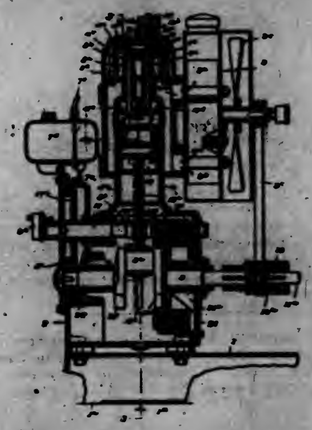
1. The combination, with a casing having curved guideways, of a vertically sliding door therefor composed of a series of longitudinal sections, each section having one longitudinal edge inwardly and upwardly turned upon itself against the wall of the section and then outwardly and downwardly turned to form a flange and terminating in an upwardly projecting lip, the other longitudinal edge of said section being inwardly and downwardly turned and having an end portion to fit between said flange and said upwardly projecting lip on the edge of the adjacent section, said end rocking in the angle between said flange and lip and allowing the ends of said sections to accommodate themselves to the curve of said guideways.

1,396,415. IDENTIFICATION OF PLATES AND FILMS. Julius Fried, New York, N. Y. Filed May 1, 1920. Serial No. 378,155. 6 Claims. (Cl. 250—84.)



3. A packet for plates or films used in X-ray work comprising an inclosure of a material impenetrable by light and penetrable by X-rays, and an adherent coating substantially impenetrable by X-rays upon a portion of that face of the inclosure to be exposed to the X-rays and removable in portions to represent any desired identification symbols.

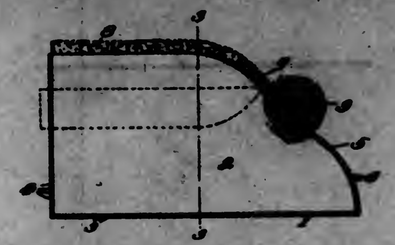
1,396,416. DRAIN-PAN. William Ira Garrett, Union City, Tenn., assignor to Garrett Drain Pan Company, Union City, Tenn., a Corporation of Tennessee. Filed Nov. 23, 1920. Serial No. 426,037. 3 Claims. (Cl. 53—8.)



3. A device of the type described comprising a central or body portion having its side walls bent to form a ledge, and pieces comprising the end walls, each edge of said end wall having two projecting portions secured to the body portion of the receptacle, and parts of the side and end portions above and below the ledge soldered or otherwise suitably secured to the side walls, in combination with a drain member which rests upon the side walls and extends to the end walls.

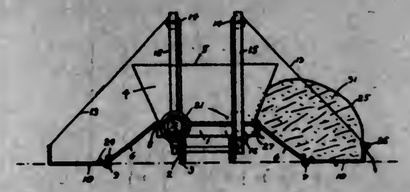
1,396,417. COMPASSES. Paul Gerock, Warren, Ohio, assignor of one-half to Josef Sawe, Warren, Ohio. Filed Mar. 24, 1921. Serial No. 455,113. 8 Claims. (Cl. 33—191.)

1. An instrument of the class described comprising two movable members, adjustable foot parts at the lower ends of said members, and a stationary member between said movable members, means for simultaneously operating the movable members to be set in any desired angle to said stationary member, said stationary member being provided with a socket, and a needle in said socket adapted to be vertically adjusted and locked in its adjusted position.



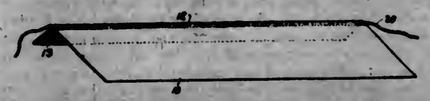
1,396,418. INTERNAL-COMBUSTION ENGINE. Bennet T. Gilliard, Hanover, Pa. Filed Jan. 24, 1919. Serial No. 272,871. 17 Claims. (Cl. 123—73.)

1. In an internal combustion engine having a closed crank case, a cylinder communicating with said case having inlet and outlet ports opposite the case, an air chamber to inclose the valve operating levers, and an air passage directly communicating with and connecting the interior of the crank case and said air chamber.



1,396,419. SLIPPER. Primus B. Giroux, Johnstown, N. Y. Filed Jan. 3, 1920. Serial No. 348,946. 1 Claim. (Cl. 36—9.)

A boudoir slipper, including a sole and an upper formed from a plurality of parts of animal skin with the fur on the inside thereof, the edges of the parts forming the front portion of the slipper being cut in double convex form and secured together at a portion of their length, by an exterior row of stitching, to provide an arc-shaped toe portion of such length that the successively descending portion of the arc will engage the foot of a wearer just in the rear of the toes, and hold the slipper in place, the sides of the front portion of the upper being separated at the rear end of the arc-shaped toe portion and the separated convex edges thereof continued until they



merge into the horizontal edges of the main upper, the said horizontal edge and curved edges being turned outwardly and downwardly to form a fur ornamentation, and a reinforcing button secured at a point on the forward portion of the upper, where the curved edges of the upper meet.

1,396,420. FREIGHT-CAR. Alexander I. Glinchikoff, Honolulu, Hawaii. Filed Feb. 14, 1921. Serial No. 444,651. 7 Claims. (Cl. 105—378.)

1. In a freight car, the combination with a frame, wheels supporting said frame, hinges on the sides of said frame, side walls connected with said hinges, flexible carriers attached to the ends of said side walls, means to support said flexible carriers, means to move said flexible carriers, and means to detachably fasten the load to said side walls.

1,396,421. ADJUSTABLE HAT-LINING. Frederic Gsunig, Brooklyn, and Maxime L. Van Humbl, New York, N. Y. Filed Aug. 4, 1919. Serial No. 315,295. 1 Claim. (Cl. 2—113.)

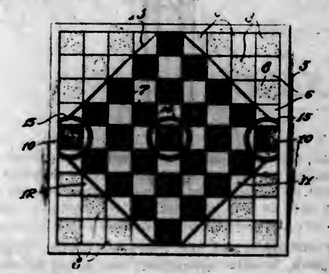
As an article of manufacture, a hat lining comprising a crown having a gathered top and a side portion formed of a flexible material cut at a bias, the sides of the said side portion being in overlapping relation, the lower edge of the said side portion being doubled up outwardly to form an attaching edge for fastening the lining into the hat, the lower portion of the said side portion being provided with an integral hem a distance from the said attaching edge and intermediate the latter and the top, and a draw string in the said hem, one end of the said draw string projecting beyond the corresponding end of the hem, the latter having an opening a distance from its other end for the passage of the other end of the draw string to allow of fastening the ends of the draw string together with the hem ends in overlapping relation.

1,396,422. BUNDLE-TAPE-APPLYING DEVICE. Thomas M. Harrigan, Woodstock, Vt. Filed May 12, 1921. Serial No. 469,144. 7 Claims. (Cl. 216—29.)

3. An adhesive tape applying device having, in combination, a carrier frame, adapted to have a roll of adhesive tape rotatably mounted thereon, said carrier frame having a plurality of arms, a hollow handle fast to one of said arms and adapted to contain liquid, a tube provided with holes in its periphery and extending into the interior thereof, a moistening roll mounted on said tube and means to connect the interior of said tube with the interior of said handle, whereby said moistening roll may be moistened.

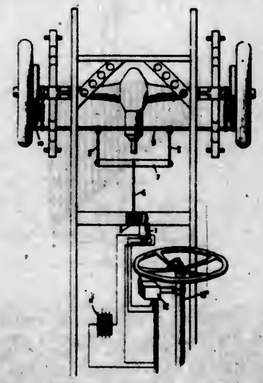
1,396,423. MAN'S GARTER. Myron B. Hammond and Henry H. Taylor, Bridgeport, Conn., assignors to The Thos. P. Taylor Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 11, 1921. Serial No. 468,678. 2 Claims. (Cl. 241—6.)

1. In a hose supporter, an elastic limb encircling member having a non-elastic clasp-bearing member on one end and having a non-elastic tongue secured to its opposite end, and a separable clasp having a female member rigidly secured to the outer face of the clasp-bearing member and having a male member adjustably secured to the tongue and adapted to register with and engage the female member whereby both are carried by the outer face of the clasp-bearing member.



1,396,424. RAZOR-STROPPER ROLL. Walter M. Hanson, Milwaukee, Wis. Filed July 26, 1920. Serial No. 398,944. 7 Claims. (Cl. 51—194.)

3. A razor stropping roll comprising a split axle, an S-shaped spring member carried within the split in said axle and having oppositely extending arms presenting a



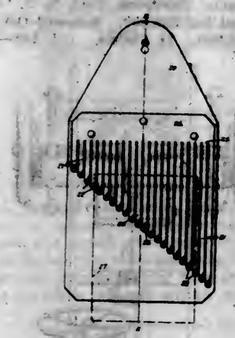
curved surface of gradually increasing radius, and an abrasive member carried by each of said arms.

1,396,425. GAME-BOARD. Thomas R. Harlow, Benton City, Mo. Filed Feb. 14, 1921. Serial No. 444,723. 1 Claim. (Cl. 46—64.)

A game-board comprising a square field laid off into alternate different colored checks and formed by diagonally extending boundary lines into a major field square in contour, and a series of triangular shaped dead fields, one of the latter being situated adjacent each side of the major field; an area located at two of the opposite corners of the major field and designated as King's arches, and a space central of the major field and intermediate the King's arches termed the King's palace.

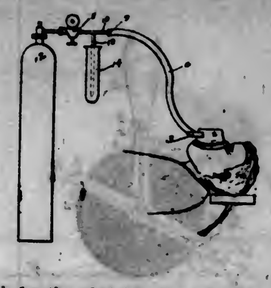
1,396,426. ELECTRICALLY-OPERATED BRAKE. Edward Vassallo Hartford, Deal, N. J. Filed Aug. 27, 1914, Serial No. 858,959. Renewed Oct. 19, 1918. Serial No. 258,900. 18 Claims. (Cl. 188—162.)

1. An electrically operated brake mechanism, comprising a motor, a winding drum operably connected with said



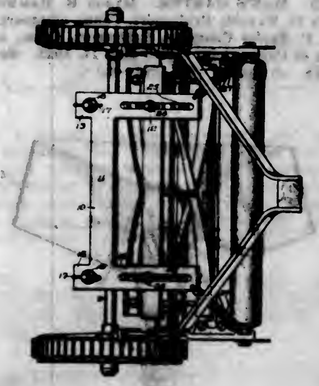
mation, a self-adjustable limiting means carried by said drum adapted to limit the extent of unwinding movement thereof, said means including a flange formed upon said drum, a peripheral slot formed upon said flange, a stop member having depending parts frictionally engaging said slot, and stop posts adapted to coöperate with said stop member.

1,396,427. BULL-HOLDING INSTRUMENT. OSIN E. HATCH, Davenport, Iowa. Filed Dec. 14, 1920. Serial No. 430,636. 2 Claims. (Cl. 128—316.)



1. An instrument of the character stated, comprising pivoted jaws, handles operatively connected to the jaws, means limiting the pivotal movement of the handles whereby said jaws are spaced apart when in closed position, and said jaws having registering trocar guiding recesses at their free ends in their outer faces, said jaws curved in opposite directions and curved transversely in the same direction.

1,396,428. PAPER OR BILL FILE. HERMAN HELEMAN and SOLOMON BRAININ, New York, N. Y. Filed Sept. 12, 1919. Serial No. 323,202. 8 Claims. (Cl. 129—35.)

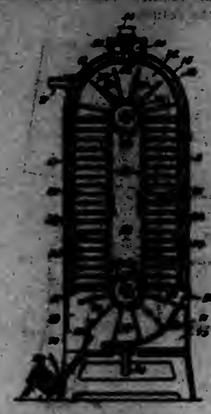


4. A file comprising a plurality of contiguous spring fingers, said fingers being of gradually varying length, means for securing one portion of all of the fingers together in parallelism and alinement, the free ends of said fingers being bent in varying curvatures away from the longitudinal plane of the fingers, and having their extremities spaced a uniform distance apart.

1,396,429. MASK FOR THE INHALATION OF CARBON DIOXID. YANDELL HENDERSON, New Haven, Conn. Filed Apr. 3, 1920. Serial No. 371,268. 4 Claims. (Cl. 128—200.)

1. A mask for the administration of carbon dioxid for the ventilation of the blood in the lungs, the said mask having a mixing-chamber opening into its interior and into the atmosphere and the said mixing-chamber containing a gas-distributer formed with openings positioned to waste the gas during expiration or cessation of breathing and to permit the gas to be drawn into the mask, mixed with outside air, during inspiration.

1,396,430. SHARPENING DEVICE FOR LAWN-MOWERS. WALTER G. HILL, Chicago, Ill. Filed Feb. 11, 1920. Serial No. 357,786. 18 Claims. (Cl. 76—82.)

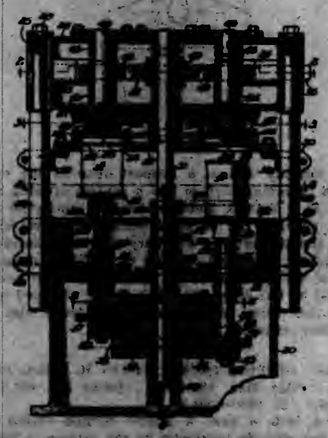


1. A sharpening device for the purpose stated, comprising a supporting member adapted to be attached to the body of a lawn mower to extend adjacent the rotary blade portion thereof, and a sharpening element adjustably supported on said supporting member and adapted to be engaged by the cutting edges of the blade portion of the lawn mower.

1,396,431. DRIER FOR CAN-COVERS. FROSCH C. HIRSCH, Bridgeport, Conn. Filed Oct. 12, 1920. Serial No. 416,540. 11 Claims. (Cl. 34—12.)

2. A drier of the character described comprising end sections and side sections detachably connected together to form circular runways, each section having a steam jacket, a demountable cap having a steam jacket and a steam inlet communicating therewith, a series of traveling carriers circulating through the runways, the drier

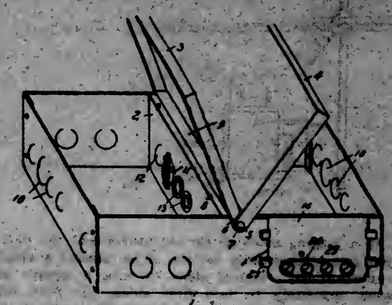
having an inlet and a discharge-outlet for the objects to be dried, and means whereby steam from the steam jacket



of the cap is circulated throughout all of the sections and exhausted therefrom.

1,396,432. NEST. ARMAND C. HITCHCOCK, Tuscott, Kans. Filed Mar. 23, 1921. Serial No. 454,932. 2 Claims. (Cl. 119—36.)

1. A nest comprising a receptacle mounted for tilting movement and provided in its opposite sides at its opposite ends with outwardly swinging doors.

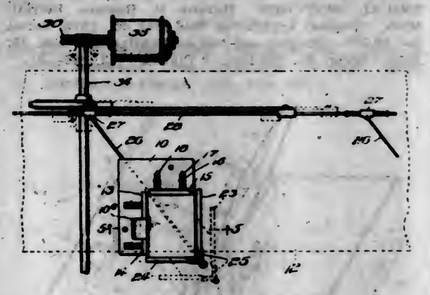


1,396,433. CAN-DOUBLE-SEAMING MACHINE. HARRISON H. HOOD, Battle Creek, Mich. Filed Feb. 19, 1918. Serial No. 218,064. 48 Claims. (Cl. 113—14.)

1. In a machine for locking can ends to bodies, the combination with seaming mechanisms, of oscillating means

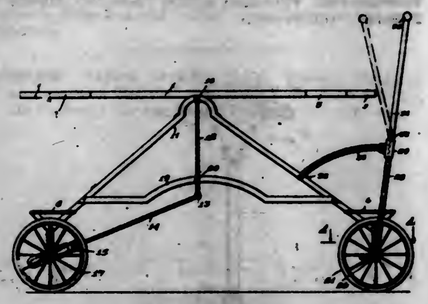
pivoted on an axis between the locking mechanisms for separately delivering can bodies and can ends successively in ostensible alinement to said seaming mechanisms.

1,396,434. METAL BOX OR RECEPTACLE FOR ELECTRICAL SWITCHES. BYRON D. HOSTON, Detroit, Mich. Original application filed May 22, 1915, Serial No. 29,788. Divided and this application filed Feb. 15, 1919. Serial No. 277,192. 3 Claims. (Cl. 247—9.)



1. A metal box, hinged lids thereon, the hinges of which comprise extending ears connected together by pivotal means having bearings in the sides of the box, a stationary partition extending from side to side adjacent the hinged portions and having a portion lying in a plane substantially coincident with the plane of the covers when in closed position to present a substantially flat top surface to the box.

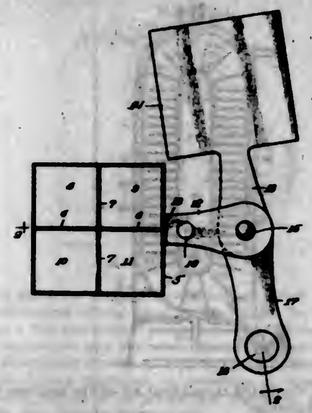
1,396,435. CONNECTING-ROD. ROBERT H. JACKSON, Phoenix, Ariz. Filed Mar. 6, 1920. Serial No. 363,648. 2 Claims. (Cl. 64—55.)



1. A self adjusting bearing comprising a casing having a slot in one face which extends the entire length of said casing to provide a shaft engaging seat, a take-up block engageable with the shaft and movable transversely of the casing, laterally extending lugs located at each end of the block and engageable with notches formed in the casing at each end of the slot to prevent longitudinal movement of the block and means for adjustably holding the block against transverse movement.

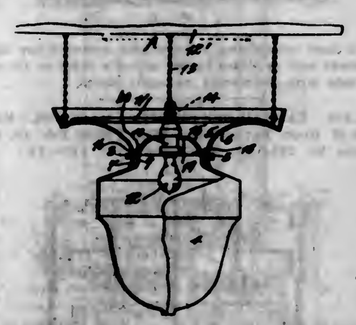
1,396,436. JOGGING-MACHINE. SAMUEL B. KATHLY and HARLEY C. ALGER, Chicago, Ill., assignors to R. R. Donnelley & Sons Company, a Corporation of Illinois. Filed Aug. 30, 1919. Serial No. 320,807. 9 Claims. (Cl. 271—89.)

1. In a jogging machine for signatures and the like, a bottom, two substantially vertical sides forming a square, two substantially vertical sides forming a square and disposed oppositely to said first sides, the four sides forming a rectangle, means for reciprocating one of said pairs diagonally with respect to the rectangle, and a bottom relieved at the back for causing the upper signature in the pile of like signatures to overlap slightly the others whereby it will receive the maximum pressure.



1,396,437. SEESAW AND TOY VEHICLE. THOMAS B. KNOSH and LEON F. CAUMONT, New York, N. Y. Filed Nov. 4, 1920. Serial No. 421,691. 3 Claims. (Cl. 208—37.)

1. A toy vehicle of the character described comprising a vehicle body, a plurality of wheels for supporting the body, steering mechanism connected with the front wheels, driving mechanism connected with the rear wheels, a link for actuating said driving mechanism, a swing bar for actuating said link, transverse rock shaft secured to said swing bar and a power walking beam normally connected with said rock shaft for rocking the same when the vehicle is in use, said walking beam being readily removable.

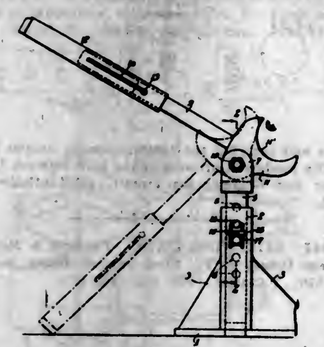


1,396,438. DEVICE FOR MAKING BUTTER PADS. RUDOLPH KNEBLER, Chicago, Ill. Filed Dec. 13, 1920. Serial No. 430,171. 2 Claims. (Cl. 31—65.)

1. A pad making device comprising a frame made of relatively thin strips of metal and having a handle extending from one side; a series of partitions within the frame made of similar metal, to provide a plurality of matrices; a plate underlying said frame, having a handle pivoted to the frame handle, whereby to move the plate toward and from the frame.

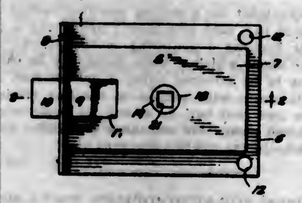
2. A pad making device comprising a rectangular frame made of relatively thin strips of material and having cross partitions forming a plurality of rectangular matrices or molds within the frame; a thin flat handle extending from the frame; a blade rectangular in form and substantially equal in size to the frame underlying the frame and having an integral handle extending therefrom pivoted to the handle of the frame.

1,396,439. LAMP. WILLIAM KNAPP, Bayonne, N. J. Filed June 30, 1920. Serial No. 392,980. 1 Claim. (Cl. 240—92.)



In a lighting fixture, a support open at the top and having a reflecting surface and a central opening for the passage of a bulb, a globe detachably supported by the support, the axis of the globe being coincident with the axis of the support, an auxiliary dished translucent reflector having a central opening of sufficient diameter to permit of the passage of an entire bulb, and reversibly supported by the globe, said globe being provided with an annular depression to receive the peripheral edge of the translucent reflector.

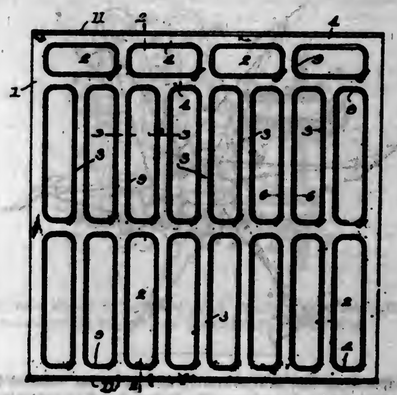
1,396,440. LIFTING-JACK. HARLEY M. KNOX, Penokee, Kans. Filed Mar. 12, 1921. Serial No. 451,775. 2 Claims. (Cl. 254—129.)



1. In a jack, a base, a hollow column mixed to the base, a bar slidable vertically in the column, a lever fulcrumed adjacent one end in the upper end of the bar, said

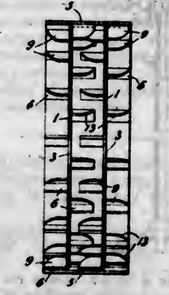
column having alined perforations in opposite sides thereof, said bar having a series of perforations adapted to register with the perforations in the column, a pin movable through the alined perforations, a bracket fixed to

the outer face of the column, an arcuate cam pivoted to the outer end of the pin and movable between the bracket and the column and guided in its movement by the bracket.



1,396,441. LATCH DEVICE. JOHN A. KULIEB, Brooklyn, N. Y. Filed July 3, 1920. Serial No. 393,854. 4 Claims. Cl. 292—169.)

1. A latch device of the class described comprising a casing composed of two sheet metal parts fashioned into the desired form, means for securing said parts together to form said casing, a latch bolt movable inwardly and outwardly through one end of said casing, a sheet metal guide plate rigidly secured to and forming a part of said latch bolt and mounted within said casing, said guide plate fitting snugly in and being guided by the casing and provided at the sides thereof with projecting members fashioned therefrom, a roll back rotatably mounted in the casing and in operative connection with the projecting members on said guide plate whereby said latch bolt may be moved inwardly by the rotation of said roll back, and tensional means mounted within the casing and cooperating with the projecting members on said guide plate for normally holding the latch bolt in an extended position.

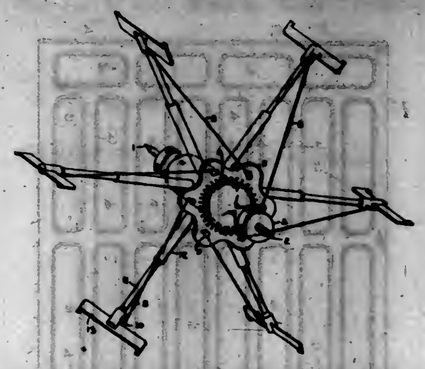


1,396,442. RAILING, GATE, GRILLE, &c. MAURICE LACHMAN, New York, N. Y., assignor to Universal Electric Welding Company, New York, N. Y., a Corporation of New York. Filed Mar. 10, 1917. Serial No. 153,807. 3 Claims. (Cl. 189—82.)

1. A metallic structure of the character described comprising complementary metal plates having portions removed to form uprights and connecting rails and spacing members inserted between said plates and forming side

walls around the openings formed by the removed portions, said spacing members and complementary plates being locked together.

1,396,443. METAL WHEEL. MAURICE LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Mar. 14, 1919. Serial No. 282,591. 7 Claims. (Cl. 301—64.)



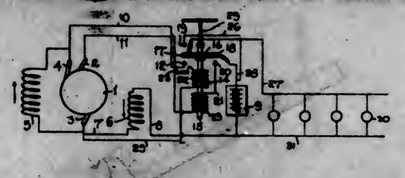
1. In a wheel of the character described, a sheet metal plate constituting the spoke part of the wheel and slit radially at its circumferential edge to provide supporting brackets bent to extend alternately in opposite directions transversely to the plane of the wheel integral therewith and engaging the inner surface of the rim, said brackets having also a bearing against the face of the plate.

1,396,444. WINDING DEVICE. HARRY P. LAM, Stonington, Conn. Filed Dec. 27, 1919. Serial No. 347,761. 4 Claims. (Cl. 242—118.)

1. In a device of the class described, a hub bearing and slidable arms thereupon and means in combination therewith for radially adjusting said arms, said means comprising a rotatable member upon said bearing and connection therebetween and said slidable arms, said rotatable member upon said bearing having slots circularly arranged

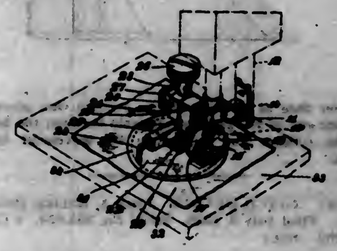
and an engaging member upon said bearing adapted to engage one of said slots, and said connection between said

slidable arms and said rotatable member being adapted to normally maintain engagement between one of said slots and said pin.



1,396,445. PLANT-STAND. Dora F. Lesson, New York, N. Y. Filed May 21, 1921. Serial No. 472,909. 1 Claim. (Cl. 248—61.)

A stand including a spider, means for supporting said spider, arms, sleeves forming portions of said arms, said sleeves being adapted to encircle said spider arms, said spider arms being formed with recesses in their under faces, a set screw secured to the under side of said sleeve, the end of said set screw being adapted to project into the recesses of said latter arms, said spider arms presenting channel portions, walls forming end portions for said channels, the upper edge of each of said walls being formed with a recess whereby said sleeves may be reversed and said set screw may be caused to engage the said latter recess.



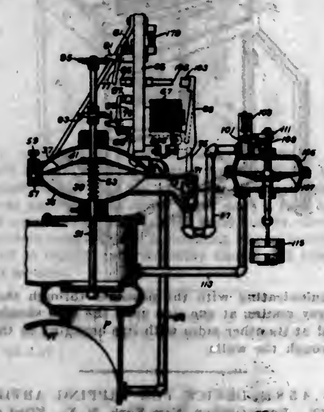
1,396,446. SYSTEM OF ELECTRICAL DISTRIBUTION. Lamar Lyndon, Orange, N. J. Filed Dec. 8, 1917. Serial No. 205,123. 9 Claims. (Cl. 171—313.)

1. A system of electrical distribution comprising a generator, an accumulator, a consumption circuit, means to supply the consumption circuit from the accumulator, or from the generator when charging the accumulator, means to effect a voltage for the accumulator and consumption circuits corresponding with their operating requirements, and additional means in conjunction with the generator, permanently included in the accumulator and consumption

circuits and carrying the total generator output to automatically produce a division of the load between the accumulator and consumption circuit, substantially as described.

1,396,447. STITCHING-GUIDE. Francis A. McDonald, College Point, N. Y. Filed Jan. 8, 1921. Serial No. 435,870. 7 Claims. (Cl. 112—151.)

6. An attachment for a sewing machine having a work table and feed bar, said attachment comprising a pointed work holder forming a centering means at one side of the feed bar about which a work piece may be caused to rotate so as to be stitched along a curved line, a gage positioned laterally with respect to the line joining said work holder and feed bar, as means for positioning said work piece, and means for attaching the holder and gage to the machine in the relation specified.



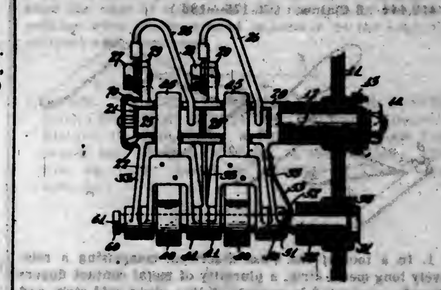
1,396,448. DOOR FOR AUTOMOBILES. John J. McGuire, Yonkers, N. Y. Filed Jan. 21, 1920. Serial No. 352,966. 8 Claims. (Cl. 296—48.)

8. A hollow vehicle door, embodying a fixed front and a spaced and hinged back, a window sash slidably mounted

on the back and adapted to be housed within the door between the front and the back thereof, and means for securing the back and window sash in open position.

1,396,449. PNEUMATIC-DESPATCH APPARATUS. James G. Maclaren, Mamaroneck, N. Y. Filed Jan. 26, 1918. Serial No. 213,536. 18 Claims. (Cl. 243—7.)

10. In a system of the class described wherein a valve controls communication between a transit tube and a pressure conduit, a pressure sensitive device for moving the valve, operating means to control the pressure on said device to operate the same and thereby to move the valve, and a mechanism governed by the pressure in the system and operating under the characteristic pressure conditions due to the presence of a carrier in the transit tube to maintain these pressure conditions in said pressure-sensitive device which are effective to move the valve.

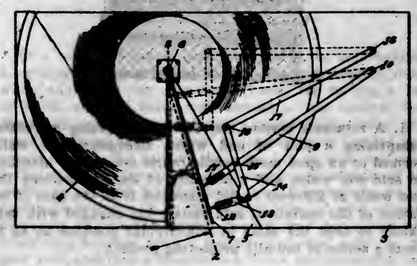


1,396,450. REEL. Sherman Jefferson Martin, Woodlawn, Pa. Filed Aug. 30, 1920. Serial No. 406,881. 4 Claims. (Cl. 242—77.)

4. A core for a reel of the character described, comprising a plurality of members constructed of resilient wire, each consisting of a longitudinally extending section, a radial section formed at each end of the longitudinal section, each of said radial sections having its outer end provided with an offset bend, the bight of which constitutes a recess, an arcuately curved section integral with the offset ends of the radial section, each of said arcuately curved sections being provided with a bent back portion constituting a hook whereby when said hooks and recesses are interengaged, the core members are interlocked and the arcuately curved portions constitute a journal.

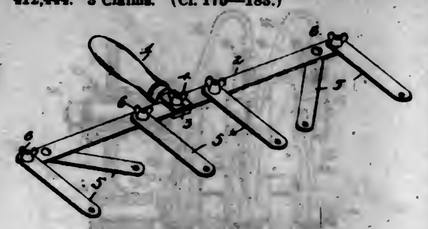
1,396,451. BRUSH-HOLDER. Lawrence A. Muser, Los Angeles, Calif. Filed Apr. 11, 1921. Serial No. 460,903. 9 Claims. (Cl. 171—234.)

1. In a brushholder for dynamo electric machines the combination of a box; a sleeve free to be slid into said box along a line substantially parallel to the axis of the commutator served by the brushholder; means for retain-



ing said sleeve in said box; and elastic means for sliding a brush placed in said box toward said commutator.

1,396,452. HOSE-MOUNTING PROTECTOR. Frank O. Monnahan, Brooklyn, N. Y., assignor of one-half to Charles Christman, Queens, N. Y. Filed Nov. 11, 1919. Serial No. 337,240. 5 Claims. (Cl. 137—90.)

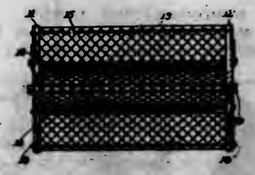


6. In a hose mounting composed of two members having resilient mounting protectors, an annular recess providing a seat for one protector on one of the members, another annular recess formed partly in one and partly in the other member and providing a seat for the other protector, both protectors being of larger diameter than the largest diameter of the mounting body.

1,396,453. DEMONSTRATING DEVICE. Edward P. Moffitt, Minneapolis, Minn. Filed Sept. 7, 1920. Serial No. 408,756. 4 Claims. (Cl. 35—16.)

8. A device of the class described consisting of a suitable body having a wedge shaped opening therein, a mutilated record or simulation thereof on the upper side of said body, the same having its center corresponding with the apex of said opening, two suitably mounted needles adapted to swing simultaneously in varied paths over said opening, a radial member adapted to swing within said opening under said needles.

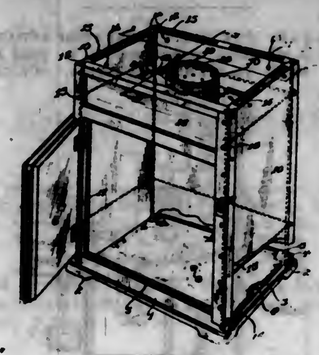
1,396,454. ENGINE-TESTER. ISIDORE MONTELIUS, Hollister, Calif., assignor of one-half to William B. Thompson, Hollister, Calif. Filed Sept. 24, 1920. Serial No. 412,444. 3 Claims. (Cl. 175—183.)



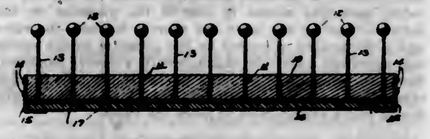
1. In a tool of the class described, comprising a relatively long metal strip, a plurality of metal contact fingers hingedly connected in spaced relation along said strip and a manipulating handle mounted intermediate the ends of the strip and projecting rearwardly of said fingers.

1,396,455. CAPSTAN-SCREW. GEORGE A. MOORE, Medford, Mass. Filed Oct. 29, 1919. Serial No. 334,233. 1 Claim. (Cl. 85—9.)

A capstan screw comprising a threaded portion, a head, and a neck between the head and threaded portion, the neck having three equal flat faces composing an equilateral triangle in cross section, each face having a hole formed therein at right angles thereto, these holes meeting at a common center.



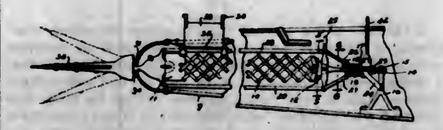
1,396,456. WASHING-MACHINE. AUGUSTO E. MUELLER, Chicago, Ill. Filed Sept. 27, 1920. Serial No. 413,083. 6 Claims. (Cl. 68—18.)



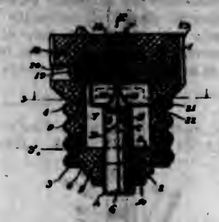
1. A rotatable clothes container for washing machines, comprising a pair of end walls, circumferential walls formed of an open mesh textile fabric detachably attached to said end walls, and a plurality of slats connecting the end walls at different radial distances from the axis of rotation of the container, said slats being engaged with said fabric to hold the same in non-circular position so as to form a series of radially projecting pockets.

1,396,457. REFRIGERATOR. ALEXANDER NOWAK, Douglas, Ariz., assignor of one-half to J. G. Pimpell, Douglas, Ariz. Filed July 28, 1920. Serial No. 399,571. 2 Claims. (Cl. 62—90.)

1. An apparatus for the purpose set forth comprising a bottom having an outlet therethrough, walls erected on said bottom and provided with open-ended passages extending vertically therethrough, one of said walls having a shoulder upon its inner side near its upper end and the remaining walls having openings in the plane of said shoulder communicating with the passages through the walls, and a tray resting at one side upon the said shoulder and provided at its other sides with lips engaging in the openings through the walls.

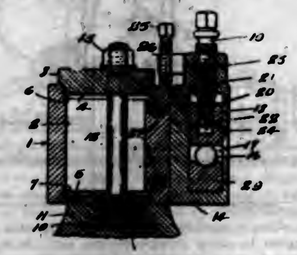


1,396,458. DEVICE FOR DIPPING ARTIFICIAL FRUIT. FRED OSMER, New York, N. Y. Filed Oct. 20, 1919, Serial No. 334,616. Renewed Sept. 15, 1921. Serial No. 501,010. 2 Claims. (Cl. 91—60.)



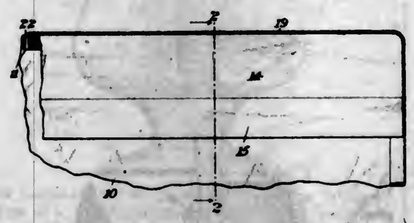
1. A device for dipping artificial fruit comprising a block member having a plurality of perforations adapted to receive the stems of the fruit, guides secured to said block member and a retaining member adapted to slide in said guides, over said perforations to bend the stems so as to hold the fruit between said block and said retaining member.

1,396,459. AEROPLANE. GEORGE ORTOIER, East St. Louis, Ill. Filed Dec. 10, 1920. Serial No. 429,618. 5 Claims. (Cl. 244—29.)



1. An aeroplane comprising a body portion and a rear tubular portion, a partially-rotating rigid skeleton member located within the tubular portion having one end pivotally mounted therein, an operating lever pivotally connected thereto, a guiding plane mounted in the rear end of the rear portion and capable of being vertically and laterally tilted, a connection between said guiding plane and operating lever whereby the said guiding plane may be vertically and laterally tilted, simultaneously, adjustable ailerons, and a connection between said ailerons whereby when the guiding plane is laterally tilted the said ailerons will be simultaneously adjusted.

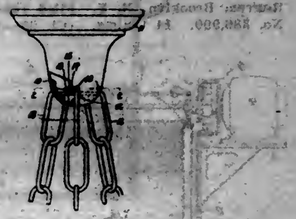
1,396,460. RENEWABLE FUSE. MORRIS POWELL, New York, N. Y. Filed June 16, 1919. Serial No. 304,523. 7 Claims. (Cl. 200—120.)



1. In combination, a hollow dielectric body; a conducting shell on said body; a contact member in the body and connected to said shell; a removable dielectric member in said body and having a metal outer end; a fuse connected to said outer end and having its inner end in contact with said contact member; and a clamping means adapted to be adjusted to tightly and releasably clamp said fuse on the contact member.

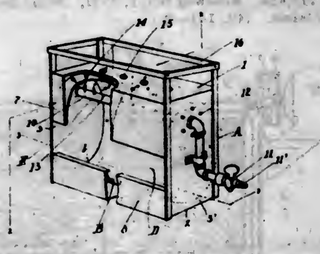
1,396,461. TOOL-POST. GEORGE G. PORTER, Syracuse, N. Y. Filed Oct. 7, 1919. Serial No. 329,408. 7 Claims. (Cl. 82—37.)

1. A tool post comprising a tubular body, a base, disks located in opposite ends of the tubular body, a screw extending through the disks and into the base, and tool holding means associated with the body, substantially as and for the purpose described.



1,396,462. GARMENT. MAX PUGATSKY and ROBERT D. VON RENTSCH, New York, N. Y. Filed Dec. 17, 1919. Serial No. 345,542. 7 Claims. (Cl. 2—142.)

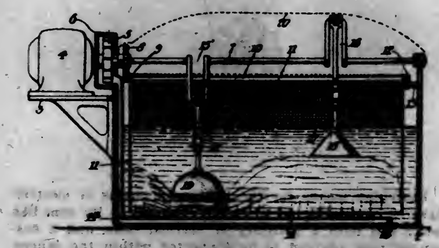
1. In a garment, an edging and lining construction comprising a stiffening member, a lining member, and an edging member, the said members being connected to the body of the garment and to each other by a line of concealed stitching.



6. As a new article of manufacture, a composite waistband structure, for application to the trousers material as a unit, comprising a stiffening member, a lining member secured to the stiffening member, and an edging member secured to the outer face of the lining member adjacent the edge of the lining member and in position to project beyond the edge of a garment and the edge of the lining member when the waistband is secured to the edge of a garment and overturned.

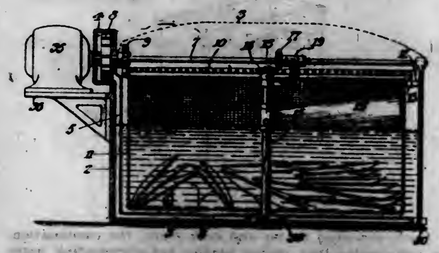
1,396,463. FASTENING MEANS FOR THE SUSPENSION-CHAINS OF ELECTRIC FIXTURES. ADOLPH C. RICKER, Oakville, Conn., assignor to The Chase Companies Inc., Waterbury, Conn., a Corporation. Filed Feb. 28, 1921. Serial No. 448,091. 1 Claim. (Cl. 240—87.)

Fastening means for the suspension-chains of electric fixtures, consisting of a canopy formed at its cone-like lower end with a plurality of vertical slots, and a suspension-ring adapted to be supported within the canopy in the horizontal plane at a point between the upper and lower ends of the said slots, and having its ends separated to form an assembling gap and upturned to form detents.



1,396,464. COMBINATION HEATER AND COOKER. PETER REINHARDT, St. Paul, Minn. Filed Oct. 8, 1920. Serial No. 415,567. 1 Claim. (Cl. 126—60.)

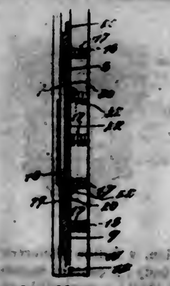
In a combined heater and cook stove, the combination, a rectangular long casing having flat surrounding outer walls and a flat top and bottom, said top having a row of holes, and the front wall having a long narrow heat discharge opening for discharging heat into the room, said opening extending to the end walls and being located as a whole, nearer the bottom than the top of said casing, a lining sheet for the casing extending longitudinally of the casing to the end walls thereof, and transversely of the casing in a curve from the upper edge of said opening upwardly to a point adjacent the top, and downward into contacting relation with a vertically central point on the rear wall and then adjacent to a point longitudinally central of the bottom and terminating at the lower edge of said opening, whereby is formed an upper and lower air chamber located respectively directly under the top, and immediately above the bottom of the casing, the transverse section of said air chambers being approximately symmetrical about a vertical longitudinal plane central of the casing, whereby the heated air will be evenly distributed on either side of said plane in said chambers, a row of perforations in the top of said lining arranged



longitudinally central of the casing, and being appreciably smaller than said holes in the top of the casing, a gas burner having a row of gas outlets extending longitudinally centrally of the casing and located nearer said perforations than to the upper edge of said heat discharge opening, so as to form an upper relatively deep area between said burner and said opening, whereby to facilitate the entry of the rising heated air from said jets through said perforations in the lining and said holes in the top of the casing, and air inlets in the end wall of said casing adjacently surrounding said burner, said air inlets being wholly above said heat discharge opening.

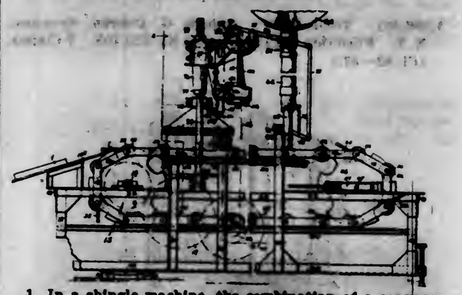
1,396,465. CLOTHES-WASHING MACHINE. August E. Roever, Brooklyn, N. Y. Filed June 7, 1920. Serial No. 386,990. 14 Claims. (Cl. 68—19.)

9. In a machine for washing clothes, the combination of means comprising a vacuum plunger operative to subject the clothes to a vacuum, means effective to force air into and through the clothes, and means for operating both of said means simultaneously.



1,396,466. DISH-WASHING MACHINE. August E. Roever, Brooklyn, N. Y. Filed Aug. 23, 1916, Serial No. 116,423. Renewed Oct. 1, 1921. Serial No. 504,731. 16 Claims. (Cl. 141—9.)

16. In a dish washing machine, the combination of a casing, a rotatable dish supporting drum within said casing, motor driven means for rotating the drum within the casing, a fan for forcing air into the drum at the bottom thereof and having connection with the means for rotating the casing whereby both are operated by the same means simultaneously, and rotatable means within the drum for removing the scum and also operated by said drum rotating means.



1,396,467. ADVERTISING-SIGN. Arthur Schlosser, New York, N. Y. Filed Mar. 7, 1921. Serial No. 450,179. 2 Claims. (Cl. 40—142.)

1. In a sign, frame members provided with grooves, extending longitudinally thereof, bars extending across said frame having the ends thereof in slidable engagement with a groove in an adjacent frame member, means to secure the bars in adjusted positions in said grooves, each of said bars being provided with a rabbet extending longitudinally thereof, carriers for advertising matter arranged to engage said rabbets, and resilient clips carried

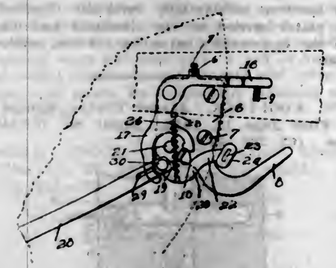
by the carriers to releasably engage the rear wall of said rabbets.

1,396,468. SHINGLE-MACHINE. Richard E. Schwabe, Royal Oak township, Oakland county, Mich. Filed Mar. 5, 1921. Serial No. 449,832. 14 Claims. (Cl. 25—43.)

1. In a shingle machine, the combination of a conveyer chain adapted to carry shingle molds, said chain embodying carrier wheels, a track for said wheels, a support to hold the molds while the excess water is forced therefrom, and rails on which the carrier wheels may travel, said rails having depressions so that the chains may lower the molds onto the support.

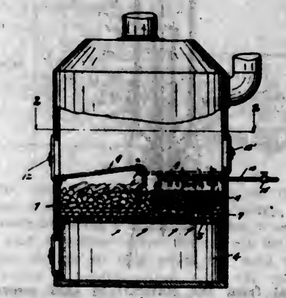
1,396,469. DISPENSING-CONTAINER. Mary J. Steele, San Francisco, Calif. Filed July 26, 1920. Serial No. 398,896. 5 Claims. (Cl. 221—113.)

1. A dispensing device comprising a container provided with a spout having an extension within the container,



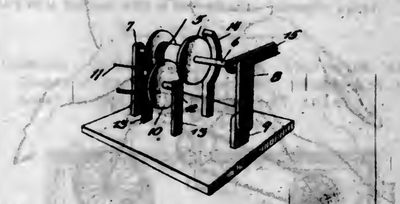
said extension having an aperture to admit fluid from the container; means for maintaining a constant level of fluid within the container; a plunger slidably mounted within said extension; and an operating rod adjustably secured to said plunger and extending outwardly through the spout to dispense fluid through said spout; and means mounted upon the outer end of said operating rod arranged to close the mouth of the spout when the plunger is in the receded position.

1,396,470. GOLF-CLUB. Thomas Taylor, Chicago, Ill. Filed Feb. 10, 1921. Serial No. 443,947. 1 Claim. (Cl. 46—4.)



A golf club comprising in combination a handle which is stream line in cross section, the ratio of fineness of which section increases as the head is approached, a head having a portion projecting to join the handle, which portion is stream lined in cross section and which head is stream lined in horizontal section and in a vertical section taken on a plane perpendicular to the face.

1,396,471. PHONOGRAPH-BRAKE. William C. Tzuniak, Grand Rapids, Mich. Filed June 17, 1920. Serial No. 389,687. 4 Claims. (Cl. 192—116.)



1. In combination with the record supporting table and tone arm of a sound reproducing machine, an automatic stopping mechanism including a plate, an adjusting arm forming a part of the plate, a brake arm pivotally connected to the plate, a controlling lever pivotally connected to the plate, means for connecting the controlling lever and brake arm whereby movement of the controlling lever will cause a relative movement of the brake arm to cause the same to contact with the table, a tripping lever carried by the tone arm, said tripping lever adapted to move into engagement with the adjusting arm to cause the tripping lever to be automatically set, and said tripping lever adapted to move into engagement with the controlling lever for causing the operation of the brake arm.

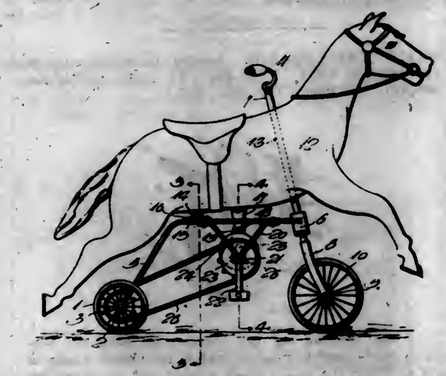
1,396,472. FUEL-SAVING DEVICE. Adam P. Thomasson, Chicago, Ill. Filed Apr. 2, 1921. Serial No. 457,909. 4 Claims. (Cl. 126—88.)

1. In combination with a heating apparatus having a grate and oppositely arranged doors; a supporting member rotatably mounted in the combustion chamber of said heating apparatus; a draft shield having a depending flange formed on said member and operative therewith; and a handle formed on said supporting member for manipulating said shield over opposite portions of said grate, substantially as described.

1,396,473. DRILLING-RIG. Joseph James Thompson, Los Angeles, Calif. Filed Sept. 11, 1920. Serial No. 409,529. 1 Claim. (Cl. 254—186.)

In a well drilling rig, the combination with the controlling cable and a reel on which the cable winds, a shaft to which the reel is fixed, a fixed post to which one end of the shaft is mounted to swing, a support spaced from the post, a swinging post pivoted to the fixed support and receiving the opposite end of the shaft for swinging movement in a direction substantially transverse to the axis of the shaft, a friction disk mounted at one side of the reel to be engaged thereby when the reel is swung in one direction, means for rotating the disk, a brake shoe at the opposite side of the reel for engagement by the reel when it is swung in the opposite direction, and an adjustable throw lever having positive and adjustable connection with the reel shaft for swinging the latter and holding it in an adjusted position.

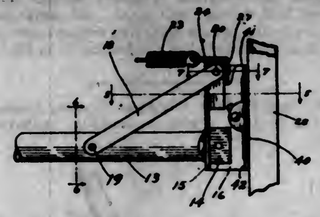
1,396,474. SHAVING-BRUSH. Raymond F. Tibbetts, Chicago, Ill. Filed Feb. 21, 1920. Serial No. 360,511. 9 Claims. (Cl. 15—60.)



1. A shaving brush, comprising a tuft of bristles, a handle providing a reservoir for shaving material, a tube opening into said tuft of bristles and extending into said reservoir and having perforations near the end of said

reservoir adjacent said tuft of bristles, a plunger movable in said tube, and means for scraping a quantity of shav-

ing material from the material in said reservoir and feeding the same through said perforations.

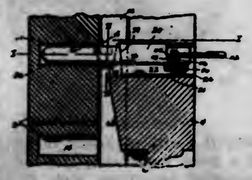


1,396,475. HOBBYHORSE. DANIEL F. TRACEY, Huntington, W. Va., assignor to The Loping Horse & Novelty Co., Huntington, W. Va., a Corporation of West Virginia. Filed Dec. 15, 1919. Serial No. 345,096. 1 Claim. (Cl. 208—42.)

In a tricycle, a frame, including a steering means for the front wheel, and rear driving wheels, a drive shaft suspended beneath the frame intermediate its wheels, a drive sprocket keyed to said shaft, a propelling connection between the drive sprocket and rear wheels, a cam positioned on the sprocket shaft, said cam being adjustable to effect its eccentric and concentric positioning with respect to the shaft, a body hingedly mounted adjacent its rear extremity to the frame, and a tappet depending from the body and riding said cam to produce a loping motion of the body when said cam is mounted eccentrically of the sprocket shaft, and an even motion when mounted concentrically of said shaft, substantially as described.

1,396,476. BEDSTEAD. DON CARLOS TRAVIS, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed May 15, 1918. Serial No. 234,643. 10 Claims. (Cl. 5—55.)

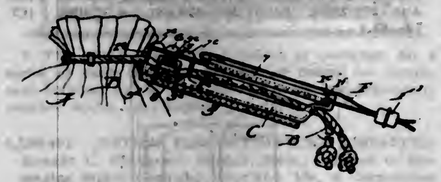
1. In a detachable connection for metal bedsteads, the combination of a tubular bed post, a side rail, a vertically extending angle iron mounted on the end of said side rail and having a longitudinally extending flange provided with a depending inclined tongue, a transversely extending member on said post adapted to



wedgingly engage said tongue, a second angle member secured to the other flange of said first angle member, and a brace connecting said second angle member to said rail.

1,396,477. AXLE-GAGING DEVICE. DAVID H. TURNBULL, Mishawaka, Ind. Filed Dec. 24, 1917. Serial No. 208,678. 2 Claims. (Cl. 33—193.)

1. An axle gaging device comprising spaced standards, means for adjusting said standards in relation to each other, vertically disposed pins rotatably mounted in bearings in the upper ends of the standards, axle spindle receiving heads pivoted to the upper ends of the pins and movable in a vertical plane, horizontally disposed arms carried by said heads and parallel to each other, brackets carried by the standards and underlying the horizontally disposed arms and provided with marking portions, outwardly and downwardly extending arms carried by the opposite sides of the heads and having their downwardly disposed portions substantially vertically disposed and marking plates carried by the standards and disposed adjacent the downwardly extending vertical portions of said arms.



1,396,478. SASH-LOCK. ALBERT TURNEY, Kansas City, Mo. Filed June 12, 1916. Serial No. 103,140. 4 Claims. (Cl. 292—57.)

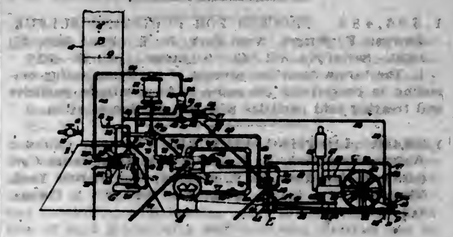
1. A sash lock construction comprising upper and lower sash members, the upper of said members being provided with a bolt-receiving opening, a bolt sheath carried by the lower sash member, said bolt sheath having one end formed as a cam edge of curved contour and corresponding in size to the size of said bolt-receiving opening and adapted to be positioned opposite and in

register with said opening, and a bolt movably mounted on said lower sash member and adapted to be projected through said bolt sheath into said opening, said bolt being provided with a lug adapted, on turning of the bolt, to cooperate with said cam edge and the margin of said opening to effect a separating movement of the sash members.

1,396,479. BAG-TIE SEAL-LOCK. EMIL TYDEN, Evanston, Ill. Filed Jan. 6, 1921. Serial No. 435,404. 8 Claims. (Cl. 24—30.5.)

8. In combination with a base having a cord run-way, a clamping jaw carried by the base opposite the cord run-way; a latch adapted at one position to be locked to the base, and having means for clamping the jaw onto the cord runway by its movement to that position; the base having at the opposite side from that at which the clamping jaw is situated a tag-receiving slide-way whose end open for entering the tag thereinto is substantially even with the end of the base at which the clamping jaw is situated, said clamping jaw having a projection which is thrust across said opening to bar the escape of the tag by the cord-clamping movement of said clamping jaw.

1,396,480. SANITARY SEAT-COVER. FRED M. VANSICKLE, Lewiston, Idaho. Filed June 23, 1921. Serial No. 479,717. 2 Claims. (Cl. 4—18.)



1. The combination in a device as described with a seat, of a lid hinged thereto and elevated above said seat, an open pocket fixed to said lid and comprising a pair of spaced walls and base plate, a pad of loose leaves in said pocket adapted to rest on said seat when the lid is closed, and means for temporarily retaining said leaves in the pocket.

1,396,481. SPOOL. DAVID F. VAUGHAN, Riverton, N. J. Filed Dec. 22, 1920. Serial No. 432,541. 4 Claims. (Cl. 242—118.)

1. A spool having a body portion and an end flange, the inner face of the flange being provided with a series of under cut corrugations, and each corrugation having a surface which extends toward the axis of the spool and toward the body of the flange from a plane extending at right angles to the turning axis of the spool.

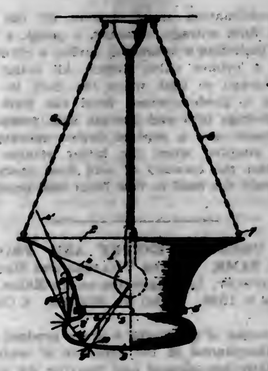
1,396,482. FLUID-PRESSURE SYSTEM. FRED S. VAUGHN, Quincy, Ill., assignor to Automatic Gas Power Company, Quincy, Ill., a Corporation of South Dakota. Filed Apr. 17, 1915. Serial No. 21,961. 20 Claims. (Cl. 103—86.)

1. The combination in a system of the character described, a fluid storage, a motor, a pump, a fluid operated means including a balancing device, a reversing valve device and a primer valve device, all being connected with the storage so that when the fluid in the latter drops below a predetermined level the fluid will flow from said storage into and operate said pump for starting said motor, and a control device operated by said motor and adapted when the latter attains a certain speed to effect the reversal of said fluid operated means so as to permit the fluid to flow from said pump into said storage.

1,396,483. GREEN DYESTUFF AND PROCESS OF MAKING SAME. VICTOR VILLIGER and HEINRICH VON KRANNICHFELDT, Ludwigshafen-on-the-Rhine, Germany. Filed July 9, 1920. Serial No. 395,182. 4 Claims. (Cl. 8—1.)

2. The process of producing a green product by heating alpha-naphthoquinone in the presence of water, until it is substantially decomposed and treating the yellow product first formed with a non-alkaline reducing agent.

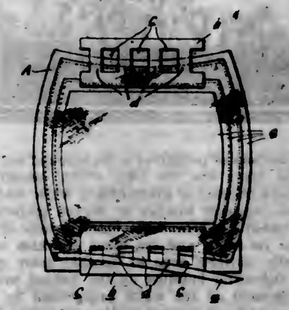
1,396,484. ORNAMENTAL TRAY AND THE LIKE. GLADYS H. WEINRICH, Chicago, Ill. Filed Feb. 24, 1920. Serial No. 360,573. 2 Claims. (Cl. 41—22.)



2. The method of producing a background sky effect for ornamental trays and the like, which consists in first establishing a backing of substantially white material, preparing two separate batches of fibrous material one of which is tinted a substantially uniform tone of one color throughout its mass, and the other of which is tinted a substantially uniform tone of another color throughout its mass, thereafter building up the desired color scheme and arrangement on the white background by successive applications of finely divided portions of tinted fibers from the two batches, applying such material in finely separated portions and by successive applications at different points

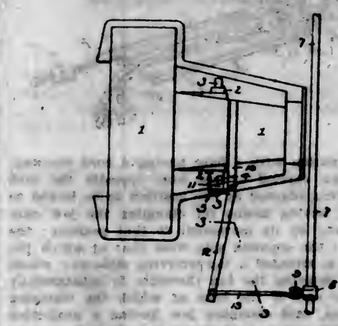
on the background, to thereby build up at each point on the background a color tone and shape which is the resultant of the several applications of material from the two batches at such point, substantially as and for the purpose set forth.

1,396,485. PROCESS FOR PURIFYING SULFUR. EDWARD F. WHITE, New York, N. Y. Filed Feb. 25, 1920. Serial No. 361,183. 9 Claims. (Cl. 23—10.)



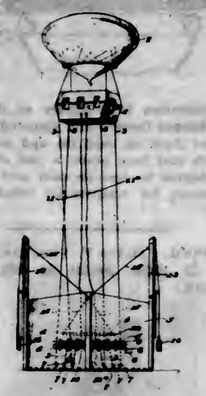
1. The herein described process of purifying sulfur consisting in pulverizing the same to form minute particles and treating said particles with an alkaline solution.

1,396,486. LIGHTING-FIXTURE. ERNEST CANTELO WHITE, New York, N. Y., assignor to Duplexalite Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 11, 1919. Serial No. 289,184. 2 Claims. (Cl. 240—92.)



1. A lighting fixture comprising, a light source, a fixture support, an opaque reflector surrounding the source, such reflector being open at the top and bottom to permit the passage of light rays through such openings, and having an upwardly flaring concave outer surface in vertical cross-section and having attached to the lower opening of the reflector a translucent member extending beyond the lower opening and within the diameter of the upper opening, constructed to direct a portion of the light rays transmitted thereby to the outer surface of the reflector.

1,396,487. BLOW-OUT BOOT. GEORGE G. WILLIAMS, Dallas, Tex. Filed Sept. 8, 1920. Serial No. 408,939. 2 Claims. (Cl. 152—24.)

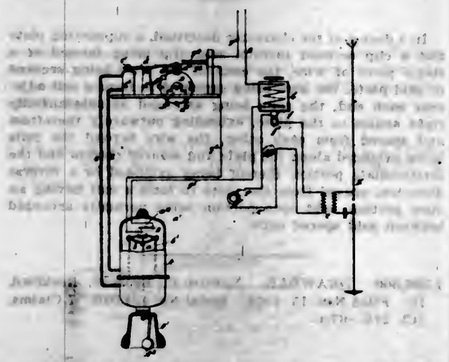


1. A blow-out boot divided longitudinally and having strips along its divided edges, said strips adapted to overlap and each of said strips being fashioned with transverse slots spaced from each other to form intermediate loops, the loops of one of said strips adapted to register with and enter the slots of the companion strip, and a thong extending longitudinally of the boot adapted to be laced through the exposed loops of one of said strips and to overlie the loop-portions of the other strip.

1,396,488. BRAKE-ACTUATING MECHANISM FOR AUTOMOBILES. JOHN WILLIAMS, CALVIN C. WILLIAMS, and HENRY WILLIAMS, Philadelphia, Pa. Filed Aug. 27, 1920. Serial No. 406,434. 4 Claims. (Cl. 74—81.)

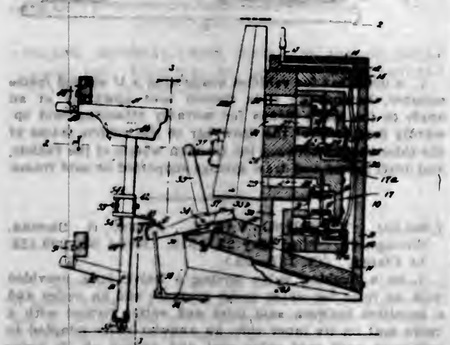
1. The combination, in an automobile, of a longitudinally movable service brake rock shaft, an emergency brake rock shaft, and connecting mechanism therebetween whereby, when said emergency brake rock shaft is rocked, said service brake rock shaft is longitudinally moved without being rocked.

1,396,489. AERIAL APPARATUS. JOSEPH T. C. WILLIAMS, Aflex, Ky. Filed Jan. 11, 1921. Serial No. 436,549. 4 Claims. (Cl. 244—4.)



1. In a means for the purpose described, the combination of a balloon, a car suspended from the balloon, a house adapted to receive the car and balloon and having a movable roof, a vertically movable support for the car within the house, connections between said support and the roof whereby the roof will be moved to closed position when the car is on said support and the latter is in its lowered position, and a cable extending from the car to the interior of the house and adapted to control vertical movement of the balloon and car.

1,396,490. FILING-CABINET OR THE LIKE. PAUL F. WILLIAMS, Chicago, Ill. Filed Jan. 19, 1915. Serial No. 3,001. 30 Claims. (Cl. 129—16.)

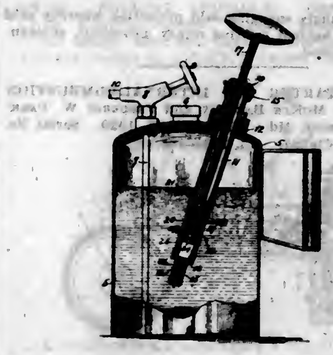


1. The combination with a holder or container for a series of cards or other articles, of means for moving said articles one by one sidewise from one position to another within said holder or container.

1,396,491. DEVICE FOR ESTIMATING DISTANCES. ROBERT L. WILLIAMS, Newton, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed June 24, 1919. Serial No. 306,366. 7 Claims. (Cl. 181—.5.)

1. In a signaling system, in combination, a submarine signaling apparatus and a radio transmitter, and means whereby said transmitter will be operated to give a single signal simultaneously with said apparatus during a portion of the operation of said apparatus, and said apparatus will operate independently of said transmitter during the remaining portion thereof.

1,396,492. PNEUMATIC ACTION. WALTER J. WODRASKA, New York, N. Y. Filed June 26, 1920. Serial No. 391,856. 5 Claims. (Cl. 84—50.)



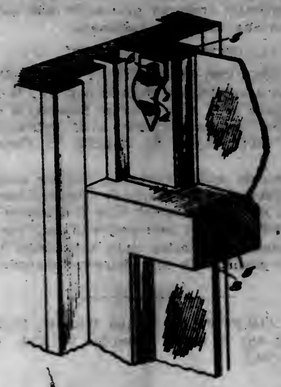
1. In a pneumatic action for player pianos, the combination with a main casing and a plurality of pneumatics carried thereby and arranged in pairs, one pneumatic of each pair being arranged vertically and the other horizontally, of key actuating means including a bell crank for each vertically arranged pneumatic, and an arm for each horizontally arranged pneumatic.

1,396,493. PROCESS OF MAKING PROPELLENT POWDER. RICHARD GEORGE WOODBRIDGE, Jr., Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 14, 1921. Serial No. 452,263. 7 Claims. (Cl. 52—20.)

1. The process which comprises heating substantially dry nitrocellulose powder grains at a temperature of from about 70 to 80° C. in contact with a deterrent material capable of diffusing into said grains at said temperature, and continuing said heating until substantial impregnation of said grains with said deterrent material has occurred.

1,396,494. AIR-PUMP. RICHARD WRIGHT, Philadelphia, Pa. Filed Apr. 5, 1920. Serial No. 371,413. 4 Claims. (Cl. 230—24.)

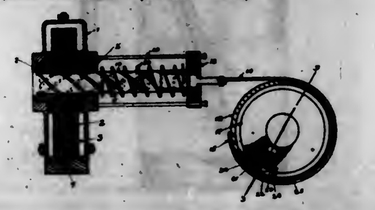
1. In a pump, the combination of a cylinder having a free opening at its upper end and an outlet at its lower end, a valve normally closing said outlet and opened by pressure below the piston, a piston, a by-pass port through the piston and discharging into the cylinder above the piston, an upwardly opening valve in said by-pass port, a spring for yieldingly holding said valve on its seat and means for adjusting the tension of said spring.



1,396,495. COMPOSITION. ABRAHAM J. BARWSKIN, Chicago, Ill. Filed Apr. 28, 1919. Serial No. 293,822. 2 Claims. (Cl. 148—24.)

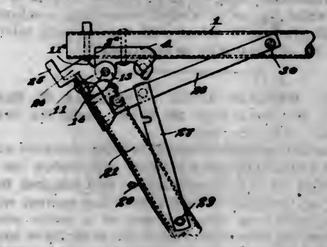
1. A preparation adapted to be applied to gold or silver portions which are to be welded, comprising a solution of mercury in nitric acid, mixed with boracic acid, niter, and jet black ink, substantially as described.

1,396,496. WINDOW-LOCK. CHRISTIAN E. BARBIER, Chicago, Ill. Filed Sept. 28, 1918. Serial No. 256,133. 1 Claim. (Cl. 292—342.)



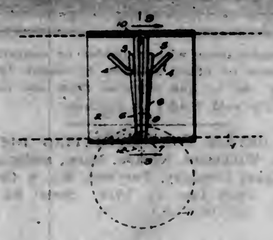
The combination with a pair of slidably mounted window sashes, of a stop interposed between said sashes, the same being carried by one of said sashes and adapted for engagement by the other to lock said sashes against relative movement, said stop being formed of a single piece of metal having its ends positioned in the same plane and contacting with the sash carrying the stop, the central portion of said stop being bowed outwardly from the sash carrying the same for engagement with the other sash; means for detachably securing the said stop to the first

mentioned mesh comprising a square projection on said mesh; and an opening of corresponding shape in one end



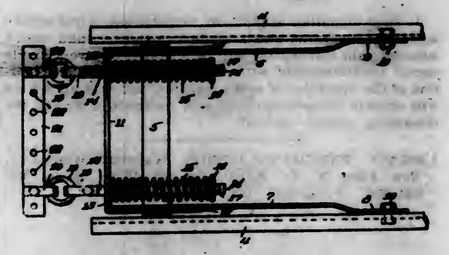
of said stop snugly engaging said projection whereby said stop is locked against relative rotary movement, substantially as described.

1,396,497. STARTER FOR INTERNAL-COMBUSTION ENGINES. McKEE BARCLAY and FREDERIC W. PARKHILL, Baltimore, Md. Filed Jan. 22, 1920. Serial No. 353,535. 5 Claims. (Cl. 123—185.)



1. A mechanical starter for internal combustion engines comprising a collar loosely mounted upon the engine shaft, a drum inclosing said collar, clutch means carried by the collar and drum for gripping the shaft, a strap around and attached at one end to the periphery of the drum and having the other end attached to the end of a spirally grooved member which is adapted to move longitudinally through a corresponding internally threaded pinion, and a rack for rotating the gear, substantially as described.

1,396,498. HAMMOCK-SUPPORT. LOUIS I. BECKWITH, Boston, Mass. Filed Mar. 29, 1921. Serial No. 456,554. 12 Claims. (Cl. 5—82.)



1. A support comprising a transverse member, a bracket fixedly secured adjacent to the end of said member, a carrier pivotally secured to said bracket to swing about an axis transverse to that of said transverse member, a pair of leg holders pivotally secured to said carrier, and legs fixed to the respective holders.

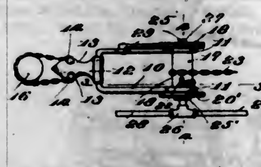
1,396,499. CHECK-HOLDER. CHARLES E. BELL, Fairmont, W. Va., assignor of one-half to Samuel Hale, Fairmont, W. Va. Filed Apr. 9, 1921. Serial No. 460,013. 1 Claim. (Cl. 40—11.)

In a device of the character described, a supporting plate and a clip secured thereto, said clip being formed of a single piece of wire, the ends of the wire being secured to said plate, the wire being extended to form a coil adjacent each end, the coils being arranged at substantially right angles to the plate, extending outwardly therefrom and spaced from each other, the wire beyond the coils being extended along the plate and secured thereto and the intermediate portion thereof being extended in a reverse direction, spaced from the plate to form a coil having an open portion, said open portion being normally arranged between said spaced coils.

1,396,500. DRAWBAR. NAHUM C. EMMERT, Rockford, Ill. Filed Nov. 15, 1920. Serial No. 424,046. 7 Claims. (Cl. 213—67.)

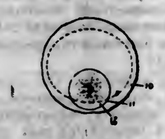
1. A draw bar for vehicles comprising a U shaped frame member, having the ends thereof bent upwardly at an angle to the sides, means for movably attaching said upwardly bent ends of the draw bar to the vehicle frame at the sides thereof between the traction wheels of the vehicle, and draft beams and draw springs supported on said frame.

1,396,501. FLUSHING-VALVE. ROBERT A. BROOKS, Chicago, Ill. Filed May 23, 1919. Serial No. 299,123. 14 Claims. (Cl. 137—93.)



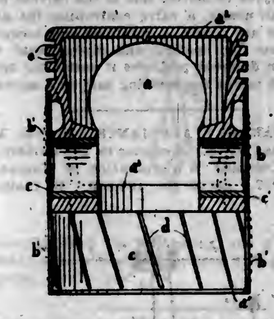
1. In a flushing valve having a valve body provided with an inlet for water under pressure and an outlet and a partition between said inlet and outlet formed with a valve seat on its inner side, an annular valve adapted to coöperate with said valve seat and having on its outer side a valve seat, a manually-operable main valve opening

outwardly and coöperating with said last mentioned seat, a cylinder, and a piston in said cylinder exposed to water pressure and connected to said main valve and having a



greater pressure area than said main valve, the effective pressure area of said annular valve being greater than the difference between the pressure areas of said main valve and said piston.

1,396,502. WIRE-STRETCHER. MILTON E. BUCK, Ematon, Kans. Filed Mar. 31, 1919. Serial No. 286,298. 4 Claims. (Cl. 254—162.)

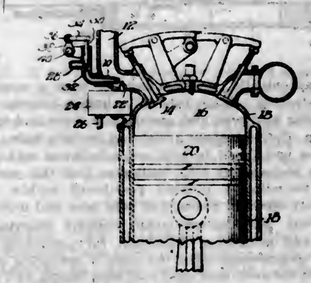


1. A winding drum whose body is provided with an axial bore of angular cross section and counterbored in one end to produce a cavity, the other end of the body being enlarged to form one head and provided with peripheral teeth, a second head composed of a boss of a size to fit the counterbore and a disk larger than the boss, a shaft through the elements of the second head and the bore of the body, bearings in which the device is mounted, means for turning the shaft, and retaining means engaging said teeth.

1,396,503. BIFOCAL LENS. LUCIAN W. BUGBEE, Indianapolis, Ind. Filed May 23, 1921. Serial No. 471,964. 11 Claims. (Cl. 88—54.)

1. A bifocal lens in which the reading segment is formed of added glass of a higher index than the remaining portion of the lens and which permits the passage through it of only the light at the middle portion of the visible spectrum.

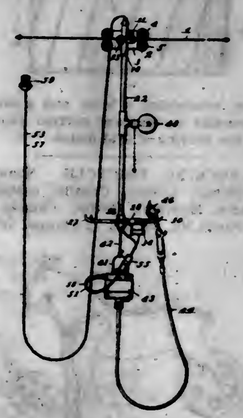
1,396,504. TRUNK-PISTON. PHILIP CHALLIS, London, England. Filed Mar. 16, 1920. Serial No. 366,368. 12 Claims. (Cl. 74—108.)



1. A piston, comprising a head, and a skirt, said skirt having an annular protuberant portion above and below the gudgeon pin bearing of said piston.

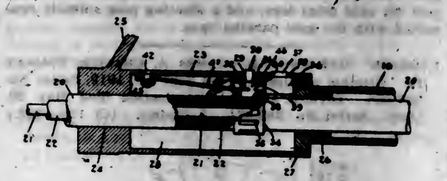
1,396,505. ROCKING TRICYCLE. NORBERT CHAPDELAINE, Montreal, Quebec, Canada, assignor to Allan Angus Magee, Montreal, Quebec, Canada. Filed Jan. 17, 1921. Serial No. 437,821. 2 Claims. (Cl. 208—165.)

1. A rocking tricycle comprising a body in the form of an animal having rearwardly extending hind legs and a wheel pivotally secured between said hind legs with an eccentrically situated pivot in relation to the thread of the wheel, a pair of wheels supporting the front legs, parallel bars pivotally secured at the ends and connected to said front wheels, one of said bars forming the direct support for said front legs, and a steering post suitably connected with the said parallel bars.



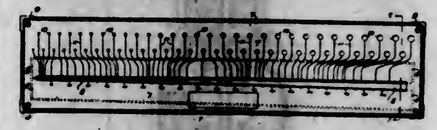
1,396,506. GAS-ENGINE. JAMES A. CHARTER, Chicago, Ill. Original application filed Sept. 15, 1919, Serial No. 323,888. Divided and this application filed May 20, 1920. Serial No. 382,874. 3 Claims. (Cl. 123—123.)

1. In mechanism of the class described, in combination with an engine and its intake passage, an independent air



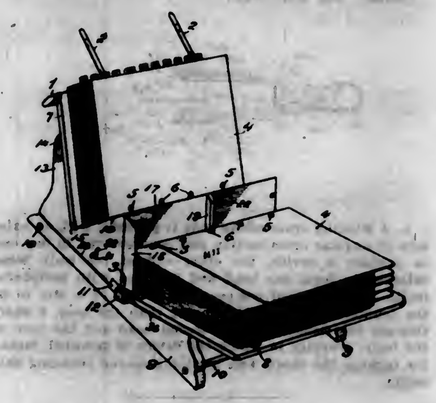
nozzle entering said passage adapted to independently deliver air through said passage directly to the engine cylinder, a fuel supply nozzle adjacent to said independent air nozzle adapted to deliver fuel to the current of air delivered by said nozzle, a valve controlling the admission of air to said air nozzle, a rotatable and reciprocatable cam mechanism for opening and closing said valve so shaped that in different positions it varies the opening of the valve, and means for rotating said cam mechanism.

1,396,507. BARBER'S APPLIANCE. SAMUEL M. COFFMAN, Kansas City, Mo., assignor to The Barbers Electric Specialty Company, a Corporation of Kansas. Filed Oct. 10, 1917. Serial No. 195,869. 10 Claims. (Cl. 105—150.)



1. In an appliance of the character described, a wire track supported at each end, a carriage to traverse said track, means on said carriage to grip the track and hold the carriage stationary, suspension means depending from said carriage, and a device supporting means secured to said suspension means.

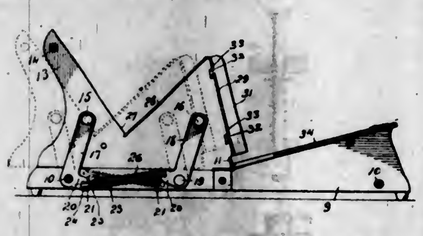
1,396,508. AUTOMOBILE-STEERING-COLUMN LOCK. WILLIAM H. DUNN, Anderson, Ind. Filed Mar. 6, 1920. Serial No. 363,722. 4 Claims. (Cl. 70—99.)



1. In an automobile, the combination with a steering post, and a steering column tube, of a hollow tubular casing surrounding said post and spaced therefrom and forming a portion of the inclosing steering column tube, and locking means positioned in said space between said post and the tube inclosed by said casing to lock the post to the casing, including a plunger positioned within said casing and between said casing and said post and movable radially thereof, push button means slidably mounted in said casing and projecting therefrom for projecting the plunger into engagement with the post, a centering member positioned between said post and said casing and slidably supporting said plunger, a locking tooth slidably supported in said plunger centering member and guided thereby for locking said plunger in the locked position and supporting said plunger in the locked position and supporting said plunger in the unlocked position, means for actuating said plunger in the locked and unlocked position, means for actuating said tooth, and spring means for normally holding said plunger in the nonengageable position.

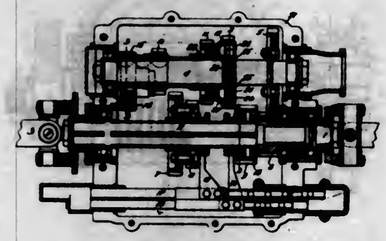
1,396,509. DRILL-BLOCK. HARRY FALTERMAYER, Philadelphia, Pa., assignor of one-half to Fred E. Russell, Langhorne, Pa. Filed Feb. 18, 1920. Serial No. 358,523. 9 Claims. (Cl. 33—201.)

1. The combination of a metallic supporting structure having two hardened straight edges defining a tapering slot; and a graduated plate overlying said structure provided with a graduated edge extending adjacent one of said edges to indicate the width of said slot at any point thereof.



1,396,510. POSTING APPARATUS. CHARLES R. FARGO and PAUL O. UNGER, Kansas City, Mo., assignors to Irving-Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Feb. 21, 1920. Serial No. 360,502. 20 Claims. (Cl. 129—12.)

1. In a posting apparatus, the combination with a binder having two clamping members, one having two posts for receiving loose leaves, the other member being adapted to slidably engage said posts, of leaves, each having two holes for respectively receiving said posts and two edge notches intermediate of said holes adapted to receive said posts, the holes and the notches being spaced at equal distances apart.



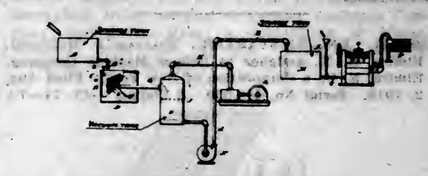
15. In a posting apparatus, the combination with a binder having two clamping members, one having two posts adapted for operative engagement with the other binder member, of a support for said other binder member, and leaf registering means arranged to register loose leaves in a normal and in an offset position, said posts being insertible through said loose leaves when the registering means is in the registering position, the registering means being movable to and from the registering position.

1,396,511. POSTING DEVICE. CHARLES R. FARGO and PAUL O. UNGER, Kansas City, Mo., assignors to Irving-Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Mar. 13, 1920. Serial No. 365,507. 37 Claims. (Cl. 45—57.)

25. In a posting device, a support for the binder member having positioning means therefor, loose leaf registering means cooperating with said positioning means, a support for the registering means, two swinging members carried by the binder member support and carrying said registering means support so that the latter can swing from the registering to an inactive position, a rod carried by one of said swinging members and slidably engaging the other swinging member, and a coil spring encircling said rod and having its ends bearing respectively against said swinging members and arranged to resist the swinging of said swinging members from one of said positions to the other position.

1,396,512. CHANGE-SPEED-GEAR TRANSMISSION. DAVID FERGUSSON, Buffalo, N. Y., assignor to The Pierce Arrow Motor Car Company, Buffalo, N. Y. Filed Mar. 8, 1919. Serial No. 281,327. 3 Claims. (Cl. 74—58.)

1. In a change speed gear transmission, the combination of a driving member, a countershaft driven thereby, a driven shaft, a gear fixed on said countershaft, a loose gear on said countershaft, means by which the countershaft turns said loose gear in one direction and which permit said gear to turn freely in the same direction independently of the countershaft, and gears which are shiftable on the driven shaft one into and out of mesh with said fixed countershaft gear and one into and out of mesh with said loose countershaft gear.



1,396,513. ARTICLE-HOLDER. MOLLIE W. HOLCOMB, Erie, Pa. Filed July 16, 1921. Serial No. 485,324. 1 Claim. (Cl. 24—86.)

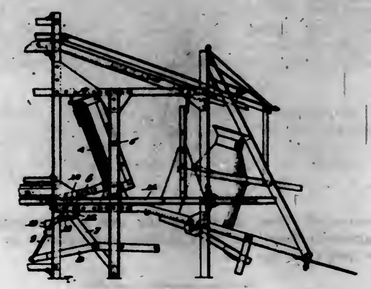
A device of the character described, comprising a body portion comprising a horizontal portion doubled upon itself at its ends and each said doubled portion bent to right angles into alined vertical portions, an upwardly extending hook continuing from the lower end of the body portion and having its upper end yieldingly engaging the said horizontal portion, a coil spring as a continuation of the upper end of the body portion, a pin portion extending

downwardly from the coil spring, and a guard extending rearwardly from the body portion and adapted to shield the point of the pin.

1,396,514. PROCESS OF CLARIFYING SOLUTIONS. JASPER A. MCCASKELL, Salt Lake City, Utah. Filed Nov. 4, 1919. Serial No. 335,698. 3 Claims. (Cl. 75—18.)

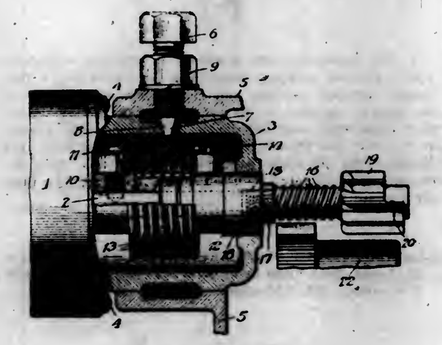
1. The process herein described of filtering solutions, which process consists, essentially, in refiltering a previously filtered solution and connecting the interior of the filtrate chamber of the refilter with a vacuum chamber; subdividing and substantially atomizing the filtrate as it enters the vacuum chamber; withdrawing from said chamber the liberated dissolved oxygen; and then delivering the refiltered solution to an open storage tank for further treatment.

1,396,515. PNEUMATIC TIRE. WALTER S. MCCLEVEY, St. Louis, Mo. Filed Feb. 21, 1920. Serial No. 360,359. 2 Claims. (Cl. 152—20.)



2. In a wheel, a pneumatic tire and a rim for supporting said tire, said rim and said tire having ridges and grooves on portions of their surfaces which are adjacent when the tire is first placed on the rim, other portions of the surfaces which are in contact being smooth and arranged to hold said respective ridges and grooves apart until the air pressure in the tube forces them together.

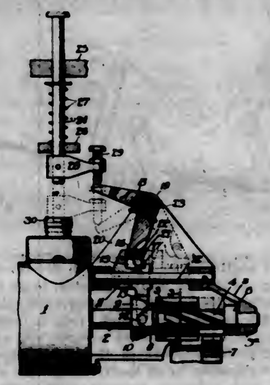
1,396,516. CAN-WASHING MACHINE. CHARLES F. MCEWAN, Oak Park, Ill., assignor to Harry D. Lathrop, Chicago, Ill. Filed Aug. 25, 1919. Serial No. 319,677. 4 Claims. (Cl. 214—130.)



1. A can washing machine, comprising can moving means; means engaging and disengaging said moving

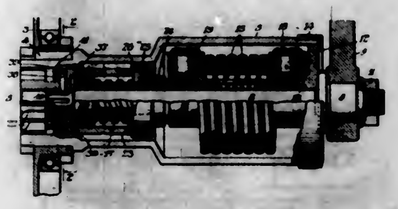
means for operating the same; and means for holding said operating and moving means in engagement during the

operation of the latter, whereby continued operation of the latter under its own inertia is prevented, substantially as described.



1,396,517. ENGINE-STARTER. WILLIAM L. MCGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Aug. 2, 1919. Serial No. 314,950. 5 Claims. (Cl. 74—7.)

1. The combination, with a prime mover and its driving shaft, of a housing secured thereto and having a supporting bearing, and a drive comprising a driving head connected with the driving shaft and located within the housing, and supported by said supporting bearing, a rotatable shaft connected with such head and projecting beyond said housing, said rotatable shaft being not substantially larger in diameter than the driving shaft and in axial alinement therewith, and a driving member mounted upon the rotatable shaft and having a longitudinal movement thereof and rotary movement therewith.

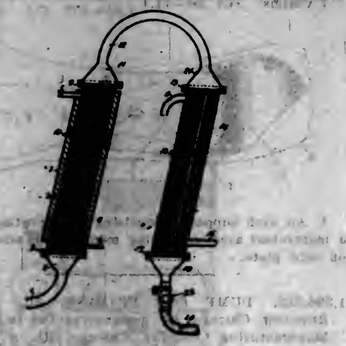


1,396,518. ENGINE-STARTER. WILLIAM L. MCGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Nov. 13, 1919. Serial No. 337,725. 14 Claims. (Cl. 74—7.)

1. An engine starter drive including a rotatable shaft, a driving member mounted thereon for rotary movement therewith and for longitudinal movement thereof to engage a part of the engine to be started, and means adapted to cause such longitudinal movement of the driving member and to retract the same and also to cause a slight

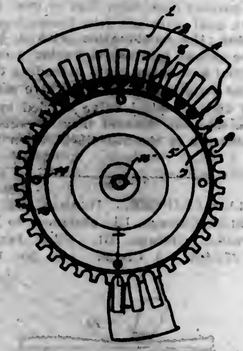
rotary movement thereof on its retracting movement away from such engine part.

1,396,519. ENGINE-STARTER. WILLIAM L. MCGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Nov. 17, 1919. Serial No. 338,690. 18 Claims. (Cl. 74—7.)



1. An engine starter drive including a rotatable member, a driving member mounted thereon for rotary movement thereof and longitudinal movement therewith to engage a part of the engine to be started and means contained within such driving member normally operative to hold such latter member against rotary movement to enforce its longitudinal movement and operative to hold it retracted when rotating in disengaged position.

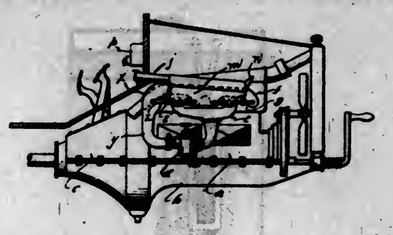
1,396,520. APPARATUS FOR STERILIZATION OR PASTEURIZATION OF LIQUIDS. ANDRÉ MÜLERTZ, Copenhagen, Denmark. Filed Aug. 23, 1919. Serial No. 319,491. 2 Claims. (Cl. 257—224.)



2. An apparatus for sterilising liquids, comprising a set of vertical heating tubes having an inlet and an outlet at opposite ends thereof for causing the liquid to pass continuously in one direction, a set of vertical cooling tubes having an inlet and an outlet at opposite ends, the inlet of the cooling tubes being in communication with the outlet of the heating tubes, means adjacent to the outlet of the heating tubes for supplying a heating medium to the

exterior of said tubes, means adjacent to the outlet of the cooling tubes for supplying a cooling medium to the

exterior of said tubes, and a counter pressure valve in communication with the outlet from said cooling tubes for producing a pressure in the apparatus.

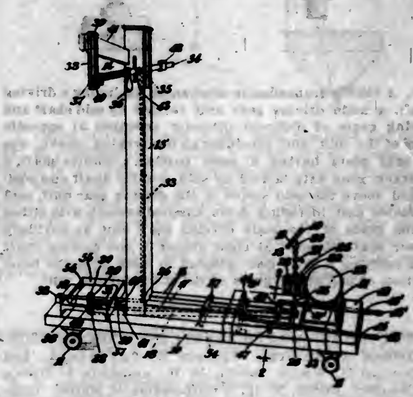


1,396,521. DYNAMO-ELECTRIC MACHINE. ROMAINE W. MYRAS, Oakland, Calif. Filed Nov. 26, 1918. Serial No. 264,144. 6 Claims. (Cl. 171—252.)

4. In a dynamo-electric machine comprising a slotted stator and a rotor, means for closing the slots of the stator and for retaining the coils therein, the same comprising a cylinder formed of magnetic material interposed between the stator and rotor and within which the rotor operates, said cylinder having a varying radial thickness and a relatively high resistance medium disposed longitudinally of said cylinder.

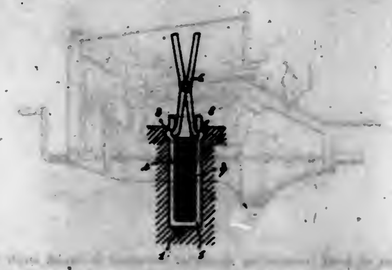
1,396,522. AUTOMOBILE-HEATER. CARL J. PATTERSON and OLIVER J. KILBURN, Jackson, Mich. Filed Jan. 10, 1921. Serial No. 436,066. 1 Claim. (Cl. 237—12.3.)

An exhaust heater for automobiles, comprising an open front and open bottom hood formed of a single piece of metal bent into inverted U section with the long leg of the U arranged to run down the outside of the manifold forming an apron with a free bottom edge into which are cut recesses for straddling the yoke clamp studs and permitting the yoke clamps of the manifold to engage the bottom of the apron to hold the heater to the engine, the top of the hood including the other leg of the U being supported in free suspension above and on the inside of the manifold by the yoke clamps engaging the said apron, a reinforcing sheet of metal secured over the hood at the top and part way down both sides, and a



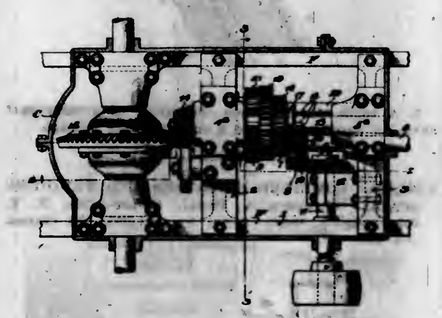
sheet of heat insulating material retained between such reinforcing sheet and the hood, the sheet of metal forming the hood continuing to the rear where it is curled into a tube to deliver the hot gases to the body of the car.

1,396,523. BROACH-TOOTH. JULIAN L. PERKINS, West Springfield, Mass., assignor to Perkins Appliance Company, Springfield, Mass., a Corporation of Massachusetts. Filed June 14, 1920. Serial No. 388,986. 5 Claims. (Cl. 90—38.)



1. A tooth, for a broach, consisting of a body part having a cutting edge, and a chip-clearance passage.

1,396,524. COMBINED EXERCISER AND WEIGHING-SCALE. CLARENCE A. PERRY, Forest Hills, N. Y. Filed Aug. 7, 1920. Serial No. 401,936. 16 Claims. (Cl. 265—20.)

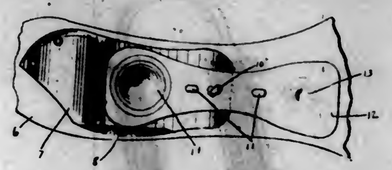


1. In an exercising machine, a lifting lever operatively connected by reduction means to a weighted scale beam, a plurality of selectively shiftable fulcra for said lever for varying the force required to raise said weighted beam, and levers connected with said fulcra for permitting said fulcra to be shifted into inoperative position.

1,396,525. COIL-RETAINER FOR DYNAMO-ELECTRIC MACHINES. Henri Pieper, Liege, Belgium. Filed Nov. 12, 1917. Serial No. 201,691. 9 Claims. (Cl. 171—206.)

6. In a dynamo electric machine the combination with a core member having open slots provided with notches, of form-wound coils and of wire pieces of magnetic metal inclosing the coils and having small parts engaging with said notches.

1,396,526. TRANSMISSION-GEARING. John Powell, Elwood, Ind. Filed June 19, 1918. Serial No. 240,788. 3 Claims. (Cl. 74—58.)

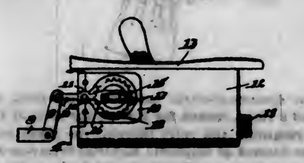


1. A vehicle transmission mechanism including a driving shaft, a main driving gear unit carried by said shaft and having gears of different diameter arranged at opposite ends of the unit and providing an intervening sleeve, one of said gears having a bevel portion, a counter shaft, a shiftable gear unit carried by said counter shaft and positioned above the said sleeve of the driving gear unit, said shiftable unit including gears adapted to mesh with either of the gears of the main driving gear unit, an auxiliary power shaft disposed at right angles to the driving shaft and carrying a bevel gear adapted to mesh with the bevel portion of one of the gears of the main driving unit.

1,396,527. WATER-REPELLENT COMPOSITION. George A. Richter, Wallace B. Van Arsdel, and Donald H. White, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Original application filed Sept. 13, 1919, Serial No. 323,624. Divided and this application filed May 26, 1920. Serial No. 384,406. 2 Claims. (Cl. 134—15.)

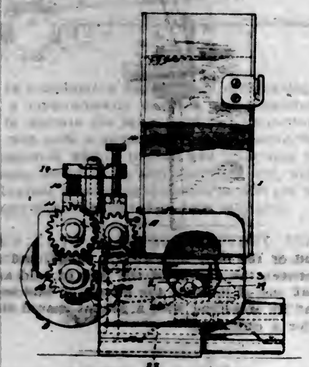
2. A water-repellent composition of matter, consisting of about 25–60 parts of gilsonite, about 25–70 parts of paraffin, and about 5–10 parts of petroleum oil, all blended with heat, and having a melting point of 120°–150° F.

1,396,528. ARCH-SUPPORT. Robert C. Ross, Wilmette, Ill., assignor of one-half to Samuel Silverman, Chicago, Ill. Filed Jan. 28, 1921. Serial No. 440,584. 7 Claims. (Cl. 36—71.)



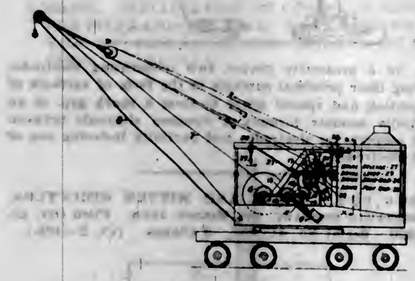
1. An arch support comprising a supporting plate and a metatarsal arch-supporting member reversibly mounted on said plate.

1,396,529. PUMP FOR PRIMING, &c. Walter J. Rudolph, Chicago, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 19, 1919. Serial No. 346,041. 16 Claims. (Cl. 103—75.)



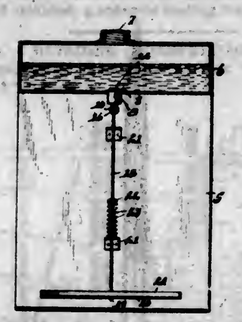
1. In a pump, the combination with a barrel, of a closure for one end of said barrel having a conical valve seat therein, inlet and outlet ports extending through said closure and one terminating in said valve seat, a piston in said barrel and a conical valve carried by the piston and having an annular channel therein registering with the port terminating in the valve seat when the valve is seated.

1,396,530. HAIR-CLIPPER. Herman B. Sande and Otto Moessing, Chicago, Ill., assignors to Moore Electric Corporation, Chicago, Ill. Filed Jan. 18, 1919. Serial No. 271,805. 1 Claim. (Cl. 30—1.)



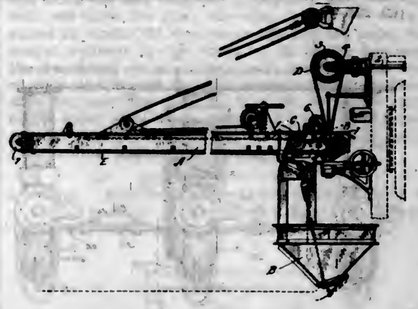
A hair clipper comprising a cutting head; a reciprocating cutting blade on said head; a rocker arm operating said blade; a handle for said cutting head extending at an angle thereto; a casing on said handle; a worm wheel in said casing; a worm in said casing meshing with said worm wheel; a socket for receiving a flexible shaft to drive said worm; a lever mounted on said casing and operatively connected with said worm wheel, there being an opening in the inner end of said casing through which said lever passes, said opening being provided with a central cylindrical portion and divergent sides leading from the forward and rear sides of said cylindrical portion; a lever fulcrumed in said opening and provided with a hub fitting the cylindrical portion thereof and said lever oscillating between said divergent sides; and a link connecting said lever with said rocker arm, substantially as described.

1,396,531. COUPON OR CARD FEEDING DEVICE. Pleasants C. Gentsch, Salem, Va., assignor to Comas Cigarette Machine Company, Salem, Va., a Corporation of Virginia. Filed Aug. 22, 1919. Serial No. 319,173. 22 Claims. (Cl. 271—44.)



2. In a device of the character described, the combination of a pair of delivery rolls, and a rocking head having a needle projecting therefrom and an offset portion adapted to move a card to said rolls, said rocking head and its needle moving forward with the card, then dropping away from the card before moving to its initial feeding position, and then moving into contact with the next card to feed the same.

1,396,532. MEANS FOR BRAKING-CRANES. Harry E. Scott, Cleveland, Ohio, assignor to The Brown Hoisting Machinery Company, Cleveland, Ohio, a Corporation. Filed June 12, 1920. Serial No. 388,583. 6 Claims. (Cl. 212—59.)

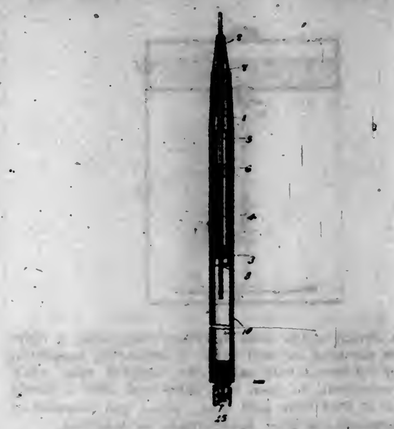


1. The combination, in braking mechanisms for hoisting machines, of a winding drum loosely mounted on its shaft, a load-sustaining pulley-system, mechanism for braking the drum against unwinding movement when said mechanism is operatively subjected to the tensile force of the load sustained by said system, and means for applying force in opposition to said tensile force, said system being connectible to the load to be sustained and having one end of its rope member fastened to the drum, and the other end fastened to said braking mechanism in suitable manner to operatively subject the same to said tensile force, substantially as shown and described.

1,396,533. AUTOMATIC FOWL-SPRAY. Bruce A. Shaw, Oak Park, Ill. Filed Sept. 12, 1919. Serial No. 323,583. 3 Claims. (Cl. 119—159.)

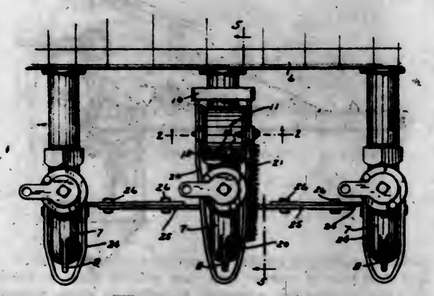
1. A device of the class described comprising, a tank; a valve mounted on said tank; a depending supporting member connected with said valve, adapted, upon downward movement, to open said valve and emit a certain amount of fluid from said tank; and a pan mounted on said supporting member, substantially as described.

1,396,534. DRIVING MEANS FOR CONCRETE-DISTRIBUTERS. Oscar Sebeck, Milwaukee, Wis., assignor to Koehring Machine Company, Milwaukee, Wis., a Corporation. Filed Sept. 2, 1920. Serial No. 407,764. 6 Claims. (Cl. 104—92.)



1. Cable driving means of the class described comprising, in combination, a drum, a cable, driven means attached to the cable, the ends of the cable being attached to said drum and wound thereabout in opposite directions toward the center of the drum, and operating means for the drum, the winding surface of the drum being such that as one end of the cable pays off of such surface in unwinding, the other end winds upon and occupies said surface previously occupied by the unwinding end.

1,396,535. LEAD-PENCIL. Elmer S. Shimer, Milton, Pa. Filed Mar. 2, 1921. Serial No. 449,127. 4 Claims. (Cl. 120—18.)



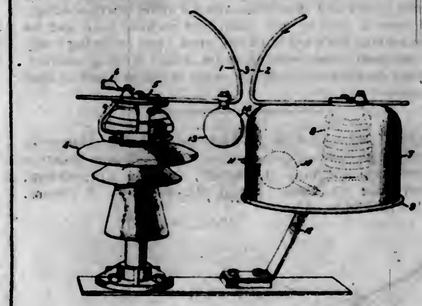
3. A pencil including an inner and outer tube rotatably connected together, one having an internal projecting key and the other provided with internal screw threads at one end of slightly less diameter than its adjacent bore, a pin having a longitudinally grooved, threaded end, adapted to turn in these threads, the groove constructed and adapted to receive the key whereby the turning of the tubes with respect to each other causes an

endwise feed of the pin, and a body or handle in the bore of which the outer tube is frictionally held, one end of the tube protruding from one end of the body or handle

and one end of the inner tube protruding from the end of the outer tube, the said adjacent ends in the form of a general continuous taper.

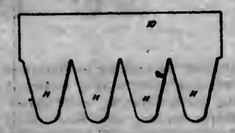
1,396,536. AUTOMATIC TALLY FOR DISPENSING-FAUCETS. WILLIAM H. SHINDOLL, Arlington, S. D. Filed May 22, 1920. Serial No. 383,361. 3 Claims. (Cl. 235—94.)

1. The combination with a plurality of dispensing faucets each having a supporting lug, of a tally having a movable indicating member, a pawl and ratchet for imparting steps of movement to the indicating member, a lever for each faucet, means rigidly connecting the levers, a connection from one of the levers to the pawl, and yielding means normally holding the levers in position to be simultaneously depressed by the bail of a receptacle suspended from any one of the supporting lugs.



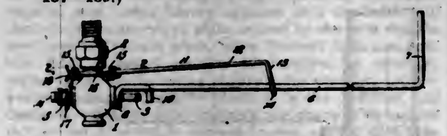
1,396,537. DENTAL AMALGAM OR ALLOY MIXER. BOHUSLAV SIML, Chicago, Ill. Filed July 23, 1921. Serial No. 487,051. 2 Claims. (Cl. 259—75.)

1. The combination with a cylindrical frame having a radially extended arm provided with a forked extension over-hanging the frame, said frame having a slot at the base or foot of said arm extended in the direction of the prongs thereof, of a cylindrical body having a diagonally disposed groove in its periphery and rotatably mounted in the frame and provided at one of its ends with an external annular flange to coact with the adjacent end of the frame, a centrally orifaced filling located in the body for rotation therewith, a circular plate having a central opening surrounding a portion of said filling and secured



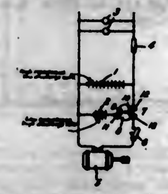
to that end of the body opposite its flange, and a lever pivoted between the prongs of the fork of said arm and engaging at one of its ends the groove of said body and provided at its other end with a pair of spaced clamping members for a container.

1,396,538. PROTECTIVE DEVICE. BEVERLY L. STEMMONS, Charlotte, N. C., assignor to General Electric Company, a Corporation of New York. Filed May 20, 1918, Serial No. 235,447. Renewed July 20, 1921. Serial No. 486,186. 8 Claims. (Cl. 175—30.)



1. In a protective device, two coöperating electrodes having their proximal surfaces in the form of surfaces of revolution and spaced apart to form a spark gap, of an umbrella member forming a common electrode between said coöperating electrodes and partially inclosing one of said electrodes.

1,396,539. GLOVE AND MITTEN STRUCTURE. BENJAMIN STEWART, Des Moines, Iowa. Filed Oct. 23, 1920. Serial No. 418,957. 3 Claims. (Cl. 2—102.)

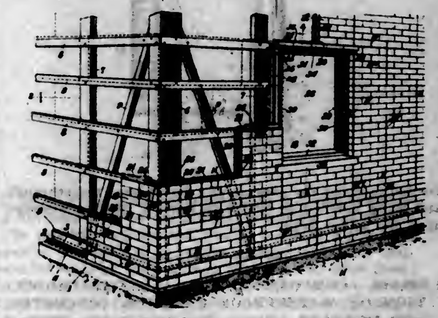


1. A glove and mitten structure, comprising a wrist band structure, comprising an endless band, composed of two members, each having a plurality of half thumb receiving members connected therewith, the thumb receiving members of the respective wrist band members being sewed together at their edges, each wrist band member having its ends sewed together.

1,396,540. DRAIN-COCK-OPERATING DEVICE. WILLIAM HENRY STIGLITZ, Louisville, Ky. Filed Jan. 19, 1921. Serial No. 438,424. 2 Claims. (Cl. 137—139.)

1. In combination with a drain cock having a rotatable plug, a longitudinally disposed rod connected with said plug to operate the same, said rod projecting outwardly from said cock, a supporting bracket embracing said cock and mounted wholly thereon and projecting therefrom in the same direction as said operating rod, and means on said bracket connecting the same to said rod and allowing free movement of the rod to turn said plug.

1,396,541. ELECTRIC-BATTERY SYSTEM AND METHOD OF OPERATING THE SAME. ELIHU THOMSON, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 27, 1919. Serial No. 320,274. 4 Claims. (Cl. 290—31.)



1. In combination in a motor starting system for combustion engines, a storage battery of relatively low capacity and low internal resistance adapted to deliver current at a high discharge rate, a second storage battery of relatively high capacity high internal resistance adapted to deliver current at a relatively low discharge rate, and switch means provided with contacts adapted to interconnect said batteries for charging the first mentioned from the last mentioned battery and for connecting said batteries in parallel to supply current to the starting motor.

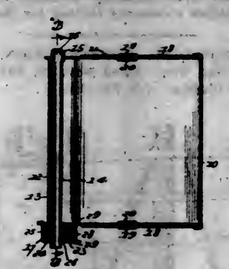
1,396,542. INSTALLATION OF CONCRETE FOOTINGS FOR PILES AND THE LIKE. ROBERT B. TUFTS, Kirkwood, Ga. Filed Apr. 13, 1920. Serial No. 373,495. 3 Claims. (Cl. 61—57.)

1. The herein described method of establishing a concrete footing for a pile, consisting in forcing a driving member downwardly beyond the lower end of a tubular driven pile and thereby forming a space below the pile, and forcing semi-liquid concrete through said driven pile and into such space under sufficient pressure to enlarge said space and establish a concrete footing for the pile.

1,396,543. BUILDING CONSTRUCTION. ISHAM P. WALKER, Tyler, Tex. Filed Nov. 19, 1918. Serial No. 263,148. 3 Claims. (Cl. 72—19.)

1. In building construction, a foundation having a rib or tongue on its upper surface extending about the foundation, said rib or tongue being right triangular in cross section and having a vertical wall facing inwardly with respect to the building and a slanting wall facing outwardly, and a series of slabs laid in courses, each slab having means for interlocking with adjacent slabs on all edges, said means comprising a groove on its lower edge and along one side edge, and a tongue or rib on its upper edge and along the other side edge, the grooves being designed to receive the tongues or ribs and the latter being shaped similarly to the tongue or rib on the foundation, the foundation rib interlocking with the lowermost course of slabs and all the ribs and grooves extending intermediate the outer and inner faces of the slabs, the tongues on the upper edges of the slabs having their vertical walls facing inwardly while the tongues on the side edges have their vertical walls facing outwardly.

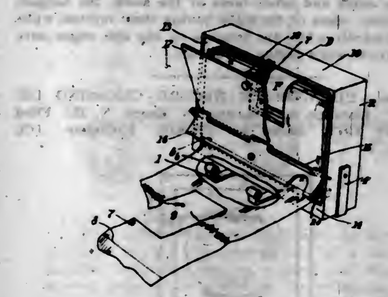
1,396,544. PHONOGRAPH-RECORD-CLEANING DEVICE. LEONARD A. WELLINGTON, Keene, N. H. Filed Oct. 27, 1917. Serial No. 198,816. 9 Claims. (Cl. 274—1.)



9. The combination with a suitable support, of an arm adapted to rest horizontally over a phonographic record, and a record cleaning device carried by said arm and adapted to rest with frictional contact upon the record, said cleaning device being resettable upon the arm to present a new cleaning surface to the record.

1,396,545. MATCH-BOX. JESSE B. YOUNG, Rush, Ky. Filed Nov. 29, 1920. Serial No. 427,112. 4 Claims. (Cl. 206—22.)

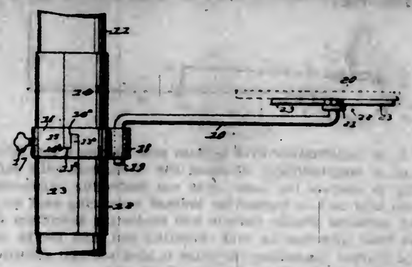
1. A match box having a storage compartment provided with a communicating tubular seat, and a dispens-



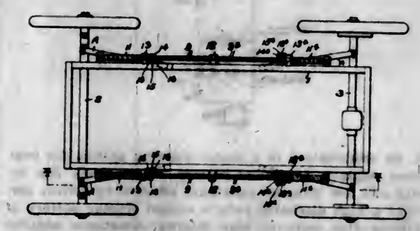
ing or delivery tube revolubly mounted in said seat and provided with a longitudinal slot for communication with the storage compartment, one end of said tube being contracted to resist the passage of a match head therethrough and being notched or slitted to exert a yielding pressure upon the match head.

1,396,546. COMPOSITION FOR AND THE PRODUCTION OF WATERPROOF CEMENTS, CONCRETES, AND MORTARS. HARRY CRAIGHILL BADDER, Bedford Park, London, England, assignor to Spencer Freeman Burrows and Henry Lewis Phipps Allender, London, England. Filed July 9, 1919. Serial No. 309,730. 7 Claims. (Cl. 106—25.)

1. A mixture for waterproofing concrete comprising a basic aluminum silicate, and a soluble silicate of a metal, and an aluminum silicate and an alkaline earth metal chlorid.



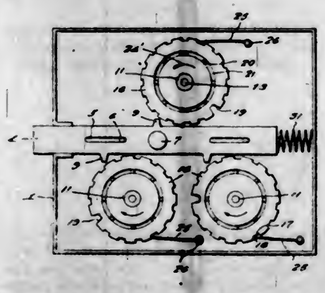
1,396,547. SANITARY APPLIANCE FOR CLOSET-SEATS. NELLIE N. BARNDEES, St. Paul, Minn. Filed Apr. 25, 1921. Serial No. 464,400. 1 Claim. (Cl. 4—18.)



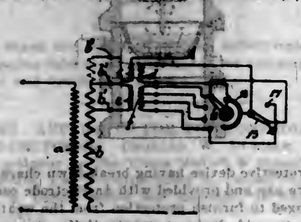
In a closet bowl attachment, the combination with a closet bowl, a seat, and a hinge connection connecting the seat to the bowl, said hinge connection including spaced upwardly extending supports on the bowl, and a pintle detachably supported on said supports, of a paper holding container to the rear of said pintle having a discharge opening adjacently above the latter, and facing said seat, and a support for the container resting on the bowl and extending to and detachably surrounding said pintle.

1,396,548. BRACKET-SUPPORT. GEORGE S. BARTLETT, Buffalo, Wyo. Filed Nov. 13, 1919. Serial No. 337,777. 1 Claim. (Cl. 248—20.)

A device for the purpose described having a clamp for engagement with a post or upright and provided with a set screw for securing the clamp in position thereon, an arm pivotally mounted for swinging movement upon the clamp and provided at its free end with a seat, and a spider having a hub revolubly mounted in said seat and provided with a socket for the reception of a depending stud on a tray or similar object resting thereon.

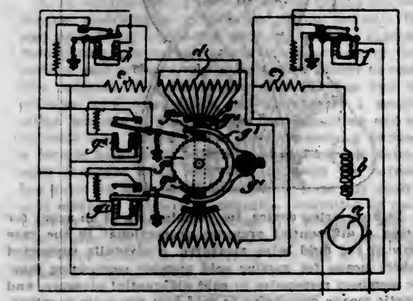


1,396,549. VEHICLE-SPRING. WILLIAM M. BEATTY, Pittsburgh, Pa. Filed Apr. 12, 1920. Serial No. 373,028. 4 Claims. (Cl. 267—25.)



3. In a vehicle, the combination of front and rear axles, a body, yielding body-supporting connections between the front and rear of the body and said axles, casings rotatably mounted one on each end of said body on axles extending longitudinally of the body, a plurality of resilient rods attached at their ends to said casings, and oppositely-acting connections between said axles and casings for rotating the latter as a consequence of a relative movement between an axle and an end of said body.

1,396,550. LOCK. MILTON S. BEAVER, Reading, Pa. Filed Oct. 9, 1920. Serial No. 415,744. 2 Claims. (Cl. 70—53.)

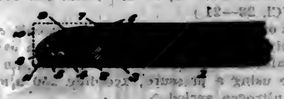


1. In a permutation lock, a spring influenced slidable bolt, guide means therefor, operating means therefor, lugs on the edges thereof, peripherally notched tumblers revolubly mounted on the casing, said bolt having projecting through the casing, means on the shafts operative to bind the shafts against the inner face of the casing, disks freely mounted on the shafts, said disks having indicating characters thereon, said casing having openings in a line with said characters, an apertured plate carried by the bolt and the apertures of the said plate, when the bolt is in one position being arranged opposite the referred to openings, spring means in the casing engaging the tumblers for preventing the turning of the tumblers in one direction, and designed, when the said tumblers are partially influenced in a second direction to exert a tension against said tumblers to turn the same and the disks connected therewith.

1,396,551. ELECTRICAL TRANSFORMER FOR REGULATING OR VARYING THE VOLTAGE OF THE CURRENT SUPPLIED THEREFROM. FREDERICK EDMUND BERRY, Hayes, England. Filed Oct. 31, 1918. Serial No. 260,531. 6 Claims. (Cl. 171—119.)

1. In an alternating current electrical distribution system, a main transformer winding, a remote supplementary transformer arrangement comprising two primary windings connected in series, leads connecting a portion of the main transformer winding to the said primary windings, secondary windings inductively associated with the latter windings and switching means for separately varying the inductive relation of each secondary winding to its corresponding primary winding.

1,396,552. VOLTAGE-CONTROLLING MECHANISM. PIERRE BOSSU, Neuilly-sur-Seine, France, assignor to Societe Anonyme Des Etablissements L. Bleriot, Paris, France. Filed Sept. 28, 1918. Serial No. 256,102. 6 Claims. (Cl. 171—239.)



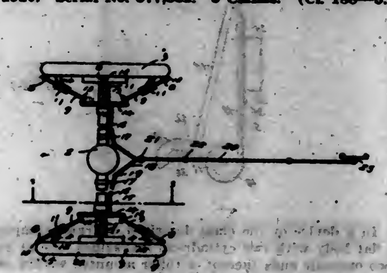
1. A controlling mechanism for maintaining constant voltage in an electric circuit comprising in combination, a slow-acting regulator operative to introduce a variable controlling resistance progressively into such circuit, and quick-acting regulators coöperative with said slow-acting regulator and operative only during the time necessary for the slow-acting regulator to exercise its control.

1,396,553. MAP-HOLDER. JOHN J. BOVI, Red Wing, Minn. Filed Dec. 22, 1921. Serial No. 444,581. 2 Claims. (Cl. 40—36.)

1. In a device of the class described, a frame composed of a flat body with two cylindrical magazines, one at each of two opposite ends thereof, a roller mounted within each magazine and adapted to engage opposite ends of a map, means for rotating the rollers to wind the map upon them; said flat frame having a space exposing a portion of the map between the two magazines; said frame comprising a back section and a front section hinged together at one of the magazines and partly overlapping each other, one of said magazines having its overlapping portions pivotally connected in concentric position to the roller therein to form the said hinge for the two frame sections.

1,396,554. ROUND RIM-BOUND TOP FOR TABLES. CHARLES O. BUZZEE, Portsmouth, Ohio. Filed Apr. 16, 1920. Serial No. 374,351. 1 Claim. (Cl. 45—81.)

A rim bound top including a core, the curved edge of which is molded into the form of a diagonally-disposed circumferential fluting or corrugation, with the extreme ends extending approximately at right-angles to the adjacent surface of the core and having a circumferential groove adjacent to one of said ends, and a rim molded on its inner periphery to correspond with and fit the molded outer edge of the core, said rim adapted to be fashioned from the point where it joins the outer surface of the core into the external shape desired, thus leaving the upper transversely-extending edge of the core finally exposed as a part of the permanent outer edge of a portion of the top.

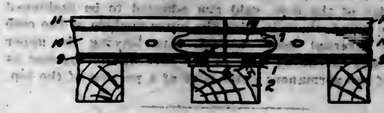


1,396,555. SHUTTLE-EYE. ALBERT J. BROUILLETTE, Woonsocket, R. I., assignor to Shambow Shuttle Company, Woonsocket, R. I. Filed Feb. 12, 1921. Serial No. 444,324. 6 Claims. (Cl. 139—46.)

2. In a shuttle, a porcelain eye having thread receiving means and having an end abutted against the wood of the shuttle, a projection formed on the eye and receivable in a recess provided therefor in the shuttle to hold the eye

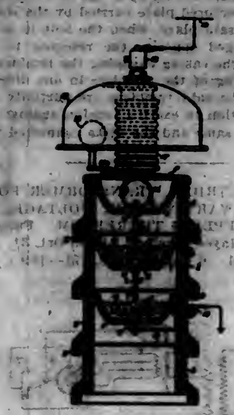
against turning, a fiber washer engaged with the opposite end of the eye, and a screw plug threaded directly into the shuttle to engage and hold the washer impinged and against movement in its said relation to the eye.

1,396,556. AUTOMOBILE-WHEEL NON-SKID DEVICE. AUGUST CARLSON, Dell Rapids, S. D. Filed Apr. 28, 1920. Serial No. 377,322. 5 Claims. (Cl. 188—5.)



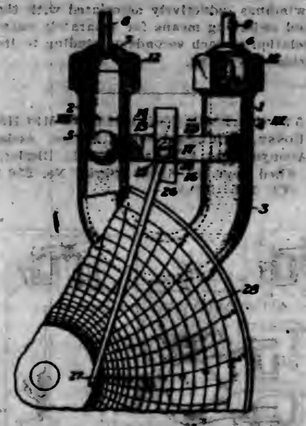
1. A device of the character set forth including an axle housing and a wheel, a plurality of brackets carried by said wheel, non-skid elements threaded to said brackets, and manually controlled means adapted to engage said non-skid elements to cause them to extend themselves by the rotation of the wheel.

1,396,557. PROCESS OF PRODUCING AMMONIA. IVAR WALFRID CARLSSON, Lidingö-Brevik, Sweden, assignor of seven-tenths to Helge Mattias Bäckström, Djursholm, Sweden, and Gustaf Adolf Kyhlberger, Stockholm, Sweden. Filed Feb. 23, 1918. Serial No. 218,685. 1 Claim. (Cl. 23—21.)



A process of synthetic production of ammonia consisting in alternately passing nitrogen and hydrogen over a substance containing at least one metal forming an unstable nitrid while using a pressure exceeding 250 atmospheres during the nitrogen period.

1,396,558. RAIL-JOINT. MERIT L. COCHRAN and MARION E. WOOD, Kansas City, Kans. Filed Nov. 6, 1920. Serial No. 422,421. 1 Claim. (Cl. 238—205.)

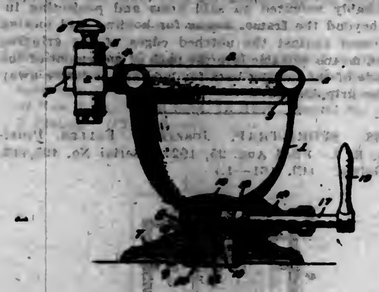


In a rail joint, a rail chair having a flat base adapted to support the bases of two adjoining rails and having respectively adjacent to opposite ends spike openings, and having intermediate of said openings two flanges adapted to embrace the upper sides of the bases of the rails and the under sides of the balls of the rails at opposite sides respectively of and spaced apart from the webs of the rails, the upper ends of the flanges being outwardly turned and bearing against the balls of the rails, and a U-bolt having threaded arms adapted to extend through said flanges and said webs and provided respectively with nuts adapted to bear against the outer side of one of said flanges, the longitudinal portion of the U-bolt being adapted to bear against the outer side of the other flange, whereby the flanges may exert a spring clamping action, substantially as set forth.

1,396,559. PROTECTIVE DEVICE. BLAKE B. F. CRAWFORD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 10, 1918. Serial No. 211,112. 16 Claims. (Cl. 175—36.)

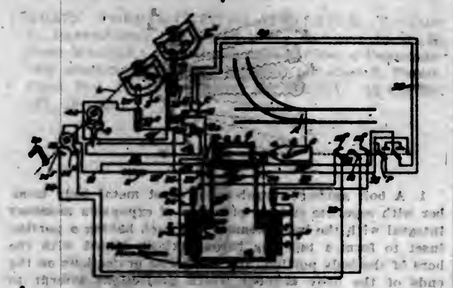
1. A protective device having break-down characteristics of a sphere gap and provided with an electrode constructed and arranged to furnish protection from the weather so as to insure to said device a substantially constant break-down voltage irrespective of weather conditions.

1,396,560. METERING DEVICE. THOMAS A. DICKINSON, Youngstown, Ohio. Filed Nov. 22, 1920. Serial No. 425,615. 7 Claims. (Cl. 284—19.)



1. In a metering device, the combination of an agent for creating a differential pressure proportional to the rate of flow of the fluid being measured, a pivotally supported member, means for moving said member comprising magnetic members responsive to said differential pressure, and magnetic means responsive to said first magnetic members, substantially as described.

1,396,561. SHAVING-CUP. SYLVESTER DOREY, Gloversville, N. Y. Filed Mar. 21, 1921. Serial No. 454,655. 2 Claims. (Cl. 65—126.)



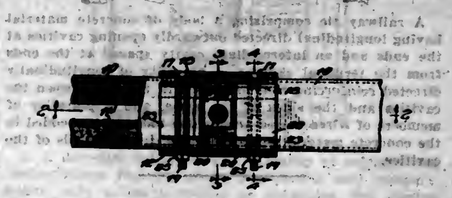
1. In a shaving cup of the class described, the combination of a bowl having a discharge opening in the bottom

thereof, a vertically movable valve for closing said opening, said valve having a shank depending from the bottom thereof, a rotary head mounted in a plane at right angles

to said shank and equipped with an eccentrically mounted pin engaging said shank, and means for rotating said head to raise and lower said valve.

1,396,562. APPARATUS FOR THE CONTROL OF RAILWAY-SWITCHES. CHARLES W. DUNHAM, Fairmont, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 6, 1920. Serial No. 395,662. 15 Claims. (Cl. 246—141.)

3. In combination, a railway switch having normal and reverse positions, a cylinder, a piston movable therein and operatively connected with the switch, a source of fluid pressure, a normal and a reverse valve for the two ends of said cylinder respectively each biased to one position wherein it connects the corresponding end of the cylinder with atmosphere and movable to a second position wherein it connects the corresponding end of the cylinder with said source of fluid pressure, a normal and a reverse magnet for said normal and reverse valves and each arranged when energized to move the corresponding valve to said second position, a lever for controlling said magnets, indication apparatus controlled by the positions of said piston for locking and releasing said lever, and means for preventing said apparatus from releasing said lever unless the pressure in each end of said cylinder is below a given value.

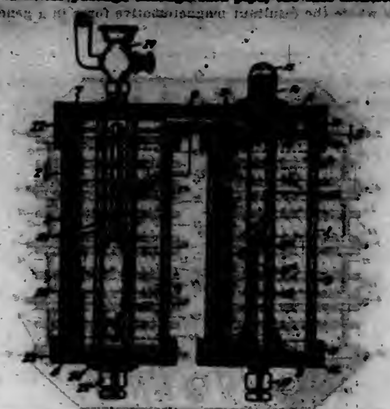


1,396,563. ELECTRICAL APPARATUS. GIUSEPPE FACCIOLI, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Continuation in part of application Serial No. 60,868, filed Nov. 11, 1915. This application filed Oct. 11, 1916. Serial No. 124,968. 12 Claims. (Cl. 175—356.)

8. A winding for electrical apparatus having an axis which is substantially a straight line, said winding being composed of sections spaced apart along said axis; the spacing of said winding being enlarged at a point on the axis where the resultant magnetomotive force in a general

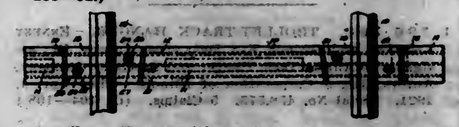
direction perpendicular to said axis is substantially zero, and independent means for rigidly supporting said winding inserted in said enlarged space.

1,396,564. TROLLEY-TRACK HANGER. ERNEST PECHNER and GERRIT VAN DUYNHOVEN, Aurora, Ill., assignors to Auroa Door Hanger and Specialty Company, Aurora, Ill., a Corporation of Illinois. Filed Apr. 4, 1921. Serial No. 459,573. 5 Claims. (Cl. 104—106.)



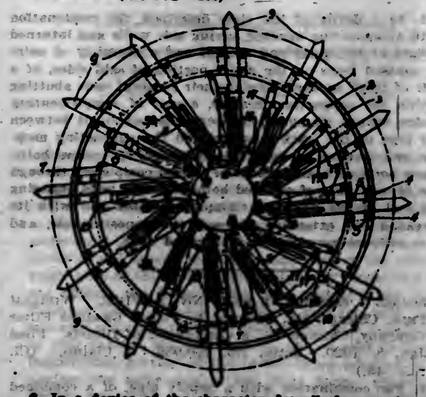
1. In a device of the class described, the combination with a supporting member having side walls and inturned flanges at the lower end thereof and a plurality of pairs of opposed holes on the upper portion of said sides, of a pair of track members having their adjacent ends abutting within the supporting member, a pair of complementary wedge shaped clamping members adapted to fit between the tops of the track members and the supporting member and having passages therethrough for screw bolts, screw bolts each adapted to be passed completely through one of said pair of opposed holes with its head engaging the end of the adjacent clamping member and with its threaded end extending through the opposite hole, and nuts coöperating with said threaded ends.

1,396,565. GASOLENE-TESTING DEVICE. WILLIAM FELL, Chicago, Ill., assignor to Visible Gasoline Filter Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 8, 1920. Serial No. 350,086. 3 Claims. (Cl. 265—45.)



1. The combination with a supply pipe, of a combined liquid filtering and testing device comprising a pair of connected receptacles adapted to be introduced in said

supply pipe whereby the liquid circulates from one to the other in its passage through said pipe, the last mentioned

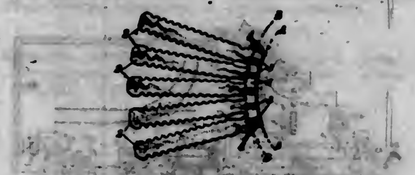


receptacle serving as a means for readily observing the character of the liquid.

1,396,563. RAILWAY-TIE. LOTHAR FINK, Oneonta, N. Y. Filed May 27, 1921. Serial No. 473,150. 1 Claim. (Cl. 238—92.)

A railway tie comprising a body of concrete material having longitudinal directed outwardly opening cavities at the ends and an intermediate cavity spaced at the ends from the terminal cavities, a plurality of longitudinally directed reinforcing rods embedded in the tie between the cavities and the sides of the same, and a plurality of members of wires looped around the rods and embedded in the concrete material between the confronting ends of the cavities.

1,396,567. ANTISKID DEVICE. CHARLES N. FRISCO, Pittsburgh, Pa. Filed Nov. 6, 1920. Serial No. 422,285. 6 Claims. (Cl. 301—47.)



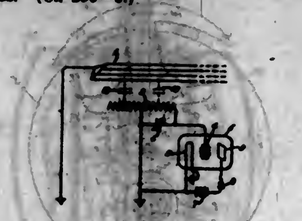
6. In a device of the character described, an outer annular frame, an inner frame carried by said outer frame, gripping bars slidably connected to said inner frame and slidable through said outer frame substantially radially thereof, each of said bars being provided in one edge with spaced notches, arms carried by said inner frame, locking bars rockably mounted on said arms and projecting inwardly beyond the frame, means for holding said locking bars pressed against the notched edges of the gripping bars, and means movable into the path of movement of the inner ends of the locking bars for moving the latter away from the gripping bars.

1,396,568. SPORE-TRAP. JOSEPH O. FULLER, Providence, R. I. Filed Aug. 26, 1921. Serial No. 495,443. 15 Claims. (Cl. 161—1.)

2. In a spore trap, a casing, a disk rotatably mounted in the casing, radially disposed guides on the disk, and means for rotating the disk.

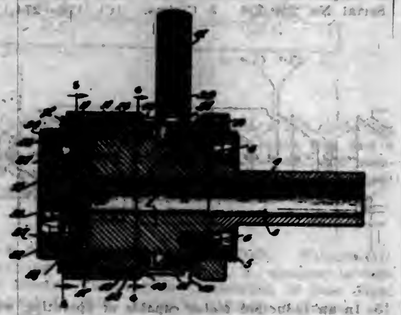
1,396,569. BOLT-ANCHOR. CHARLES S. GERVAN, White Plains, N. Y., assignor to Lawrence S. Jackson, New York, N. Y. Filed July 14, 1916. Serial No. 109,209. 2 Claims. (Cl. 85—2.4.)

1. A bolt anchor comprising a sheet metal body member with separate ends, a plurality of expansion members integral with the body member and each having a portion inset to form a tapering throat axially aligned with the bore of the body portion, and tooth like projections on the ends of the body member which projections interfit to cause said ends to register.



1,396,570. FLOATING JEWEL-BEARING. KENNETH B. GLENN, Ambridge, Pa. Filed Feb. 2, 1921. Serial No. 442,126. 4 Claims. (Cl. 58—140.)

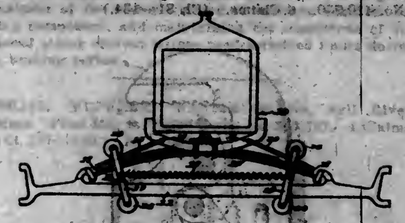
1. A jewel bearing comprising a body, disks closing said body and one of said disks having an opening to receive



a spindle, an inner ring in said body, an outer ring in said body and supported by the disk, a spring attached to said ring for floating the inner ring within the body, and jewels carried by the inner ring for supporting the spindle.

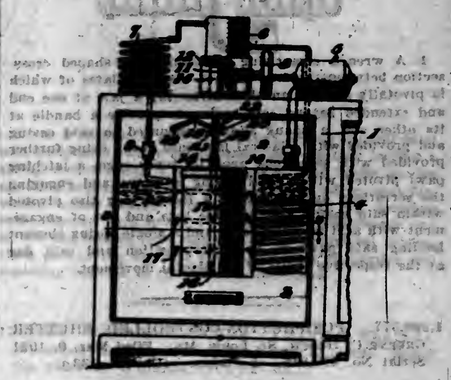
1,396,571. RADIO RECEIVING SYSTEM. ALFRED N. GOLDSMITH and JULIUS WEINBERGER, New York, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Sept. 13, 1918. Serial No. 253,938. 9 Claims. (Cl. 250—6.)

1. A radio receiving system comprising a receiving loop antenna having two halves with large mutual inductance between the halves and a ground connection to the junction point of the two halves so as to provide a substantially non-inductive path to ground for currents induced in the loop by capacitive induction.



1,396,572. THREAD-CUTTING APPARATUS. WILLIAM C. HAFNEMEISTER, Cleveland, Ohio, assignor to G. H. Scott Machine Company, Cleveland, Ohio, a Copartnership consisting of George H. Scott and Carl S. Fetner. Filed Nov. 15, 1917. Serial No. 202,121. 11 Claims. (Cl. 10—95.)

1. In combination, a set of circular chasers peripherally notched to produce cutting lips, a sustaining device whereon said chasers are adapted to be arranged with their cutting lips spaced about an imaginary circle substantially concentric with the axis of the sustaining device, each chaser having a recess, a member projecting into the recess of each chaser and movably carried by the sustaining device, and a screw adjustable within the sustaining device to alter the position of said member.



1,396,573. SHOCK-ABSORBER. ORVAL K. HARLEY, Jenks, Okla. Filed May 27, 1920. Serial No. 384,648. 3 Claims. (Cl. 267—22.)

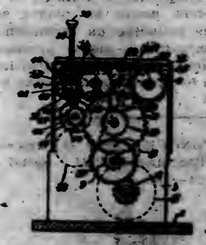
1. A shock absorber for vehicles comprising transverse guide members located above the main spring and movable with the spring supported body member of the vehicle toward and from the plane of the axle, and a traveler

having retarding elements co-acting with said transverse guide members, said retarding elements being inwardly impelled on deflection of the main spring.

1,396,574. COMBINED REFRIGERATOR AND ICE-CREAM FREEZER. DELOS P. HEATH, Detroit, Mich. Filed Sept. 8, 1920. Serial No. 408,847. 2 Claims. (Cl. 62—116.)

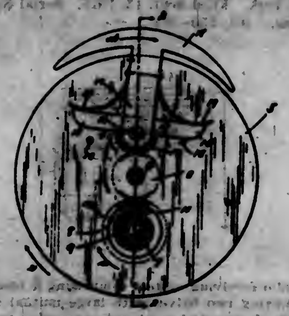
1. A domestic refrigerator, a plurality of refrigerating compartments therein, means for cooling said compartments, said means including an expansion coil located in one of said compartments and so arranged as to provide a pocket, an ice cream freezer located in said pocket, and unitary means for operating the cooling means and the ice cream freezer.

1,396,575. PIN-TONGUE. JOHN H. HAMMESSEY, Providence, R. I. Filed May 5, 1921. Serial No. 466,896. 1 Claim. (Cl. 24—160.)



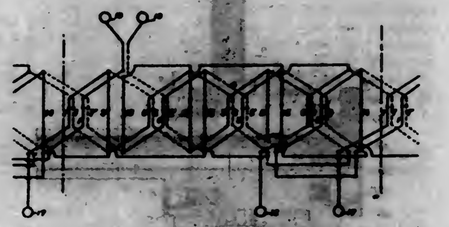
In a pin tongue pivot, a base member having a pair of ears formed with holes the outer ends of which are counter-sunk, so that the bottoms of the counter-sunk parts are spaced from the inner ends of the holes, a pin tongue having a head formed with a hole, and a hollow-wire rod in the hole having its ends extended beyond opposite sides of the head and received in the holes of the ears, the ends of said hollow-wire rod being expanded to provide hollow funnel-shaped parts which conformably engage the counter-sunk outer ends of the holes of the ears, and having their outer edges flush with the respective outer side faces of the ears.

1,396,576. QUICK-ADJUSTING WRENCH. GUSTAV HOFFMANN, Chicago, Ill. Filed Nov. 1, 1920. Serial No. 420,930. 6 Claims. (Cl. 81—124.)



1. A wrench comprising a casing of U-shaped cross-section between the free ends of the side plates of which is pivotally secured an element having a jaw at one end and extended beyond said casing to provide a handle at its other end, a shank slidably mounted in said casing and provided with a lateral jaw, said shank being further provided with serrations upon its inner edge, a latching pawl pivoted within said casing adjacent and engaging the serrations on said shank, a locking dog also pivoted within said casing and movable into and out of engagement with said latching pawl, and a single spring element holding said pawl in operative position and said dog at the respective limits of its pivotal movement.

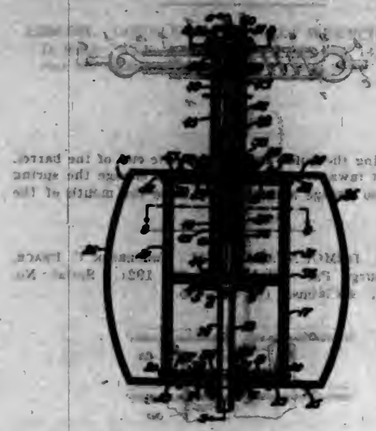
1,396,577. PUSH-BUTTON-CONTROLLED SHUTTER. GREENE C. HOSCH, St. Louis, Mo. Filed Mar. 9, 1921. Serial No. 450,846. 4 Claims. (Cl. 88—123.)



1. In a machine of the kind described, the combination of a length indicator having a scale with divisions for indicating aliquot fractions of the unit of measure, a driven pointer cooperating with the scale to indicate the length of goods measured, a movable indicating chart driven simultaneously with the pointer and bearing numbers for indicating computed figures corresponding to the length indicated by the length indicator, a movable shutter for normally screening the resulting point to prevent the computed figures from being read, a hand actuated part connected to the shutter for opening the same, a movable stop for normally preventing the actuation of the hand actuated part, and means for driving the same in synchrony with the pointer, said movable stop having means cooperating with the hand actuated part to permit the actuation of the same only when the pointer coincides with one of the said fractional divisions on the scale.

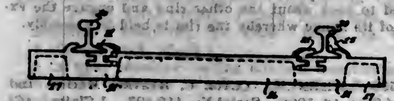
1,396,578. MECHANICAL DEVICE. JOHN ISELS, Oakland, Calif. Filed Apr. 4, 1921. Serial No. 458,128. 2 Claims. (Cl. 74—30.)

1. A mechanical device of the character described comprising, a frame, a shaft journaled on the frame, a fly-wheel rigidly mounted upon the shaft, a spring driven gear carried by the fly-wheel, and directing lever carried by the fly-wheel, and a geared connection between said first named gear and the lever.



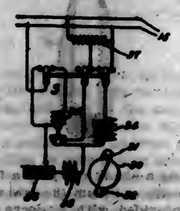
1,396,579. INDUCTION-MOTOR. TATSUICHIRO ISONO, Tokyo, Japan, assignor to General Electric Company, a Corporation of New York. Filed May 24, 1919. Serial No. 299,556. 5 Claims. (Cl. 172—274.)

5. In an induction motor capable of operating with a field of either of two numbers of poles, a secondary winding adapted for use with either pole numbers, comprising a wound portion responsive to the lower number of poles, and connections between equi-potential points of said winding forming active conductors, whereby said winding operates as a short circuited secondary responsive to the higher number of poles.



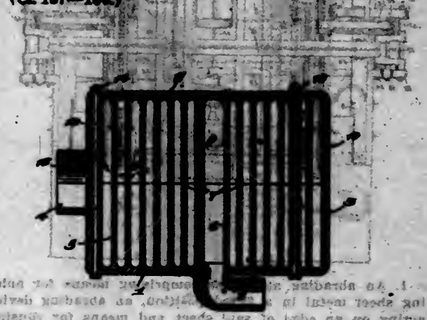
1,396,580. WAVE-OPERATED DEVICE. PATRICK J. KILCULLEN, Philadelphia, Pa. Filed Apr. 13, 1920. Serial No. 373,471. 7 Claims. (Cl. 230—32.)

1. A device of the character described including means adapted to float in a body of the water; a conduit; means operative due to the wave action of the water on said floating means to pump a fluid through said conduit; and means including a screw thread connection operative upon movement of the floating means beyond predetermined limits to effect a gradual relative change in position between said first and second means to compen-



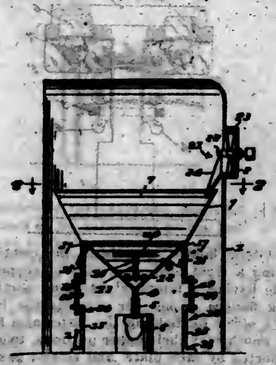
sate for the rise and fall of the tide; substantially as described.

1,396,581. TIE AND RAIL FASTENER. JOHN O. KLEIN, Alliance, Ohio. Filed Dec. 31, 1920. Serial No. 434,209. 11 Claims. (Cl. 238—264.)



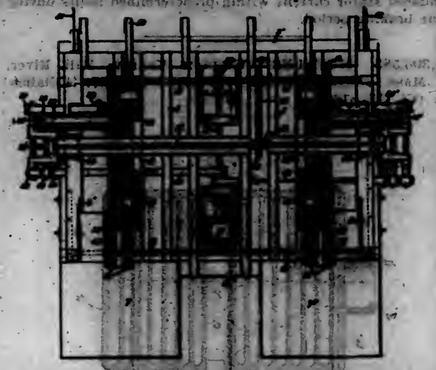
1. In a device of the class described, a rail tie having an obliquely extending channel in its upper face and a rail engaging member occupying such channel, said member having a face extending under the rail and adapted to form a seat for the lower surface thereof.

1,396,582. REPULSION-MOTOR. WILLEM C. KOSTHALS-ALTES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 13, 1918. Serial No. 216,949. 8 Claims. (Cl. 172—276.)



1. The method of dynamically braking a repulsion motor which consists in connecting the exciting component of the stator winding across the source of electrical supply, simultaneously reversing the polarity and connecting the rotatable of the stator winding in multiple with the exciting component, and maintaining the magnitude of the induced stator current within predetermined limits during the braking period.

1,396,583. MUFFLER. WILLIAM KRAUTH, Fall River, Mass. Filed May 9, 1920. Serial No. 380,297. 4 Claims. (Cl. 137—104.)

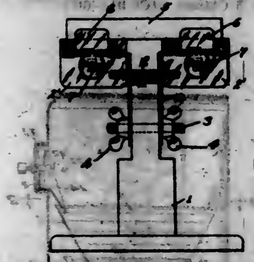


2. In a muffler, a pair of castings having central inlet and peripheral outlet connections, each casting having a spiral wall forming a spiral passage, said walls having abutting and nesting concave and convex edges, and fastening means passed through the castings for securing same together said spiral walls being each continuous and at one end leading from one side of the peripheral connections and at the opposite end terminating in partial surrounding relation to the center connections.

1,396,584. VARNISH-CATCHER. VALENTINE KUKULKA, Muskegon Heights, Mich. Filed Dec. 17, 1920. Serial No. 431,411. 5 Claims. (Cl. 91—60.)

1. The combination with a varnishing booth, of a funnel disposed within the latter and provided with a discharge mouth, and a turn-table for stock to be varnished, the turn-table being disposed within the funnel, whereby excess varnish is directed to the discharge mouth for gathering at the latter.

1,396,585. ABRADING DEVICE. Wesley E. Lamb, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 21, 1919. Serial No. 284,071. 10 Claims. (Cl. 51—140.)



1. An abrading apparatus comprising means for holding sheet metal in a fixed position, an abrading device acting on an edge of said sheet and means for causing relative traversing motion between said sheet and said abrading device.

1,396,586. GAS-PURIFYING COMPOSITION AND METHOD OF MANUFACTURING SAME. Roscoe P. Mabe, Wilkinsburg, Pa., assignor to Mine Safety Appliances Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 9, 1920. Serial No. 388,514. 6 Claims. (Cl. 183—113.)

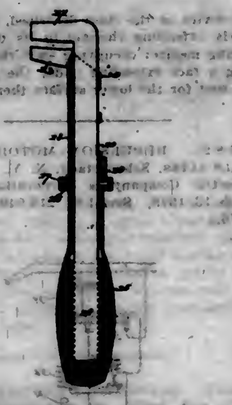
1. A gas-purifying composition, comprising pumice intimately combined with an alkali.

1,396,587. RAZOR-HONE HOLDER. Frank J. Mirson, San Francisco, Calif. Filed Mar. 12, 1919. Serial No. 282,157. 1 Claim. (Cl. 51—211.)

A whetstone holder comprising the combination of a base having a rigid post, of a pair of supporting plates, each plate having a laterally extending portion with two depending flanges, a bolt for securing the two plates to the post, a screw for holding the plates at a fixed distance from one another at their upper portions, two clamp members supported by each plate, and screws passing through the depending flanges for holding the clamp members in place and for drawing them together upon an object.

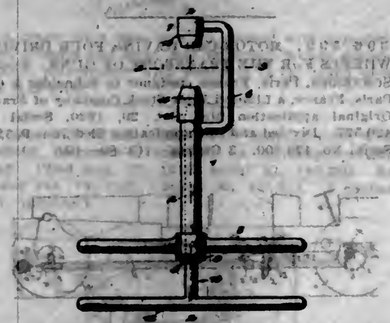
1,396,588. JEWELRY CATCH OR CLASP. Frederick W. Nietzel, Attleboro, Mass., assignor to M. S. Company, Attleboro, Mass. Filed May 5, 1921. Serial No. 467,118. 8 Claims. (Cl. 24—230.)

2. In a clasp, a barrel, a member in the barrel having a shank of partly semi and partly circular-cross section and having a loop on one end and a hook on the other, a guide spindle fitted over the shoulder part and shielding the loop, and a spring arranged over the other part of the shank



and abutting the guide and the opposite end of the barrel, being bent inwardly at both ends to engage the spring and to also engage and normally close the mouth of the hook.

1,396,589. DEMOUNTABLE RIM. Frederick C. Peace, Harrisburg, Pa. Filed Mar. 28, 1921. Serial No. 456,607. 4 Claims. (Cl. 301—35.)

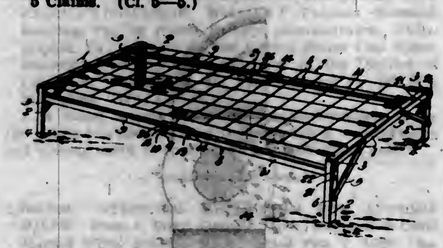


1. A demountable rim comprising, in combination, a rim divided in a plane passing through its tread portion, into two rings each having a side flange, one of said flanges being cut adjacent its base to provide a plurality of notches, a plurality of clamps each shaped to substantially the cross sectional contour of the rim, one end of each clamp in clamping engagement with one of said notches with its end portion substantially flush with the inner surface of the flange, the other end of each clamp adapted to hook about the other ring and engage the exterior of its flange whereby the rim is held in assembly.

1,396,590. WRENCH. Clyde C. Reaver, Marion, Ind. Filed Sept. 16, 1920. Serial No. 410,698. 1 Claim. (Cl. 81—162.)

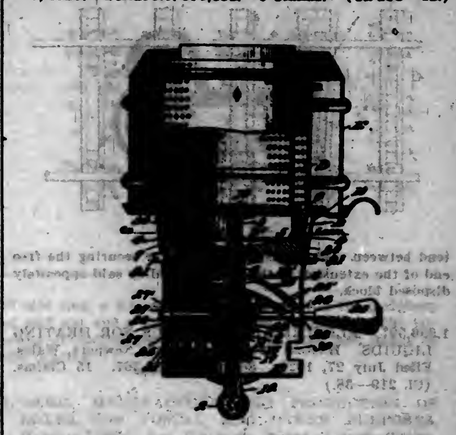
A wrench having a shank carrying a fixed jaw and provided at the opposite end from the jaw with a feed screw, a movable jaw provided with a sleeve slidably mounted on the shank of the fixed jaw, a grip or handle interiorly threaded for engagement with the feed screw and having an integral groove adjacent its upper end slidably engaging a lip on the inner end of the sleeve, and a locking device consisting of an eccentric disk pivotally mounted on said sleeve and engageable with the upper end of the handle in the manner and for the purpose specified.

1,396,591. DOUBLE-GRIP SOCKET WRENCH. Warren D. Reier, Williamsville, N. Y. Filed Aug. 14, 1920. Serial No. 403,452. 1 Claim. (Cl. 81—121.)



A double grip socket wrench comprising a member having a sleeve portion and a squarred portion, a socket member removably secured to said squarred portion, a rod slidably mounted in said sleeve portion and provided with a squarred end portion, a socket member removably secured to said squarred portion of said rod, and handles secured to the first said member and to said rod, as and for the purpose set forth.

1,396,592. LIGHT-SENSITIVE COLLODION COATING MIXTURE AND FILM. Julius Rheinberg, London, England. Filed Oct. 11, 1920. Serial No. 416,813. 7 Claims. (Cl. 96—7.)



1. A light sensitive coating mixture comprising soluble gun cotton dissolved in methyl alcohol, and an organic ferric salt.

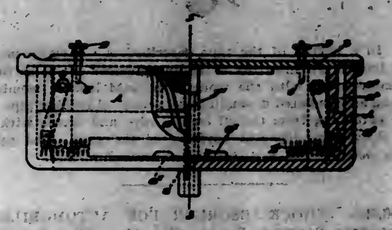
1,396,593. FOLDING COT. Donald W. Richards, San Jose, Calif. Filed Feb. 18, 1921. Serial No. 446,011. 5 Claims. (Cl. 5—5.)

1. A folding cot comprising a spring fabric, end bars connected therewith, folding legs carried by said end bars and extending longitudinally of the end bars when folded, and side bars removably connected with said legs, each side bar having separable end sections having their inner end portions meeting in overlapping relation, one end section having end notches and a side notch, pins carried by the second end section and fitting into the notches of the first section, a latch carried by the first section and releasably engaging the pin fitting into the side notch to retain the sections connected, and a plate carried by the first section and engaging the second section to hold the sections against transverse movement.

1,396,594. BLUE-FLAME OIL-BURNER. Henry Ruppel, Cleveland, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed July 7, 1920. Serial No. 394,481. 9 Claims. (Cl. 158—42.)

1. In a burner of the type described, a vertically movable trough, an inwardly extending member at its bottom communicating with the trough, the said inward member having an elongated depending sleeve, an oil feeding pipe, a tube extending from the oil feeding pipe and fitting within the sleeve, the adjacent surfaces of the sleeve and tube being machine finished, for the purpose described.

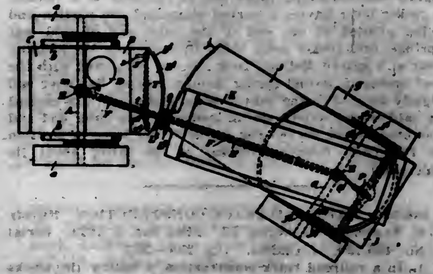
1,396,595. SHOCK-ABSORBER FOR AUTOMOBILES. Filletus Sackett, Kansas City, Mo. Filed Dec. 31, 1920. Serial No. 434,229. 3 Claims. (Cl. 267—19.)



1. In a device of the character described, a leaf spring rigidly secured at its inner end to the body of a vehicle, a rocker lever having a curved segmental rim portion and being pivoted at one end to the outer end of said leaf springs, said rocker lever being fulcrumed on the running gear at a spaced distance from the end connected with the leaf spring, a second spring member having its inner end rigidly secured to the vehicle body, and a carriage carried by said second named spring member at its outer end and mounted on the curved rim of the rocker lever in position to resiliently resist movement of the latter about its fulcrum.

1,396,596. RAILROAD-TRACK CONSTRUCTION. Philip H. Sampson, Waukegan, Ill. Filed Jan. 5, 1921. Serial No. 435,190. 5 Claims. (Cl. 238—50.)

1. In a railroad track construction, a hollow tie, blocks disposed in said tie, a rail carried by each block, rail-holding plates carried by said blocks and so disposed that

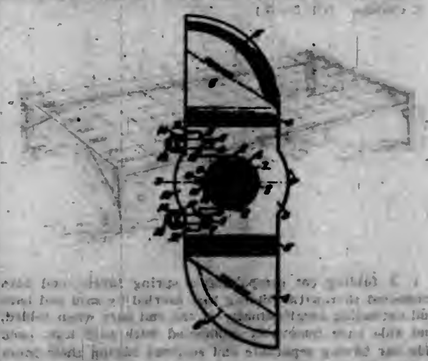


the mill rests on a portion of such plate, one of said plates having an extension, said extension being adapted to extend between said blocks, and means for securing the free end of the extension to the plate carried by said oppositely disposed block.

1,396,597. ELECTRICAL APPARATUS FOR HEATING LIQUIDS. HAROLD CRANSTON SANDERS, Newport, Wales. Filed July 27, 1920. Serial No. 393,267. 15 Claims. (Cl. 219—38.)

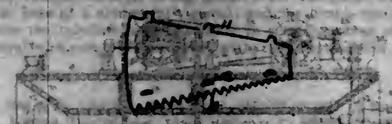
1. An electric liquid heater comprising in combination a container formed as an oblong basin, a trough in said container, a heating element arranged horizontally in said trough, a reservoir in said container bounded by the wall of the trough and the body of the container, a liquid inlet passing through the bottom of the container into the reservoir and discharging at the upper part of said reservoir, apertures in the lower part of the wall separating the trough and reservoir, and a liquid discharge outlet connected to said trough at a lower level than the discharge end of the liquid inlet within the reservoir.

1,396,598. MOTOR-CAR HAVING FOUR DRIVING-WHEELS FOR THE TRANSPORT OF GUNS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Oct. 29, 1920. Serial No. 420,527. 6 Claims. (Cl. 89—40.)



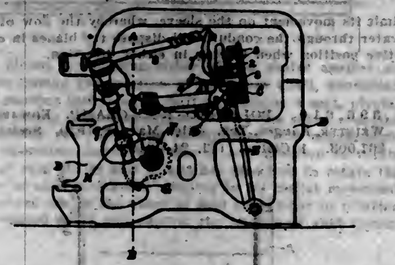
6. In a motor driven car for transporting guns, the combination of a motor driven forward wheeled truck and a rear wheeled trail, a hollow draw-bar having flexible connections with said truck and carriage, a drive shaft housed in said draw-bar and having drive connections with said motor and driving connections with said rear carriage wheels, said forward truck having a toothed sector the center of which is in a line perpendicular to its truck axle at the center of the latter, a trail supporting plate, anti-friction bearings between said plate and draw-bar, said plate having a curved toothed sector having its center in a line normal to the center of the gun carriage axle and gear connections between said toothed sectors carried by said draw-bar for transmitting steering movements of the front truck to the rear gun carriage.

1,396,599. MOTOR-CAR HAVING FOUR DRIVING-WHEELS FOR THE TRANSPORT OF GUNS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Original application filed Oct. 29, 1920, Serial No. 420,527. Divided and this application filed June 9, 1921. Serial No. 476,999. 8 Claims. (Cl. 89—40.)



1. In a motor-driven car for transporting guns, the combination of a motor-driven forward wheeled truck having steering means and a rear wheeled trail gun carriage, a tubular draw-bar having flexible connections with said truck and carriage, a drive shaft housed in said draw-bar and having drive connections with said motor and driving connections with said rear carriage wheels, said forward truck having a toothed sector the center of which is in a line perpendicular to its truck axle at the center of the latter, a trail supporting plate, anti-friction bearings between said plate and draw-bar, said plate having a curved toothed sector having its center in a line normal to the center of the gun carriage axle and gear connections between said toothed sectors carried by said draw-bar for transmitting steering movements of the front truck to the rear gun carriage.

1,396,600. ROTARY CUTTER. ALFRED MERVYN SIMPSON, Honolulu, Hawaii. Filed June 27, 1921. Serial No. 480,311. 9 Claims. (Cl. 146—29.)

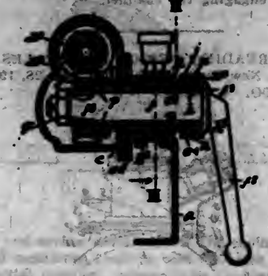


1. A rotary cutter comprising a shaft having a series of peripherally spaced longitudinal keyways therein, a series of separate knives mounted on said shaft, each knife including a thick hub section and thinner integral radial blades, and separate keys connecting the hubs only to the shaft, each key having a length greater than the thickness of the hub and serving to engage and space adjacent knives.

1,396,601. WIRE-TYPE CHARACTER. THADDEUS L. SMITH, of Boston, Mass. Filed Sept. 28, 1921. Serial No. 501,504. 4 Claims. (Cl. 24—142.)

2. A blank for a glass lamp tip, formed with oppositely located tongues and slots, and engaging devices adapted to extend transversely with reference to the blank when rolled into a tip.

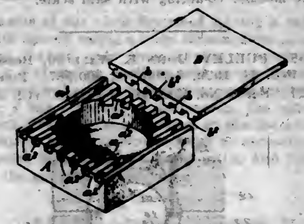
1,396,602. SHUTTLE-ACTUATING MECHANISM FOR LOOMS. RICHARD HARTERLEY SMITH, Keighley, England. Filed Aug. 27, 1917. Serial No. 188,284. Renewed Feb. 14, 1921. Serial No. 445,014. 2 Claims. (Cl. 139—48.)



2. In shuttle actuating mechanism for a loom, a rotary shaft, a picking cam mounted on said shaft, a picking shaft arranged at an angle to the vertical plane in which the rotary shaft of the loom is situated and also at an angle to the vertical plane in which the end frame of said loom is situated, an arm extending from said picking shaft at approximately right angles thereto, a picker, a strap secured to said arm and to said picker, supports and guides for said picker and a shuttle box within which said picker operates.

1,396,603. PROCESS OF MAKING BRIQUETS AND PRODUCT THEREOF. WILLIAM P. TAGGART deceased, Reading, Pa., by Hattie Stearly, administratrix, Philadelphia, Pa., assignor to The United States Coal Manufacturing Company, a Corporation of the District of Columbia. Filed Mar. 10, 1920. Serial No. 364,612. 20 Claims. (Cl. 44—16.)

1. A baked briquet of combustible carbonaceous material which has disseminated therethrough a waterproofing and binding agent comprising an insoluble silicic acid.



1,396,604. STEERING MECHANISM FOR AUTOMOBILES. FRED I. TOUR, Detroit, Mich., assignor to Child Harold Wills, Detroit, Mich. Filed Feb. 7, 1920. Serial No. 356,914. 7 Claims. (Cl. 74—79.)

7. In an apparatus of the kind described, a socket piece, an eccentric bearing in said socket piece adapted to be adjusted longitudinally therein, said bearing having an outwardly extending annular flange at the end of said socket piece, said flange being provided on its periphery with spaced, laterally extending grooves, said socket piece being provided with a longitudinally extending groove in its outer surface, a ring having an inwardly extending lug, said ring being adapted to pass over said socket piece and its lug to engage in the groove in said socket piece, said ring having a transverse slot in its periphery and a locking piece adapted to engage in the laterally extending slot in said ring and in said flange of the bearing, said outlet piece being screw threaded at its end, a nut having internal screw threads engaging the threads on said socket piece, said nut being located inside

of said ring, a laterally extending groove in the periphery of said nut and a lug piece adapted to engage in the laterally extending grooves in said nut, ring and flange of the bearing.

1,396,605. MANUFACTURE AND PRODUCTION OF BOXES FOR POSTAL AND OTHER PURPOSES. HAROLD UREDE and CHARLES HENRY JASPER GOOCH, London, England, assignors to Wood Postal Boxes Limited, Stratford, England, a Corporation of Great Britain. Filed Nov. 5, 1920. Serial No. 421,920. 1 Claim. (Cl. 217—5.)

A box with a body-part made in one piece in which is, or are, a recess, or recesses, for the article, or articles, to be contained therein, and a lid, or cover, also made in one piece, the said body-part and lid, or cover, being provided with grooves, or recesses, and ribs, or other projections, so arranged, shaped, and disposed, that the lid, or cover, when put in place on the body-part, can be pressed down into the closed position so that the ribs, or other projections, on the one part are engaged with the grooves, or recesses, in the other part; substantially as hereinbefore explained.

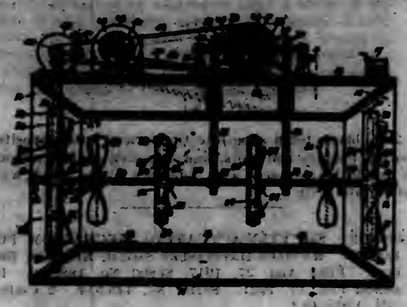
1,396,606. FUNNEL. CHARLES W. VINCENT, Ashley, Pa. Filed Feb. 14, 1921. Serial No. 444,737. 2 Claims. (Cl. 226—29.)

1. A funnel for filling radiators for internal combustion engines comprising a body part and a spout part,

spout having an exterior channel for receiving the upper end of the overflowing pipe of the radiator, a cap removably engaging the spout and adapted to engage the filling spout of the radiator, said cap having an ear thereon for engaging the channel.

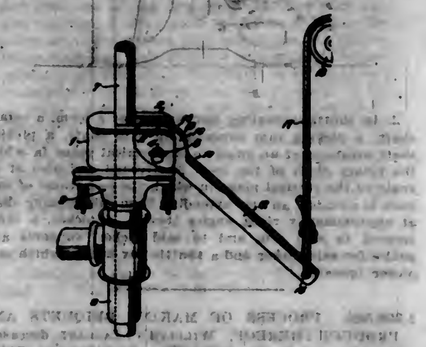
1,396,607. READING DEVICE FOR SCALES. GUSTAV VON POST, New York, N. Y. Filed Aug. 28, 1920. Serial No. 406,600. 4 Claims. (Cl. 248—1.)

1. In a weighing device having a scale with unit prices marked thereon, and a member rotatable with respect to said scale, having series of products of weight and price, each series registrable with a unit price indication on said scale in combination with a reading slide movable along said scale having a reading opening therein of substantially the same width as a series and a price indicating division, a zero indicator carried by said slide and a parallax indicator coöperating with said zero indicator, whereby said slide and its indicators are eligible into reading position along said scale and across the series on said rotatable member co-acting with said scale.



1,396,608. PULLEY. JOHN E. WALLING, Bessemer, Ala. Filed Feb. 24, 1920, Serial No. 360,587. Renewed Apr. 4, 1921. Serial No. 458,388. 1 Claim. (Cl. 64—18.)

A split pulley comprising a pair of complemental sections, each including a semi-circular rim section and a spoke having a semi-circular depression therein, a semi-circular bushing section seated in said depression, said bushing section having located at one end a tangentially disposed opening, and a shoulder within said opening and also having a tangentially disposed opening at the opposite end of the bushing section and a bolt extending through the openings in each bushing section and through a registering opening in one of the spokes.



1,396,609. CURRENT OR TIDE MOTOR. GEORGE P. A. WEISENBORN, Salt Lake City, Utah, assignor, by mesne assignments, to said George P. A. Weisenborn, trustee in trust of The United Manufacturing and Power Company, Seattle, Wash. Filed May 4, 1920. Serial No. 378,756. 2 Claims. (Cl. 170—126.)

2. In an apparatus of the class described, a submersible barge having a conduit therethrough, a shaft mounted for rotation in said conduit, propeller devices attached to said shaft and each including a hub, an annular rim connected to said hub by radiating rods, a sleeve rotative on each of said rods, a tubular member rotative on each sleeve, winged extensions upon each of said tubular members and a stop disengageably connected with each tubular member to

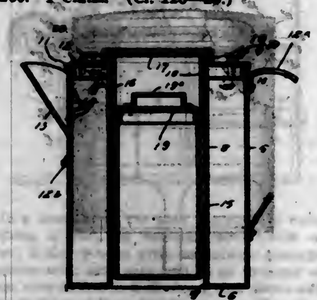
limit its movement on the sleeve, whereby the flow of the water through the conduit will dispose the blades in operative position when flowing in either direction.

1,396,610. POLISHED-ROD CLAMP. EDWARD P. WHISTER, Ranger, Tex. Filed Mar. 18, 1920. Serial No. 367,003. 1 Claim. (Cl. 24—248.)

In a rod clamp, a yoke member, a flat oval shaped gripping member eccentrically pivoted between the arms of the yoke member, said pivot being in the major axis of the gripping member, the end of the gripping member remote from the pivot being serrated, a handle on the gripping member, said gripping member being adapted to grip and hold a rod against movement in either direction through the yoke.

1,396,611. RETAINING DEVICE FOR SCREWS OR BOLTS. GROVER W. WHITE, Atlanta, Ga. Filed Feb. 16, 1921. Serial No. 445,412. 1 Claim. (Cl. 85—32.)

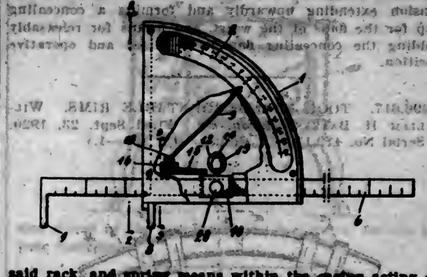
A device of the class described comprising a tubular element having an external thread one end of which terminates in a cutting point, and the tubular element being



provided with spaced longitudinal channels interrupting the thread, and one end of a tubular element having a transverse slot, and an element threaded into the bore, the tubular element being adapted for reception within the bore of a structural element, and the device threaded into the tubular element serving to retain another structural element in engagement with that first named.

1,396,612. KEEO-SETTING MECHANISM. NELSON WHITE, Des Moines, Iowa, assignor to Monroe Calculating Machine Company, New York, N. Y., a Corporation of New York. Filed Oct. 28, 1920. Serial No. 419,026. 5 Claims. (Cl. 235—144.)

1. Means for holding either of two shafts against rotation during the rotation of the other shaft, consisting of a member fast to each shaft and having a seat, pivotal arms having normal engagement with the seats, a spring connecting said arms and maintaining said engagement, and operating means movable in one direction to rotate one of said shafts and in another direction to rotate the other of said shafts and adapted in its initial movement to release one or the other of said arms prior to rotating the related shaft and against the tension of said spring.

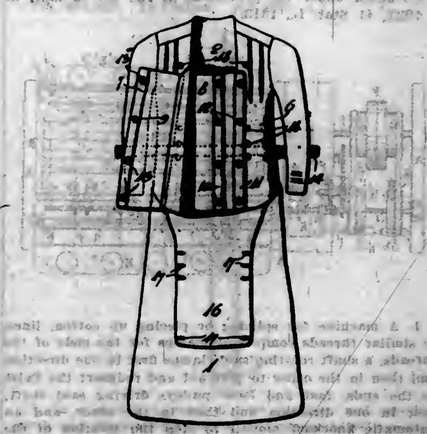


1,396,613. CAMPER'S COOKER. ARTHUR B. WILBY, Sweetwater, Okla. Filed July 8, 1919. Serial No. 309,260. 1 Claim. (Cl. 126—89.)

In a cooker, a receptacle having a flue, a cover closing the space exterior to the flue, a container in the flue, and a handle for the container engaging the top of the flue to hold the container in suspension and projecting beyond the flue to engage the cover and retain it in place.

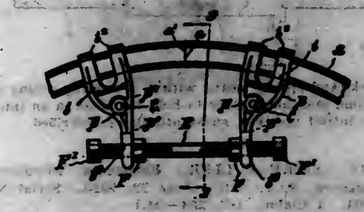
1,396,614. MICROMETER-GAGE. EDWARD HUGH WILLIAMS, New Orleans, La. Filed Oct. 26, 1920. Serial No. 419,780. 2 Claims. (Cl. 33—147.)

1. A micrometer gage comprising a casing having a recessed block in its lower edge and a scale along one side thereof, a ruler slidable in the recess in said block, lugs on said casing and ruler, a second block mounted within the casing and being relatively movable to said first mentioned block, and to the ruler, said ruler slidably fitting through the last mentioned block, means carried by the last mentioned block for clamping the latter to said ruler, a rack permanently connected to said second mentioned block, a pointer in the casing adapted to move over said scale and having teeth adapted to engage with said rack, and spring means within the casing acting on said second mentioned block to hold the same in an intermediate initial position, substantially as described.



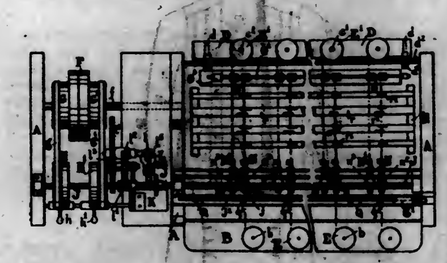
1,396,615. SPIKE-PULLER. FREDERICK WOODCOCK, Duanesburg, N. Y. Filed June 22, 1920. Serial No. 390,704. 1 Claim. (Cl. 254—21.)

An extractor of the class described having a mounting member with spaced walls, a lever intermediate said walls and pivoted thereto, said lever having a notch beyond the walls, a leaf spring to close said notch disposed intermediate said walls and on the lever, an extractor member having a bar disposed in said notch, the side walls of said notch diverging from the base to the entrance, said spring engaging said extractor member to normally maintain it spaced with respect to said walls, and retaining means for the springs on said arms.



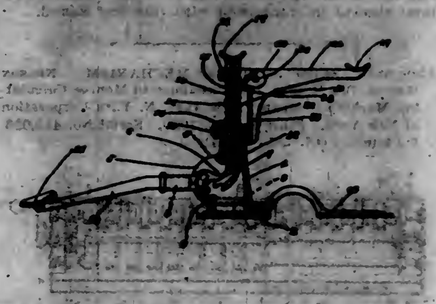
1,396,616. GARMENT. LEANORE E. ALLEIGH, San Francisco, Calif. Filed Mar. 21, 1921. Serial No. 453,999. 4 Claims. (Cl. 2—145.)

1. A dress comprising a skirt and waist, the waist having unconnected front side sections provided with



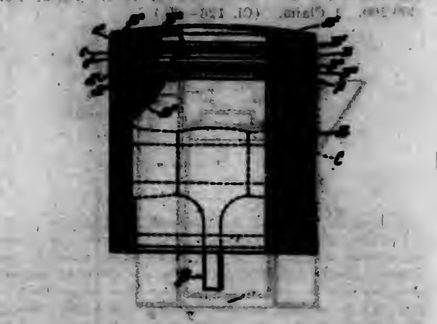
flap extensions for extending in overlapped relation, means for releasably holding the flap extensions in adjusted overlapped relation, the skirt having a flap extension extending upwardly and forming a concealing flap for the flaps of the waist, and means for releasably holding the concealing flap in a raised and operative position.

1,396,617. TOOL FOR DEMOUNTABLE RIMS. WILLIAM H. BASKIN, Macon, Ga. Filed Sept. 23, 1920. Serial No. 412,156. 1 Claim. (Cl. 157—1.)



A tool of the character described, comprising a pair of clamps, each clamp being formed of a pair of reversely disposed gripping members, each member being flared outward and broadened laterally and bifurcated at its heel, and then curved inward to form a bifurcated gripping claw, the heads of said gripping members being each grooved on the inner side to form a passageway substantially parallel to said claws, and the said members being perforated transversely intermediate of said grooves and said claws, screw bolts passing, respectively, through said perforations in each pair of gripping members, with nuts on said bolts for drawing said jaws together, and a right and left-handed screw having its ends passing said grooves, with nuts on said last mentioned screw, respectively engaging the heads of said clamps, substantially as and for the purpose described.

1,396,618. MACHINE FOR SPLICING AND PIECING UP COTTON, LINEN, OR SIMILAR THREADS. ARTHUR BENNETT, Hollinwood, England. Filed Apr. 2, 1921. Serial No. 458,168. 5 Claims. (Cl. 28—2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

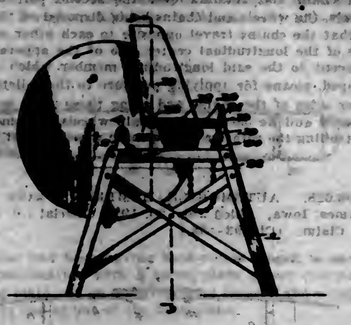


1. A machine for splicing or piecing up cotton, linen or similar threads comprising clamps for the ends of the threads, a shaft rotating said clamps first in one direction and then in the other to take out and re-insert the twist in the ends, fast and loose pulleys driving said shaft, first in one direction and then in the other, and an automatic knock-off motion to stop the rotation of the shaft after making the predetermined number of revolutions for taking out or re-inserting the twist.

1,396,619. AUTOMOBILE JACK. GUY L. BOWMAN, West Haddam, Conn. Filed Aug. 16, 1920. Serial No. 403,690. 5 Claims. (Cl. 254—116.)

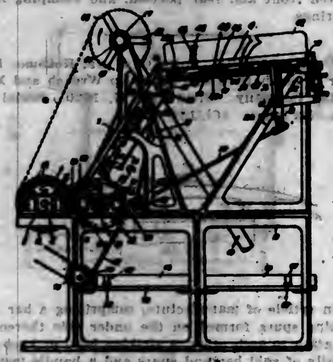
1. A jack including a pedestal, a foot lever fulcrumed therein, a stem slidable in the pedestal and connected to the lever, means for engaging the stem to hold it against downward movement, an extension bar detachably connected to the pedestal, and an extension head adjustably connected to the stem and overhanging the extension bar.

1,396,620. METALLIC PISTON PACKING. HARRY MORTON BRAMMER, Norfolk, Va., assignor to Piston Research Corporation, Norfolk, Va., a Corporation of Virginia. Filed Apr. 8, 1921. Serial No. 460,568. 2 Claims. (Cl. 74—109.)



1. In a metallic piston packing, the combination with a piston provided with an annular groove in the cylindrical portion thereof, said groove having parallel side walls perpendicular to the axis of the piston, and having also a pair of annular ribs each rectangular in cross section projecting outward from the bottom of said groove, of a compound packing ring composed of two outer rings each substantially L-shaped in cross section, and a middle ring mounted between said outer rings and bearing against the adjacent faces of said outer packing rings.

1,396,621. MACHINE FOR TREATING GRAIN, &c. HAROLD L. BUNN, Hatton, N. D. Filed Apr. 16, 1921. Serial No. 461,893. 6 Claims. (Cl. 83—28.)

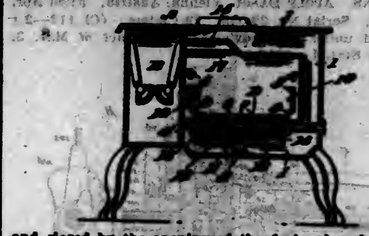


1. In a machine for treating grain and other agricultural products, an unbalanced or over-weighted drum which, by reason of its unbalanced or overweighted con-

dition, is adapted to automatically turn to a draining position when free having a compartment for containing

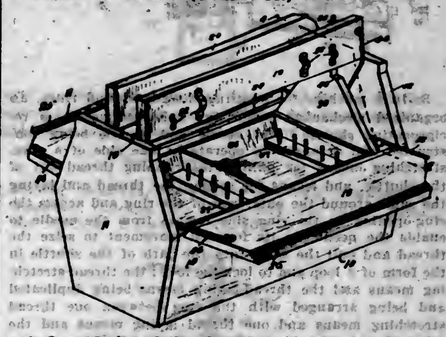
a solution and another compartment in communication therewith for containing grain or other product to be treated.

1,396,622. FEEDING MECHANISM FOR PRINTING-MACHINES. ALFRED SEDGEAR BULLEN and CHARLES JEAYES, Auckland, New Zealand. Filed Aug. 26, 1920. Serial No. 406,352. 6 Claims. (Cl. 271—28.)



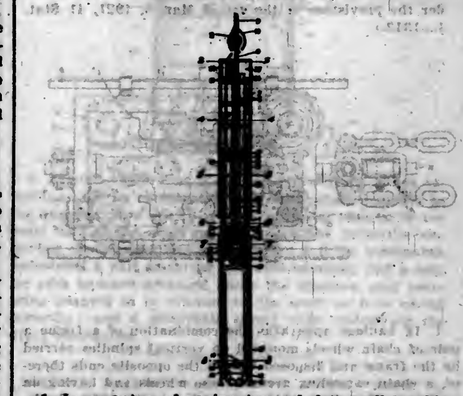
1. In a machine of the kind described, a hollow spindle containing a port, in communication with an air exhauster; a sleeve with arms containing passages adapted to register with said port and to be directed so that the vacuum acts on stacked envelops, and slides adjustable in the extremities of the arms for varying the cross sectional areas of the passages therein.

1,396,623. COMBINED GAS AND WOOD AND COAL RANGE. GUY B. CHISO, Chicago, Ill., assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Nov. 11, 1919. Serial No. 337,216. 6 Claims. (Cl. 126—94.)



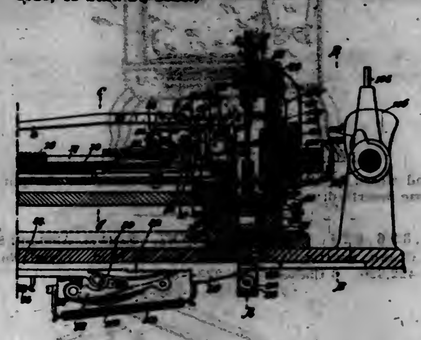
1. A cooking range of the character described, comprising an oven, a burner chamber below the oven and in communication with the oven, an air inlet passage in communication with the burner chamber extending laterally thereto, the inlet passage having longitudinally extending supplemental passage connections communicating with the ends of the burner chamber, an air outlet passage communicating with the oven, a chimney flue communicating with the said oven outlet passage, a gas burner in the burner chamber, a fuel valve for the burner, dampers adapted to open and close the air inlet and the oven out-

let flue, and operative connections between the fuel valve and both of said dampers whereby the dampers are opened



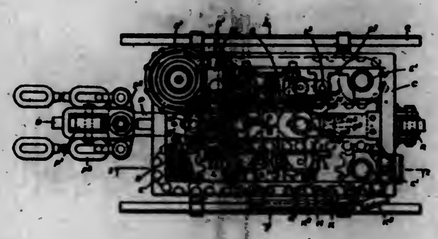
and closed by the opening of the fuel valve, for the purpose described.

1,396,624. SEWING-CABINET. SAMUEL ADOLPHUS CLARK, Seattle, Wash. Filed Nov. 6, 1920. Serial No. 422,520. 6 Claims. (Cl. 223—52.)



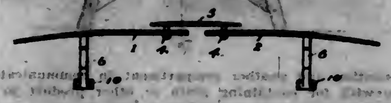
1. In a device of the class described, a casing including hinged side elements movable outwardly and from each other to open position, hinged top elements movable toward each other to open position, and means for moving the side and top elements to open or closed position simultaneously.

1,396,625. EARTH-BORING MACHINE. CLYDE S. CORMAN, Norwood, Ohio. Filed July 15, 1920. Serial No. 396,892. 16 Claims. (Cl. 255—4.)



1. In a motor advancing type of deep well machine, earth and stone cutting saws, motors operatively connected thereto and means of raising and lowering and supplying power to said machines.

1,396,626. MACHINE FOR COVERING RINGS WITH THREADS, ESPECIALLY FOR MAKING THREAD-BUTTONS. ADOLF DANZL, Vienna, Austria. Filed Apr. 17, 1915. Serial No. 22,023. 29 Claims. (Cl. 112—2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



3. In a machine for securing threads around rings, an organized mechanism comprising a beaked needle, a reciprocating shuttle; said needle and shuttle being constructed and arranged to operate at one side of a ring, stretching means for pulling the running thread out of the shuttle, and means for making the thread and laying the same around the outer rim of the ring and across the ring-opening on the ring side remote from the needle to enable the needle on its forward movement to seize the thread and pull the same into the path of the shuttle in the form of a loop and to lock the loop; the thread-stretching means and the thread-laying means being duplicated and being arranged with the ring between one thread stretching means and one thread laying means and the other thread stretching means and thread laying means, and the thread laying means being constructed and arranged to lay the running thread across one side and then across the other side of the ring, around the edge and across the opening of the ring.

1,396,627. HAULAGE APPARATUS. CHARLES THOMAS DENHAM, Massa, Italy. Filed June 28, 1920. Serial No. 392,498. 9 Claims. (Cl. 105—30.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In haulage apparatus the combination of a frame a pair of chain wheels mounted on vertical spindles carried by the frame and disposed toward the opposite ends thereof, a chain extending around these wheels and having on its inner side rollers which engage the teeth of the wheels, members mounted on the exterior of the chain and adapted to engage and grip a longitudinal member to which haulage power is to be applied, a second pair of chain wheels mounted and arranged similarly to the first pair, a chain with rollers and gripping members similar to the first chain and running over the second pair of chain wheels, the wheels and chains being disposed on the frame so that the chains travel opposite to each other on either side of the longitudinal center line of the apparatus and adjacent to the said longitudinal member which is to be gripped, means for applying pressure to the rollers on the inner sides of the chains and along those parts which are opposed and lie between the chain wheels, and means for controlling the rotation of the chain wheels as set forth.

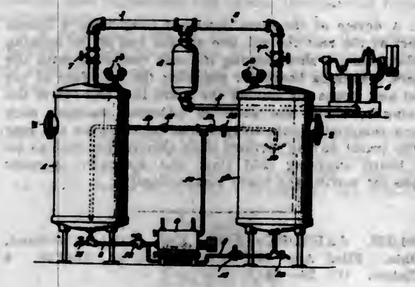
1,396,628. AUTOMOBILE BUMPER. FRANK ELLIS, Ames, Iowa. Filed July 26, 1920. Serial No. 397,581. 1 Claim. (Cl. 293—85.)

An automobile bumper comprising curved end bars, each provided with a slot adjacent the end, a solid central bar, bolts projecting from the central bar and adjustably mounted in said slots, vertically extending springs connected at a central point to said end bars and each having a curved front and rear portion, and clamping arms for the springs.

1,396,629. CAM-PINION. JOHN G. HAAS, Kokomo, Ind., assignor of one-half to The Speed-Up Wrench and Manufacturing Company. Filed Apr. 27, 1920. Serial No. 376,926. 8 Claims. (Cl. 164—118.)

1. As an article of manufacture, comprising a bar having punching spurs formed on the under side thereof in spaced relation to each other, a striking head or knob carried medially of said bar and spurs and a handle member terminally of said bar.

1,396,630. TOOTHBRUSH-HEAD. LE GRAND HIGGINS, Clovis, Ill. Filed Apr. 12, 1920, Serial No. 373,227. Renewed Sept. 21, 1921. Serial No. 502,260. 2 Claims. (Cl. 15—87.)

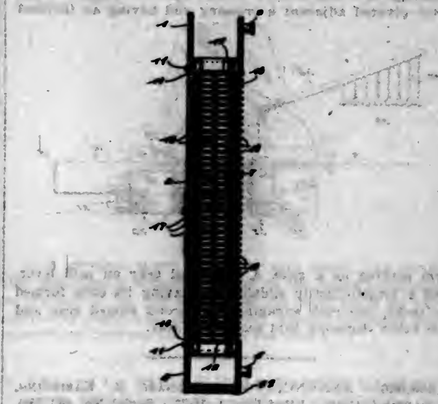


1. A tooth brush head comprising a casing, a shaft projecting therefrom, a plurality of spring tongues struck from the casing, a base having a plurality of recesses for detachable engagement with the tongues, and bristles projecting from the base.

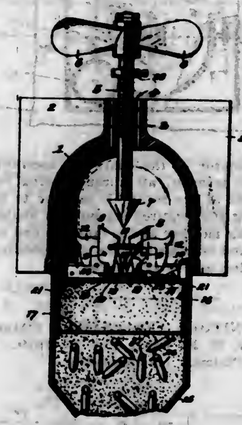
1,396,631. LOOSE-LEAF BINDER. MARK P. JACKSON, Abbeville, Ga., assignor to Beorum and Pease Company, New York, N. Y., a Corporation of New York. Filed Feb. 3, 1920. Serial No. 356,494. 2 Claims. (Cl. 129—24.)

1. A loose leaf book having hook-plates hinged to each other in combination with a spring-plate to act thereon, a retaining plate and an upwardly bent lever of the second class on the end of one of the hook-plates.

1,396,632. METHOD AND APPAPATUS FOR TREATING LIQUIDS. AAGE JENSEN, Portland, Oreg., assignor to Jensen Creamery Machinery Company, Inc., a Corporation of New York. Filed May 31, 1919. Serial No. 301,131. 4 Claims. (Cl. 99—18.)



1. The process of treating milk, cream, and the like, which consists in subjecting the same to sub-normal pressure to withdraw free oxygen and gaseous content, and when in this condition in subjecting the same to a pasteurizing temperature while moving rapidly in a thin layer, said pasteurizing action being obtained through a continuous circulation of the material between the point of sub-normal pressure and the pasteurizing point.

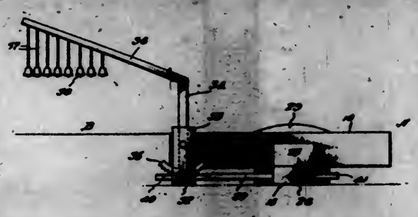


4. An apparatus for treating milk, cream, and the like, comprising a plurality of containers, means for applying a vacuum thereto, a pasteurizing apparatus, and connections between each of said containers and said pasteurizing apparatus for permitting a continuous circulatory movement of the material being treated through any one of said containers and said pasteurizing apparatus.

1,396,633. RADIATOR FOR AUTOMOBILES AND THE LIKE. HENRY N. JENSEN, Estherville, Iowa. Filed Apr. 12, 1920. Serial No. 373,318. 5 Claims. (Cl. 257—130.)

1. In a radiator for automobiles or the like, the combination of a unit including upper and lower tanks and vertical conduits disposed between the tanks and communicatively connecting them together; of a second unit mounted upon the first unit and detachable as a whole therefrom while the first unit is completely assembled, said second unit comprising a frame fitted upon the front of the first unit, a plurality of horizontal fin plates secured to and carried by said frame and having notches receiving said conduits, and means for detachably securing said frame to the front of the first unit.

1,396,634. AERIAL TORPEDO OR BOMB. EDWARD W. JOHNSON, Chicago, Ill. Filed Nov. 26, 1917. Serial No. 203,984. 3 Claims. (Cl. 102—2.)

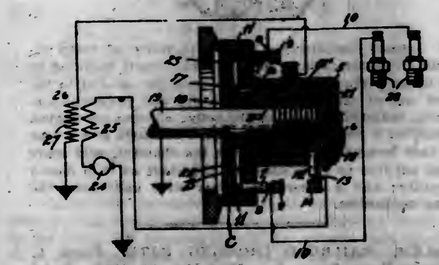


3. A bomb comprising a body, a plurality of wings extending radially therefrom; a threaded shaft mounted in the upper portion of the body; a propeller secured to the outer end of the shaft; an explosive and projectile-containing chamber secured to the body; a firing mechanism embodying a pair of spring actuated hammers and a sear for each hammer arranged above the chamber, said sears being adapted to be released by the shaft as it is moved inwardly; and a removable safety slide underlying the firing mechanism.

1,396,635. RAILROAD-CROSSING GATE. STINE L. JONES, Baton Rouge, La. Filed Mar. 19, 1921. Serial No. 453,553. 3 Claims. (Cl. 246—302.)

1. In a trackway, a depressible shoe engageable by the wheels of a train whereby to be moved downwardly,

springs normally urging said shoe upwardly, a rack depending from said shoe, a shaft, a pinion on said shaft meshing with said rack, a second pinion on said shaft, a lever pivoted adjacent a crossing and having an inclined



arm serving as a gate, a segmental gear on said lever, and a longitudinally slidable bar having its ends formed as racks, one rack engaging the second named gear and the other engaging said segmental gear.

1,396,636. ANNUNCIATOR. BERNARD R. KABIGTING, Oakland, Calif. Filed Feb. 1, 1921. Serial No. 441,580. 5 Claims. (Cl. 40—96.)

1. An annunciator of the character specified, comprising a rotatable member, an apron bearing legends and geared to an end of the rotatable member to be operated thereby to bring the required legend into visible position, and an operating member at the opposite end of the rotatable member and bearing legends corresponding with the legends appearing on the said apron.

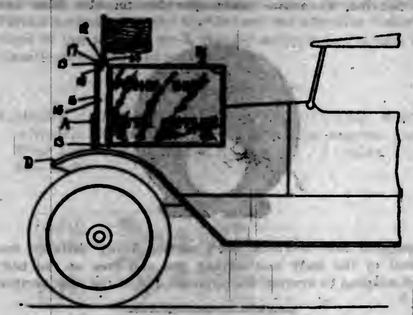
1,396,637. IGNITION APPARATUS. CHASE KENNEDY, Perth Amboy, N. J. Filed July 25, 1919. Serial No. 313,166. 3 Claims. (Cl. 200—19.)

1. An ignition device comprising a disk-like element having a hub provided with a metallic bushing adapted for operative connection with one end of a cam shaft and serving to hold said disk-like elements in a position at right angles to the axis of said cam shaft, a metallic collector ring secured to said disk-like element and provided with a radial arm, said ring being eccentric with the disk like element, a cap housing said disk-like element, contact devices carried by said cap, said contact devices respectively adapted to co-act with said radial arm of the aforesaid collector ring and lying parallel to the axis of the bushing of said disk like element, a contact element radiating from the cap and co-acting with said metallic bushing, a contact brush co-acting with said metallic collector ring, the disk-like element formed of insulating material and associated with respect to the walls of the cap to prevent leakage of the current past the effective sparking points between the metallic ring and its co-acting contact devices, all of said contact devices and said brush adapted to be operatively arranged in an ignition circuit.

1,396,638. POSTER-FRAME. WILLIAM ARTHUR KILGO, Asheville, N. C. Filed Apr. 2, 1921. Serial No. 457,966. 2 Claims. (Cl. 40—86.)

1. A device of the class described comprising a frame, rollers at the rear thereof, one at each end of the opening in the frame, a sheet having its ends connected with the rollers, a backing board for engaging the rear face of the sheet and means for moving the board into and out of the opening to clamp the sheet in adjusted position, such means comprising outwardly extending parts on the rear of the frame having inclined slots therein, projections on the board engaging said slots and manually operated means for moving the board longitudinally.

1,396,639. LAUNDRY-CLIP. LADA KIML, Cleveland, Ohio. Filed Apr. 17, 1920. Serial No. 374,728. 4 Claims. (Cl. 24—261.)

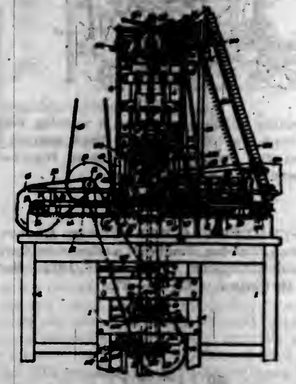


1. A laundry clip comprising a plate, a wire, the wire being provided with a loop, the loop of the wire being pivoted to the plate, and the plate being provided with means for holding the free ends of the wire when the wire is inclined with relation to the plate, substantially as described.

1,396,640. ADVERTISING DEVICE. CHARLES W. KING, St. Louis, Mo. Filed Dec. 12, 1920. Serial No. 430,218. 6 Claims. (Cl. 40—125.)

1. A device of the character described comprising a bar adapted for connection at its center with the filling neck of a radiator, clamping means carried by said bar and engageable with the filling neck of a radiator, uprights at

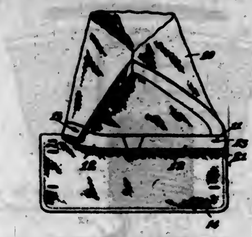
the ends of said bar, plate members pivoted upon said uprights and adapted to bear display matter, a cross bar



connecting the upper ends of said uprights whereby to hold them rigid, and means for locking said plates with respect to said uprights.

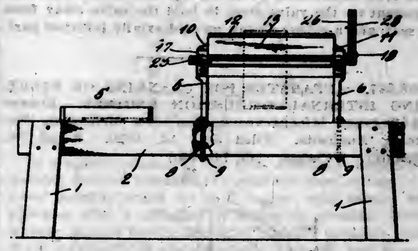
1,396,641. MEDICATED CHEWING-GUM. GUY KING, Atlanta, and CHARLES G. ADEIT, Tallulah Falls, Ga. Filed Mar. 12, 1921. Serial No. 451,771. 5 Claims. (Cl. 99—16.)

1. A medicated chewing gum comprising the ordinary chewing gum ingredients and having incorporated therein a chloroamin.



2. A medicated chewing gum comprising the ordinary chewing gum and one or more of the chloroamins in about the proportion of one thousand (1000) parts of the former to five (5) parts, or less, of the latter.

1,396,642. DRY-CELL TAMPING APPARATUS. HENRY T. LANG, Fremont, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Oct. 13, 1917. Serial No. 196,541. 20 Claims. (Cl. 226—1.)

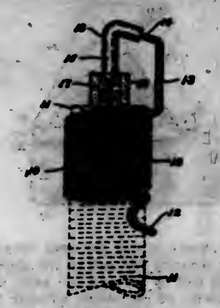


1. In apparatus for tamping mix in dry cell cans, the combination of a reciprocating can carriage and tamping means separable as the mix is tamped in the can and in tamping relation when adjacent each other, an intermittently rotatable can carrier having pockets for cans, a continuously moving conveyer coöperating with said pockets adapted to feed empty cans thereto, a retaining arm coöperating with the empty cans on said conveyer adapted to retain the cans thereon during the rotation of the can carrier and means operated by the can carriage adapted to move the arm to release a single can from the conveyer when the tamping means and can carriage are separated to deposit said can in one of said pockets.

1,396,643. REVERSIBLE CUFF. JOHN J. LONG, Norfolk, Va. Filed Apr. 4, 1921. Serial No. 458,491. 13 Claims. (Cl. 2—79.)

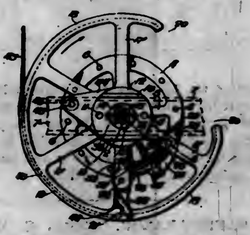
2. A garment sleeve, a cuff for said sleeve, and means for permanently securing the cuff to the sleeve permitting a reversal of the cuff by turning the same about an axis extending lengthwise of the sleeve without breaking said connection between the cuff and the sleeve.

1,396,644. PRESS-CLOTH-REPAIRING MACHINE. ABNER JUDSON LUBEY, Baton Rouge, La. Filed Jan. 14, 1921. Serial No. 437,295. 6 Claims. (Cl. 223—54.)



1. A device of the kind described comprising a support, fixed jaws associated therewith, movable jaws coöperating with the fixed jaws, holders for the movable jaws, formed with eccentric straps, eccentrics movable in said straps, rock shafts for moving said eccentrics, and handles on said rock shafts, substantially as described.

1,396,645. SAFETY-RAZOR. EDWIN C. MADDEN, New York, N. Y. Filed Feb. 6, 1920. Serial No. 356,620. 7 Claims. (Cl. 30—12.)



1. In a safety razor, a handle; a spring yoke carried thereby; oppositely disposed pintles carried by the yoke; a blade supporting bed pivotally mounted on the pintles; a blade clamping member likewise pivotally mounted on the pintles; and friction connections between the yoke and bed, and between the bed and clamping member serving to hold the parts in their adjusted position.

1,396,646. INNER-TUBE DEFLATOR. GEORGE S. MELLOR, Philadelphia, Pa. Filed June 25, 1921. Serial No. 480,434. 4 Claims. (Cl. 152—12.)

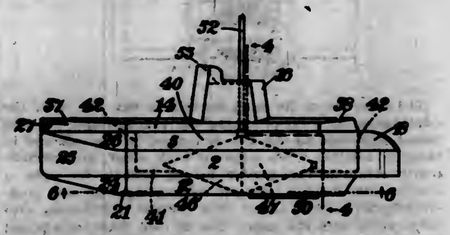
3. A deflator for pneumatic tires consisting of a spirally wound wire tube having an inherent degree of retraction and formed at one end with a manipulating finger whereby the diameter thereof may be expanded, a longitudinally extending part at the other end of said spirally wound wire tube terminating in an axially inturned arm for engagement on the valve stem to hold the valve away from its seat, and a rubber sheath on said axially inturned part.

1,396,647. APPARATUS FOR CRANKING OR STARTING INTERNAL-COMBUSTION ENGINES. ROBERT ALEXANDER MILLER-ARGUS, Essendon, Melbourne, Victoria, Australia. Filed July 12, 1920. Serial No. 396,647. 3 Claims. (Cl. 74—56.)

2. A starting device for internal combustion engines, comprising a stud wheel secured to the crank shaft having a plurality of laterally projecting studs thereon, a stationary sleeve secured to the engine frame, a catch wheel rotatable on the sleeve and having a circumferential groove, a pull line secured at one end to the catch wheel and passing around the groove, a catch block carried by the catch wheel, said block being pivoted at one end to the catch wheel and formed with a catch at the other end adapted to engage the studs on the stud wheel, means for lifting the catch block out of engagement with the studs, and resilient means engaging the stationary sleeve and the catch wheel for normally holding said catch wheel in one position.

1,396,648. AUTOMOBILE-TIRE FILLER. STEPHEN D. MILLS and HIRAM PAUL, Oklahoma, Okla. Filed Dec. 2, 1919. Serial No. 341,845. 1 Claim. (Cl. 152—10.)

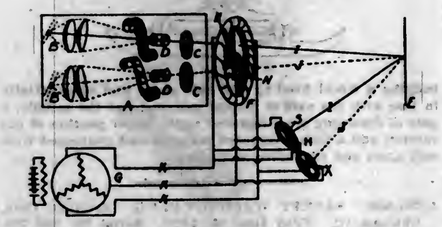
A filler for automobile casings of the character described comprising a body of soft rubber having an annular recess therein adjacent its inner circumference, a small pneumatic tube removably seated in said recess, an air valve extending through the body between the parts of the casing and through the opening in the wheel rim and adapted to receive the ordinary inflating means whereby the tube may be inflated, a canvas cover provided for the filler and



separated into sections, each section being suitably fastened to the body and having one end free of the body and adapted to overlap the adjacent end of the next section.

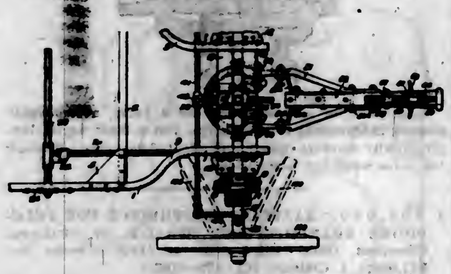
1,396,649. WELL-DRILLING APPARATUS. GEORGE S. MINSHALL, Bowling Green, Ky. Filed Sept. 18, 1920. Serial No. 409,802. 7 Claims. (Cl. 255—11.)

1. In a drilling machine, a frame, a walking beam carried by the frame, a counterbalance beam carried by the frame, means for connecting the beams together, and means for operating one of the beams.



1,396,650. SUBMERSIBLE TOY. EDWARD MOLLOY, Clapham Common, London, England, assignor to Cyril Fells Stacey, London, England. Filed Apr. 6, 1921. Serial No. 458,971. 15 Claims. (Cl. 46—37.)

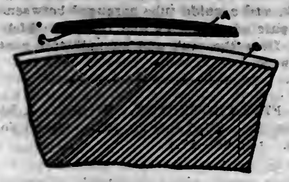
1. A submersible toy comprising in combination a casing, buoyancy-producing means carried by said casing, and means operable by human agency for overcoming the buoyancy produced thereby and thus permitting the toy to sink,



said buoyancy-producing means including a member carried by the casing and, after the last named means have operated, automatically changing in size without further human actuation of the toy to vary the effective displacement of the toy and cause the toy entirely by its own automatic action to rise again.

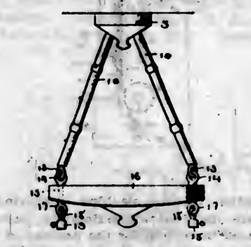
1,396,651. STEREOSCOPIC-MOTION-PICTURE MECHANISM. EDGAR BLACKBURN MOORE, Los Angeles, Calif. Filed Aug. 7, 1916. Serial No. 113,535. 3 Claims. (Cl. 88—16.6.)

2. A mechanism, consisting of a rotary eyepiece light shutter with the rim, or the fixed part of the same containing the stator of a polyphase electric motor, the rotating disk of the above shutter corresponding to the rotor of the above motor.



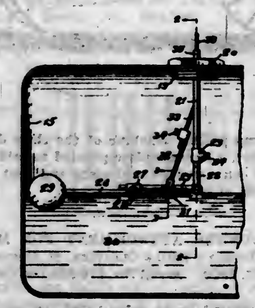
1,396,652. COMBINED MOTOR AND ANIMAL-DRAFT VEHICLE. JAMES MORRISON, Cincinnati, Ohio, assignor to The Trailmobile Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed June 28, 1920. Serial No. 392,2[illegible]. 5 Claims. (Cl. 280—33.6.)

1. In a vehicle, a structural iron, built-up frame, having a reduced width front end, a front axle, a semi-elliptical leaf spring extending longitudinally with the axle between the axle and frame, having its opposite ends pivotally connected to the axle and intermediately connected to the frame and centrally thereof, wheel carrying stub axles pivotally mounted to the opposite ends of said axle, a wheel steering fifth wheel swiveled centrally upon said axle and connecting with said stub axles, a draft bar pivotally connecting with said fifth wheel, a cross-rod connecting with the opposite sides of said frame, and a pair of parallel brace-rods pivotally connecting with said axle and cross-rod.



1,396,653. TYPOGRAPHIC PRINTING-PLATE. JOHN MURRAY, London, England. Filed Aug. 15, 1921. Serial No. 492,488. 1 Claim. (Cl. 101—3.)

A typographic printing plate and cylinder therefor, the plate being curved on its outer surface to the radius of the printing surface and initially flat or substantially so on its inner surface and having in its inner surface a series of grooves the bottoms of which are curved to the radius of the surface of the cylinder and the cylinder having in



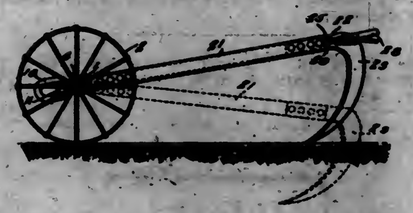
it a series of circumferential grooves counterpart to the ribs in the inner surface of the plate, as set forth.

1,396,654. LIGHTING-FIXTURE. EARL B. NEWMAN, Findlay, Ohio. Filed Nov. 6, 1919. Serial No. 336,126. Renewed Sept. 14, 1921. Serial No. 500,705. 1 Claim. (Cl. 240—78.)

In a lighting fixture of the class described comprising a wooden, hollow, substantially semi-spherical canopy, a fire proof metallic lining for said canopy, said canopy being provided with a plurality of diverging openings therein, wooden casings having fire proof metallic conduits therein fitted terminally in the diverging openings, and threaded to receive securing nuts thereon arranged within the hollow canopy, depending eyes carried by the lower extremities of said metallic conduits, an enlarged spacing element provided with a plurality of vertical apertures therein near its outer periphery, eye bolts positioned within the said vertical apertures and connected to the depending eyes, and loosely connected depending sockets carried by the lower terminals of the said eye bolts and beneath the spacing element.

1,396,655. GAGE. RICHARD T. NEWTON, New York, N. Y. Filed Dec. 30, 1918. Serial No. 268,907. 2 Claims. (Cl. 73—82.)

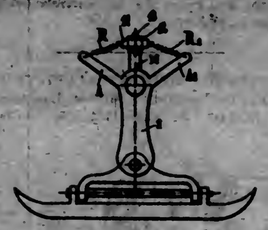
1. In a tank cage, a tank frame comprising a pair of spaced standards, a second pair of spaced standards ad-



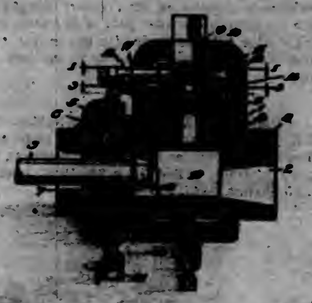
justably secured thereto, a foot lever pivoted between the lower ends of said adjustable standards, a link pivoted to said foot lever, a flexible gage wire adjustably clamped to said link, and a guide tube arranged between said foot mentioned pair of standards and through which the gage wire is led from the tank and an indicator controlled by said gage wire.

1,396,656. FIRE-PROTECTOR. NICHOLAS A. NICHOLSON, Johnstown, Pa. Filed July 26, 1920. Serial No. 397,674. 2 Claims. (Cl. 98—17.)

1. In a motion picture machine employing a film, a frame; a plate disposed approximately parallel to the frame and spaced therefrom for the passage of the film the plate having an opening; a shutter controlling the opening and mounted to swing on an axis approximately parallel to the plate; a bumper including a member mounted to move in a direction approximately parallel to the plate and cooperating with the shutter to hold the shutter closed and in open position; and a circuit including the bumper, the circuit being maintained open by the film when the film is in its normal place, and being closed when the film is in abnormal position.



1,396,657. STUMP-PULLER. JOHN W. JOHNSON, Jacksonville, Fla. Filed Nov. 22, 1920. Serial No. 425,708. 5 Claims. (Cl. 254—132.)



1. In a stump pulling machine of the class described, a movable support, a harness plate pivoted to said support, a pair of beams connected to said plate and root hooks carried at the ends of said beams.

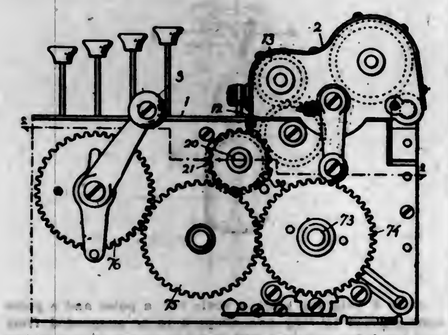
1,396,658. RUNNER ATTACHMENT FOR MOTOR-VEHICLES. JOCELYN EMILE OLLIVIER, St. Gervais, France. Filed Oct. 27, 1920. Serial No. 419,958. 4 Claims. (Cl. 280—13.)

1. An attachment to be substituted for an automobile wheel, comprising a runner carrier adapted to be fastened to the adjacent steering spindle on one axle of the automobile; a runner connected with the foot of the carrier to rock relatively thereto about both its transverse and its longitudinal axis; and a stop device for preventing the carrier from turning about the axis of the spindle and embodying a wheel fixed to said axle above and substantially in line with the axis of pivotal movement of the spindle, a pair of diverging arms fastened to the upper portion of the carrier, and a fork interposed between and connected with said arms and straddling said wheel.

1,396,659. SAFETY WASHOUT-PLUG. SPENCER OTIS, Chicago, Ill. Filed June 25, 1920. Serial No. 391,795. 6 Claims. (Cl. 137—69.)

1. A plug for combination having a valve, a removable element independent of said valve, and a blast nozzle longitudinally movable therein and adapted to operate through the valve when the latter is open.

1,396,660. SANITARY MOUTHPIECE FOR TELEPHONE-TRANSMITTERS. WILLIAM H. PALMER, Cleveland, Ohio. Filed Sept. 18, 1920. Serial No. 411,066. 1 Claim. (Cl. 179—187.)

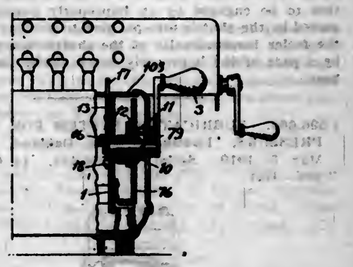


In a mouth piece for use in association with telephone transmitters, the combination of annular means designed for connection to a transmitter and equipped with straight spaced spring fingers on which are inwardly deflected terminals, of a removable member having a circumferential flange at one end the periphery of which is beveled toward said end, whereby the flange is adapted to be pressed into and pulled out of engagement with the terminals of the spring fingers, and also having a circumferential groove immediately in front of said flange, the said flange having longitudinally-displaced grooves in its periphery to receive the fingers when the mouth piece is moved rectilinearly between the fingers.

1,396,661. SPRING DEVICE FOR CHAIRS. HENRY A. FABB, New York, N. Y. Filed Jan. 22, 1916, Serial No. 213,218. Renewed Apr. 26, 1921. Serial No. 464,538. 4 Claims. (Cl. 45—137.)

1. A spring support for a chair, including a base plate, a top plate, springs for sustaining the top plate, and tension members for drawing one of said plates toward the other plate against the opposition of said spring.

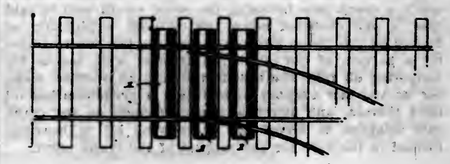
1,396,662. CALCULATING-MACHINE. EDGAR E. PRENNEY, New York, N. Y., assignor to Monroe Calculating Machine Company, New York, N. Y., a Corporation of New York. Filed Dec. 26, 1918. Serial No. 268,343. 17 Claims. (Cl. 235—79.)



1. In a calculating machine, register wheels, selecting wheels adapted to rotate the register wheels, carry mechanism adapted to thereafter rotate the register wheels, an operating shaft, and means adapted to rotate the selecting wheels and the carry mechanism continuously and during the rotation of the operating shaft and for vibrating the selecting wheels into and out of driving connection with the register wheels without modification of the rate of rotation thereof.

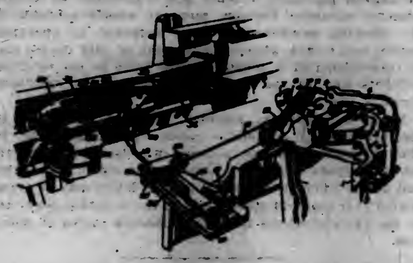
3. In a calculating machine, register wheels, selecting wheels adapted to rotate the register wheels, carry mechanism adapted to thereafter rotate the register wheels, an operating shaft, and means adapted to rotate the selecting wheels and the carry mechanism continuously and at an even rate of speed during the rotation of the operating shaft and for vibrating the selecting wheels into and out of driving connection with the register wheels and including a driving element, a member fast thereto, a member fast to the shaft of the selecting wheels, and a loose connecting member.

12. In a calculating machine, selecting mechanism including a shaft, a plurality of driving elements mounted thereon and a series of digital keys for each element, carry mechanism including a shaft and a plurality of driving elements mounted thereon, numeral wheels operable by the selecting elements and carry elements, an operating device, and means whereby movement of said device may be transmitted at a constant speed ratio to the selecting elements and to the carry elements through successive cycles of operation.



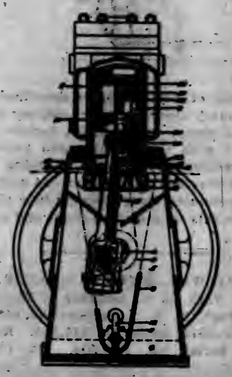
17. In a calculating machine, selecting mechanism including laterally adjustable gears, carry mechanism including rotary elements, numeral wheels operable by the selecting gears and carry elements, an operating device, and means whereby movement of said device may be transmitted at a constant speed ratio to the selecting gears and to the carry elements through successive cycles of operation.

1,396,663. CRANK-HANDLE LATCH. EDGAR E. PRENNEY, West Orange, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a Corporation of New York. Filed Mar. 15, 1920. Serial No. 365,971. 4 Claims. (Cl. 74—33.)



1. In a device of the character described, a machine having a stationary sleeve, a rotary driving member journaled upon said sleeve, an operating handle having driving engagement with said member and provided with a stud shaft rotatably and slidably engaging the bore of said sleeve and provided at its inner end with an annular groove, and a retaining lever operable in a plane at right angles with the axis of said stud shaft and engaging said groove.

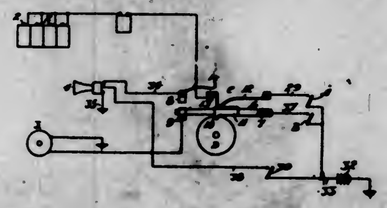
1,396,664. RAILWAY-SWITCH HEATER. ISAAC C. POPPER, New York, N. Y., assignor to The Theros Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 16, 1919, Serial No. 345,331. Renewed Sept. 14, 1921. Serial No. 500,704. 12 Claims. (Cl. 246—428.)



8. A railroad switch heater including a horizontally disposed tube, one entire end of which is open, said tube adapted and constructed to be placed in the space between ties for radiating heat to the rails thereabove, and means for opening and closing said tube.

1,396,665. FEELER MECHANISM FOR LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 15, 1920. Serial No. 417,187. 10 Claims. (Cl. 139—85.)

1. In a feeler mechanism for looms, the combination of a feeler supported to enter the shuttle on a detecting beat in a direction inclined to the longitudinal axis of the shuttle and which is held from movement along the filling carrier by engagement with the filling until substantial exhaustion thereof, and means supported in position to be engaged by an improperly boxed shuttle and moved by the shuttle into position to prevent movement of the feeler longitudinally of the shuttle when it is struck by a part of the improperly boxed shuttle on a detecting beat.



1,396,666. LUBRICATING SYSTEM FOR FLUID-COMPRESSORS. EDWARD A. RIX, Oakland, Calif. Filed Mar. 5, 1919. Serial No. 280,684. 14 Claims. (Cl. 184—18.)

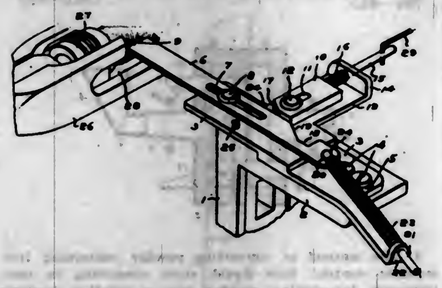
1. In a fluid compressor a cylinder, a piston, a crank shaft, a crank case inclosing the same, an oil well in said case, a pan mounted below the cylinder, a plurality of fingers on the piston adapted to dip into the pan to transfer a portion of the oil to the cylinder wall, means for delivering oil from the well to the pan, an overflow member on the pan adapted to maintain a predetermined oil level therein, and directing flanges formed on the crank case adapted to direct the overflowing oil to bearings formed in the case for the support of the crank shaft.

1,396,667. COMBINATION LOCK AND SWITCH. IRWIN B. SIMMS, Stockton, Calif. Filed Dec. 30, 1918. Serial No. 268,800. 5 Claims. (Cl. 177—314.)

5. In a wiring system of the class described, an electric source of supply, an ignition circuit and a starter circuit having common returns, a switch in each circuit, a circuit breaker interposed in a lead of each circuit between the switch and place of ignition, and starting motor respectively, said circuit breakers each substantially representing a single pole, double throw switch including means for simultaneous operation and adapted to open the starting

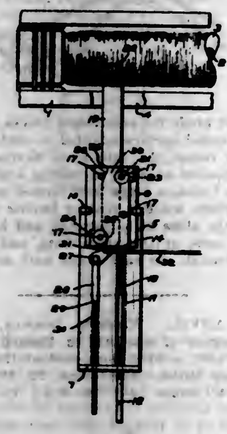
circuit and ignition circuit simultaneously, an electrically actuated signal having a return in common with the ignition circuit and starter circuit, said circuit breakers including a pair of contacts disposed so that the free ends of each circuit breaker will engage one of said contacts and a common connection between said contacts and the other side of the signal.

1,396,668. WEIGHING-SCALE. WALTER S. SMITH, Columbus, Ohio, assignor to The Smith Scale Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 23, 1918. Serial No. 267,936. 2 Claims. (Cl. 265—49.)



1. In a weighing scale, a scale bar, a poise and a poise hook carried thereby and adapted to be suspended from said bar being provided with notches on one edge, said bar and said hook being shaped to interlock with said notches and at the same time engage the opposite edge of the bar when the hook is in normally suspended position on the bar to prevent movement thereon but permitting movement when the hook is moved to abnormal position.

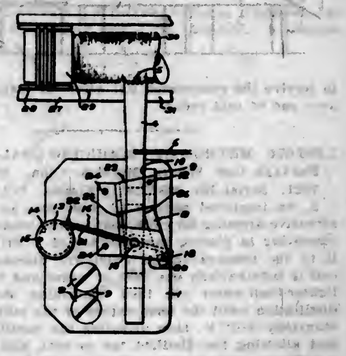
1,396,669. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed June 11, 1920. Serial No. 388,274. 11 Claims. (Cl. 139—85.)



1. In a feeler mechanism for looms, the combination of a feeler which is mounted for movement toward and from the front of the loom and also in a direction longitudinally of the shuttle, a feeler controlling cam which tends to move the feeler longitudinally of the shuttle on a detecting beat as the feeler moves frontwardly, a spring

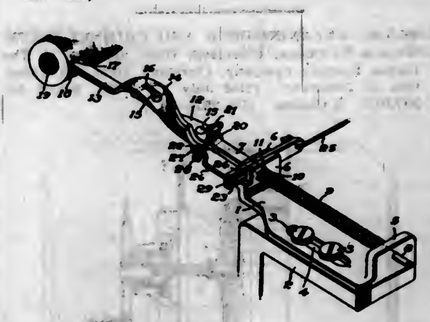
which acts on the feeler in opposition to the feeler controlling cam as the feeler moves frontwardly and effects

displacement of the cam by the feeler when a working supply of filling is present in the shuttle on a detecting beat.



1,396,670. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed June 11, 1920. Serial No. 388,277. 13 Claims. (Cl. 139—85.)

1. In a feeler mechanism for looms, the combination of a feeler carrier mounted for movement toward and from the front of the loom, a feeler loosely mounted on the feeler carrier and having two cam surfaces one on each side of the feeler, rollers mounted on the feeler carrier at opposite sides of the feeler and normally engaging the cams and effecting lateral movement of the feeler relative to the feeler carrier when filling is substantially exhausted on a detecting beat.



1,396,671. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 22, 1920. Serial No. 398,257. 13 Claims. (Cl. 139—85.)

1. In a feeler mechanism for looms, the combination of a feeler stand, a feeler loosely mounted on the stand, a feeler bearing upstanding from the feeler stand and having one portion for determining the feeling position of the feeler and another portion for determining the movement of the feeler longitudinally of the shuttle, a spring acting laterally against the feeler intermediate the ends of the feeler to hold it against one portion of the bearing when the feeler is in feeling position, and tending to move it against the other portion of the bear-

ing as the feeler is moved frontwardly and prevented from effecting such movement by engagement of the feeler with the filling on a detecting beat until substantial exhaustion thereof, and means for effecting replenishment of filling when the feeler is moved against the other portion of the bearing on a detecting beat.

1,396,672. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 27, 1920. Serial No. 426,700. 12 Claims. (Cl. 139—85.)

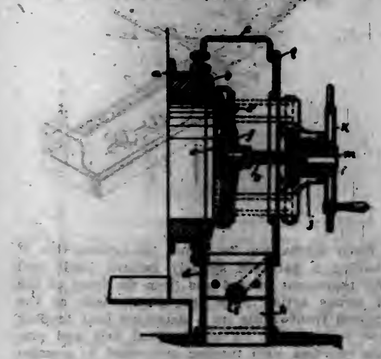
1. In a feeler mechanism for looms, the combination of a feeler having a flattened spirally twisted blade and mounted for movement toward and from the front of the loom, and means acting upon the spiral blade as the feeler is moved frontwardly on a detecting beat tending to turn the feeler about its longitudinal axis and prevented from effecting such turning movement by engagement of the feeler with the filling on a detecting beat until substantial exhaustion thereof.

1,396,673. COTTON-LINT COLLECTOR. ARTHUR STABLER, Los Angeles, Calif. Filed Nov. 27, 1920. Serial No. 426,823. 2 Claims. (Cl. 13—17.)

1. A lint collector comprising an endless moving screen, compressing rollers having said screen mounted on the

same, means for collecting lint between the flights of said screen, and an offtake from said screen arranged

to receive the compressed lint after the latter has passed over one of said rollers.



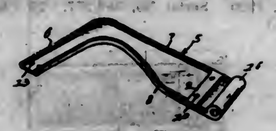
1,396,674. METHOD OF PRODUCING COAL-TAR PAINT. FERNAND GEO. WHITE, Meriden, Conn. Filed Aug. 19, 1921. Serial No. 493,725. 2 Claims. (Cl. 134—14.)

2. An improved method of producing an elastic, preservative dressing for cloth, leather and kindred materials, consisting in placing raw coal tar in a still and raising it to the temperature at which the discharge from the coil is substantially one part of water and three parts of lighter-than-water oil, then continuing the process of distillation until the temperature of the still reaches substantially 310° F., then arresting the distilling operation and allowing the distilled tar to cool, and then adding a sufficient amount of tar oil lighter than water to reduce the consistency of the mass to that of thin paint.

1,396,675. PROCESS OF MAKING POTASH ALUM. THOMAS H. WRIGHT, Los Angeles, Calif. Original application filed May 28, 1919, Serial No. 300,404. Divided and this application filed May 11, 1920. Serial No. 380,559. 2 Claims. (Cl. 23—13.)

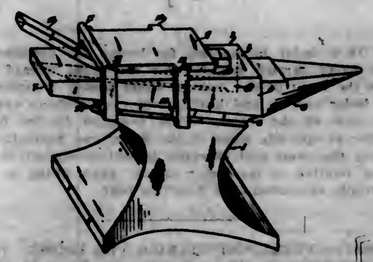
1. A process of making potash alum, comprising treating an alkaline, aqueous, mineral potassium chlorid solution with sodium sulfate, rendering slightly acid, adding aluminum sulfate, and removing the potash alum thus formed from the mixture.

1,396,676. CLEANING-DOOR AND CHIMNEY-VALVE. WILBUR T. CLARK, Cleveland, Ohio, assignor to The Hanna Furnace Company, Cleveland, Ohio, a Corporation of Delaware. Filed July 21, 1920. Serial No. 397,913. 5 Claims. (Cl. 251—27.)



4. In a structure of the class described, the combination with a frame having a valve seat adapted to be associated with a stove, furnace or the like and afford lateral communication to the interior thereof, of a carrier, a valve-closure flexibly supported by the carrier in position to accommodate itself to the valve seat, a support whereon said carrier travels, and actuating means for operating said carrier and valve-closure, substantially as set forth.

1,396,677. ELECTRIC ROTATING FURNACE. CORNELIUS BAEK CORNELIUS, Stockholm, Sweden. Filed Mar. 27, 1920. Serial No. 369,236. 10 Claims. (Cl. 204—64.)



1. The method of converting powder containing free metallic content into liquid state consisting in continuously introducing powder into a rotating heating device separately discharging the free metallic content and continuously discharging the residues from said device.

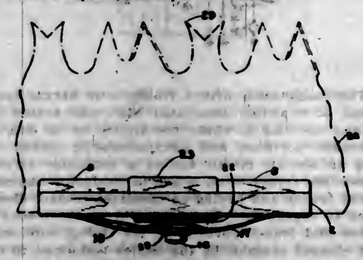
1,396,678. BED-HINGE FOR AUTOMOBILE-TRUCKS. CHARLES H. CROMWELL, Georgetown, Ill. Filed May 12, 1921. Serial No. 468,902. 2 Claims. (Cl. 296—17.)

1. In a bed hinge for automobile trucks, a plate having a rib on its under surface adapted to contact an end rail of a chassis frame, the said plate having an angularly disposed extension adapted to overlie and be secured to a side of the frame, a hinge butt formed on the outer end of the said plate, a hinge member having flanges adapted to embrace the sides of a body sill and having ears embracing the ends of the hinge butt, and a pivotal pin extending through the said hinge butt and through the ears.

1,396,679. ANVIL. WILLIAM DORNAN, Los Angeles, Calif., assignor of one-half to Hasard & Miller, Los Angeles, Calif., a Firm composed of Henry T. Hasard and Herman Miller. Filed Sept. 22, 1919. Serial No. 325,543. 4 Claims. (Cl. 78—8.)

1. An anvil comprising an anvil body having a flat upper face and flat side faces, there being inclined mating channels in the side faces, a clamping plate having a flat lower face, arms extending from the clamping plate loosely against the side faces, and lugs extending from the arms into the channels; so that the clamping plate will be raised or lowered as it is moved forwardly or backwardly

1,396,680. PROPELLER. JACQUES B. FUNK, Baltimore, Md., assignor of one-half to Richard W. Cook. Filed Dec. 10, 1920. Serial No. 429,751. 7 Claims. (Cl. 170—159.)

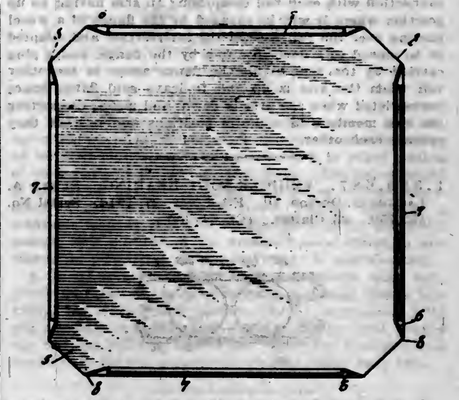


1. A propeller comprising a plurality of units each of which consisting of a flexible sheet having oppositely and angularly disposed blades at its ends, the units being provided with transverse slots at their longitudinal edges which receive the blades whereby to dispose the units in superposed relation.

1,396,681. CASTER FOR ANGLE-BAR FURNITURE. GLENN G. GREENE, Warren, Pa., assignor to G. G. G. Metal Stamping Company, Warren, Pa., a Corporation of Pennsylvania. Filed Feb. 10, 1921. Serial No. 443,925. 6 Claims. (Cl. 16—4.)

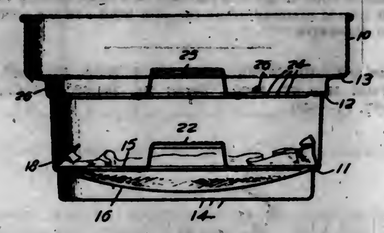
3. The combination with an angle frame, of a caster holder in which a caster is mounted, said caster holder comprising a base plate and a cage attached to said base plate, and a single plate extending across the open side of said angle member for frictionally engaging said cage, said plate having bent over ends adapted to be firmly pressed into engagement with the flanges of the angle frame.

1,396,682. SAW-DRESSING TOOL. CHARLES GUSTAFSON, Instanter, Pa. Filed June 14, 1920. Serial No. 388,907. 4 Claims. (Cl. 76—47.)



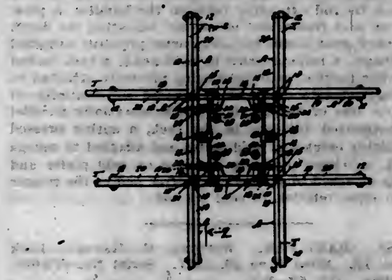
1. In a saw dressing tool, a plate, a rail terminating one edge of said plate, spaced alined leaves terminating the opposite edge of said plate, a second plate adjustably secured to said first named plate, a head terminating said second plate and disposed parallel to and overlapping the adjacent ends of the said leaves, and a ledge secured to the first named plate adjacent the said head and for coöperation therewith.

1,396,683. PLANTER. WILLIAM J. HALL, Ringgold, La. Filed May 27, 1920. Serial No. 384,667. 8 Claims. (Cl. 97—35.)



3. A planter including a main frame, handles attached thereto, a tie rod extending between the handles, a plow carried by said frame, and means for adjusting the depth of said plow, said means including arms pivotally attached to the frame, a roller carried by said arms, a rack forked at its lower portion, said forks being pivotally attached to said arms, whereby the rack is located substantially on the center line of the planter, two substantially parallel plates supported adjacent to the rack, a spring pressed pawl slidably carried by said plates and adapted to engage the rack, a trigger pivotally mounted on said plates and pivotally attached to said pawl, the free end of the trigger being in close relation to said tie rod.

1,396,684. BAKE-PAN. WILLIAM C. HANSEN, Rock Island, Ill. Filed June 20, 1921. Serial No. 479,059. 2 Claims. (Cl. 53—6.)



1. A baking pan comprising a body portion having side walls formed integral therewith, means forming a part of the side walls for reinforcing the same, and said pan having its corners cut away.

1,396,685. COFFEE-MAKING DEVICE. John D. Houck, Chicago, Ill. Filed June 27, 1921. Serial No. 480,785. 3 Claims. (Cl. 53—3.)

1. A coffee making device comprising a receptacle having a perforated bottom, means to maintain a perforated disk in spaced position above the perforated bottom, and means to support a fabric from the periphery of the perforated disk.

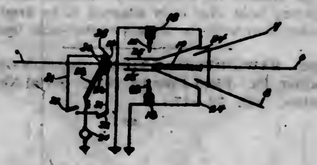
1,396,686. SHOCKLESS RAIL-CROSSING. Evelyn L. V. Howell, Los Angeles, Calif., assignor of one-half to Herman M. Schroedter, Los Angeles, Calif. Filed June 20, 1921. Serial No. 478,836. 15 Claims. (Cl. 246—273.)

1. In combination with two intersecting rails having flange spaces at the intersection, a movable member in connection with each rail comprising an arm having an up position where it will be engaged by the flange of a wheel passing over the rail toward the intersection and adapted to be moved to a down position by the flange, and a plug carried by the arm to fill the flange space in the other rail when the arm is up and to leave said flange space unrestricted when the arm is down, and means connecting the two members in opposite positions and so that they operate each other.

1,396,687. VEHICLE-BODY BEARING. Elmyr A. Laughlin, Oregon, Ill. Filed Nov. 27, 1916. Serial No. 133,759. 33 Claims. (Cl. 64—65.)

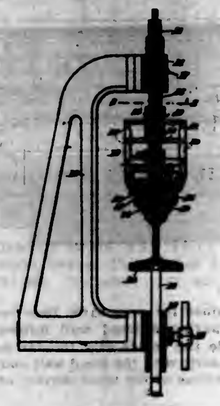
1. A bearing device comprising upper and lower housings or bearing-plates vertically movable the one with relation to the other and having plain bearing faces, a plurality of rollers interposed between said plates and means on said plates and said rollers to maintain the rollers constantly spaced at the same distance apart and constantly centered with respect to the application of the load.

1,396,688. VEHICLE-BODY BEARING. Elmyr A. Laughlin, Oregon, Ill. Filed Jan. 2, 1917. Serial No. 140,138. 48 Claims. (Cl. 64—66.)



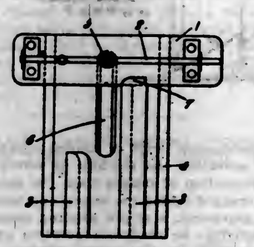
1. In a car mounting, a truck; a car body pivotally mounted thereon to permit turning of the truck relatively thereto; and means interposed between said body and truck arranged to cause the weight of the car to effect turning of the truck relatively to the car body upon change in elevation of one side of the truck, substantially as described.

1,396,689. VEHICLE-BODY BEARING. Elmyr A. Laughlin, Oregon, Ill. Original application filed Jan. 2, 1917, Serial No. 140,138. Divided and this application filed Apr. 9, 1918. Serial No. 227,461. 5 Claims. (Cl. 64—63.)



1. In a car truck, the combination of upper and lower bearing members having bearing surfaces; a rotatable bearing member arranged between and engaging with said surfaces; and walls extending from said surfaces toward each other inclosing the upper and lower portions of said bearing member, said walls being slightly flaring, substantially as described.

1,396,690. TROLLEY-WIRE SWITCH. Milos N. Mikulic, Kansas City, Mo. Filed Sept. 29, 1919. Serial No. 327,193. 2 Claims. (Cl. 191—38.)

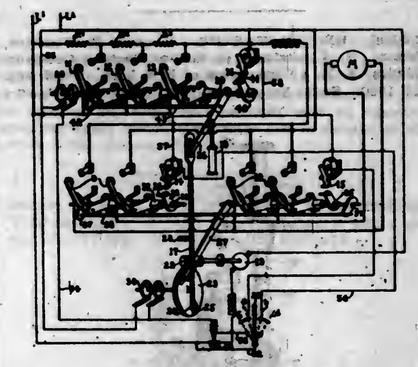


1. The combination with a trolley wire having branch portions, of a switch associated with said branch portions and operable to shunt the trolley on to either of said branch portions, and electromagnetic means comprising an electric circuit having a conductor arranged alongside the trolley wire, a second conductor associated with the trolley and having an insulated contact element adapted to engage said first conductor as the trolley approaches said branch portions of the trolley wire, and a switch element operable by the trolley motorman to close the circuit through said conductors to actuate said trolley switch.

1,396,691. ART OF ORNAMENTING GLASS ARTICLES. John A. Milliken, Bayonne, N. J., assignor to John E. Marsden, Atlantic City, N. J. Filed Dec. 2, 1916. Serial No. 134,747. 14 Claims. (Cl. 51—278.)

1. An improvement in the art of ornamenting hollow glass articles comprising inserting a chuck into the article without contacting therewith, temporarily attaching the chuck and the article by an interposed material capable of being applied in molten condition, subjecting the article to the action of an ornamenting apparatus by connecting the chuck and the attached article to said apparatus, and finally changing the physical condition of the interposed material to permit of separation of the chuck and the attached article.

1,396,692. CLOTHES RACK OR HANGER. James Row and Charles Frederick Smith, Holborn, London, England. Filed Mar. 24, 1921. Serial No. 455,267. 5 Claims. (Cl. 211—16.)

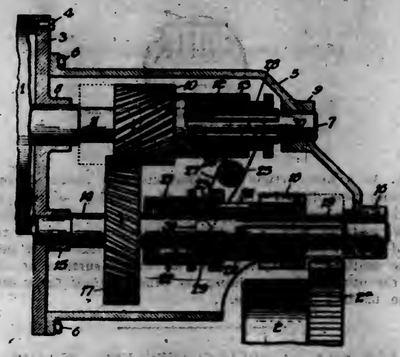


1. In a clothes rack the combination of a base board, a carrier member slidable in said base board, a sliding pivoting and supporting pin operating between said carrier member and said base board so that on said carrier member being drawn out to the limit of its travel in relation to said base board it can be turned at right angles to said base board, a hanging bar carried by and longitudinally arranged in relation to said sliding member and a stop and two supports all carried by the base board the former to retain the sliding member in its position at right angles to the base board and the latter to support said sliding member when in said swung around position.

1,396,693. NOVELTY POST-CARD. Harry O. Rugh, Chicago, Ill. Original application filed Aug. 21, 1919, Serial No. 318,865. Divided and this application filed Jan. 21, 1920. Serial No. 353,050. 11 Claims. (Cl. 120—74.)

1. As a new article of manufacture, a postcard comprising two dished disk members rotatably secured together near an edge thereof, a third dished disk member non-rotatably secured to one of the aforesaid disks, the said third member providing an outer surface for a suitable mailing inscription and an outer surface or one of the other disks providing the other surface for a suitable mailing inscription.

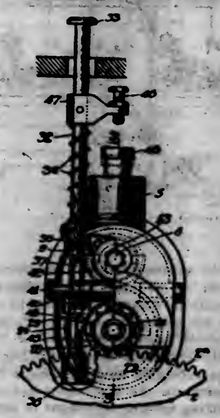
1,396,694. CIRCUIT-CONTROLLER. William C. Stevens, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 8, 1920. Serial No. 421,451. 14 Claims. (Cl. 200—92.)



1. In a circuit controller, the combination with cooperating contacts, of operating means therefor including an element movable in a given direction to effect biasing of said contacts for engagement while effecting restraint of the same against engagement pending reverse movement of said element, said means further including a rotatable member rotatable unidirectionally for positively moving said element in the first-mentioned direction and thereafter permitting reverse movement of said element.

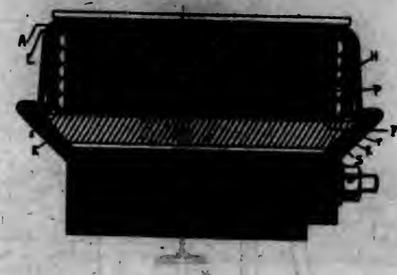
8. In a circuit controller, the combination with relatively movable contacts, of contact operating means providing for locking said contacts out of engagement with one another, thereafter for biasing said contacts toward one another while so locked and finally for releasing said contacts to permit engagement thereof under such bias.

1,396,695. ENGINE-STARTER. Maurice P. Whitney, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Aug. 25, 1920. Serial No. 406,088. 17 Claims. (Cl. 74—7.)



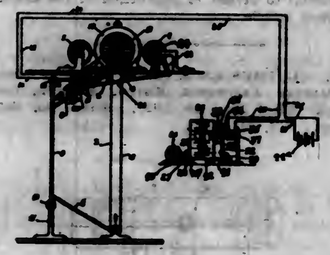
1. An engine starter drive comprising driving and driven shafts, a pinion mounted on the driving shaft for

rotary movement therewith and automatic longitudinal movements thereon in both directions, a gear mounted on the driven shaft and meshing with the pinion, a driving member adapted to engage a member of the engine to be started and mounted on the driven shaft for rotary



movement therewith and longitudinal movement thereof for engagement with such engine member and disengagement therefrom, and means for transmitting the longitudinal shifting movements of the pinion to the driving member.

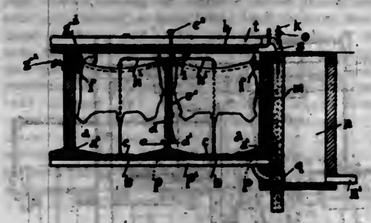
1,396,696. ENGINE-STARTER. MAURICE P. WHITNEY, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Aug. 25, 1920. Serial No. 406,024. 14 Claims. (Cl. 74—7.)



1. An engine starter drive comprising a driving shaft, a driven shaft, reduction gearing between these shafts including a gear on the driven shaft and a pinion mounted on the driving shaft for rotary movement therewith and longitudinal movement thereof, said pinion being normally disengaged from the gear but adapted to be manually operated for engagement therewith, a driving member mounted on the driven shaft for rotary movement therewith and longitudinal movement thereof for engagement with a member of the engine to be started and for disengagement therefrom, and means for transmitting the longitudinal shifting movements of the pinion to the driving member.

1,396,697. PNEUMATIC TIRE. EDUARD ERBURG, Pilsen, Austria. Filed July 9, 1918. Serial No. 775,062. 6 Claims. (Cl. 152—13.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

2. An air-container for pneumatic tires comprising a tubular member having a tread wall formed of textile fabric and flexible ties inside said tubular member connected by textile fabric with the tread wall and connecting the same with portions of the inner surface of said tubular member.

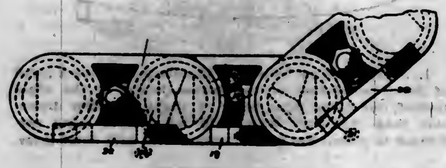


1,396,698. TARGET APPARATUS. CLARK E. CARTER, Montreal, Quebec, Canada, assignor of one-half to Allan B. McBeath, Montreal, Canada. Filed Sept. 14, 1915, Serial No. 50,636. Renewed Aug. 9, 1918. Serial No. 249,185. 19 Claims. (Cl. 124—15.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In combination with a cinematographic machine means for operating the machine, a screen arranged to receive a projection of images from the machine, a movable wall arranged behind the screen and balanced to have a rockable movement, a screen winding means and rotary means adapted to be rendered operative by the rocking of the wall to cause the screen winding means to be brought into operation.

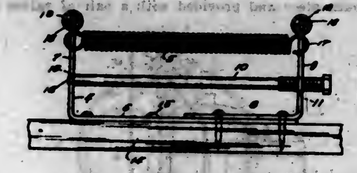
1,396,699. APPARATUS FOR TREATING HIDES. ARTHUR NEAL WALKER, Bolton, England. Filed Feb. 4, 1920. Serial No. 356,350. 4 Claims. (Cl. 149—10.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In an apparatus for the treatment of hides in the manufacture of leather, pits each constructed with a central partition, the top of which is at a lower level than the boundary walls of the pit and below the level of the liquid therein, said partitions being provided with an aperture at the bottom thereof, and means for introducing a fluid under pressure into each section of the pit to enable



a circulation of liquid to be effected from one section to the other, and a reverse circulation of the liquid at will.

1,396,700. HANDY BOOK AND TRAY STAND. ANNA G. GREENWOOD, Denver, Colo. Filed Apr. 3, 1920. Serial No. 371,083. 2 Claims. (Cl. 45—57.)

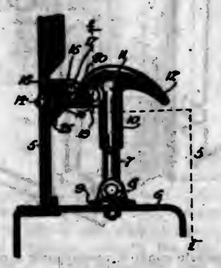


1. The combination in a set for the purpose described of a weighted foot, affixed tubular upright body with hand set screw in top of tubular body, as means of holding a telescoping upper tubular neck into position, a side hinged table and bracket on upright body; an outer end fixed T-head on tubular neck, as means for holding a swivel head bolt, a lamp neck and electric fixture attached to upper end of swivel bolt, as means for holding an adjustable light, a spring washer, interposed on swivel bolt to separate swivel T and T-head; a swivel T with studs on side and bottom, to which may be screwed a ball nut, which fits into joint or socket attached to table; a hand nut also on studs to fasten parts to position, parts as stated as a means of adjusting table to different positions and attached to table a rod on which slides notched spring clamps, forming means for holding a book, or means for supporting table.

1,396,701. CHAIN. CARL W. GREGORY, Petaluma, Calif. Filed Dec. 18, 1919. Serial No. 345,870. 4 Claims. (Cl. 74—32.)

1. In a chain, the combination of links having overlapping ends, lugs carried by each of said overlapping ends, said lugs having vertical flat faces, wear blocks having vertical faces adapted to abut said lugs and said wear blocks having rolling contact with each other.

1,396,702. SCRAPER. GEORGE E. VON HOFFMANN, Evanston, Ill. Filed Nov. 8, 1920. Serial No. 422,582. 3 Claims. (Cl. 15—2.)

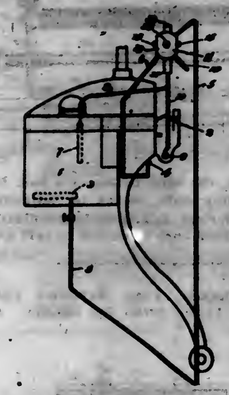


3. In a cleaner, the combination of a base having two upwardly projecting arms, means for adjusting one of said arms, and springs extending longitudinally of said base and having their ends connected to said arms.

1,396,703. CARLINE. FRED MATHEWS, Chicago, Ill. Filed Jan. 26, 1920. Serial No. 354,071. 10 Claims. (Cl. 108—5.6.)

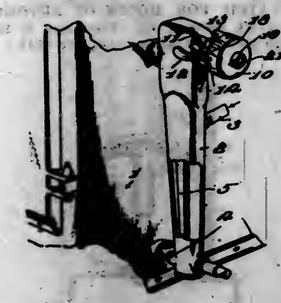
1. The combination with a channeled carline, of an end-plate engaging the end edges of said carline and secured thereto, said plate being greater in width than the carline and having its ends extending laterally beyond the sides of the same, and provided with an inwardly extending flange which laps under and is secured to the bottom of the channel of said carline.

1,396,704. LATCH FOR HOODS OF AUTOMOBILES. FRED MATHEWS, Chicago, Ill. Filed Apr. 9, 1921. Serial No. 459,840. 10 Claims. (Cl. 292—114.)



1. A keeper for a latch comprising parallel lugs a support for the same, and a rocking member journaled in said lugs one end of which is adapted to be engaged and moved by the said latch to cause its opposite end to engage the support of the lugs.

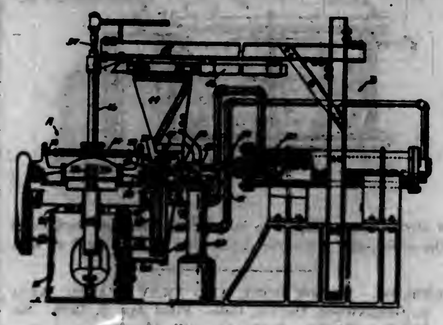
1,396,705. GAS-CONTROLLING DEVICE FOR LINOTYPE MACHINES. CHARLES SYLVESTER, Winnipeg, Manitoba, Canada. Filed Apr. 16, 1918. Serial No. 228,965. 7 Claims. (Cl. 22—71.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a type setting machine, the combination with a metal pot, the mouth piece thereof, the gas pipe leading

to the pot and the mouth piece and the mercury pipes associated with the pot and mouth piece and a gas supply pipe, of a gas controlling device inserted between the gas supply pipe and the gas and mercury pipes of the pot and mouth piece and provided with a pair of valves and

internally arranged such that the varying pressure of the mercury in the pot mercury pipe controls, through one valve, the feed of gas from the supply pipe to the pot gas pipe and the varying pressure of the mercury in the mouth piece mercury pipe controls through the other valve the feed of gas from the supply pipe to the mouth gas pipe.



1,396,706. THERMOSTAT FUEL-REGULATING DEVICE FOR GAS-STOVES. BENJAMIN E. MEACHAM, Lorain, Ohio, and CHARLES MUNSNER, Chicago, Ill, assignors to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Oct. 2, 1920. Serial No. 414,333. 12 Claims. (Cl. 236—15.)

1. A thermostatic control, comprising a regulating shaft, an indicator wheel movable thereon, a locking member carried by the shaft and held against relative rotation thereon, the indicator wheel and the locking member interlocking, and means for holding the wheel and locking member in interlocking positions, for the purpose described.

1,396,707. PNEUMATIC-TIRE-REMOVING APPARATUS. HARRY A. MILLER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 23, 1919. Serial No. 332,601. 40 Claims. (Cl. 18.2.)

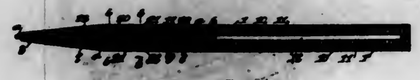
1. An apparatus for removing the forming core from a tire casing comprising, a support for a tire and core, a core removing mechanism movable with respect to the support, means for holding the tire upon the support

against the action of the core removing mechanism, and means for actuating the core removing mechanism.

1,396,708. HAIR-WAVER. HARRY NATKIEL, New York, N. Y., assignor to The Marcelette Hair Curler Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 3, 1921. Serial No. 442,110. 7 Claims. (Cl. 132—41.)

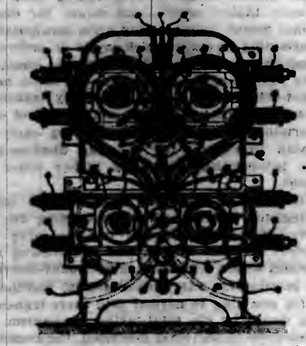
5. The herein described hair waver comprising a single strip of spring material formed into two legs connected to each other at a sharp angle, one portion of each leg being of flat material while another portion thereof is of corrugated material, the flat and corrugated portions being substantially co-extensive.

1,396,709. METHOD OF OBTAINING SAMPLES FROM A BALLOON WHILE INFLATED. RALPH H. UPSON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1919. Serial No. 281,414. 11 Claims. (Cl. 244—3.)



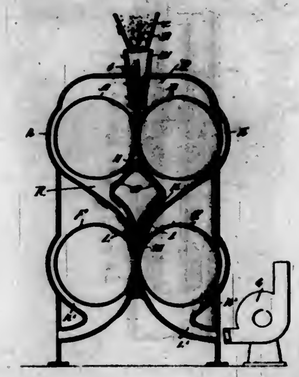
1. A gas bag for a balloon or the like comprising a panel of fabric consisting of two layers joined at the edges thereof, the outer layer being of slightly smaller dimension than the inner layer, said inner layer being perforated to permit the gas to contact with said outer layer.

1,396,710. ATTACHMENT TO SCREW-FEED PENCILS. AMPHOUX FLEMING, Alexandria, Va. Filed Jan. 26, 1921. Serial No. 440,116. 7 Claims. (Cl. 120—18.)



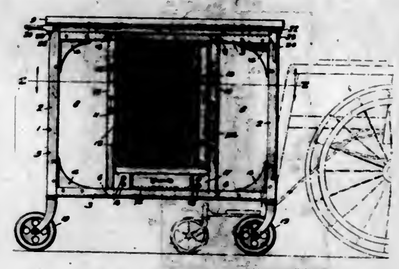
5. A pencil holder of the character described comprising a casing, a tapered body rotatably mounted in the

forward end of the casing, the said body being apertured for the passage of the pencil lead therethrough, the said casing having an internal screw threadway in the rear end thereof, a trough-like lead receiver that extends from the front end of the threaded portion of the casing into the rotatable body member, and in alinement with the lead passage, a plunger device including a head having positions for engaging the screw way in the casing, the said plunger and the threadway being disconnected, when the plunger is adjusted to a predetermined position, whereby the said plunger is adapted for being freely pulled directly back to the limit of its movement, whereby to leave the receiver free for the reception of a new lead, a magazine rotatably mounted within the casing and



adapted, when rotated, to feed the leads into the lead receiver, when the latter is empty, and the plunger is drawn back, and connections that join the rotatable casing member and the magazine, whereby rotation of the magazine is effected, when the said casing member is rotated with respect to the receiver, the said magazine including means for holding the leads in position for dropping their full length into the receiver, when the lead is to be dropped is brought into alinement with the open portion of the trough-like receiver and in position for being engaged by the follower device, when the latter is adjusted for engagement with the feed screw in the casing.

1,396,711. APPARATUS FOR PULVERIZING ORE AND THE LIKE. GEORGE JOHNSTON, Manchester, England. Filed Aug. 15, 1921. Serial No. 492,468. 11 Claims. (Cl. 83—12.)

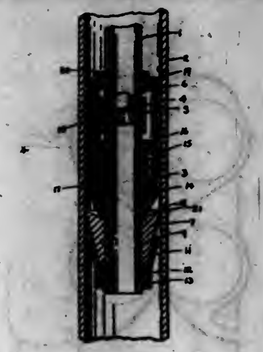


1. In pulverizing apparatus, a pair of crushing rolls and means arranged adjacent the nip of the rolls for guiding air-propelled material thereto and means for propelling said material and rotating said rolls at substantially the same speed.

1,396,712. METHOD OF CRUSHING. GEORGE JOHNSTON, Manchester, England. Filed Aug. 27, 1921. Serial No. 495,976. 10 Claims. (Cl. 83—12.)

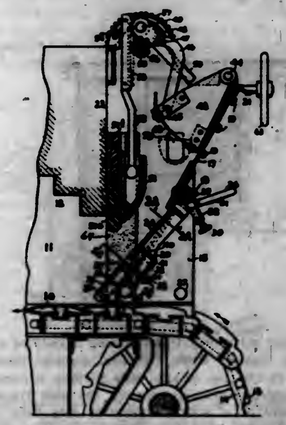
1. In the art of crushing, the step of driving a pair of crushing rolls at a peripheral speed of at least two thousand feet per minute and propelling material to said rolls at a speed substantially corresponding thereto.

1,396,713. WHEELING SERVICE-CART. LOUIS H. KAISER, Cincinnati, Ohio, assignor to The John Van Range Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 16, 1919. Serial No. 331,074. 1 Claim. (Cl. 45—17.)



A wheeling service-cart comprising a pair of angle-iron side frames, having wheels at the opposite base ends, a table fixed to the top of said side frames, a compartment casing mounted centrally between the side frames below the table and of a width dimension less than said side frames, and with said side frames forming open areas at opposite sides of said casing, said compartment casing interiorly sub-divided to provide a heated compartment having an entrance opening through one side of the casing, and a cold compartment opening through an opposite side of the casing, and a heater for said heated compartment.

1,396,714. PUMP-PLUNGER. ROBERT E. CARMICHAEL, Houston, Tex. Filed July 15, 1920. Serial No. 396,517. 7 Claims. (Cl. 103—63.)

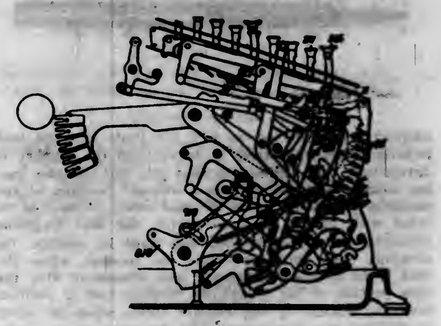


1. In a pump plunger, an expanding cup comprising a frusto-conical tubular member longitudinally divided on planes tangent to the inner face thereof, a cup-shaped

washer to retain said sections together, a recessed upper face on said cup, a conical expanding member fitting

therein, and resilient means bearing on said expanding member to automatically expand said cup during the operation of the plunger.

1,396,715. FURNACE-HOPPER. WILLIAM LLOYD, Hazleton, Pa., assignor to Coze Traveling Grate Company, Port Carbon, Pa., a Corporation of Pennsylvania. Filed Feb. 26, 1918. Serial No. 219,255. 23 Claims. (Cl. 110—108.)

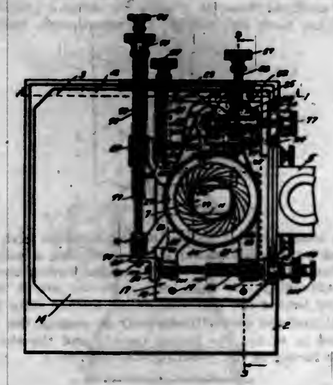


1. In a furnace hopper, a feed plate downwardly inclined toward the furnace grate, and an air cooled protective igniting plate overlying the lower portion of the feed plate in the region of the grate.

16. In a hopper, a regulating gate for varying the depth of the fuel bed admitted to the grate, vertically arranged rack bars suspending the said regulating gate, horizontally arranged spindles extending from opposite ends of the hopper side walls, pinions thereon meshing with the rack bars, worm wheels on said spindles, and hand operated worm for driving said worm wheels independently whereby the regulating gate may not only be lifted and lowered, but its opposite ends independently adjusted vertically to insure alinement between the lower edge of the regulating gate and the surface of the grate.

22. In a hopper, a pair of side standards, a hopper body supported thereby, poke hole apertures in the side standards opening to the hopper chamber, and external cups at said poke holes serving to prevent the escape of fuel through the poke holes during the passage thereof through the hopper.

1,396,716. ADDING-MACHINE. JOHN MAGNUS, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 3, 1919. Serial No. 274,891. 18 Claims. (Cl. 235—60.)



1. In a machine of the class described, the combination with register wheels, means for turning the same, manipulative amount-determining means, means automatically effecting one-step movement of a higher order wheel upon turning of the next lower wheel between zero and nine, of additional means normally intercepting such action in one or more higher orders, and means for disabling said additional means operable only upon manipulation of amount-determining means in such order or orders.

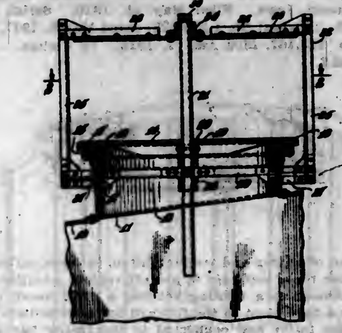
2. In a machine of the class described, the combination with register wheels, means for turning the same, manipulative amount-determining means, and carry transmitting devices between wheels; of means, under control of said amount-determining means, for intercepting carry-transmissions, with provisions for effecting disablement of lower order intercepting means by higher order intercepting means.

3. In a machine of the class described, the combination with register wheels, means for turning the same, manipulative amount-determining means, carry transmitting devices between wheels, and total-taking mechanism; of means, under control of said amount-determining means, for intercepting carry-transmission, together with provisions for resetting to normal said carry-transmission intercepting means by the total-taking mechanism.

5. In a machine of the class described, the combination with register wheels, racks to turn the same, amount-keys for measuring rack-movements, actuator bars for the racks with provisions for one-step independent movement of the latter, means normally preventing such movement and tripped by wheels turning between zero and nine; of a supplemental member or members normally preventing the independent rack-movement in a higher order or higher orders, and an amount-key-operated member or members to trip said supplemental member.

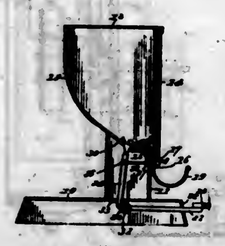
1,396,717. ADJUSTABLE IRIS AND CURTAIN FOR CAMERAS. JOHN E. LEONARD, Los Angeles, Calif., assignor, by mesne assignments, to Mitchell Camera Co., a Corporation. Filed Dec. 4, 1919. Serial No. 342,513. 11 Claims. (Cl. 95—65.)

1. A camera having an iris and a plurality of curtain forming elements interposed between the photographing lens and the exposure aperture.



1,396,718. APPARATUS FOR CATALYSIS. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 24, 1916, Serial No. 241,652. Renewed June 5, 1919. Serial No. 302,045. 13 Claims. (Cl. 23—28.)

1. In combination, a body of catalytic material in the form of a granular conductor of electricity, means for passing a current of electricity through the same to maintain the catalyzer at an elevated temperature, and means for varying the resistance of the granular material to the passage of the electric current.



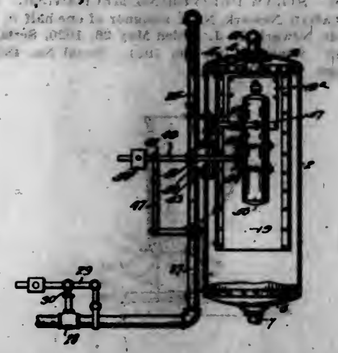
1,396,719. EXPLOSION-HATCH FOR OIL-TANKS. BURTON E. HULL, Houston, Tex., assignor to The Texas Company, a Corporation of Texas. Filed Jan. 30, 1920. Serial No. 355,278. 14 Claims. (Cl. 220—25.)

1. The combination with a closed tank having a hatchway, of a hatch for closing the hatchway, a rod attached to the hatch, a guide frame secured to the tank and having guide bearings for the rod to allow the hatch to open and close as the rod slides in the guide bearings, and means disposed above said hatch and secured to said tank for limiting the outward movement of said hatch by engagement therewith.

13. The combination with a closed tank, a cylindrical projection extending vertically upward therefrom forming a hatchway, and means associated with the upper periphery of said cylindrical projection for forming an annular groove, containing a sealing material, of a movable hatch adapted to rest upon the upper periphery of said cylindrical projection and having a downwardly extending flange entering into the sealing material in said annular groove to form an effective seal, and also having a downwardly extending peripheral flange disposed beyond the outer wall of said annular groove to prevent the entrance of water therein, means for guiding the vertical movement of said movable hatch, and rigid stop means disposed above said hatch and adapted to be engaged thereby for positively limiting the upward movement thereof.

1,396,720. STRAW-DELIVERING MECHANISM. JOHN J. MOUAWAD, Newark, N. J., assignor of one-half to Adbo Nassour, Newark, N. J. Filed May 26, 1920, Serial No. 384,429. Renewed July 20, 1921. Serial No. 486,185. 3 Claims. (Cl. 206—21.)

3. In a straw delivering mechanism, a hopper having an inclined bottom and a depending partition at the front edge of the said bottom, the said hopper having a front wall, the lower part of which is parallel to and spaced from the partition to produce a clearance for the passage of straws, the said wall having a discharge opening at the lower edge thereof, a door pivotally mounted in position to guard said opening, plungers mounted to operate in conjunction with the lowermost straw at the discharge opening, arms to which the plungers are pivotally connected, fingers carried by the said arms and projecting into the hopper for agitating the straws, a shaft on which the arms are carried, an operating arm for partially rotating the shaft, a spring for returning the parts to normal position, means for oscillating the arms, and means for holding the oscillated means against movement.

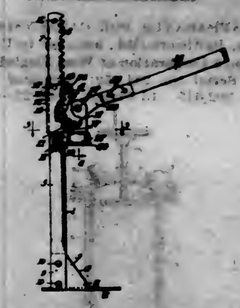


REISSUES.

15,219. TRACTOR-BINDER HITCH. Joseph W. Gamble, Boone, Iowa. Filed May 31, 1919. Serial No. 301,100. Original No. 1,238,428, dated May 8, 1917, Serial No. 113,467, filed Aug. 7, 1916. 10 Claims. (Cl. 280—33.7.)

7. In an offsetting and steering hitch, in combination, a forward bar for attachment to a draft vehicle, a trailer bar for attachment to a trailing vehicle, a draft reach connected by a fixed pivot to the forward bar intermediate the ends of the latter and connected to the trailer bar at a point spaced from the pivot and thereof, and means for steering and offsetting the draft and trailing vehicles relatively comprising a movement translating member connected by a fixed pivot to the draft reach intermediate its ends and extending at either side thereof, a bar pivotally connected to the trailer bar and to the movement translating member at the same side of the reach, and a bar pivotally connected at one end to the movement translating member on the opposite side of said reach and at its other end to said forward bar.

15,220. OIL, GAS, AND SAND SEPARATOR. David G. Lorraine, Los Angeles, Calif. Filed July 16, 1921. Serial No. 486,317. Original No. 1,373,004, dated Apr. 5, 1921, Serial No. 356,488, filed Feb. 5, 1920. 10 Claims. (Cl. 183—39.)

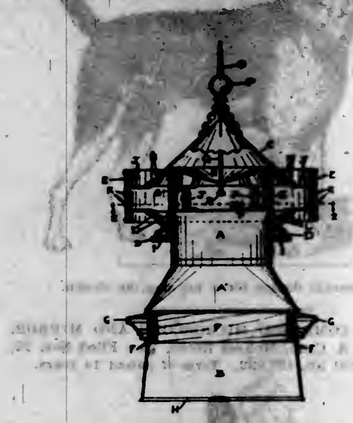


1. In an apparatus for separating gas and oil from oil wells comprising a receptacle, a vertical partition arranged in the receptacle and terminating short of the top and bottom of the receptacle, and means arranged between the said partition and a contiguous wall of the receptacle for introducing the oil from the well whereby the oil is caused to flow downwardly and around the lower end of the partition and rise on the opposite side and the gas that freely escapes from the oil rising to the top of the receptacle and collecting above the upper end of the partition, said means including an inlet oil tube arranged in the upper part of the receptacle, said tube having a surrounding discharge sleeve with a deflecting bottom plate for discharging the oil toward the receptacle wall.

15,221. CONCRETE CONSTRUCTION. Ralph A. Mesmer, Kansas City, Mo. Filed Jan. 14, 1922. Serial No. 534,622. Original No. 1,380,866, dated Oct. 2, 1918, Serial No. 329,690, filed Mar. 26, 1919. 5 Claims. (Cl. 72—101.)

1. In concrete construction, the combination with a cementitious body of an anchor strip comprising a solid strip lying along the surface of said body and having anchoring means extending into said body, a facing and a tie-piece extending behind the rear side of the anchor strip and between it and the cementitious body to engage the anchor strip and to secure the facing thereto and thereby to secure the facing to the cementitious body.

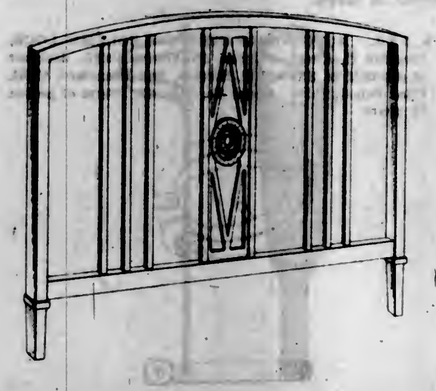
15,222. BOTTLE-CAPPER. Harold G. Rice, Chicago, Ill. Filed Sept. 10, 1921. Serial No. 499,541. Original No. 1,376,583, dated May 3, 1921, Serial No. 437,004, filed Nov. 29, 1920. 6 Claims. (Cl. 226—84.)



1. In a bottle capper, a rider fashioned from a single plate formed into a rear wall and sides having first and second extensions, the first extension having a notch in its lower edge, the notch defining an inner wing prolonged transversely of the rider into engagement with the second extension, the second extension having a notch in its upper edge, the sides being provided at their forward edges with ears located above the extensions, and a securing device connecting the ears; a frame comprising a rack received slidably in the space defined by the rear wall, the sides, the inner wing and the ears; a lever located between the extensions and fulcrumed thereon, the lever including a segment meshing with the rack, the notch in the second extension exposing the rack and segment at their place of meshing, to provide for the egress of dirt, the lever being in contact with the extension at a point opposite to said notch; and a capping head carried by the extensions.

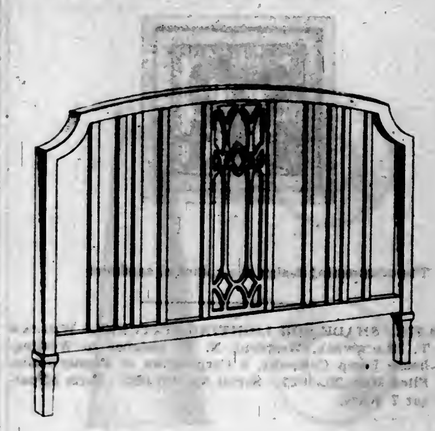
15,223. VENTILATING CUPOLA FOR BARNS AND THE LIKE. Herman Steen, Fairfield, Iowa, assignor to The Louden Machinery Company, Fairfield, Iowa. Filed July 30, 1921. Serial No. 493,720. Original No. 1,313,826, dated Aug. 12, 1919, Serial No. 262,850, filed Nov. 15, 1918. 7 Claims. (Cl. 98—4.)

7. In combination with a vertically disposed ventilating flue having a cone shaped cap placed a distance above its



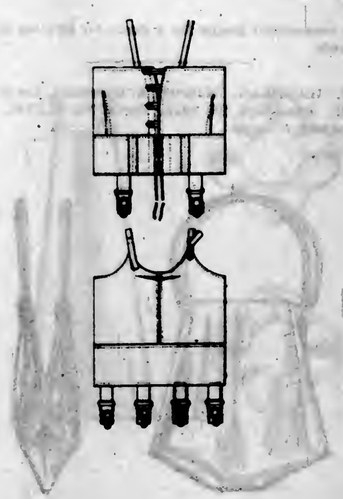
upper end and an outer band surrounding the upper end of the flue and the lower edge of the cap at a distance therefrom, of an inner band interposed in the space between the outer band and the flue, said inner band being substantially right angular in cross section and the vertex of the band being set toward the flue with a space between them; a series of radially disposed brackets having their inner edges secured to the flue and their outer edges

connected to the inner band, and a series of angularly shaped braces with horizontally disposed sides having upwardly and downwardly diverging ends; the downwardly diverging ends being secured to the aforesaid brackets; their upwardly diverging ends being connected to the cap and their central portions connected to the outer band, said braces thus supporting the cap and the outer band in position by their attachment to the brackets.



DESIGNS.

59,572. BEDSTEAD END FRAME. Frank Anderson, Buffalo, N. Y., assignor to Barcalo Manufacturing Company, Buffalo, N. Y. Filed Mar. 8, 1921. Serial No. 449,539. Term of patent 3½ years.



The ornamental design for a bedstead end frame, substantially as shown.

59,573. BEDSTEAD END FRAME. Frank Anderson, Buffalo, N. Y., assignor to Barcalo Manufacturing Company, Buffalo, N. Y. Filed Mar. 8, 1921. Serial No. 449,540. Term of patent 3½ years.

The ornamental design for a bedstead end frame, substantially as shown.

59,574. COMBINATION BRASSIÈRE-GIRDLE. Fredericka L. Bannink, Atlantic City, N. J. Filed July 20, 1921. Serial No. 486,316. Term of patent 14 years.

The ornamental design for a combination-brassière-girdle as shown.

59,575. SHRINE. FRANK BIENKOWITZ, Winooski, Vt. Filed Mar. 7, 1921. Serial No. 450,490. Term of patent 3½ years.

The ornamental design for a shrine, as shown.

59,576. SHADE FOR LIGHTING-FIXTURES. WILLIAM T. BLACKWELL, Westfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Mar. 30, 1921. Serial No. 457,065. Term of patent 7 years.

The ornamental design for a shade for lighting fixtures, as shown.

59,577. HANDBAG. MARJORY A. BOETHING, Los Angeles, Calif. Filed Sept. 23, 1920. Serial No. 412,357. Term of patent 7 years.

The ornamental design for a handbag, as shown.

59,578. TOY DOG. ADOLPHE M. BUSSON, Baltimore, Md. Filed Apr. 1, 1921. Serial No. 457,220. Term of patent 14 years.

The ornamental design for a toy dog, as shown.

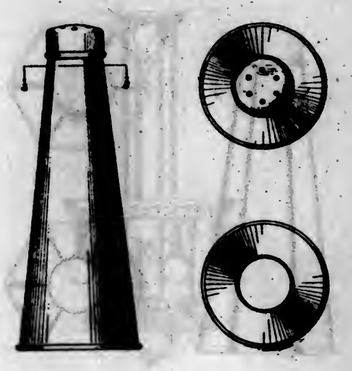
59,579. COMBINED MICROSCOPE AND MIRROR. JAMES H. A. CARR, McKees Rocks, Pa. Filed Nov. 22, 1920. Serial No. 425,922. Term of patent 14 years.

The ornamental design for a combined microscope and mirror, as shown.

59,580. AUTOMOBILE-STEERING-COLUMN LOCK. FRANCIS C. COPELAND, San Francisco, Calif., assignor of one-half to Edward C. Streich, San Francisco, Calif. Filed Feb. 4, 1920. Serial No. 356,245. Term of patent 3½ years.

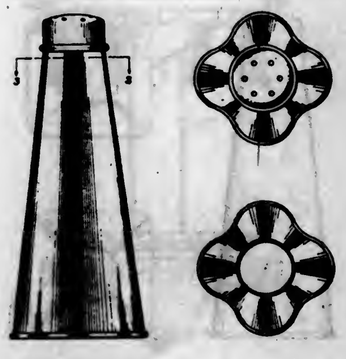
The ornamental design for an automobile steering column lock substantially as shown.

59,581. LAMP-BASE. OTTO J. DOSMAN, Chicago, Ill., assignor to Chicago Papier-Mache Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 17, 1921. Serial No. 438,018. Term of patent 3½ years.



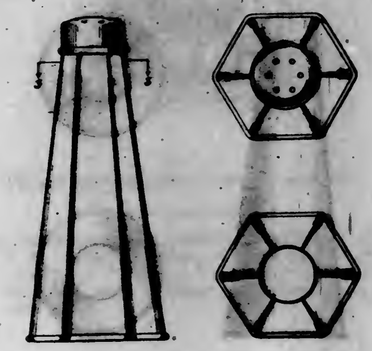
The ornamental design for a lamp base, substantially as shown.

59,582. AMUSEMENT DEVICE. CLINTON ELMER FROST, Cleveland, Ohio. Filed June 16, 1921. Serial No. 478,183. Term of patent 14 years.



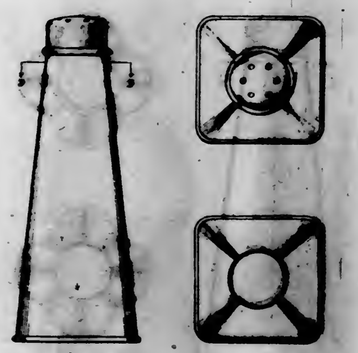
The ornamental design for an amusement device, as shown.

59,583. SIFTER-TOP CAN OR SIMILAR RECEPTACLE. WILLIAM H. GREEN, New York, N. Y., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Apr. 30, 1921. Serial No. 465,858. Term of patent 14 years.



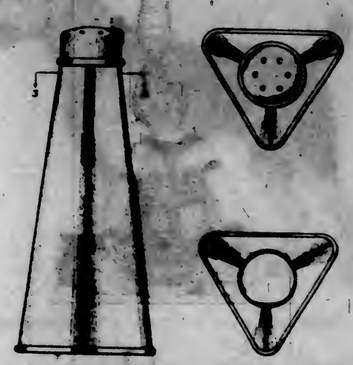
The ornamental design for a sifter top can or similar receptacle, as shown.

59,584. SIFTER-TOP CAN OR SIMILAR RECEPTACLE. WILLIAM H. GREEN, New York, N. Y., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Apr. 30, 1921. Serial No. 465,859. Term of patent 14 years.



The ornamental design for a sifter-top can or similar receptacle, as shown.

59,586. SIFTER-TOP CAN OR SIMILAR RECEPTACLE. William H. Gunn, New York, N. Y., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Apr. 30, 1921. Serial No. 465,860. Term of patent 14 years.



The ornamental design for a sifter-top can or similar receptacle.

59,586. SIFTER-TOP CAN OR SIMILAR RECEPTACLE. William H. Gunn, New York, N. Y., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Apr. 30, 1921. Serial No. 465,861. Term of patent 14 years.

The ornamental design for a sifter-top can or similar receptacle, as shown.

59,587. SIFTER-TOP CAN OR SIMILAR RECEPTACLE. William H. Gunn, New York, N. Y., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Apr. 30, 1921. Serial No. 465,862. Term of patent 14 years.

The ornamental design for a sifter top can or similar receptacle, as shown.

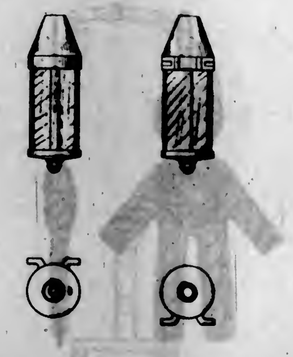
59,588. PIN-HOLDER. Lillian Z. Gunn, Chicago, Ill. Filed Mar. 10, 1921. Serial No. 451,310. Term of patent 3½ years.

The ornamental design for a pin holder as shown.

59,589. EMBLEM, PIN, BUTTON, OR SIMILAR ARTICLE. Edwin C. Heathcote, Brooklyn, N. Y. Filed May 16, 1919. Serial No. 297,706. Term of patent 7 years.

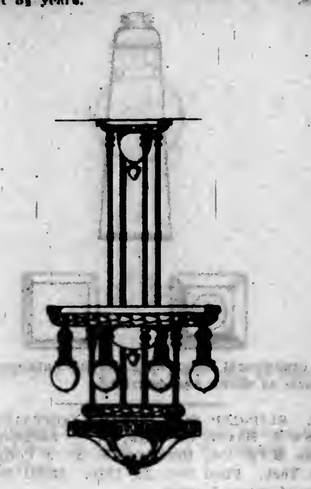
The ornamental design for an emblem, pin, button, or similar article, as shown.

59,590. EMBLEM, PIN, BUTTON, OR SIMILAR ARTICLE. Edwin C. Heathcote, Brooklyn, N. Y. Filed June 3, 1919. Serial No. 301,575. Term of patent 7 years.



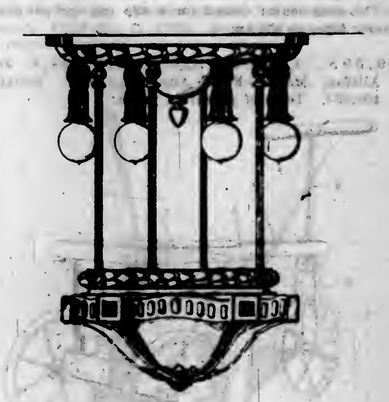
The ornamental design for an emblem, pin, button, or similar article, as shown.

59,591. EMBLEM, PIN, BUTTON, OR SIMILAR ARTICLE. Edwin C. Heathcote, Brooklyn, N. Y. Filed June 7, 1919. Serial No. 302,806. Term of patent 7 years.



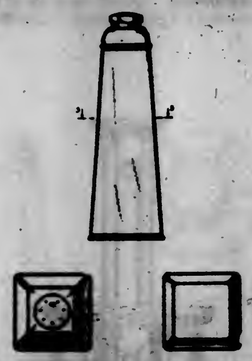
The ornamental design for an emblem, pin, button, or similar article, as shown.

59,592. VAPORIZER FOR INTERNAL-COMBUSTION ENGINES. James H. Hopkins, Pomona, Calif., assignor to Jesse McComas and Charles W. Goodwin, Pomona, Calif. Filed June 23, 1920. Serial No. 390,520. Term of patent 14 years.



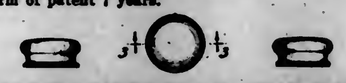
The ornamental design for a vaporizer for internal combustion engines, substantially as described and shown.

59,593. LIGHTING-FIXTURE. Roland T. Hughes, Oak Park, Ill., assignor to Moran & Macnair, Inc., Chicago, Ill. Filed Aug. 23, 1920. Serial No. 405,594. Term of patent 3½ years.



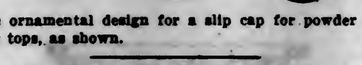
The ornamental design for a lighting fixture, as shown.

59,594. LIGHTING-FIXTURE. Roland T. Hughes, Oak Park, Ill., assignor to Moran & Macnair, Inc., Chicago, Ill. Filed Aug. 23, 1920. Serial No. 405,595. Term of patent 3½ years.



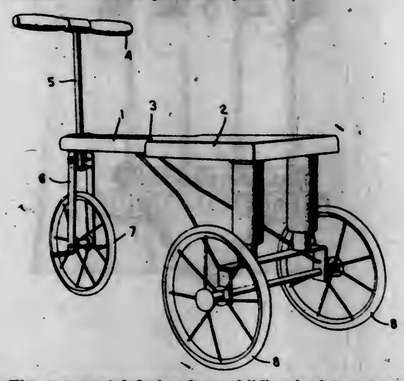
The ornamental design for a lighting fixture, as shown.

59,595. POWDER-CONTAINER OR SIMILAR RECEPTACLE. CLEM S. HUMPHREY, Brooklyn, N. Y. Filed June 26, 1920. Serial No. 392,080. Term of patent 7 years.



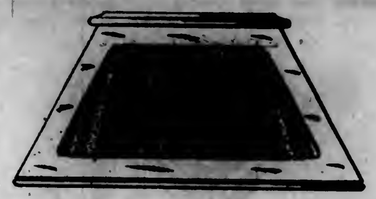
The ornamental design for a powder container or similar receptacle as shown and described.

59,596. SLIP-CAP FOR POWDER-CONTAINER TOPS. FRANK S. HYATT, Brooklyn, N. Y., assignor to Brass Goods M'f'g. Co., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 22, 1919. Serial No. 339,956. Term of patent 7 years.



The ornamental design for a slip cap for powder container tops, as shown.

59,597. SLIP-CAP FOR POWDER-CONTAINER TOPS. FRANK S. HYATT, Brooklyn, N. Y., assignor to Brass Goods M'f'g. Co., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 22, 1919. Serial No. 339,957. Term of patent 7 years.



The ornamental design for a slip cap for powder container tops, as shown.

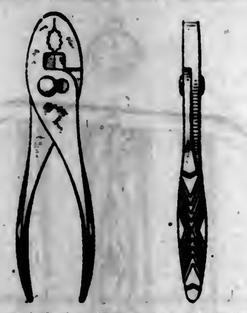
59,598. CHILD'S WHEEL TOY. JOHN C. JUTHE, Allston, Mass. Filed Aug. 28, 1920. Serial No. 406,637. Term of patent 14 years.

The ornamental design for a child's wheel toy as shown and described.

59,599. PANEL FOR A LAMP-SHADE. LEON L. KATZENSTEIN, Worcester, Mass. Filed Feb. 17, 1921. Serial No. 445,901. Term of patent 7 years.

The ornamental design for a panel for a lamp shade, as shown.

59,600. CABINET. EDMUND PHILO KELLOGG, Chicago, Ill., assignor to Albert Pick & Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 11, 1921. Serial No. 444,293. Term of patent 3½ years.



The ornamental design for a cabinet as shown.

59,601. PACKAGE CONTAINING CANDY. ALICE G. KILGORE, St. Paul, Minn. Filed Feb. 28, 1921. Serial No. 447,337. Term of patent 14 years.

The ornamental design for a package containing candy, as shown.

59,602. ORNAMENTATION OF A PLIER-HANDLE. ANDREW A. KRASUSKE, South Orange, N. J. Filed Apr. 8, 1920. Serial No. 372,800. Term of patent 14 years.

The ornamental design for an ornamentation of a plier handle as shown.

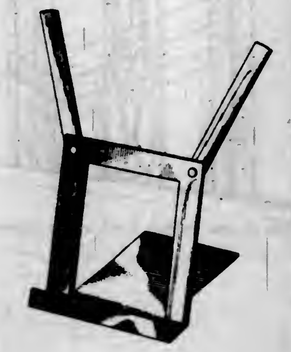
59,603. ICE-CREAM CONE. THOMAS F. LAWTON, New York, N. Y., assignor to Cone Company of America, New York, N. Y. Filed Nov. 23, 1920. Serial No. 426,067. Term of patent 14 years.

The ornamental design for an ice cream cone, as shown.

59,604. LAMP-SUPPORT. ERNEST F. MCCARTHY, Worcester, Mass. Filed Sept. 10, 1920. Serial No. 409,481. Term of patent 3½ years.

The ornamental design for a lamp support, as shown.

59,605. FINGER-RING. FRANK E. PELOQUIN, Providence, R. I. Filed Jan. 15, 1921. Serial No. 437,595. Term of patent 3½ years.

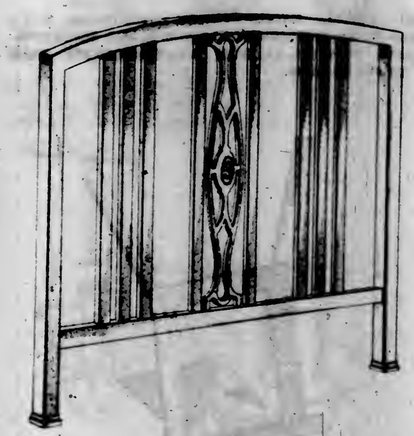


The ornamental design for a finger ring, as shown.

59,606. LOOSE-LEAF BOOK. FRANK C. SKILES, Chicago, Ill. Filed Sept. 26, 1919. Serial No. 326,689. Term of patent 7 years.

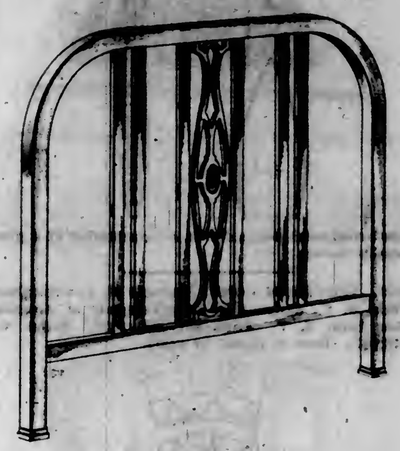
The ornamental design for a loose leaf book, as shown.

59,607. EASEL. ROBERT SPENCER, South Orange, N. J.; Lane H. Spencer, executor of said Robert Spencer, deceased. Filed Oct. 11, 1920. Serial No. 416,271. Term of patent 14 years.



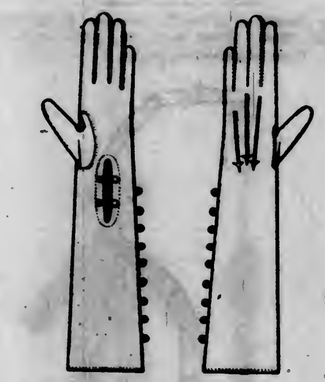
The ornamental design for an easel, as shown.

59,608. GRILLE FOR BEDSTEAD-FRAMES. Charles A. Stuart, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Mar. 14, 1921. Serial No. 452,339. Term of patent 14 years.



The ornamental design for a grille for bedstead frames, as shown.

59,609. BEDSTEAD-FRAME. Charles A. Stuart, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Mar. 14, 1921. Serial No. 452,340. Term of patent 14 years.

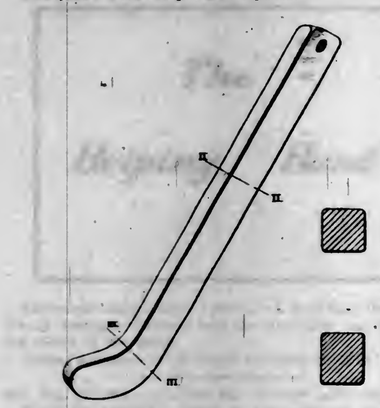


The ornamental design for a bedstead frame, as shown.

59,610. BEDSTEAD-FRAME. Charles A. Stuart, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Mar. 14, 1921. Serial No. 452,341. Term of patent 14 years.

The ornamental design for a bedstead frame, as shown.

59,611. GLOVE. Harry A. Taylor, New York, N. Y. Filed June 30, 1920. Serial No. 393,193. Term of patent 3½ years.

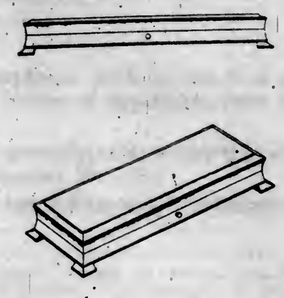


The ornamental design for a glove, as shown.

59,612. WATCH-CHARM. Jens T. Tennefass, Minneapolis, Minn. Filed Mar. 15, 1921. Serial No. 452,551. Term of patent 14 years.

The ornamental design for a watch charm, as shown.

59,613. CLOTHES-LIFTING STICK. Noble Thornton and Elmer C. Dunn, Keokuk, Iowa; said Thornton assignor to said Dunn. Filed Sept. 10, 1920. Serial No. 409,482. Term of patent 14 years.



The ornamental design for a clothes lifting stick, as shown.

59,614. CHEST. Frank Tockes, Chicago, Ill. Filed Feb. 26, 1921. Serial No. 448,245. Term of patent 7 years.

The ornamental design for a chest, as shown.

59,615. JEWELRY-BOX. Frank M. Wright, Albany, N. Y. Filed Mar. 5, 1921. Serial No. 450,099. Term of patent 7 years.

The ornamental design for a jewelry box, as shown.

59,616. JEWELRY-BOX. Frank M. Wright, Albany, N. Y. Filed Mar. 5, 1921. Serial No. 450,100. Term of patent 7 years.

The ornamental design for a jewelry box, as shown.

OFFICIAL GAZETTE, NOVEMBER 8, 1921.

[PUBLISHED NOVEMBER 14, 1921.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.
